STRANGE things get into the articles from the pens of our celebrated writers In the Chicago American of January 18, Dr Frank Crane, advises us to "Get Away from The Cities Into The Open Spaces." And in so doing he makes it a little hard to tell whether he is trying to spring a little joke, or is merely a quack, as many other doctors are . Possibly he's not a crane, but an ostrich who sticks his head in the sand!

In trying to account for the presence of large numbers in the cities, the Dr. declares:—

"One reason, perhaps, is that the multitudes are cowardly and lazy. In cities they can easily go out and get good food, done up in attractive packages, at a grocery store. In the country they have to hustle for themselves—raise their own grain, and kill their own meat."

**Since when has it become possible for persons in the cities to go to the grocery store and get good food done up in attractive packages without having to hustle for it—excepting those, of course, that are fortunate enough to have others doing the hustling for them?**

Within the last ten days the Chicago-American printed a news item stating that in 1922-1923, 108, 000 persons had lost their farm holdings; and, according to John F. Sinclair of Minneapolis, President of the John F. Sinclair banking corporation, speaking in the interests of 310 small bankers in the four states of North and South Dakota, Montana and Minnesota, farm mortgages have increased there from $169,000,000 in 1910 to $530,000, 000 in 1920. The taxes paid by these same farmers increased from $90,000,000 to $206,000,000 and the short time loans raised by the farmers at high interest have swelled from $700,000,000 to $1,200, 000,000 in the same time.

In the face of these conditions, which are driving the farmers into the cities, the Dr., like the quack physician he appear to be, advises city people to go out into the open places! It sure is bad advice to give the inexperienced, when those of experience struggle so hard and fail!

I would suggest that Lloyd George and Dr. Crane go out into the open places and try farming for a few years and then come back and tell us how it is done! If they succeed they would thereby build a monument to themselves in the minds of large numbers of people that would rank equally with that of Moses, who also led his race out of the wilderness into the promised land. However, Lloyd George finds it more profitable to dabble in politics, while Dr. Crane finds it more profitable to write the twaddle with which his name is associated.

I believe that they both are well aware of the fact that to bring about the change that H. G. Wells speaks of, and to which the Dr. refers, necessitates a basic transformation in society—from the private ownership of land and industries to collective ownership; also from production for profit to production for use. But here's where the Doctor's malpractice comes in; he hasn't got the courage to say this; and so blames the drift from the country to cities, not on the economic forces that cause it, but on the victims thereof! Can such writers be aught else than jokes; or be taken seriously? Are they facing facts, or hiding from them?

I was born and raised on a farm in Central Illinois. Our folks finally moved to a small town, where I went to school for a year or two. Now, when I meet an old schoolmate and ask him or her where some of the others are, invariably the reply is, in some town or city. Why? Simply because there was no opportunity to **hustle** a living in the country!

# Protests Loss Personality

IN the October isue of the Industrial Pioneer was a reprint of a statement by a college dean on modern business organization. On the joke page is a good description of its human product in a story of a fellow who called himself a machinist because of working in an automobile factory putting on bolt number fourteen.

On bottom of business management reprint I attached the joke referred to (look it up in order to get the point). I gave the two combined clippings two titles respectively — "The Mountain heaved and brought forth a mole" (Old testament Bible) and "The Inverted Pyramid." Then wrote a brief note telling party clipping was mailed to that I hoped I did not offend by sending what I believe would interest him.

The interpretation of the above could be outlined thus—development of human resources of the nation is as important as conserving the natural resources of the nation; in fact, more important; for a nation is measured and strengthened according to the quality of its personal units.

If business, in the name of efficiency, backed by low cunning, **deprives a citizen of opportunity** to become skilled, resourceful, self-reliant and independent of any one boss or "one process" union for an existence, such employers commit treason as much as have the patriotic officials in depriving the navy of its fuel reserves. **Pennsylvanian.**

## THE DEATH OF LENIN

LENIN'S death has removed from life a statesman of immense ability and an idealist of the first water. A man of simple tastes, great courage and sacrifice, Lenin possessed a canny prevision, that prophetic foresight which enables true statesmen to anticipate and take advantage of remote developments. To these, he added the synthetic qualities of real leadership: the personality and power to weld and direct divergent tendencies together into one strong whole for definite ends. And his prevision and leadership combined made possible his constructive genius; those Napoleonic qualities that made him the foremost organizer of the Federated Soviet Republic of Russia.

Lenin was a great man who vindicated the great man theory. Around him and through him great achievements whirled and left their impress far beyond the confines of their origin and enactment. At the same time, Lenin also exposes the weaknesses of that theory. For, broadly speaking, it was not paralysis, but the burdens of dictatorship that killed Lenin. In him, the system which he personified broke down, as does, in the long run, every top-heavy system of excessive centralization. It broke down in Rome, destroying Rome as it fell. It broke down in Germany, in the labor movement particularly; crucifying the German working class. And now it is breaking down in Russia, killing Lenin.

Nor was Lenin, great man that he was, great enough to save the system of so-called workers' dictatorship itself. Born of a political misconception, namely, that all power resides in the state, the so-called dictatorship of the proletariat, which Lenin personified, had its course dictated by something even more powerful than the state, namely, economic development. Russia was and is most largely a dictatorship of peasant and foreign interests. They have deflected communist state craft and molded the Russian state in the likeness of their interests, just as state ownership under populism would make the proletariat subversive to the farmer interests, were such a thing ever possible here. To all of which Lenin, perforce, was compelled to give unwilling approval.

Of course, it is foolish to call Lenin, the destroyer of Russia and to hold him responsible for all of its misfortunes, including the famine and the serious impairment of its industries; though the excessive adulation of some of his admirers justifies such a course. Russia is far from being destroyed; and it is too vast a country for any one man to destroy. In addition, its misfortunes are not attributable to Lenin, but to the world war, blockade, white terror, drought, famine, and other evils too numerous to specify. It was these that not only overwhelmed Russia, but Lenin, too; making of him its heroic and yet broken leader—as heroic and as broken as is Russia herself. And praise, not condemnation, should be Lenin's just as it is bound to be Russia's. Amid terrific problems both have done nobly and well! The only misfortune has been, so far as the American workers are concerned, the attempt to fasten the policies born of Russian exigencies, on the labor movement of this country. To this is much misunderstanding due.

What can we say that would express our admiration for Lenin more than these words:

Oh, America, where is your Lenin?

Oh, for a Lenin here! Oh, for an American with the many sided genius and idealism of a Lenin!

## THE RISE OF RAMSAY McDONALD

THE rise to power of Ramsay McDonald does not seem to have affected the nerves of capitalism any. After the failures of both Lenin and Ebert, capitalism may have come to realize that economic determinism is, after all, the only voter worth while; and as he confers economic mastery on it by his ballot, there is nothing in the rise of a labor premier to be afraid of. Especially when such a premier is in favor of tory measures to relieve unemployment and is only representative of the left-wing of liberalism, owing his ascendancy to its trades and dickers.

Had Ramsay McDonald been a Bolshevist, projected into power as a result of social breakdown, his reception might have been different.. But as a creature of compromise, as a sort of coalition victor, a labor marionette, consulting with and fawning upon royalty, and acting in the interests of British imperialism primarily, what is there for the capitalists to fear in him? On the contrary, they can charge their own failures to Ramsay McDonald's alleged proletarianism and so give the cause of the workers another black eye, as they did in the similar case of Frederick Ebert before him.

Contrary to the capitalists, some workers see in the rise of Ramsay McDonald a recognition of the growing ascendancy of the proletariat. They believe Ramsay McDonald's election a great advance for the workers, reflective of its increasing strength. With English trades unionism at its weakest and the British army of unemployed at its highest mark, where is the basis for such belief? Is there increased strength in a weakened unionism and adverse economic conditions?

Evidently, history is repeating itself. Germany has taught capitalism the preservative value of political socialism of the moderate school—and Ramsay McDonald's political socialism is ultra-moderate, being essentially of the Fabian middle-class bureaucratic type, with its pronounced capitalist-liberal tendencies.

# Wilson

ELECTED to keep us out of war, he betrayed the confidence reposed in him.

Urging a "war for democracy," he later stated that that war was an economic and commercial war.

Espousing the new freedom, he fastened conscription, espionage, militarism, in a word, oppression, on this country, in the interests of the very capitalists against whom his creed was directed.

Posing as the world's idealist and liberator, he supported a league of extermination that persecuted proletarian internationalism, outlawed Russia and Germany, and promoted the most reactionary imperialism possible, namely, that of international capitalism.

Touring this country seeking vindication for his traitorous policies, the workers' heckling unnerved him, paralysis struck him down, and the electorate whom he once betrayed, subsequently repudiated him and relegated him to the obscurity from which Death has made it possible for him to temporarily emerge.

Dead, who among intelligent workers will think of Wilson if not to despise him?

A man who had the greatest of greatness thrust upon him, though most presumptuous he proved least equal to the opportunity.

His one virtue was his idealism, which his weaknesses always caused him to betray.

Wilson—forget him! There's great work ahead!

# Teapot Dome!

IN last month's Industrial Pioneer, in the article, "The Lumber Monopoly Exposed," it was shown that this gigantic and most profitable combination of capital was not founded upon superior ability, self-sacrifice, enterprise, or any other similar qualities, but upon bribery and theft; and, above all, upon corrupt corporate control of the machinery of government.

Now comes Teapot Dome, to show how other monopolies are built on precisely the same qualities of crookedness. Here we find the same imperilling of national and social safety for private profit through the corrupt use of corporate funds in high governmental places. Capitalists and governmental officials are all tarred alike.

Teapot Dome is also evidence of the one-hundred-percent patriotism of "our" capitalists and authorities. To pilfer the oil reserves of the nation for profit via corruption—'twas ever thus with the most strenuous flag-wavers and "red" hunters.

From the Roosevelts, Denbys and Daughertys, down to the Sinclairs and Dohenys, Teapot Dome proves once more the superlative scoundrelism of the superlative patriots.

# Is the Business Recession Ended?

THE technological journal, Management and Administration, discussing industrial and trade conditions, expresses the belief that the "period of recession appears to have ended." This will prove welcome news to those wage workers who are beginning to feel the pinch of unemployment. So also will the further statement, "the general upward movement should begin by March at the latest."

Management and Administration further declares "there must either be a recovery or we must proceed along present levels," which illustrates the uncertainty that always attends a business recession. There is no definite prophesy possible, as a result the technological prophet so qualifies his prophecies as to meet alternatives. But even there, he may be wrong, for conditions are just as likely to grow worse instead of better or remain passable. That's a way they have in periods of recession; the optimists to the contrary notwithstanding.

Management and Administration emphasizes the fact that there has already been "a very considerable recession in business." The Federal Reserve Board's index of production in basic industries declined from 146 in October to 144 in November. The index of production in manufacturing industries between the same months fell from 133 to 126. Railway tonnage declined from 126 in October to 125 in November, and then fell to 116 in December. (All these figures are based on the average for 1921 as 100.)

Management and Administration concludes "That there has been a sharp decrease in the quantity of goods produced is apparent, and a further decrease in the production in basic industries is likely. In view of the danger of overproduction which existed during the first half of 1923, however, this decrease is wholesome and may be considered as a necessary correction and adjustment in the industrial mechanism."

### Is There a "Correction"?

But is it a "correction"? The writer has lived through four recessions, depressions, crises, and panics, as they are variously called, and any talk of "correction" seems amusing to him. Each one appears to be worse than the other, creating war and nearly throwing civilization into the scrap heap, as a climax. Yes, it's "some correction" that the industrial mechanism undergoes. It reminds us of the lady who is certain that her latest operation is the last and the best of the half-dozen or more that she has already undergone, with worse results to herself each time. There's no lack of optimism, but the evidence is wanting.

Take Leland Olds, industrial editor, Federated Press, for instance. Contrast his views with those of Management and Administration. Says he:

"Difficult times ahead in which business men struggle to force business to hold its own is our forecast for 1924. Employment with some seasonal variations will gradually decline. Wage reductions will slowly overtake and pass wage increases. The end will be a new regimentation of the American working class in huge semi-skilled mass producing units like Henry Ford's in this country or the great Ruhr industries in Germany.

### "Difficult Times" Ahead

"The difficult times will not necessarily produce a financial crisis except for numerous individual concerns which still maintain their partial independence of the financial dynasty. These will be forced to choose between absorption into the great combines or financial ruin. In the process, labor's standards will be depressed and its independence curtailed.

"This forecast is based upon a review of the following facts:

"(1) The year 1923 has been one of forced business and industrial activity. Full industrial activity has been called forth by an investors' rather than a consumers' demand. The result has been further overdevelopment of the majority of industries similar to that which produces the cutthroat competition preceding the formation of giant trusts in the steel and oil industries.

"(2) Contrary to most forecasts of a year ago the peak of industrial activity was reached in April, since when there has been a very slow but real decline in industrial activity and a growth of unemployment. As a result of our immense gold surplus and the federal reserve banking system the passing of prosperity appears as a gradual fading rather than a crisis.

### Increased Labor Supply

"(3) The steady increase in labor supply resulting from a net immigration of over half a million, coupled with a migration from country to city of at least double that number has raised the number of applicants for industrial jobs until they largely exceed the demand of employers. The steady introduction of labor saving machines and efficiency methods is accelerating this process. Only a successful fight for materially shorter hours can counteract this tendency toward part time and unemployment.

"(4) The improvement in domestic demand for the products of industry has been exaggerated. The real increase in the farmers' purchasing power is nearer $200,000,000 than the $2,000,000,000 commonly described in business propaganda. Labor is not spending such wages as are left after the landlord has made his grab; the lesson of 1920-1921 is still fresh. This is shown by the increase in savings deposits.

"(5) In spite of higher prices the volume of wholesale trade in the New York federal reserve district in November showed a decline over the same month of the previous year. The decline from

October was 24 per cent while the normal decline is only 18 per cent.

"(6) The possible recovery of Europe is no longer recognized as a sure cure. Business men are by no means sure what effect this will have on American industry. The fact that the United States is now a creditor nation coupled with the vast expansion of Europe's productive power may cause Europe to come in not as a market but as a brutal competitor for our own domestic market as well as for the markets of Asia, Africa and South America. Low wages and long hours in Europe are a serious threat to the position of the American worker.

"(7) Business men feel that a period of "difficult times" is coming. They are bending every effort to defer those evil times as far as possible by forcing business to the best of their ability. But the powers that be know that such times must come and welcome the changes which will result. Generally speaking 1925 is looked upon as the probable time when they will arrive.

"(8) This situation was bound to result from the monopolization by a small group of private owners of all that each country produces over and above a bare subsistence for the producers. The surplus is collected by so-called protective tariffs and by excess profits and interest charges which so raise the cost of everything that the products of one group of workers will exchange for an unduly small proportion of the products of other groups of workers. This appears to the farmer and the wage earner as an increase in the cost of living, that is, as an increase in the amount of his labor which he must exchange for the bare essentials of life. If the rights of this small group of private owners to all the surplus could be eliminated the excess productivity of the modern world could be absorbed without creating unemployment, by the establishment of vastly shorter hours or a wider diffusion of comforts, or both."

In the meanwhile, what is there left for the workers to do, but to organize to the utmost, pending the coming of these "difficult times"? How else can they secure "the establishment of vastly shorter hours or a wider diffusion of comforts, or both"? How else can they prevent their own complete dehumanization in the regimentation plans of big capitalism?

Organize, workers! Organize not only in your own defense, but also for your own emancipation! Lose no time! Do it now!

### A SECOND EDEN

By RALPH JOHNSON

Do you wish this world were better?
  Then we'll tell you what to do:
Join the union of the workers,
  Help to oust the greedy few.
Rid your mind of selfish motives;
  Let your thoughts be clean and high;
You can make a second Eden
  Of this world you occupy.

## History and Civics

(Continued from page 8)

teaching profession been wedded to authority and conformity, it possesses no capacity for leadership. Our educators are a species of "domesticated animals"—with the psychology that accompanies these products of agelong submission and dependence. The real hope of education lies rather in the rise to power in the social body of the world's producers: the men and women who are closest to the soil and toil of civilization, the men and women whose enslaved lot makes conformity mean death and revolution mean life: hope lies in the rise of this class to supreme power and with that supremacy the elimination of all classes based on economic domination —the taking of the world's destinies once for all out of the hands of ignorant and cunning gamblers for the stakes of wealth and power for the few at the expense of the many, and the assumption of these powers by those whose very training in struggle has dictated a socially conscious partnership of all producers in the assurance of opportunity and well-being for all.

## Buy the Working Class Press!

The I.W.W. press consists of the following 12 publications in ten different languages:

**Industrialisti** (Finnish), daily, subscription per year $4.50. Address Box 464, Duluth, Minn.

**Industrial Worker,** twice a week, per year, $4.00. Box 1857, Seattle, Wash.

**Industrial Solidarity,** weekly, per year, $2.00.

**Industrial Pioneer,** monthly, per year, $2.00.

**Solidaridad** (Spanish), twice a month, per year, $1.00.

**Golos Truzenika,** (Russian), twice a month, per year, $1.50.

**Bermunkas,** (Hungarian), weekly, per year, $2.

**Il Proletario,** (Italian), weekly, per year $2.00.

**Tie Vapauteen,** (Finnish), monthly, per year, $1.75.

**Industrialen Rabotnik,** (Bulgarian) twice a month, per year, $1.50.

**Jedna Velka Unie,** (Czecho-Slovak), monthly, per year $1.00.

**Industrijalni Radnik,** (Croatian), monthly, per year, $1.75.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# The Battle of Passaic

By JIM DARCY

*"In our hands is placed a power greater than their hoarded gold;*
*Greater than the might of armies magnified a thousand-fold.*
*We can bring to birth the new world from the ashes of the old,*
*For the Union makes us strong."*

**BITTER class war is raging in Passaic, with the martial strains of this famous Wobbly song rising mightily from the throats of 12,000 wool and worsted mill strikers who have risen from the mire of dumb, degrading poverty and are in revolt for higher wages and other demands.**

**With heads of families regarding themselves fortunate if they were making $22.50 a week, and a large number receiving as low as $15.00, it will be seen at once that the strike is a desperate blow for elemental necessities. In spite of living costs constantly going up, wages were cut ten per cent last autumn, and the workers began to organize.**

**In the early part of February the 5,400 workers employed by the Botany Mills came out, and before another week had passed the Garfield Worsted Mill and the Passaic Spinning Company were struck. Shortly after this the Forsten-Huffman Mills spinners joined their striking fellow workers of these other plants, and one week later the Gera Mill workers walked out.**

This kind of solidarity enraged the mill owners, and at the sound of the Wobbly war songs the "bulls saw red." Followed the usual scheme invoked for such situations the bosses ordered the police to use their clubs and smash the life out of this rebellion. A large parade of strikers marched from Passaic through Clifton and Garfield where some of the mills are located. At the Ackerman bridge between the latter two towns they were met by the police who rushed the crowd of men, women and children clubbing indiscriminately.

The parade was a peaceful demonstration, in which there were even baby carriages pushed by mothers. However, the police exist to serve industrial autocracy. In this case their reprehensible service was so vigorous that even a part of the conservative press in near by cities protested editorially.

More important, though, was the electrifying effect this savagery had on the strikers. No longer would they struggle simply against the wage cut. They formulated the following demands and presented them to the mill masters:

1. Ten per cent increase over the old wage scale.
2. Return of money taken from them by wage cut.
3. Time and a half for overtime.
4. A 40-hour week.
5. Decent sanitary working conditions.
6. No discrimination against union workers.
7. Recognition of the Union.

Demonstrations of mass picketing brought new police onslaughts. This time clubs were supplemented by tear-gas bombs in an unsuccessful attempt to disperse the pickets. But when the tactics of police violence reached this disgraceful extreme the World War Veterans came to the strikers' aid, furnishing them with gas masks and steel helmets. Thus are the devices of militarism pressed into service in modern class struggle.

Not only have the police been used against the strikers, in the ways already described, but fire department equipment has been used. Water driven with terrific pressure through fire hose nozzles has been poured on the massed workers. But the flame of revolt against their evil conditions of existence has leaped too high; it is too big and strong, to be extinguished, and only grows more intense after these savage assaults.

There are a number of Wobbly strikers who are doing much to sustain the fighting morale, and to promote the solidarity so essential to victory. In the great textile strike at Lawrence in 1911-12 the I. W. W. succeeded in welding together the workers of many nationalities and putting up a battle that was of worldwide interest. But the workers later forgot the One Big Union and drifted apart, easy prey for their trustified masters.

Mill owners fear that 40,000 silk workers of

Passaic and Paterson may join the strike. Add this large number to those already striking and an industrial contest of great magnitude would be in progress. In the strike it was early seen that old trade lines must be torn down in order to obtain the requisite solidarity. Tactics that have so long been advocated by the I. W. W. were advanced and adopted. The result is that more than 12,000 strikers are making a united stand animated by class consciousness.

Would you witness the misery of the mill slaves? Then come to Passaic's filthy streets lined with decrepit tenements and derelict homes, where the workers pass their lives when not sweating in similarly vitiated factory confines. See the mill strikers parading with a banner, thousands of women and girls in line with the men. They have lifted aloft a banner inscribed with the defiance of revolt. And it is surmounted by a mill girl's shabby hat—the only one she can afford on her niggardly wage, while every millinery shop and department store flaunts its treasures in her face. But she is a worker, and this damnable regime of rich loafers provides that one bummy, old hat is enough for her. And for the rich female parasites, what? Ease, luxury, hats and shoes and

apparel galore. It was like this when the Bourbons fell and when the workers toppled the throne of the tsar.

In Passaic you will see rickety children. Why are they rickcty? Why are they suffered to be mutc, wasting victims of malnutrition—slow starvation? Why are the tired workers so desperately drivcn, so bittcrly rewarded for their labors? Why are silks and wool for a class of leeches while shoddy and remnants and scraps arc the portion of society's useful members?

Again the thunder of iron hoofs rcvcrberates from the cobbles and sidewalks. The mounted police are glorying in their finkified role. The cossacks arc charging to crush rebellion out of these risen helots, to drivc thcm back to their dungeons of drudgery, and their babies back to starvation. Motorcycle cops are speeding, too; rushing into crowds, knocking down the workers, and clubbing their heads.

And the strike goes on, Wobbly battlc hymns ringing louder than this cacophony of suppression. The workers arc struggling for life itself. Truly they have "Nothing to lose but their chains." And though mill owners turn deaf ears to their demands the while these robbers order the violence that is daily and hourly enacted here, that mill girl's hat is on the standard and thousands of marching feet move to the inspiration of that ensign, like the red liberty caps of old that rose to mark the fall of tyrants.

Some time it will start in just this way—the revolution in America—a mill slave's worn, misshapen hat on a banner's top, and on another banner that demand for a greater, finer, happier life epitomized in the demand: "Bread and roses."

Bread! Yes, because we need it for our bellies, and roses and all the good things of life in a real civilization where human rights shall transcend property rights and where we shall be the masters of the machines instead of their slaves. And because we shall dare to challenge the plunderers, making "the thief disgorge his booty." Because in that glorious hour of revolt we shall shatter to fragments the power of capitalism to raise on the ruins of hate and oppression the new commonwealth of love and social justice.

The acts of the police so transgress all customs of human decency that they fear publicity, and they have overturned cars of cameramen, smashing their cameras. To circumvent this device airplanes are circling over Passaic taking pictures, and reporters are using armored cars.

The American Civil Liberties Unions has interested itself in this struggle and is fighting to insure freedom of speech, press and assemblage

**LOOKS TIRED, DOESN'T SHE?**
**The Pace That Kills Is the Textile Mill Pace**

for the workers, while doing other relief work. Among those prominent from this group is Elizabeth Gurley Flynn, whose experience in such struggles has extended over twenty years.

The wages cited at the outset must bring to the reader some visualization of existence pieced out on that niggardly pittance. The workers' lot must be intolerable on such coolie stantards, and it is gratifying to see the New Jersey strikers springing up from their sink of wretchedness. They are putting up a memorable fight and one that merits the heartiest support of the working class. And this support must be financial without delay if a speedy victory is going to be won.

The General Relief Committee of Textile Workers, 743 Main Avenue, Passaic, N. J., is appealing for donations to be used as strike relief, and your prompt aid should be given.

---

Since this article was received there have been thousands of workers added to the already embattled hosts. Continued police ruffianism in the towns where the struck mills are located, and where the strikers held huge demonstrations of mass pickcting, stirred 5,000 dye workers to quit and join the strike.

This brings the number on strikc to more than 16,000, and we have another vindication of the effectiveness of the industrial union idea. If the workers embrace it fully they can win, but if they let their solidarity be broken they are sure to return to the old conditions. Trade unions can not win industrial battles with monopolies.—THE EDITOR.

# Why the I.W.W. will Not Die

By JOHN I. TURNER
(General Secretary-Treasurer of the I. W. W.)

**IT IS easy to keep up courage when there are no troubles and the world looks bright. And if a labor union is progressing without serious opposition, enthusiasm is everywhere to be found. But it is when difficulties confront it that courage and determination are needed. And I doubt that one could suggest anything better to a disheartened member of the I. W. W. than a little study in this organization's history, and an observance of how it has weathered many a stormy period and always came through determined to continue in its good work.**

One of the favorite pastimes of many of its enemies and many of its "friends," too, has been in pronouncing it dead—or nearly dead, and then falling in line for the funeral march. Their "death sentences," however, have not been effective. Somehow the I. W. W. as an organization has escaped the fatal strangling, although a few of its members have been victims of "neck-tie parties" at the hands of the employing class hirelings.

The first serious crisis in the I. W. W. came at the second convention in Chicago in 1906. Its first and only president, a man by the name of Sherman, had been suspected by some of the delegates of not having the interests of the organization at heart. Their suspicions were well founded as the events that followed proved.

### Early Troubles of the I. W. W.

The convention voted to abolish the office of president. Sherman and his gang surrounded themselves with a bunch of Chicago police and when the newly elected General Executive Board went to the General Office of the I. W. W. they were kept out and Sherman and the police held the building by force, and refused to turn over the records of the organization or its treasury of four thousand dollars that Sherman had in the Prairie State Bank. Two of the board members were beaten, and it was quite a while before the I. W. W. got control of the General Office and the funds. But while the fight for the possession of the general office building and the treasury had been going on, more serious troubles were brewing.

The Western Federation of Miners had become a part of the I. W. W., from its beginning, practically. It took in all miners regardless of craft or trade and recognized the class strugggle. This army of courageous fighters, as many a hard-fought miners' strike bears evidence of, was a vital factor in the I. W. W. and supplied much of its fine spirit and strength in its early days.

Now Sherman and his followers had won the support of the W. F. of M. officials, many of whom never had been in sympathy with the I. W. W. but had been forced into the organization by pressure brought to bear upon them from the rank and file of the miners. The controversy with the "Shermanites" gave them an opportunity to win the support of their less enlightened membership in a move to pull away from the I. W. W. In this they succeeded. It was a hard blow to the I. W. W., despite the fact that the more radical element of the miners remained with it instead of following the officials in the secession.

After the withdrawal of the W. F. of M. the socialists deserted the I. W. W. and declared that its end had come. Probably the loss of **their** support was little to worry about; but the moral effect of losing the W. F. of M. was of no little consequence to the new organization.

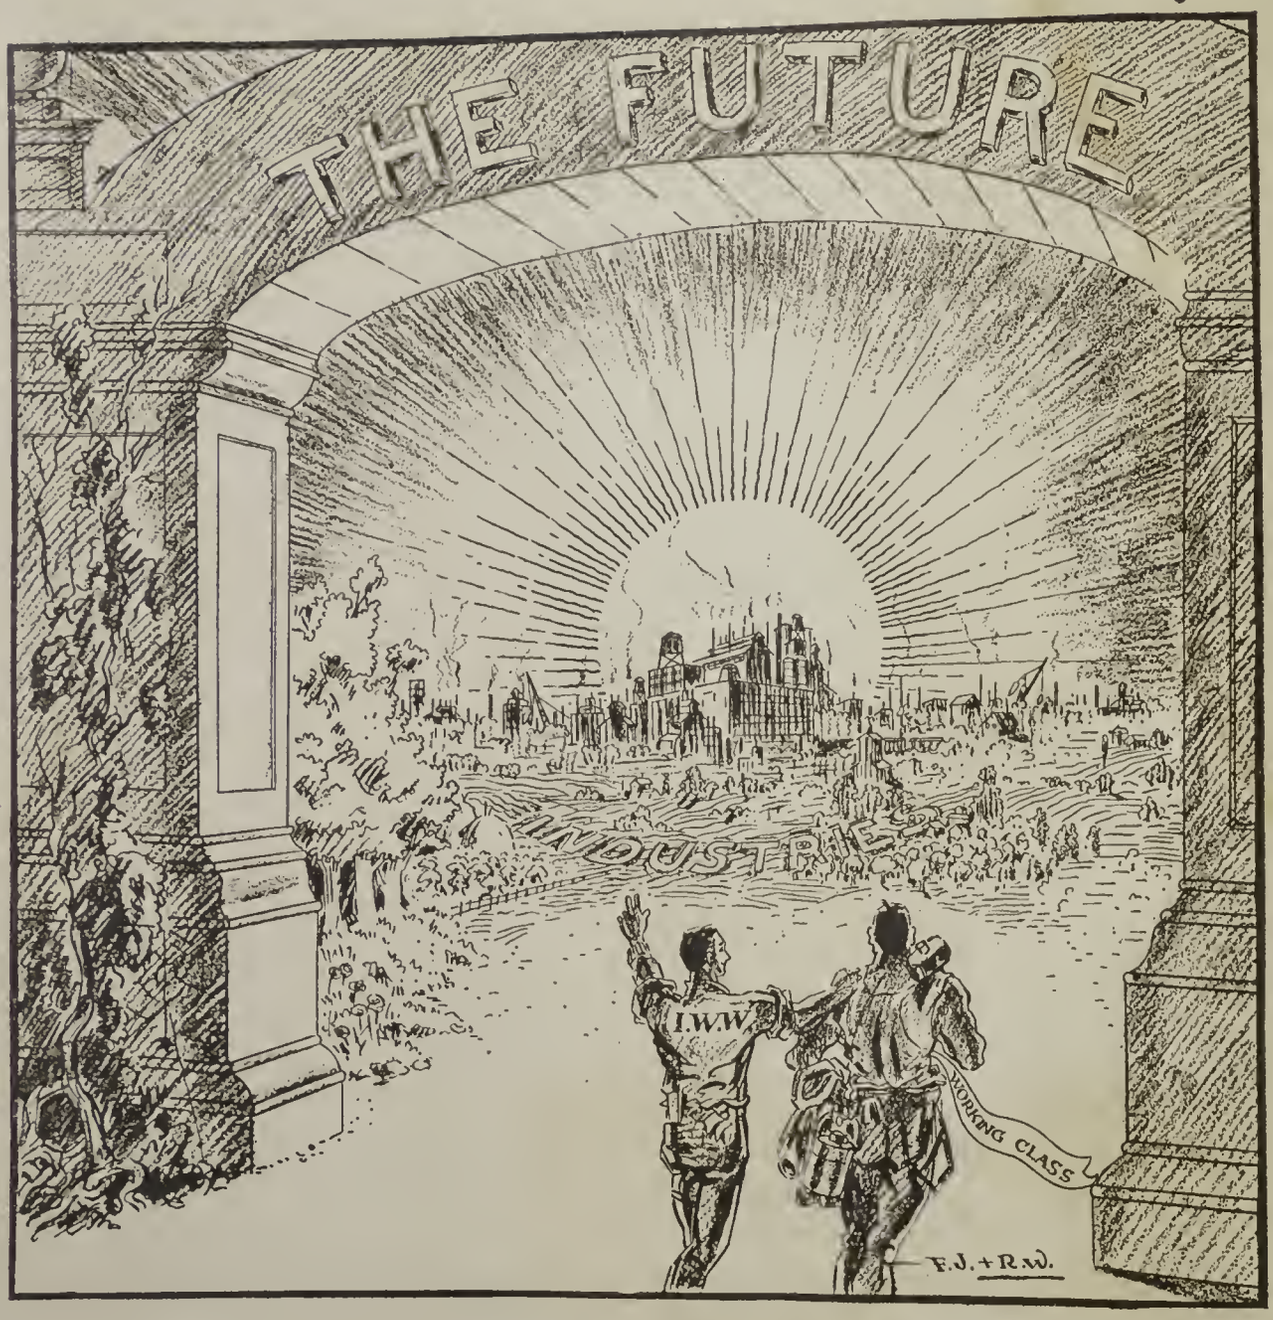
It is surprising to know that in the face of such a calamity the two years that followed witnessed much strike activity on the part of the I. W. W. The days of I. W. W. job control in Goldfield, Nevada, will long be remembered by the miners of the West.

### Fierce Fights Against Bosses

With the fourth convention at Chicago in 1908 came the fight over the "political clause" in the preamble, and it resulted in the elimination of that clause. To set forth as a clear-cut labor organization without the "political wing" was suicide. So said the parliamentarians, high and low.

It seems that the greater disaster that came from this move was to the "pollys" themselves. After they had sounded the death knell of the I. W. W. and were on the eve of an awful setback for the political wing, the "overall brigade," as the parliamentarians had termed their opponents in the fourth convention were preparing for some interesting fights with the employing class.

Two struggles of the year 1909 that stand out were the free speech fight in Spokane, Washington, and the strike of the Pressed Steel Car Company at McKees Rocks, Pennsylvania. Here the I. W. W. strikers drove back the Pennsylvania State Constabulary (commonly called cossacks) after making good their threat to take the life of a cossack for every striker killed by them. This was the first time that these famous strikebreakers had ever been routed by striking workers.



Then in Lawrence, Massachusetts, in 1912, came a walkout of the textile workers of the American Woolen Mills against a decrease in wages. The strike was called a "spontaneous walkout" on the part of the formerly suppressed textile workers. The I. W. W. sent its ablest organizers there and they lined up the strikers for what probably was the greatest strike that the woolen kings of Lawrence had ever had to contend with.

Many strikers were arrested by the police who were only too willing to do the bidding of the employers. Attempts of the strikers to send their children away to friends and sympathizers who had agreed to feed them until the strike was over, were met with police reprisals. Some of the women, mothers of the children, were beaten by the police as they tried to put them on trains to send them away. Three organizers were arrested and charged with the murder of a striking girl who was most likely shot by gunmen of the employers.

Against all this persecution, the strikers, representing many nationalities and speaking many different tongues, stood solid. After about two months of brutal persecution of the strikers the woolen trust gave in and granted large wage increases.

### Trouble With Decentralizers

The year 1913 brought the trouble with the "decentralizers," when it seemed as if these fanatics with their foolish ideas would completely wreck the organization. They did not get control of the convention that year as they had planned to do, but they did much harm with their cries of "Down with autocracy" against every effort of the organization

to establish discipline. They did not believe in discipline. They had a lot of dreams about "freedom." Freedom to them meant for every fool to have the unmolested right to do as he wished to do. How any organization that accepted such ideas could exist at all is something that this element never explained. And the chief cause of their failure to gain control of the I. W. W. at that time rested in their inability to organize themselves to carry on their fight. Men of such ideas cannot organize. They cannot agree on a concerted plan of action. They may be coerced or forced into united action, but they can not enforce discipline among themselves so long as they try to put their ideas into practice. One branch of the organization at Vancouver, British Columbia, started to make their own dues stamps. Others of the same school supported them in their senseless action. And again the I. W. W. for some months had to spend the greater portion of its energy in suppressing these foolish endeavors.

Many of the less patient of the membership became discouraged and quit. The enemies of the organization were sure that they heard the final count. It was a perilous time for the I. W. W. But it did not die.

### A Very Active "Corpse"

An organization drive in the wheat belt in 1915 revealed to the "prophets" the fact that the I. W. W. had not yet become a corpse. This drive aroused new courage and determination and led to one of the greatest strikes that had ever taken place in America. (Probably not the greatest in numbers, but the greatest from the viewpoint of tactics used). That was the strike of the lumber workers of the Northwest in 1917-18.

Following the harvest drive a concerted effort was made to line up the lumber workers for a strike against the long hours and other bad features connected with working in the woods and sawmills.

Organizers of the I. W. W. met with brutal treatment at the hands of lumber trust thugs. The famous beatings of organization members at Beverly Park, a suburb of Everett, Washington, and the murder of five or more organizers that tried to land there off a boat from Seattle, is an example of how the timber barons welcomed the I. W. W. in its attempt to organize the workers of the woods and mills.

But these brutalities did not stop the lumber workers from organizing. The conditions under which they had to work and live were bad. They were out for something better.

A convention of delegates elected by the lumber workers of the I. W. W. met in Spokane, Washington, in March, 1917, and drew up the demands of the workers as they had been instructed to do. The camps were to be made more sanitary. Clean beds, better food and an increase in wages were demanded, and foremost of all, they demanded that the workday be reduced from ten hours to eight.

These demands were presented to the employing lumbermen. Not realizing that the I. W. W. had become so strong in the woods and sawmills, they refused to consider these demands. So the strike came in the following June, and the Northwest lumbering industry was almost completely tied up.

The usual persecutions of strikers were made worse when the public press, loyal to the employers, proclaimed to the public that the strike was called to help the Germans win the war; for this country had then engaged in the fight to "save the world for democracy." Strikers were arrested and beaten. Then came federal indictments against officials and organizers, with long terms in prison for them. And it must not be forgotten that the copper miners of the I. W. W. in Arizona and Montana were striking at the same time. Arrests of strikers and deportations from the strike zone took place in Arizona.

THE I. W. W. HAS ALWAYS OPPOSED TRAGEDIES LIKE THESE; THE BOSSES MAKE THEM

Two months the lumber workers remained out. Then they did one of the most remarkable things that has ever been done by striking workers in the history of the American labor movement. They voted to "transfer the strike to the job." The idea was to slow down production until the employers would have to grant the eight-hour workday. Many thought such tactics could not be put into practice. The boss lumbermen thought so too. But they had not realized how well this "strike on the job" idea had permeated the minds of the lumber workers and how well they had organized and

planned to carry it on. Of course without organization it could not have been a success.

"If we have to stay on the job ten hours, we'll give them much less than we would even in the eight hours that we were asking for," they said. And they made good their promise to themselves. Also, entire crews would often quit and go home, or to the camps, when the eight hours were over. Workers "fired" for so doing went to other jobs to continue the same line of action. Discharged workers could not be replaced by other than organized workers. The strike was a great success.

After a few weeks of this demonstration of united action on the job by the membership of the Lumber Workers' Industrial Union of the I. W. W., the employers gave in and announced through the press that the eight-hour workday would be universal in the Northwest woods and sawmills. The other demands were also complied with and the strike on the job was called off.

### Criminal Syndicalism Laws

But the exploiters of labor never cease to fight organization of their workers. They strike back every way they can. The famous criminal syndicalism laws were enacted as a further means of sending workers to prison. (In Idaho, however, the "C. S." law was passed shortly before the strike started, and no doubt in anticipation of it, as they saw that the lumber workers of that state were organizing into the I. W. W.)

A mob of American Legion men, aroused by the lies and misrepresentations of the I. W. W. in the press, were used by the employers as "cat's paws" to attack the lumber workers in their hall at Centralia, Washington, on Armistice Day, 1919. Naturally they had to defend their lives against this mob. In the fight four of the Legion men were killed. A few hours later one of the defenders who had been arrested and thrown in jail there was taken out under cover of darkness and hanged by the mob of lumber trust lickspittles in a most fiendish manner.

Amidst the reign of terror that followed, as the capitalist press fanned the flames of hatred against the I. W. W., and lumber workers were hunted down, jailed and beaten, the men that defended their lives against the murderous mob were railroaded to prison for life.

It seemed that the organization could not live through this continuous persecution and terroristic tactics on the part of the employers and their hirelings. Many became discouraged, and abandoned the organization. But the I. W. W. lived on.

The spring of 1923 found the timber kings compelled to face another strike of this often killed organization. The strikers demanded the release of men imprisoned for union activity. While these demands were not granted, the strike was a fine example of solidarity and many believe that the men in the penitentiary at Walla Walla, Washington, might have been later released by the I. W. W.

VERY PLAIN LESSON TAUGHT TO THE LUMBER WORKERS BY I. W. W. STICKERS

campaign in their behalf had not the solidarity of the organization been greatly weakened by the traitorous conduct of the ego-maniac James Rowan, and his dupes with their "Emergency Program."

### Internal Foes Fail at Disruption

To gratify a personal grudge he had against officials in the General Office of the I. W. W., Rowan circulated bulletins and letters among the membership in which he stated that the General Secretary-Treasurer had stolen thousands of dollars of the organization's funds and that the General Office was run by gunmen and gangsters. At the convention called to investigate the controversy all these statements were proven to be false, but the turmoil created as the result of Rowan's outrageous lies has forced the organization to spend much time and energy that but for such confusion could have been spent in the education and organization of other workers.

This gang of cut-throats that tied up by a court injunction the funds of the I. W. W., including money for the release of members in prison and for those awaiting trial, have about played themselves out. However, they are still issuing a lying sheet from Portland, Oregon, that they have the nerve to call the "Industrial Unionist." They counterfeit the seal and dues stamps of the I. W. W. and they, this bunch of would-be union wreckers that refused to recognize a convention of delegates elected by the rank and file of the membership to investigate and ascertain the cause of all the

trouble, are still trying to make workers believe they are the I. W. W. And occasionally some uninformed worker is led into their trap and joins them and pays dues to support these enemies of the working class.

Just as the I. W. W. has overcome other disruptive tactics at the hands of its enemies, it is overcoming the admittedly bad effects of the "emergency" stab in the back. The organization has made mistakes and will no doubt make others, as workers have ever done in their struggles with their oppressors. But by their mistakes they learn. And the fact that the I. W. W. has endured these twenty years of attacks from within and from without should serve as an inspiration to every workers to drive him on to greater activity and determination. The idea of industrial unionism as outlined in the preamble of the I. W. W. is an idea born of conditions that have made it inevitable. A knowledge on the part of the toilers in industry of the developments of capital creates an army of workers that forms the nucleus of an ever-growing industrial solidarity. The attempts of its enemies to disrupt and to suppress it add to the determination of the militant membership of the I. W. W. to carry on the fight until the ideals for which they have fought so hard have become a reality.

**In Fighting the Poison of Capitalist Newspaper Propaganda the I. W. W. Press Has Always Played a Leading Part, and Continues to Teach The Truth to the Working Class**

# DRIVING 'EM OUT

SWOOPING DOWN on the brood of vultures comprising the alien I. W. W.'s, the Anarchists and the Socialists, everywhere hatching discontent and misery, the great American Eagle is driving 'em out!

Hard, cruel, destructive, uncompromising and murderous, these brutes in human form are seeking to destroy industry, all that industry creates, and Christian civlization itself.

Pressing their hideous doctrines upon the lowest element, their propaganda leads to chaos and explosive dangers.

They have resolved that the honest laborer must go or become their pawn.

Lacking the power to reason, they are wolfish and vicious.

Without cause they resort to the torch and terrorism, sparing neither life nor property.

The American Eagle, backed by the American Flag, is determined to drive 'em out and keep 'em out!

Refusing to reform and become decent, law-abiding Americans, they have no rights under the American Constitution.

The old Eagle has his eye on 'em and he's going to sweep 'em out.

Every loyal American in every walk of life should help the sturdy beak and talons in the unrelenting fight.

Start to-day!

To-morrow may be too late!

# It Sticks to Your Shoes

By DANIEL TOWER

**The drawing on the opposite page is a reprint of capitalist anti-radical spleen by which we are graphically reminded of the sweet solicitude, on the part of America's owners, for preserving the free speech, press, and assemblage "guarantees" in the sacred Bill of Rights. For a while dormant, there is now a reawakening of the birds of prey, as is powerfully described in this article, the first of several to be contributed by Daniel Tower. Next month there will be another.**

**IS THERE freedom of thought in this country? There is. It gets into your hair and sticks to your shoes like fly-paper.**

**Out in Oregon there is a law which compels all aliens who conduct grocery stores and butcher shops, apartment houses, and amusement emporiums to hang out signs telling their nationality. The motive of those who passed that law, I understand from a man who lately hurried through Oregon, was that all hundred per cent patriots would boycott anybody whose sign showed he was an outlander, and that he would then be constrained to become a loyal American. And during the two years or more that it requires to obtain naturalization papers he and his family would be free to eat grass in summer and go south with the birds in winter.**

Wisconsin is another state notable for broad-minded lawmakers. It cherishes a legislative act providing for the condemnation and confiscation of history textbooks which reflect upon the founders of this republic and their motives in the struggle for independence.

### More Work for Bookleggers

Fisher's "True History of the American Revolution" is one textbook which could be brought into Wisconsin only on a dark night by a booklegger. For in relating how Samuel Adams and other rebels dealt with persons who were not in favor of the revolt against England, Fisher writes:

"Men were ridden and tossed on fence rails; were gagged and bound for days at a time; pelted with stones; fastened in rooms where there was a fire with the chimney stopped on top; advertised as public enemies, so that they would be cut off from all dealing with their neighbors. They had bullets shot into their bedrooms; money or valuable plate extorted to save them from violence. . . . Their houses and ships were burnt; they were compelled to pay the guards who watched them in their houses; and when carted about for the mob to stare at and abuse they were compelled to pay something at every town."

Porter's "History of Suffrage in the United States" is another work which is kept out of Wisconsin by law. Porter says: "Much personal property and even real estate were unceremoniously appropriated by the armed forces of the Revolution, at least under some slight color of legality, although often it was barefaced robbery."

James Oneal's book "The Workers in American History" is a third volume which cannot enter the schools of the great cheese-bearing commonwealth north of Illinois. For Oneal, in recounting the development of the turning against England, says: "Nor did the 'patriots' rely on persuasion alone. The more effective arguments of tar and feathers, physical assault, the boycott and exile were employed against those who regarded the claims of the 'fathers' with suspicion or openly opposed them."

### Kansas Editors Get Excited

Kansas newspapers have started a campaign to keep school children from hearing anything derogatory to the state in which they reside. Geographies used in the schools have been attacked, on the ground that they contain information which conflicts with the slogan which Kansas has spent many thousands of dollars to spread: "Kansas Grows the Best Wheat in the World." The newspapers discovered statements in the school geographies to the effect that Rochester and Minneapolis were the great milling centers of the country, and that the finest wheat growing section was the Red River District in the north. Various editors have demanded that the state textbook commission change the present geographies for others which will speak well of Kansas as a wheat producer.

Mississippi is on the alert for any unexpurgated education which may endanger its young people. The Deer Greek *Pilot* declares editorially: "It is with a great deal of pleasure that we announce to the people of Mississippi that, at last, we have gotten out of our textbooks all matter that reflects on the South in any way and all objecionable matter in reference to the theory of evolution. We believe that we have for use in our agricultural highschools next year the only textbook on biology that does not mention the subject of evolution."

But perhaps the longest step forward in the field of law-making has been taken in the town of Kensott, Arkansas, where the city council, following an extended drought, enacted an ordinance prohibiting all persons within the municipal limits from singing, whistling, humming or otherwise uttering the song, "It Aint A Goin' To Rain No More."

### Mr. Muzzey Believes Too Much

History purifiers have been busy in Washington State, where the Seattle chapter of the Sons of the American Revolution appointed a committee to examine the teaching of history in the public schools. This committee, headed by Harry Denton Moore, condemned Muzzey's history, and asked the school boards and textbook commissions to discontinue using it. The committee declared that Muzzey's book was "not a well balanced economic history. . . . He believes that our mining laws have robbed the people of a great heritage, not knowing that they made possible the development of our mineral resources."

"Pupils are interested in broad, powerful descriptions, vivid and colorful," the Seattle committee goes on. "They should be made acquainted with the facts which lead them to understand that liberty is a priceless jewel; that they should be proud of their country and its representative system of government.

"The field of historical criticism is no place for sixteen year old school children, and it is proper for them to accept the statement of facts made by the signers of the Declaration of Independence, who were living at the time and who pledged their lives and fortunes in its behalf, rather than to embark in a discussion of the justness and propriety of the acts of our forefathers in refusing to longer remain under the authority of the British crown. Muzzey says that the dispute involves a 'debatable question.' What is the object to be attained by impreaching the Declaration of Independence? What matters whether King George the III, or his ministers were mainly responsible for the war or not! What the pupil needs to know is this: The colonists believed themselves to be oppressed and so believing they stood ready to sacrifice all in the cause of freedom."

Concluding, the Seattle book-deodorizing squad states: "We want our children to become red-blooded American Patriots, ready to do and die for the land which gave them birth, to say with Decatur, 'My Country, may she ever be right, but right or wrong, My Country', and to preserve the principles for which our ancestors fought under the blazing sun of Bunker Hill, and left their bloody footprints in the snow at Valley Forge and Princeton."

IT IS TO SECURE THIS SLAVE-DRIVING THAT THE ANTI-RADICAL DRIVES ARE MADE

### Smoked Glasses for Iowa Kids

Officers of the American Legion In Iowa also have been concerned lest the works of Muzzey or other historians assailed by the Sons of the American Revolution get before the eyes of the school children in that state. These historians include Hart, West, McLaughlin, O'Hara, and Ward. One statement by Muzzey which irritated the Iowa Legionaires was this: "The next move of the administration (1812) was an attempt to bribe England and France to bid against each other for our trade."

McLaughlin and Van Tyne are unpopular with the Iowa Legion because in describing conditions at Valley Forge they wrote: "There his (Washington's) soldiers suffered from want, partly because Congress could not get money from the states and partly because unfit men in the Army supply department neglected their work."

West got himself disliked by the Legion because he said in his history that: "Many officers

HE LOVED FREE SPEECH SO WELL HE WOULD HAVE STRANGLED IT WITH HIS EMBRACES

(Revolutionary) were incompetent, self-seeking, and treacherous."

Everett Barnes, who wrote a "Short American History for the Grades" was in bad with the Sons of 1776 because he referred to John Hancock as a smuggler. But Barnes is in right again because he has rewritten his book and now asserts that Hancock was a "sterling patriot."

### New England Gets News Slowly

Under the United States Constitution, which went into effect on the first Wednesday in March, 1789, freedom of worship is guaranteed to the multitude. But as this is written the state of Massachusetts has not heard about the Constitution going into effect. News travels slowly in New England.

Anthony Bimba has just been tried in Brockton, the shoe-town wherein Sacco and Vanzetti were arrested in 1920. Bimba was prosecuted under a 229-year-old state law on a change that he had denied the existence of a God. He was prevented from taking the stand in his own behalf by an old court decision barring an atheist from appearing as a witness. The fact that the defendant had not been proven an unbeliever did not worry the trial judge. Finally he was acquitted of blasphemy and convicted of sedition.

If Thomas R. Marshal had lived, this might be a religious country. I remember the thrill which I got from a news dispatch on October 11, 1921, telling of a speech at Montclair, N. J. by the eminent ex-vice-president. Mr. Marshall declared that every child in the United States should be compelled to attend church. He assailed those persons who interpreted the "freedom of worship" clause in the Constitution as meaning "that they did not have to worship God at all."

Religion is receiving judicial attention in Williamsport, Pa. One reads in an Associated Press account that: "Albert Hart, 41, has his choice of attending the Billy Sunday services every evening for two weeks or serving a jail sentence for assault and battery upon his wife. This sentence was imposed upon him by Alderman G. B. Allen." And in Greensburg, Pa., the crime-wave is flattened out in the same way: "Three youths, pleading guilty to entering a building with intent to commit a felony, were ordered by Dom, J., in the Criminal Court, to attend church and Sunday school regularly during the next two years."

Freedom for coal corporations in Alabama which get their digging done by convicts is assured by word from Birmingham that John George, 84-year-old Confederate veteran, has been put into the state-leased mine at Flat Top, to serve there a six-months' sentence for alleged moonshine operations. Flat Top is a gaseous mine, and John George will be free to breathe all the gas he likes during his stay.

Streets in Passaic, New Jersey, are now kept free form wine, women, and song. The councilmen there don't like music, and when mill striker's went about town singing about wanting more bread and butter the council passed an ordinance on the sixteenth of February prohibiting all persons from singing on the public thoroughfares. This includes "hymns and everything," the authorities have explained.

HOW WILL THIS MUTE TYPE, DENIED FREE SPEECH, REPLY IN THE HOUR OF REBELLION FOR THE SILENCE OF CENTURIES?

# CAPITAL

By HENRY GEORGE WEISS

I'm a poor and ignorant crittur,
  There's no denyin' that;
So will you please, good business men,
  Come tell me where I'm at?
This talk of economics
  Has got me all het up;
I know as much about it
  As the oneriest pup.
They say that Labor can't be used
  Without some Cap—i—tel:
But does that mean the Man or Means?
  Will some one up and tell.

Somehow it seems to me, you know,
  That Cap—i—tel is but
The things we use to produce with;
  —But then I'm such a mutt!
I sorta thot that railroads, mines,
  Looms, woolen mills, and such,
Along with hands, were Cap—i—tel
  That somehow got in "dutch."
The land, my friends, is Cap—i—tel,
  For it produces wheat,
Assisted by the kindly aid
  Of farmers' hands and feet.

The mines, it seems, are Cap—i—tel,
  For they produce the fuel,
Abetted by the laborin' man
  And also the mule.
The fact'ries too are in that class,
  Railroads and 'lectric lights,
And telephones and telegraphs—
  No wonder there is fights!
But what I'm aimin' at my friends,
  And wants to understand,
Is, if the owners went away,
  COULD WE NOT USE THE LAND?

Or if the bosses left the mine
  WOULD WE NOT HAVE THE MINE?
Or shook the railroads, phones and lights,
  WOULD THEY NOT STAY BEHIND?
It seems to me when all is said,
  That all the ginks could take
Would be the frosting, excess coin,
  While WE WOULD HAVE THE CAKE.
The carving then would merely need
  Someone to wield the knife;
Why hell! there'd be a bigger slice
  Of cake for kids and wife!

I'm asking then for god's sake why
  You cover when they say
That if you strike they'll up and take
  Their cap—i—tel away?
Their backs would have to sure be broad
  To lug off mills and trains;
And as for gold—why let that be!—
  The REAL gold still remains.
Sure Mike, we need the cap—i—tel
  For laborers and such,
But don't confuse with capitalists
  Who merely have a clutch

On Cap—i—tel, and in themselves
  Are parasites on it . . .
Why don't you have the guts to rise
  And order them to git?
I'm a poor and ignorant crittur,
  There's no denyin' that,
But I'll bet a nickel 'gainst a dime
  I've got the dope down pat;
And if with all my ignorance
  I ferret out such stuff,
Why don't you working stiffs help me
  To call their rotten bluff?

# SWAN SONG

By FRANK HAGAN

GAYLY flung as a white ribbon on a flower-printed frock of green winds the long valley road, bordered by pastures where dairy cows are grazing. It is springtime. Strong winds are blowing from the hills, big and pure and free. Nature is glorying in her best mood. This the scarlet tanager seems to know as he vies with the blue jay for honors in winged beauty. Bob white and his mate, followed by their newly-hatched covey cross the road in stately file to hide themselves under a hedgerow. Nest-building robins are calling, interrupted by a staccato drumming. The woodpecker is busy high on a pole close by. From waving meadows of tender green, daisies, violets and wild roses lift up their pretty faces and feel the wind's caress.

A little wood stands to the west, labyrinthal in leafy coolness, against the late sun's flaming glory. Seeming loath to quit this lovely scene he drops slowly behind the world's edge showering a farewell gift of gold. It sifts between boughs, blossoms and leaves enriching the earth where shadows have lengthened. This charming peace, with fragrances, murmurs and colors commingles to animate joy of life, or rather a more passive state like some mystic soothing that holds with time no account, but is destined to go on forever.

From such a spell Joe Bates roused himself with an effort, moved his head from the pack on which it had rested, and sat upright. He noticed the nearness of twilight. He must hurry on, so drinking again at the spring in the grove where he had tarried he siezed his pack and took the road. As he swung along soft breczes soughed through elms and beeches like an evening hymn. With action in his limbs day-dreams vanished. He merrily whistled improvised airs that startled the birds along the way, and a squirrel scampered off to eye the boy's figure suspiciously. Joe was happy with youth's unquestioning, undoubting happiness.

Youth! What a fine estate! Before it the vista of promising life. New joys on each horizon's rim; fresh treasures where every rainbow ends. Straight, strong bodies; minds innocent of care, cherishing a plethora of saving illusions. Frothy-sweet is life's cup at the brim, and here youth drinks. The cup is bitter only near its dregs. Age drinks this distillation of reminiscence and regret.

No marvel, then, that men nearing the dregs shrink. No wonder that they would cheat time and turn back the leaves in the book of existence. The fleshless finger beckons inexorably and our folklore is ever freighted with the anodyne witchery of magic pools wherein the aged may bathe to lose their burden of years and emerge virile, beautiful and young. De Leon's folly is writ on history's pages; Faust is immortal to literature because, broken by the weight of thought, ugly with the stigma of time he made his pact with Beelzebub, winning youth at the price of his soul.

Joe was eighteen, erect in posture, sanguine, full of a spirit to win to high places, to make his mark. His ears had been attuned to the words of our wise men, and his heart was light because he believed. It had opened to the inculcation of individual initiative as trustingly as the petals of a fresh jack rose for the dew's kiss. He was an American, thank God! A heritage in itself, to guard jealously, augmenting its treasures as did the good servant the lord's gift of talents. Anyone could multiply this gift in the sweet land of liberty.

Living on a farm all his life and feeling his father's house falling into poverty's deeline the boy saw no indueement for his ambitious nature on the land. The farm was not paying. Each year matters grew worse. A mortgage on his father's broad acres was held by the bank in Hazlewood. Not that his father was either inefficient or lazy. No, he understood the business of farming and was tireless in his labors, but in the pit of the stock exehange gamblers were using him and thousands of his kind for pawns in grain futures. The "baekbone of the middle class" was disintegrating, leaving their land by eompulsion, to go cityward and join the faetory hands.

Joe did not elect to remain with this failing yeomanry, sweating sixteen hours a day in the interests of bankers. If fail the farm must there was the eity, an alluring ehimera, whose siren call has ever gone to far fields, thrilling and irresistible to so many sturdy sons of the soil. To the city — symbol of opportunity — he was bound as we discovered him in the eool grove where he had paused to rest and to queneh his thirst.

It was twenty-seven miles from his sire's mortgaged acres to the nearest eity, a "metropolis" of a hundred thousand population. To Joe it seemed almost the largest plaee in the world on those two visits he had made in ehildhood. He was making the journey on foot because his father had opposed his departure and refused to advanee train fare. Mothers are different. Stealthily she had pressed a few dollars into her boy's hands. But as he would need this sum getting started in Jonesboro he ehose to walk to his Meeea.

Night had marshalled its velvety black forces under the trees by the time that Joe, elimbing up the road to a high point, saw away below the myriad lights of this eity of his dreams gleaming a welcome. The boy halted and drew a long breath. There lay the Promised Land right before his very eyes, tangible, pulsating, the hum of its life rising to him on the still air. It waited, fruitful, to present its benefactions to the "right-minded." And Joe was right-minded. He had just enough imagination and memory and faith to sustain him.

Had not the high priests and the low priests of Ameriean Success taught him, as they had taught millions of his penniless kind, that before the altar of their god one must appear with supreme eonfidence in the up-and-doing eult of making one's pile? Had they not urged assuranees that earthly paradise must be the reward of him who practised good works? That meant first of all willingness to work hard, then determination to prosper, and finally an unfaltering faith in the happy issue of the elect.

The cult had its saints; a railsplitter and a eanal boy had overcome environment and beeome presidents. Newsboys and bootblacks, waiters, elerks and gandy-daneers had risen to millionairedom. Let the lazy seoff, theirs were only loser's eries, the despair of unworthiness. "At the top there is always room!"

Ardently believing, his being suffused with hope, the boy descended from the clean hills, coming presently to a place where the road merged into a blaekened highway, flanked by factories, the stacks on several of them still belching smoke and sparks. He erossed some railroad traeks where a switching engine was energetically at work. Then he pushed on toward the labor market of the eity. That night he slept the sleep of the just, the tired and the lamblike in a eheap lodging-house bed neither so soft nor so elean as his own eot at home elose to the eaves where doves nested.

Aceustomed to rising early, Joe was up at five. "The early bird catches the worm," he thought as he dressed himself.

A few minutes later he was on the street. Very few workers were stirring. The hum of the city had not yet begun. On the eobblestones a milk wagon rumbled and the beats of the horse's hoofs rang out distinetly. The early sky was like lead and a light, ehilling rain was falling. Had Joe known about employment agencies he might have waited a few hours and presented himself for sale on the labor mart. But being ignorant of the ministrations of job sharks he was aware of only one approaeh to the precious job. Straight to the faetories he was going.

But he was very hungry. Into an ill-smelling restaurant he stepped, where he was served with some pancakes the like of which he had never known. They were burned outside and raw beneath. "Quiek Luneh" was right! Washing the eakes down with strongly ehicoried eoffee he paid his bill, and felt equipped for his quest.

Trudging the rain-splashed streets, black with long-aeeumulated filth, he went across the city, over a bridge high above the railroad yards, and past some warehouses and faetories whose doors were still elosed. He had been traveling to the manufacturing district almost instinetively with no sense of diserimination between the motley industries. Then suddenly he remembered Harry Grover. Harry had gone to sehool with him, and he had lived on an adjoining farm. The lad had gone to Jonesboro two years before and found work in a rubber faetory.

This seemed as good a clue as any. He might meet his friend. Joe did not stop to eonsider that there might be several plants manufacturing rubber goods in this eity. He made inquiries. A sleepy-eyed night watehman, just ending his long vigil, informed him that there was a rubber factory about two miles away, straight ahead.

Hurrying on, Joe came to a low-lying marshland that stood between the main body of factories and a few scattered outfits farther on. Signs were stuck in this wasteland advertising real estate values for manufacturing sites. Beyond the

waste the land rose slightly, and as he drew nearer the boy saw a plant of several buildings the largest of which carried an inscription along its entire length: Consolidated Rubber Company.

There it was! He almost broke into a trot so eager was he to reach it. By this time workers were going toward this plant and others around it. Applicants for work at the Consolidated were lined up along a wall on a side street where the employment gate stood closed. For the most part they waited mutely, indisposed by the inclement morning and the spirit of competition from addressing one another. Those nearest the gate felt an advantage, while the others strung out in the line were envious.

Joe took his place at the line's end. Although it was not yet seven he was about Number 79 in the row. A few minutes passed and the watchman opened the gate. Immediately those nearest it began to push forward.

"Cut out that pushin'," yelled the watchman. Yuh can't git in till the boss comes."

Someone timidly asked when the hiring would begin.

" 'Bout seven the boss'll be comin' along," replied the keeper at the gate.

He had but one arm and one side of his face showed scars from a terrible burning. Indeed, the optic on that hapless side was missing. Yet he stood there like the proprietor of a landed estate in the presence of his serfs, and his remaining eye glared at the applicants.

Meanwhile, at the "Employee's Entrance" around the corner workers were swarming into the plant, and the time-clocks were being punched rapidly. Then the whistle blew.

Joe looked at the young man beside him and ventured:

"Wonder if they'll hire many?"

The one so addressed didn't know. Said that for several days he had been coming to this place looking for a job.

"Got a bum place in line this morning. It starts to form right after five."

Here was an "eye-opener" for the country youth. Urban dwelling humans were thought to be still slumbering at such an early hour.

"You ought to get on," Joe encouraged. "You've stuck to it."

"Maybe..... Anyway it's tough to be 'way down at this end today. Looks like they're going to do some hiring....."

"Don't they hire every day?" Joe wanted to know.

The other seeker thought this an odd question.

"Hell, no! Why until yesterday they've been hanging out a sign at six-thirty that no help'll be put on. There's no sign out now and it's after seven, so I figure they'll hire some."

A movement of the line, something tense in the air, halted their conversation. The foreman had appeared to decide their fate.

Contrary to general expectation he did not choose those nearest the gate. Instead he paced the length of the line slowly and then made selections. The chosen ones were told to go inside the gate. Outwardly his choice did not seem to involve much critical inspection, but he did bring his discernment into play, and the company regarded him as an expert in hiring the "right" kind of men. His eyes fell swiftly on Joe. The inventory was almost instantaneously concluded. The boy's lucky star was with him.

"Go inside the gate and wait for me."

Now, Joe did not know that he was chosen because he looked quite strong, which in truth he certainly was. Neither did he understand that his youth stood in his favor. Subsequently he was to learn about this particular factor.

At the moment he went briskly inside the gate, like one of the saved entering the portals of paradise. Faith in success surged warmly through his veins. He was starting where all the national saints of America had started..... at the bottom. He would rise. He would work hard and keep the rules. Promotion would come. Had there been a strong sex urge in the lad he would probably have drifted in blissful wanderings of the mind to the happy land of soon-secured opulence and an early marriage with the boss's beautiful daughter. Tales of this pattern constitute no insignificant portion of the saccharine pabulum given to young Americans, and he errs who thinks that the stories are designed exclusively for bucolic consumption. In large cities and small cities public library shelves are lined with much-thumbed tomes of the Alger variety on whose sustenance lean sons of the tenements prepare themselves for leaner manhood, going it alone, bound to win their way on individual grit.

Joe was given an application blank by the foreman.

"Fill that out tonight and hand it in at the office in the morning," instructed the foreman.

"Yes, sir."

Then through the factory precincts to a department called the gas press room. Joe could have felt no prouder with a D.S.C. than he did at that moment with the application sheet. This questionnaire of his personal history and his opinions seemed like a commission to him. Everything was beginning so well.

Of all the processes contributing to the production of rubber articles in the Consolidated there was none so strenuous, so wearying as the work done in the gas press room. Be it further noted that there were no "snaps" in any of the departments of this neo-Taylorized industrial rapids. Everything was done at high speed and the flood of commodities

rushed swiftly on. "Speed" was the company's slogan. Speed was constantly preached to the workers. Only those conforming to its utmost requirements remained long on the payroll. Speed was exalted as a virtue; it was exacted as a business necessity. The workers were solemnly advised that their prosperity depended on speed. The department managers outdid one another in bringing "efficiency" to the nth degree. The foreman scratched out their hair trying to think up new ways to increase production. Of course the word "efficiency" was always used, but in ninety-nine cases out of a hundred when bosses talk about industrial efficiency they are thinking in terms of rushing their employees a bit faster. This pervading motive was felt throughout, and the general superintendent of the Consolidated even dreamed about speed.

Thus Joe Bates fell into this maelstrom of the speed obsession where it whirled fastest. The gas press room was fairly dizzy with speed. It was one continual round of rapid motion, with only a single break during the day. At noon a period of fifteen minutes was set apart for lunch. The plant operated on a ten-hour basis.

There were no lost motions in the gas press room. The work was so arranged that every effort counted, and to waste any movement was equivalent to getting behind in one's work, with no opportunity of again catching up.

Joe's first impression of the room in which he was fated to spend so many long hours, was that it was uncomfortably hot. Along one side were ranged a number of presses, near the windows. These presses were operated by a hydraulic system controlled by turning valves.

The first day was comparatively easy. Joe was given a box on which to sit before another larger box containing cigarette holders that had not yet been through the vulcanizing process of the presses. They were rather rough and in their heated state adhered to each other. Joe separated them into individual pieces.

"This is only for today," the foreman told him. "Tomorrow you'll go on a press, so keep your eyes open on how it's done."

"Yes, sir," he replied promptly.

Thereafter he quite mechanically broke the soft stems apart, his eyes on the nearest pressman. This worker was about twenty-five years old, very active, working, in common with all the pressmen, with the precision of a good machine, speedy, rhythmic, true.

That night Joe filled out the application sheet in the lodging house, and being a novice in the industrial scheme he had no difficulty in giving accurate answers. He did not feel, as so many workers feel, resentment at the probing character of the sheet. It even wanted to know his mother's maiden name! Joe had worked only on a farm and had never belonged to a union. He very truthfully answered the question regarding his opinion of unions that he did not believe in them. Also that he belived it his duty to report any other worker he should see acting at work in any manner injurious to the company's interest. And he meant that, too.

The next morning he handed the application to a clerk in the office, and proceeded to his work place. Here he was stationed beside a pressman and directed to assist him. As soon as Joe had mastered the operations well enough to handle the job he would be given a press.

The first operation was to smear long, wire pins with grease. Then these were run through the length of the rubber stems. The pins were quite hot so that the grease melted on them without the loss of time. Then the stems were placed in metal molds, twelve stems in each separate mold and twelve of these molds. The covers of these molds were almost exactly like the parts into which the rubber was placed. A mold ready for the press weighed forty pounds, and forty **hot** pounds. It was necessary to handle these molds with pads, but with all the care that Joe took to protect his untrained hands they were cruelly burned.

Every fifteen minutes a bell rang and that was a signal to reverse the valves. This opened the gas press. Then he would quickly remove the twelve hot molds, placing them on the metal table where he worked. As soon as the press was cleared he would throw in the other twelve molds ready for the process. A twist of the valves and the press was closed, automatically increasing the heat.

Then he was obliged to open the molds and remove the finished stems, pulling out the greased pins. This procedure was repeated over and over again, forty times a day. The temperature in the room was 120, everything he touched was hot, pins, molds, and the rubber after vulcanizing. The table on which these articles were prepared was heated by gas burning underneath.

For the first few days Joe's job seemed impossible to master. He was driven to the use of every ounce of reserve energy to stand the grind. In one ten-hour shift he was compelled to feed that press and to disgorge it of 38,400 pounds of hot metal! Over 19 tons, not to speak of the other operations, all of which were performed like "chain lightning," as one of the men put it.

At night this strong farm lad, used to hard work and willing to "hit the ball," was exhausted. He could scarcely drag his feet. His muscles ached, and he had hardly sufficient energy to eat. On the second day his wrists had begun to swell, and these he had bound. Normally interested in looking about at new scenes he now fought his way, uncaring, into the packed street cars each evening and soon enough, although it seemed an eternity, he would be prostrate on his cot, so tired that sleep came only after hours of anguished wakefulness.

After a few weeks he grew hardened to the

exactions of the treadmill. The man who had chosen him from the line as likely timber had not made a mistake. Joe was good material; he was gritty. He stuck to it. He meant to succeed. Already he had received two letters from home asking him to come back to help with the many tasks that were crowding his parents. But he had cast the die. He intended to make good where he was.

In July his stamina was pushed to the limit. The heat in the press room was terriffic. The place was an inferno at 135 degrees, but the management would not grant a lay-off. The men were forced to keep on with the usual amount of production. By this time Joe's work was considered up to the standard required, and he was paid fifty-two cents an hour.

The hot spell passed at last. September brought relief, and autumn soon enough chilled into winter. And the speeding of the gas press room went on and on. One day was like the next, working to a state of near-exhaustion, pushing almost madly to climb aboard crowded street cars. Packed into their foul-smelling confines or hanging on at the platforms and steps. Sardines are arranged into cans in order; human beings in nearly all American cities during the rush hours are jammed in the transportation "systems" without even a pretense of order, and without the creature comfort accorded the lower animals in cattle cars.

Two years of this and Joe was eager for a change. He did not intend to leave his job. No he was still hopeful; he still had a chance to win to better station. But he did want something more than the humdrum, wearying routine, and he fell a victim to marriage.

Another year went by and he was a father. The little family lived in a very small cottage on the outskirts of Jonesboro. Life had its gentler hours now for the tired factory slave. But try as he might he could not "get ahead." There was always a lurking fear of a shut-down, or a slackening of the work and the economic hardships this would bring. But the factory ran steadily enough.

Then it came like a flash from clear skies: a notice was posted to the effect that a ten per cent wage reduction was to become general in all departments the following week. There was some talk of unfairness, and some of resistance. Those so convicted, or even suspected, were promptly discharged.

Joe's wife heard the bad news with her heart beating fast. She, too, had bad news. She was pregnant again.

The pay for the following week had ten per cent sliced from it as announced. There was an additional fault in Joe's, a small shortage. He told his foreman and was directed to the office to have it rectified. In the office he stood outside a plate glass partition at the pleasure of the paymaster. This personage then called him inside. While stating his case Joe glanced through the open window at the paymaster's side.

Here was a part of the factory ground he had never seen before. It was a lovely spot. The company had gone other firms one better in providing pretty views faced by office windows. Consolidated Rubber had a lawn which sloped gently to a tiny lake. In the center of this was a little flower-grown island, and on the clear surface of the water swans were gracefully enjoying themselves. In the background rose a high wall entirely covered with ivy.

While the paymaster was figuring, Joe's thoughts went back to the years of his childhood and adolescence. He saw the fleet of white ducks on the pond at home and the sweet memory of the peaceful scene was like an unguent on the raw wound of life. The check matter adjusted, he looked again at the beautiful swans, so white and so cool on this hot June day, and then he went back to the press room.

From that time on he often thought of these swans. In the press room, the stinging sweat over his tortured body, fairly oozing from his course shoes, with the heat around 130, he would seize on the thought of the great, stately white swans so cool and so contented in their silvery lake.

On crowded street cars his mind went back to the swans. At night he began to dream of endless reaches of placid waters mirroring walls of green ivy, and swans everywhere.

Then for the first time he broke a rule of the company and went to that part of the property where he could watch the immaculate birds. He was seen and ordered back to his work and reprimanded, having missed his first "heat," as the fifteen-minute periods were called.

After the wage cut and the news of his wife's second pregnancy ambition seemed to quit his spirit, leaving him a disillusioned factory hand, just one of the millions of industrial slaves that serve the factory system without hope in their hearts, sodden, dispirited, resigned to the compulsion of their places as cogs in the scheme of things.

Day after day the monotony of his driven existence went on, and when he was hottest, weariest, he thought of the swans almost with the fierce yearning of one lost in a desert without water.

The image of that lake and its happy swans became an obsession with Joe. Overwork, marital worries, the devastation of hope's city in his heart were working curious changes in his mind. He began to be late in returning home from the plant. A habit was growing on him which he could not curb no matter how his wife scolded when he was late. Joe was sneaking on the forbidden ground after the shift was over to watch the swans.

July came and just before it sweltered into August the mercury in the gas press room marked 138. One of the men collapsed.

"He's been here too long," the foreman confided to Joe. "They are good for about eight years if they don't start too old. We never hire any over thirty."

And this was Joe's fate. A few more years and he would be too broken to keep up the pace..... He heard the bell, turned the valves, lifted out a dozen hot molds, forty pounds to each; swung up a like number and closed the press. Over and over again, more than 19 tons of hot metal handled by him every day.

The last "heat" came. The blast of the whistle ended his worst day. He punched the clock. Then across the yard to the swans. Over the lake shading maples watched their quiet images in the mirror below. Not a leaf stirred. But the swans were cool. Joe watched them.

Why was he doomed to endless labor in that stifling press room? Because he was a man. He had previously looked on the gliding birds with fondness. But now his head was hurting him. He wanted to plunge into the water, but he checked himself. Then he stood like a statute and reflected. He felt hopeless. He began to hate the swans. The emotion mounted. He began cursing at them, but they paid no heed. He looked about him on the grass for a stone. Back to the yard he ran to find some, and then, with his pockets filled and a missile in each hand he rushed back to the lakeside, hurling the stones as he ran, hurling them at the dignified swans. They glided in fright behind the little island.

Then began a race to hit them. Around and around the lake he ran, and around and around the island the birds swam.

In the office the superintendent was preparing to leave. He came near the windows on the side where the swans had their idyllic home.

"My God! What's up?" he shouted, rushing around to the door to stop this mischief.

"I'm going to kill 'em! I'm going to kill 'em," Joe was screaming, as he dashed around to get better aim at the swans.

The superintendent couldn't catch him. He called for help.

Three foremen, late with their reports, came running up. Together they managed to corner the culprit.

"Why it's Joe who works in the gas press room!" one exclaimed.

Joe was writhing to free himself.

"Are you crazy?" sternly demanded the superintendent. "What do you mean by throwing at those swans?"

"Swans, swans!" he yelled with fresh struggles to get away. "I hate those swans in their nice, cool lake. Hate 'em. Hate 'em!"

His captors realized his condition. They gripped him more firmly.

"Quiet, Joe, go easy," soothed the superintendent. "Get a hold on yourself and act like a man."

"A man!" screamed Joe, his face red and streaming sweat from his great exertions. "What the hell's the good of being a man? Huh?"

Then, resistance going out of his body, he sobbed, "I don't want to be a man. . . . Too hard, too hot. . . . . I want to be a swan!"

They led him away sympathetically, and all the way to the psychopathic ward he kept muttering:

"Beautiful swans, so beautiful..... so cool, so cool..... I want to be a swan. Do you hear me? I said I want to be a swan."

**Recently the business manager has announced that the cost of publishing and mailing this magazine is 16 cents. With bundle orders selling at 12 cents a copy it can readily be seen that the loss is great. With increased circulation the cost per copy for production can be reduced, and in no other way. But while we are striving to build up the circulation the magazine must be made attractive and informative, and this costs money.**

**The will of our membership, expressed in the last General Convention, was that no paid advertising be taken by this magazine, and as nearly all periodicals depend very largely, and often almost entirely, on soliciting such advertising matter, we are at a disadvantage in this respect. The theory among us is that advertisers influence or control publication policies. However, we are not going to discuss the validity of this reasoning. It is sufficient to say that as we can not look elsewhere for the financial support required for the life and effectiveness of this magazine, we must depend squarely on our readers. And that is where we want to get support at all times.**

**No matter how much we dislike the fact it is none the less true that our magazine does not reach a larger number because most of the workers are still moron-minded, and we must build up steadily among those with intelligence to value our publications. You, who support this magazine are showing the way, breaking the trail, in truth, pioneering.**

**We urge that in your branch meetings that you consider the advisability of raising the price of bundle orders to 17 cents and singles to 25 cents a copy. Other labor magazines, that none of us think are anywhere nearly as good as the Pioneer charge 25 cents a copy. Take this matter up without delay and when you have reached your decisions write to the business manager. Let us meet our problems in a reasonable manner, and make provision for the self-sustenance of The Industrial Pioneer.**

JAMES SULLIVAN

# Jawbone Business

By HUBERT LANGEROCK

WE WERE on a railroad construction job on the desert. Torn tents, flies, fleas and all the rest of the insect population of an insanitary camp; long hours, alkali dust and poor water. Bathing and washing facilities were absent. On Sundays the men were too tired even to think of washing clothes and it was not long before the stock of entomological specimens in and around the camp increased in geometric ratio. Which is only a polite way of stating that the crew got lousy. Then providence appeared in the shape of a Chinese laundryman, a pioneer in his humble way. Out of some rocks and a few discarded pieces of corrugated iron, he rigged up what, for the location, was a fairly decent laundry establishment. But there was no money in camp and when the crew remained away from his place of business, he went after the trade in person.

"No money, John," came the doleful plea.

"Me savvee jawbone."

Now jawbone is western slang for credit and, on that basis, the celestial business man delivered his bundles and deferred his bills till payday. He had some system, though. He produced a little book and asked his customers to put down, themselves, their name with the amount of their indebtedness.

One practical joker wrote down: Theodore Roosevelt. Others took the hint and, pretty soon Lincoln and Jefferson and Washington and many more historical names were on the Chinaman's ledger.

When the paymaster made camp for the first time, the laundryman was there and produced his book.

"Very distinguished customers, indeed," stated the paymaster, "but how do you expect to collect?"

The Asiatic failed to understand but, with the stoicism of his race, announced:

"No mo' savvee jawbone."

Thus the camp once more became an ideal place for an expert entomologist to carry on his studies in insect lore. It was alive, it fairly moved; men refused to stay, they came and went in a steady stream. Jawbone had ruined the camp.

### Symbolical of Country's Plight

In the course of the last year, I have often thought of this true story. To me it has become almost symbolical of the plight which this country will be facing pretty soon with its huge increase of installment buying and selling.

Last year installment sales amounted to a gross total of five billion dollars, one-twelfth of the national income.

Is this credit business making ready for the working class a terrible day of reckoning? Is jawbone liable to ruin this country as it ruined our camp in the desert?

For the workers, credit buying has, in the past, assumed a character which it would be silly to overlook or forget. In the East, there were credit men selling, especially to immigrants, those "phony" luxuries which, to the newcomers, meant America. The inner truth of the whole matter was that they did not intend to sell at all. No honest attempts were ever made to collect installments, when due. The merchants stood in with the justice courts and, after a few payments, they got back their goods on a writ of replevin and tried the trick on another greenhorn.

### As Viewed By British Employers

Those were small swindlers but there also were and still are more respectable fakers. In the sale of houses on the installment plan, in the sale of industrial insurance, the bulk of the profits do not come through a completed sale but through what are called lapses which means the inability of the buyer to live up to his contract with the resulting loss of all his previous payments.

Some real estate men have sold a cottage ten times and they still have it in their possession. The friendly judge always forecloses the deal as soon as illness or unemployment or any other of the economic upheavals of a speculative age cut off the worker's income and the more the buyers lost their payments the louder the kept press kept on shrieking: "Own your home, it is just as easy to buy a home as to pay rent."

And, in spite of these lessons, during the last two or three years, installment buying assumed such a huge volume as to become a characteristic feature of American life.

A commission of the Federation of British Industries recently visited the U. S. and, in its report, it pointed out how the post-war depression had been largely overcome, on this side of the Atlantic, by trusting the people, extending liberal credit and financing installment purchases.

In the February Atlantic Monthly, Mr. Pond, whose splendid studies on the evils of standardization form such a vivid contribution to the study of the machine process, that many industrial unionists will readily remember his name and work,

warns us on sound economic grounds, of the undeniable dangers of such a course.

.Installment buying has taken recently such huge proportions that it has made necessary the creation of an entirely new economic mechanism to handle this particular situation.

Open any magazine of bourgeois or middle class appeal and hundreds of opportunities to buy nearly everything under the sun, on credit, with little or nothing down, stare you in the face. The buyer promises to pay so much a month and, quite frequently, signs promissory notes to that effect. The seller cannot afford to wait until the notes become due to get his money. His profits are depending upon the number of times that he turns over his working capital. So, he offers the notes to a bank, but banks refuse to deal in long time paper. Ninety days is generally their limit.

Therefore a new middleman or intermediate concern springs up, the discounting or financial company. It buys the seller's paper and re-discounts it at the bank. For every four dollars which it borrows from the bank it uses generally one dollar of its own.

So numerous have those new concerns become in the last two or three years that they have founded a national association with a present membership of six hundred companies and many eligible corporations not joining.

Their earnings may be surmised from the 1925 figures for automobiles sold on installment credit. A total of $1,020,000,000 of cars was sold and the volume of credit extended on those sales was $1,280,000,000. The difference between the two figures represents the profit of the discounting concerns for the single item of motor cars. The rate of discount of those financing concerns is usually from 2 to 3 p. c. above the going bank rate.

So large have the profits of those new middlemen become that the usual thing has happened. The larger concerns are getting ready to kill the smaller profiteers in order to grab their winnings themselves. Negotiations are being carried on right now as a result of which, automobile manufacturing corporations will become more of a financial institution and discount their own installment notes instead of selling them to a financing company.

How and to what extent does this new economic condition affect the workers?

The success of installment buying is largely due to the false social philosophy which the A. F. of L. has inculcated into the American workers.

### Aping The Middle Class Is Wrong

The crime of the A. F. of L. is not so much its structural inefficiency nor the inner circle of professionals who use the organization to sell out the American workers like cattle in the market of the false social philosophy which it is presenting to the workers of this country, as a social ideal, the desirability of becoming a pale and flabby imitation of the middle class instead of a new and definite social type proudly rising on its own merits and with its own characteristics.

The motto of the middle class is: "We are what we appear to be." So the A. F. of L. craftsman, like the middle class neighbor whom he is aping, feels uncomfortable when the man next door begins to sport something bought on credit and, not to be outdone, he buys the same thing by the same method. Many a working girl, instead of joining a real union to improve her working conditions, tries to achieve a measure of individual success by the ownership of a suitable wardrobe that she can only afford, if at all, on the deferred payment plan.

Any time the worker who is ignorant of the teachings of class-consciousness discounts his future earnings and obligates himself to pay for questionable luxuries, he paralyzes his economic action as a worker and delivers himself into self-imposed peonage. As soon as he goes into debt, gone is also his militancy and his peace of mind and, even, the efficiency as a producer upon which he relies to hold his job.

It is a high price to pay for the questionable privilege of being taken by a few simpletons for a hundred per cent denizen of Main Street.

Elementary economics will teach one the difference between the acquisition of an improved tool on the hire-purchase plan and the buying of luxuries. The improved tool can be paid for out of its own earnings. But the largest volume of installment buying is done in goods which show a high depreciation in a short time and offer no returns whatever to their buyers.

That the resulting situation offers grave dangers for the economic and financial condition of the nation at large is admitted by the leading bankers themselves. They called a special meeting in Chicago last December and adopted certain rules to regulate the installment business, but the competition between credit concerns caused those rules to be disregarded.

The situation is becoming positively dangerous. There are many applications for delays in meeting installments and more broken agreements in which partly paid articles are replevined by the sellers. The National Retail owners and the National Hardware Association have recently become vocal to the extent of asserting that the middle class and the craftsmen who ape it are cutting down on essentials in order to be able to pay for luxuries.

The national officers of the Typographical Union admit the existence of such a condition, as far as their membership is concerned.

### Methods Productive of Panics

There exists only one logical conclusion to such a situation and it is called a panic. The deep-seated cause of a panic is the compulsory under-consumption of the workers whose wage cannot buy back the commodities which they produce, but the immediate cause of a panic is generally the over-expansion of credit created in a frantic effort

to dispose of the mass of commodities which the workers have created but cannot buy back with their wages.

Installment buying may look rather inoffensive when money is easy, but what of it when money becomes tight?

With the huge amount of outstanding debts created by installment buying, a panic would strike the middle class and the craftsmen harder than ever before.

In the past, the proletarian who was able to survive physically the sufferings of a crisis found himself, as soon as conditions began to improve, with the full and untrammeled enjoyment of all what he was able to earn in the shape of wages. Not so the middle class and the craftsmen. They had a local standing, perhaps a partly paid for home, they could get credit and it took them nearly half way in the direction of the next panic before they were able to get clear of the indebtedness contracted to outlive the previous one. That was one of the causes why, in the past, middle class people, real and imitation, hated the hobo so cordially. If a panic strikes in the near future, craftsmen and middle class will have to settle for that average five billion of credit goods besides their subsistance debts before they will be square with the world.

If the recurring economic cycle leads to a panic in the near future, we shall once more witness the growth of a bourgeois reform party. The basis of petty bourgeois reformism is always debt. The reformer is but a would-be capitalist who wants to use political action to get rid of some of his debts. The free silver craze of 1896 was not based upon an even rudimentary undertanding of the theory of bimetallism. Free silver to most of its votaries meant a legal trick to get rid of most of the indebtedness contracted during the panic of 1893.

It needs no demonstration to prove that such a huge mass of credit, as that which is now outstanding, could not be established without a considerable relaxation of the usual credit requirements. A salesman endowed with a modicum of common sense realizes that he need not lie awake at night figuring out how to break what he calls sales resistance. It is much easier and just as safe to take a long chance. In fact, he takes a good many long chances. I am satisfied that the facility of getting goods on credit has created a small army of deliberate swindlers. Easy installment buying has been a contributing factor in the spreading increase in criminality.

Before the installment boom, bad payers, known as "skips," were estimated at 7 per cent of the total of time buyers. In three years their number has almost doubled. It reaches now nearly 14 per cent of the total of sales. Dodging the installment collector is becoming a new sport and the skips have provided the vaudeville actors with a new source of jokes.

### Clever Youth Slips Something Over

Recently, in a large city on the Pacific Coast, a clever young man got wise to the fact that the investigators for the credit houses had adopted the rule to approve all applications for credit entered by people who owned their furniture. So he bought thirteen dollars and fifteen cent's worth of second hand furniture and made application for credit to an even dozen of clothing houses. Each one provided him with a suit of clothes and an overcoat upon the statement of his landlord that he was renting an unfurnished apartment. Then he skipped but he did not leave town. He appeared before the secretary of the Retail Clothing Men's Association, introduced himself as the only genuine 100 per cent skiptracer and was employed at once. The first batch of skips that was handed to him for investigation consisted largely of his own aliases. He was paid five dollars a day to look for himself and fired for inefficiency when he failed to locate himself inside of thirty days.

Skips on automobile sales can not fail to be numerous since the machine itself provides an excellent vehicle to dodge the collector.

The conscious industrial proletarian is no reformer, he is a revolutionist. When class consciousness keeps him from the prevailing craze of installment buying, it saves him dollars and cents and, in another wider sense, endows him with a larger probability of survival generated by the rational husbanding of his energy.

From a social point of outlook, the commodities generally bartered in credit selling fail to appeal to the industrial proletarian as strongly as they do to the middle class and its imitators within the ranks of labor.

### A Word on the Artistic

The craze for flying over the country with such a speed that one has no chance to take a decent look at the landscape, the more or less artistic reproduction of music by mechanical means, the canned jazz of the radio and phonograph fail to captivate the mind of the proletarian to any great extent.

Such devices transform him too much into a passive spectator. The function of art is relaxation from the strain of the productive process in his case and, as he emerges into a definite social type through the teachings and practice of revolutionary industrial unionism, he shall establish his own formulas of art and beauty.

Art to him will become social, it will rest him by providing an outlet for those of his faculties which the machine process leaves dormant. Social art will provide a wholesome emotion in which the proletarian will become an active participant.

The class-conscious proletarian will be of a finer and higher moral type than the would-be bourgeois who likes to show his contempt for a mere pedestrian by deliberately knocking him down with a partly paid for automobile.

# The Lesson of West Virginia

By GEORGE PUTNAM

## Photographs taken in Powell Creek Tent Colony, near Little Coal River in Boone County and Printed here by courtesy of the Federated Press

NOWHERE TO GO

This Little Girl's Father Struck Four Years. Strike Lost. No Food or Money Left. She is Wearing Cast-off Boy's Clothes Sent by Sympathizers

THERE is no country in which industrial development has been so swift and so spectacular as in this sweet land of liberty with reservations. For these reasons the United States offers among its many widely advertised opportunities a really matchless chance for studying class warfare concomitant with unique capitalist expansion. If you were to take an outline map of this country and mark with rings of red the locations of its fiercest industrial battles the blood-mottled relief would be startling.

Over West Virginia's coal fields you could throw a large stain to stand for a regime of company terrorism seldom equaled in the vicious annals of bourgeois bloodshed and abrogation of human rights. Industrial feudalism is not new to coal districts, but is a yoke that uniformly oppresses the miners wherever they have failed to make a united stand in their own interests, or where their fight has met with failure.

In 1921 the whole country was amazed by accounts of thousands of miners mobilizing in Marmot, Kanawha County, West Virginia for the aid of their union fellow workers desperately battling in Mingo County, 65 miles distant, against the operators' reign of terror. On the mountain roads these marching miners were opposed by an army of company gunmen, who used bombs, gas and machine guns. The union men put up a good fight, capturing both machine guns and finks in many skirmishes. Their act was an outstanding exhibition of solidarity with rare courage and military strategy to recommend it.

But even at that time the miners said one fact more than any other explained their inability to win against the bosses. The union railroaders kept hauling scab coal. Solidarity of labor has often been shown by the miners, though its natural gestures have been bound because of the Lewis machine, but solidarity of labor to the sixteen separated railroad unions is meaningless. They do not give each other solidarity and they have been consistently at the service of their masters, no matter what the effect on miners or other groups of workers.

Last month we witnessed another disastrous retreat by the miners of West Virginia, when the U. M. W. of A. international office called off a four-year and two-year strike involving 15,000 workers and their dependents. They had been receiving a semi-monthly relief of $1.50 a person. Now they have been advised to secure what jobs they can.

The strikers have been living in tents and such ramshackle quarters as are shown in the photographs accompanying this account. The scene of the conflict is along the Little and Big Coal rivers, on the Paint and Cabin creeks, and on other tributaries of the Kanawha. The operators evicted the workers from company property long ago, and hardships beggaring description have been endured.

Although it is a fact not obscure even to fakers like John Lewis that aggressiveness is essential to working class victory, and that folded arms would not avail against the guns of company murderers who systematically launched bloody expeditions on the miners' homes and persons, the tactics formerly used in West Virginia were stopped. This weakened the miners. It prevented adequate defense and offense by which to smash the teeth of company thuggery. Kill the militant spirit of a union and its power to achieve working class good is killed. The Lewis act in this matter placed the miners at the mercy of coal company gunmen who were responsible only to law administered by the judicial hirelings of the coal operators.

With regard to the railroad workers: again they failed to come to the miners' assistance continuing throughout to haul the coal mined by scabs. And until there is effected a solidarity between these bodies of workers, miners and railroaders, whose strategic advantage is so great, the operators will have comparatively clear sailing. The lesson of England, where fear of united action by transportation workers to assist the miners caused the powerful British government to subsidize the miners, insuring the the wage level demanded, should be learned in America.

THE KIND OF SHACKS MINERS LIVE IN

Log Cabin Home of Elmer Mitchel, Four-Year Striker. He Has a Wife and Seven Children and No Job

NO COLOR LINE HERE

White and Black Workers Stood Together For Their Common Cause

Dragging out the strike over such long periods, while giving evidence of determination, results disastrously because times of strike are times of great sacrifice and intense suffering for the workers. To subject them to such drains on energy and spirit is unwise as a method of class struggle. The employers can endure protracted conflicts much better as their lives, if not their profits, are secure. Short, powerful strikes recruiting the maximum of solidarity are more effective. Even threatened solidarity often secures demands.

West Virginia conditions steadily worsen. The workers have suffered severely, but their spirit of revolt is not dead. In time it will again blazon oppression's night that marshals under the dark wings of corporate greed, such as United States Steel.

# Editorials

**ANTHRACITE STRIKE FAILURE.** — Examination of the provisions in the agreement accepted by the Lewis machine to end the strike of hard coal miners in Pennsylvania reveals sweeping defeat, the more galling in that it calls upon the miners after the long struggle from September until February dumbly to acquiesce in their own betrayal for a period of five years. That, practically, is what the covenant requires. The whole scheme of treachery suited the operators, and after the usual barrage of newspaper lies and villification, including the works of allied agencies of capitalist misinformation directed to the strikers' undoing, a priest blessed the settlement with encomiums for Lewis at the hand-picked Scranton convention in which the agreement was railroaded upon the workers.

At the outset, to many at any rate, prospects for victory by 158,000 workers in this basic industry seemed very bright. On the miners' side was an inspiring solidarity. The operators made no attempt to run the collieries. Yet defeat was the miners' fate. When unorganized or only partially organized workers lose strikes it is easy to understand their failure. And it is not difficult to grasp the reasons for loss of strikes involving workers untrained to protest and without union resources.

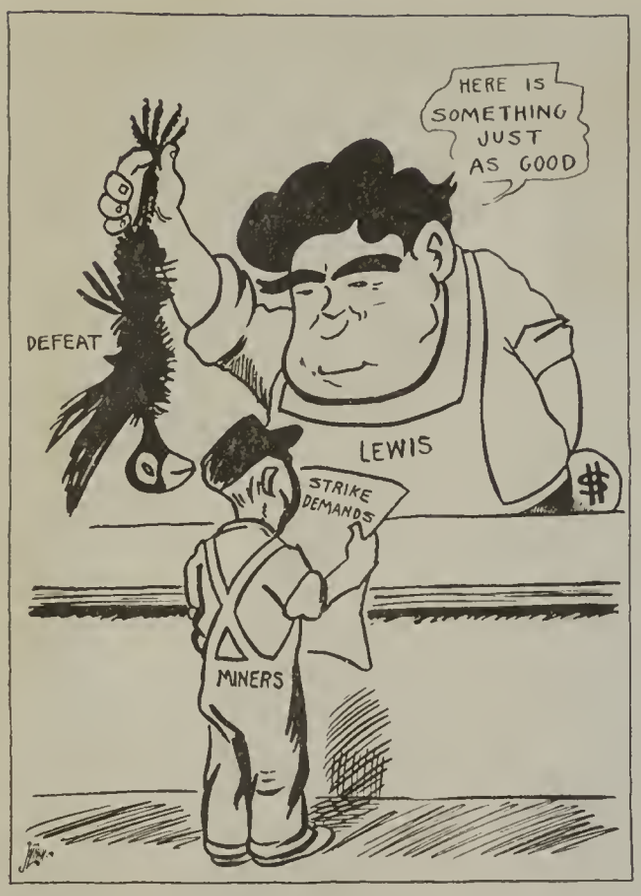
But in the anthracite strike we found an organized body of men possessed of great numerical strength, with a wealth of actual experience in contests against their employers, and backed by a large union treasury. Why then, with so many powerful factors in favor of their chances to triumph, did this host of strategically placed workers lose so completely?

The Hearst publications oracle, Brisbane, comments didactically on the inglorious termination, suggesting that the miners should have employed counsel before pursuing a strike policy. He said that no great corporation embarks on any important course without receiving the expert advice of the most astute legal minds. Let us suppose that an honest, informed, intelligent opinion could have been secured and used for the miners' guidance, what would the counsel have been?

Simply that as trade unionism is obsolete as a weapon against employing class industrial concentration, so, too, district division among mine workers foredooms them to failure when opposing the hegemony of mine operators. To illustrate: when one district of miners strike, or a single branch of the industry, the operators in other districts intensify production to supply the demand for coal. This method is common to all other great industries, and in the 1919 steel strike it was recognized that all plants must be struck so that transfer of orders could not be effected. Were the mine workers grouped in autonomous bodies bounded by districts their tactics, however futile, might be consistent. But they are united in a union embracing hundreds of thousands of members in Canada and the United States with general headquarters.

Their experience has been that strike settlements by districts are disastrous, just as the prosecution of strikes in that manner precludes possibility of victory. Entering the anthracite strike they should have made is as general as their entire membership, and they should have called on transportation workers for support. Fighting in that formation how could they lose?

Instead, a part of the miners strike, the majority continue to dig coal, while transportation workers haul whatever coal is



needed to fill the bosses' orders. The result is never in doubt, and it is a crime against the fine courage of the striking miners to send them before industrially organized operators a regiment or a division at a time.

**ANOTHER DEPORTATION FRENZY.** — Purporting to be engaged in an effort for ridding this country of foreign-born gunmen and other unnaturalized persons occupied with illegal pursuits, the Immigration Office of the Labor Department has instigated a campaign to corral these "undesirables" and deport them to the lands of their birth. Newspapers in a number of cities are taking up the hue and cry, with Chicago in the lead. The paladins of good citizenship, who think that only the gunmen on company payrolls employed for intimidating labor and breaking strikes should be encouraged, are making a noisy pretense that they want to see our fair shores cleansed of gun-toting foreigners who act on their own initiative.

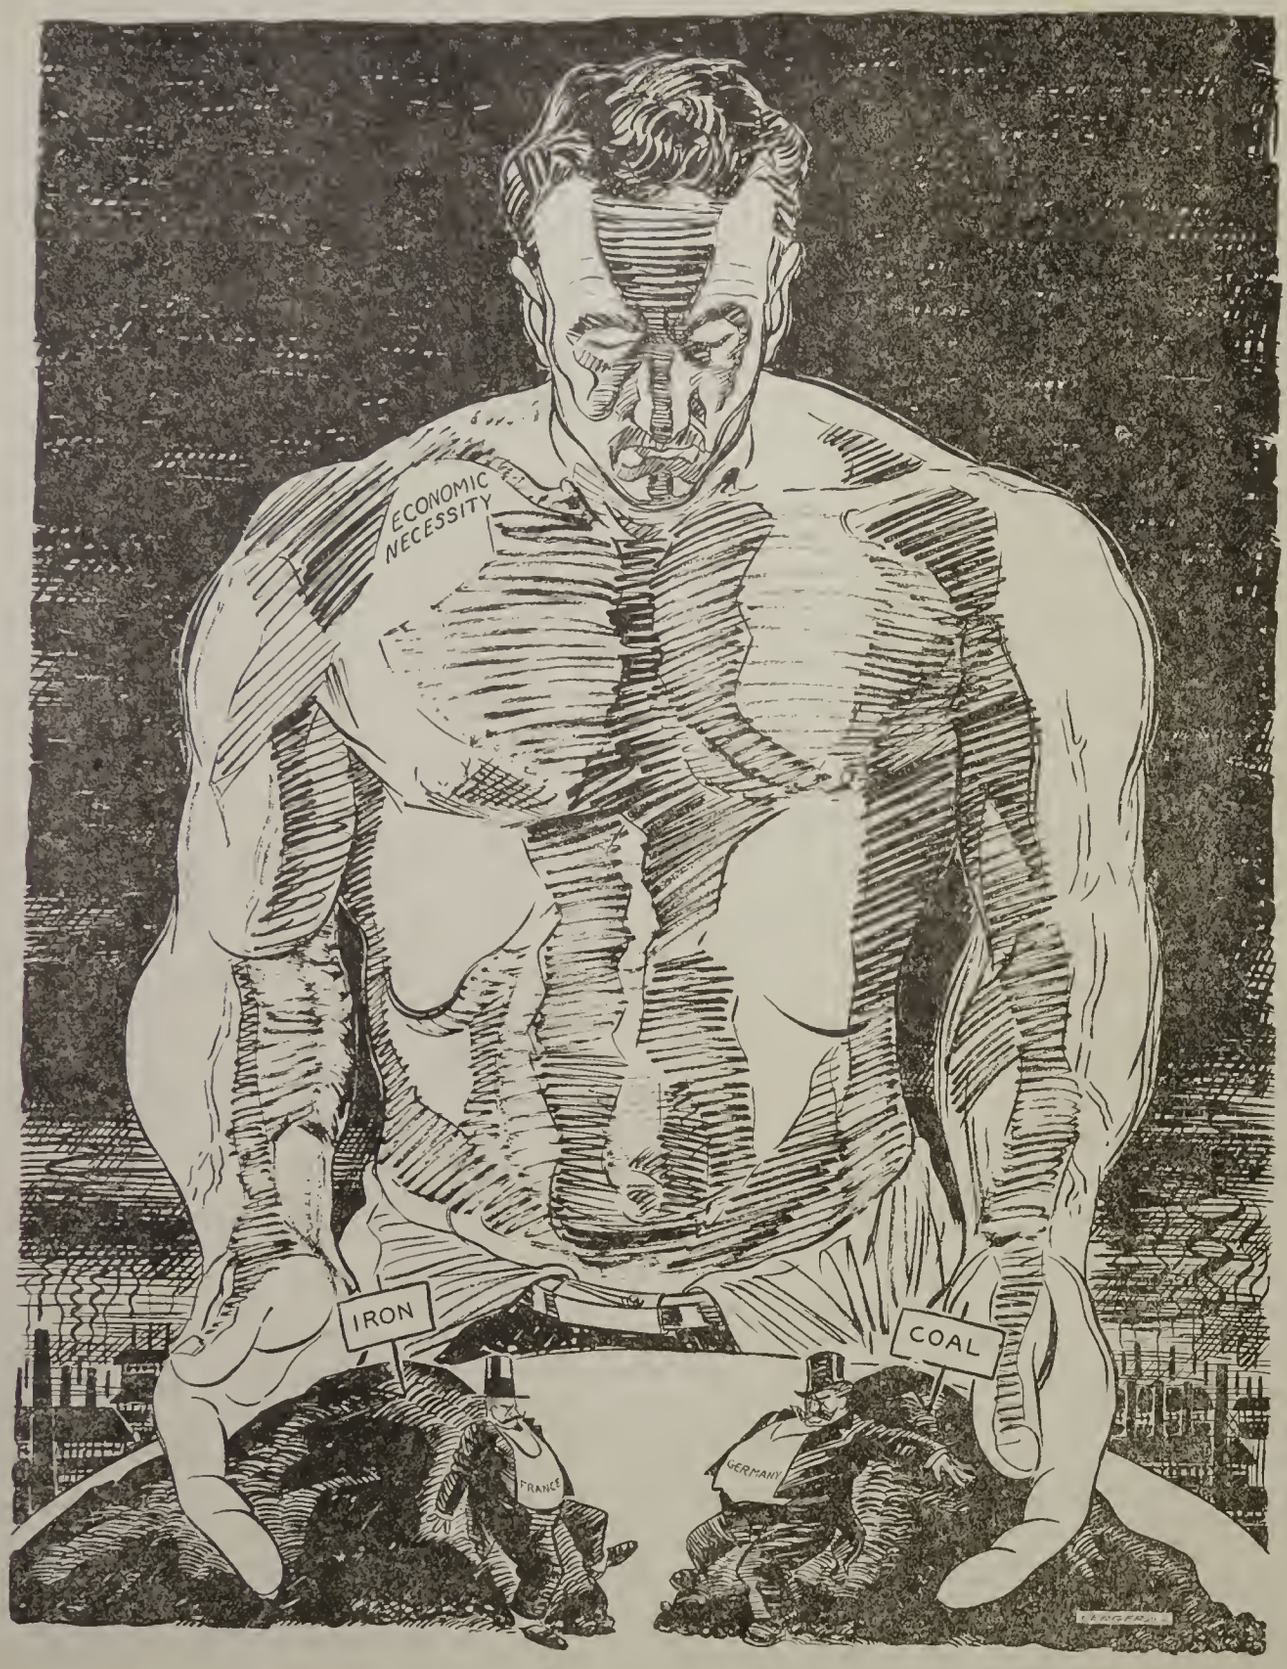
This propaganda is in line with other policies that have been advocated by the president and the Labor Department head, such as finger print registration of all foreign-born. Here is surveillance with a vengeance in the interests of American monopolists. It is a fact that labor organization in steel plants, packing houses, mines and other important industries rests squarely on the problem of unionizing the foreign-born workers. With finger print supervision these workers will be discouraged from organizing because they fear deportation. The press is psychologizing the Scissorbillica so that they will regard all foreign-born workers as dangerous to "the peace and dignity of the state."

All of this activity seems to be paving the way for deportations of radicals on a larger scale than ever before, and a consequent blow at labor organization. The only effective answer to this onslaught is increased industrial unionism. That is what employers fear more than anything else.

**"THEY SHALL NOT PASS."**—This was the grim-lipped oath sworn by the French at Verdun, so we were thrillingly advised during the late unpleasantness abroad. To make good this vow over a hundred thousand French wage slaves, in uniforms of course, lost their lives; to smash that Gallic resistance about four hundred thousand Teutonic wage slaves, likewise in uniform but of another color, were murdered. Half a million fatalities at this particular shambles.

Today the capitalists of both countries pass as they please and are on very fraternal terms in the slight matter of exploiting the working classes of Germany and France. This applies prominently to steel, coal, iron, coke and potash production. Referring to an understanding between German and French monopolists in the latter commodity Monsieur le Cornec, director general of the Societe Commerciale des Potasses d'Alsace reminds his colleagues that:

"One value of the pact must be emphasized. It lies in insurance against labor troubles. If the German potash workers go on strike, there will always be the



French supply to fall back on and thus there can not be a potash shortage."

Here is a plain statement of policy revealing the practicability of business combination on an international basis. It amounts to an industrial unionism of these French and German employers, and the slaves that they are so thoroughly robbing

can not stop the encroachments nor win to a better level of existence unless they adopt the same tactics, industrial organization without respect to geographical cleavages and political boundaries. That must be their reply to those who so confidently expect to use them against each other in times of strikes.

**LUMBER WORKERS' CONFERENCE.** — At Portland, Oregon, on April 1st Lumber Workers' Industrial Union No. 120 goes into conference to consider the problems of organization with which the workers are confronted. It is a fact that through I. W. W. organization, conditions in the woods were made immeasurably better, especially by the 1917 strike.

But many blows have been leveled at the I. W. W. in this industry, among the worst being a vicious blacklist system and the introduction of piece work. Doubtlessly the Portland Conference will seek methods to circumvent the former, and to abolish the latter. In this connection it is opportune again to point out that William R. Langdon, American consul at Antung, China, recently made a report to the United States Commerce Department containing these words: "The enterprise of Pacific Coast lumber manufacturers and cheap water transportation across the Pacific have closed all the 23 sawmills in Antung."

We have heard a lot about coolie labor, haven't we? But here is very eloquent proof that the workers of the Pacific Coast woods are more profitable than Orientals, so much more profitable that the latter can not compete with them.

Several years ago the writer, while making a study of hours of labor in the whole lumber industry, came across complaints from Japanese lumber interests that they were having the greatest difficulty competing with American lumber companies because of the advantage the gyppo system brought to the latter.

It may also be remarked, incidentally, that my investigation of hours worked in the American lumber industry showed positively that in the states where the I. W. W. had effected greatest organization, hours, and all other aspects were better for the workers than in states where the organization had been unable to make much progress. A similar study in any industry will show the same facts: where unionism is strong wages are relatively higher, hours of labor fewer and conditions generally improved over those prevailing where organization is either weak or non-existent.

Therefore, we look hopefully to the deliberations at Portland for tactics which will bring a revival of the great fighting spirit that challenged industrial tyranny in lumbering and forced from the criminal employers so many of the requirements to a higher standard of living for lumber workers. Nothing but I. W. W. organization ever got these workers anything worth while in the years that have passed: only the lack of I. W. W. organization is responsible for bad conditions now prevailing in the camps; and the I. W. W. is the only power big enough and militant enough to bring the lumbering situation to a successful issue for the workers when they recognize the tremendous power of this industrial union weapon. More power to L. W. I. U. No. 120, and to the Portland Conference!

**TELL THEM THE TRUTH.** — Trade unionism's first appearance in the drama of American class warfare aroused the hyena howls of a judiciary groveling at the feet of its masters. Anxious to serve the rising capitalists this slimiest agency of the bourgeoisie branded exponents of the new economic associations of workers conspirators. To unite for the purpose of raising wages or effecting other changes in the conditions of their employment was criminal; the unions were illegal combines, and their members outlaws.

But economic pressure forced the outlaw unionists to persevere. A long struggle followed and defiance against the black-gowned damnation won for the workers the right to organize. However, history has many evidences of reformed outlaws

and in time a degree of respectability was attributed to the erstwhile law-breakers, which contemporary trade union leaders are so eager to preserve that they prostitute themselves in many ways for the gratification of modern employers.

Trade union officials grow hoarse repeating that the aims of their organizations are patriotic; that they are "safe and sane;" that they stand in four-square opposition to "radicalism." During the late war, with nationalistic piety they handed over many an unwelcome "red" member of their ranks to the tender mercies of the secular arm.

Having failed to understand the real meaning of a labor movement confronted by the unfolding of capitalist imperialism they remain isolated from the class conscious hosts of wage slaves throughout the world. And in conflicts against a phalanx of economically united bosses they are predestined to defeat because the use of obsolete methods in these contests is like trying to beat "Big Berthas" and machine guns with cross-bows and flintlocks.

Our business is to propagate the truth among workers, convincing them of their class position in society and of the fact that they have a class mission to accomplish, namely, their self-deliverance from wage slavery. If the labor movement is to advance it can stand for nothing less and one has a narrow vision, indeed, who can compass no more than a living wage just in front of his nose like a bag of oats on the pedlar's broken-down nag. Draft horses, oxen and other beasts of burden are given enough on which to live. The working class, capable of producing all the wealth of this world, and able to create infinitely more when rid of its parasites must surely aspire to finer heights than a modicum of animal comfort, gained only after most unremitting drudgery.

**ON THE RUBBER TRAIL.**—Newspapers of this country have given widespread publicity to complaints against Britain's practical monopoly of the world's rubber market. Eastern Asia's rubber growing area comprises about 4,000,000 acres under British control, with a valuation of approximately £700,000,000. Large automobile manufacturing concerns in the United States, heavily interested in the purchase of rubber, are responsible for the press propaganda.

This becomes easily understandable by their latest plan through which seven lead-

ing industrialists of prominent motors corporations have formed an organization committee to gain control of lands specially suited to rubber production. They anticipate buying up all small organizations outside of British control. The firms with members composing the land-buying nucleus are General Motors, Mack Truck, Nash Motors, Dodge Brothers, Packard and Studebaker. Purchases are to be made of lands in Sumatra, the Philippines and Brazil.

Meanwhile the cost of rubber goods has taken a sharp rise, and the following should be interesting:

> "There is about ten pounds of crude rubber in the average standard tire. The British rubber control has advanced the average price of that crude rubber about fifty cents a pound.

That accounts for a $5 advance in the cost of making a tire. But a thirty-three by six Goodrich balloon tire and tube, which cost $30 before the British advance now costs $54, or an increase to the American buyer of $24. We have found that the Englishman got the $5, but who got the other $19?"—Thus Representative Shallenberger, answering Secretary Hoover's charge that government protected foreign monopolies were the chief offenders in raising crude rubber prices. And he undertakes to answer his own question: "The big tire companies all show the greatest net profits for 1925 of any year in their history. The Fisk Company more than doubled their previous profits; Goodrich netted $15,000,000; Firestone earned 26 per cent." And he adds, "It seems to me that instead of investigating English rubber, we had better get after the American tire manufacturer."

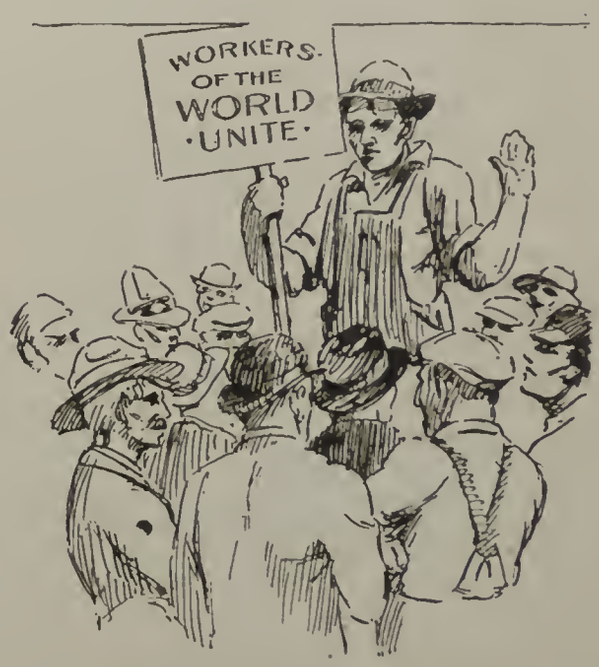
Watching developments of this latest movement of Dollarica business expansion is sure to be an engrossing pastime, and Filipino nationalists should regard it as a blow to their aspirations for political independence. The sinews of industry are binding the islands more firmly to American imperialism.

**NEWSPAPERS AND PASSAIC.**—With all their scheming together the capitalists sometimes let their wires get crossed, and the Passaic situation furnishes us with the sound of jarring notes among the parasites. Mill owners and those who possess the ordinary daily liars are both employers, both beneficiaries of the profit system. As such they should harmonize when workers go on strike, and, of course they almost invariably do so. But their policemen sometimes whack the wrong heads, and then we see bourgeois papers indignant over the matter of police brutality.

The club-invested town clowns of Passaic upset an automobile in which newspaper photographers were riding, breaking their cameras and molesting some of the reporters. This excessive indulgence of the policemen's love of anarchy should have been checked by the textile exploiters. The result was that a number of papers, among them the New York WORLD, commented editorially on police inhumanity, and in the exposure were drawn into depicting what the law was doing to the strikers. By this police indiscretion a very large number of workers were made aware of what was going on in Passaic, where the mill slaves are striking for the right to exist at least as securely as other beasts of burden.

When exploiters fall out workers gain. It reminds one of the Italian censorship. American newspapers generally did not regard Mussolini's drastic methods fit subject for adverse criticism until his machine began to pinch the American newspaper men. Then the papers affected set us a loud wail. Dictatorship was represented as having very objectionable parts.

Likewise, in Passaic it was not so very wrong, in the opinion of the bourgeois rags, for the woolen companies to resort to any means, no matter how outrageous, for suppressing the strike, but the **modus operandi** suddenly assumed villainous proportions when newspaper representatives and newspaper property were attacked. The moral to draw from this is: Buy I. W. W. papers and get the truth about the working class movement all of the time.



LEARN TO SPEAK, TO AGITATE, TO ORGANIZE YOUR FELLOW WORKERS!

# Craft Form Versus The I.W.W.

By J. A. VAN DILMAN

"Bring To Me the Wealth of the World, and I'll Give You Just Enough Wages to Exist on," Says the Capitalist, and the Ignorant, Disorganized Workers Suffer and Die to Obey Him

THE I. W. W. is a revolutionary, international, working class union which avoids confusing issues by recognizing no enemy but the exploiting class; no binding interests but those of toilers united for action by industrial alignment.

Craft form of unionism once effective in enforcing demands on isolated employers is no longer fitted to cope with a master class that swayed neither by prejudice nor sentiment detrimental to its material interests proceeds with infinite care to perfect what its miseducators so assiduously sneer down among us, namely, a one big union of "its" own breed.

Craft organization is to all practical purposes so dead as to stand in need of immediate burial before its rottenness disgusts to the point of revulsion. Witness for instance the spectacle of one great railway brotherhood degenerating into a banking institution and worse; into a direct exploiter of labor so unfair in its tactics as to draw venomous fire in convention from an affiliated body whose rights it trampled in the mire as ruthlessly as any frankly capitalistic master might do.

The history of this conservative form is replete with class collaboration, policies inconsistent with labor's aims, contracts conflicting as well as useless, jurisdictional disputes and outright scabbery to qualify for job control by encouraging confidence not of its membership or of the workers as a whole but of masters whose interests it more than half consciously serves.

In spite of all this or rather "because" of reactionary conservatism, its strength is but fictitious and incapable of withstanding vigorous onslaught when the ungrateful beast it seeks to pamper, turns to rend unit by unit its various battalions. A craft strike is pitiful in that the often heroic resistance of its rank and file usually winds up in compromise detrimental to them by leaders who have much to gain from skilful manipulation of conflicting interests. Its continued existence is permitted only through the ignorance of workers who cannot conceive the existence of a "class struggle" nor their unavoidable position in it. Craft form will have proven, once the final chapter is written, harmful more than useless to Labor's progress, since it not only blinds the latter to its own potential strength but in desperation to survive its day of usefulness strives openly to antagonize workers toward the only method able to combat capital on terms that promise eventual success. In other words it is a pretty toy still retaining in some of its phases a semblance of utility, but one which prevents its users from grasping the powerful bludgeon of revolutionary industrial unionism which bases its hope on solidarity of the workers, opposed to capitalist forces in distinctly drawn battle lines, thus preventing confusion which under craft union guidance throws us into a slavery contemptible because so unnecessary.

Even those blinded by mistaken self-interest should not fail to grasp the significance of a master class hatred vented so openly on the I. W. W. as to disclose its instinctive dread of an organization whose very principles spell doom for the oppressor, and even whose immediate demands are calculated to loosen its grip on the throat of suffering humanity.

It is up to us as workers to lay all prejudice aside that we may more clearly conceive the distinctions between antiquated craft groupings which survive by grace of downright servility and class collaboration and one basing its program on "a struggle that must go on till capitalism shall have been overthrown."

Craft unionism is an obsolete staff that proves but a broken reed in times of industrial stress and a sham which hoodwinks its members by various subterfuges till continued inconsistencies kill final faith in all organizations, good, bad and indifferent. This of course does not apply to rebels who, having clear vision, can not be thus misled; but how many such are there in conservative unions?

Broad study of subjects concerning our welfare as workers, and moral courage to act are vital, nor will cowardly attempts to evade serve other purpose than that of having trouble inevitably thrust upon us "after" we have reached the stage where resistance will be well nigh impossible.

Only full recognition of revolutionary industrial unionism's practical merit, by at least a militant minority, can clear up an issue whose import stands clear and distinct beyond all other "isms" that face a world in throes fated to bring forth freedom or slavery.

Which shall it be? It is up to us, who vainly boast of a red-blooded manhood we have as yet failed to prove, to tear a recent page from British labor history where solidarity so ably expressed its potential strength and—should we still be inclined to hold ourselves intelligent and men, let us live up in deed as well as word to our own implication.

Snap out of it! We cannot stop the tides. Let us learn to swim now for deep waters are ahead where nothing else will save; more especially not the proverbial straw of craft union form that fails utterly of its purpose.

ORGANIZE! Not tomorrow but NOW into the unions of your class.

ORGANIZE industrially along scientifically correct lines.

ORGANIZE your fellow workers and friends for numbers are necessary to power in a working class union and power alone can guarantee consideration from those whose concepts of mercy and justice are but hollow mockeries to lure us deeper into the horrors of wage slavery.

Join the I. W. W. today!

By COVINGTON AMI

The sun is but the tail-end of a monstrous firefly,
The moon is but a big glow-worm acrawlin' 'cross the sky;
The comets they ain't nothin', sir, but gasbags full o' wind,
Just iridescent hotair by the seraph statesmen spinned.

The things they call a planet, an' the things they call a star,
Ain't nothin', sir, but cat's eyes aglowin' fum afar;
The earth's a hollow bubble, just a ghost-skin 'round a hole,
An' full o' creepin' microbes what believes they is a soul.

The whole of all creation is the shadder of a dream,
The mortal conjuration, sir, of things that only seem;
An' it's a fact past doubtin', which can never be gainsaid,
We's never really livin' an' we's never really dead.

# The Political and Economic Aspects of American Agriculture

By SAM MURRAY

**In Addition to Analyzing the Breach Between Workers and Farmers, This Writer Describes the Forces at Work to Take this Broad Smile Off John Farmer's Face**

THIS will be election year. A new congress will be elected this fall. The affair will probably command less interest than a presidential election, or for that matter not as much as a similar event a few years ago, inasmuch as the passing of politics as a determining factor in the affairs of the country is being more and more recognized. Yet, we can expect to be deluged with the usual appeals, entreaties and admonitions to vote for this candidate or that measure, and assured that this is to be the most momentous campaign of history and that the destiny of the race depends on how we vote.

As usual we can expect at least three political groups whether they unite under one flag or separate under the banners of the Progressive, Socialist and Workers' parties again to come out with an appeal for the workers and farmers to come together and elect their candidates, promising all kinds of blessings to be showered from above as soon as the two great branches of the army of industry stand shoulder to shoulder on the political field.

### The I. W. W. Not Against Voting

Although the writer of this article has no present intention of casting his sacred ballot at any one or any thing the coming election he is willing to grant that privilege to the rest of the fellow workers. The I. W. W. has never denied the right of a member to vote as early and often as his conscience may dictate, so long as he feels that his interests can be served in that way. However, as an organization representing the most advanced interests and seeking the most important matter in the way of educational material for the industrial workers, we are interested in the soundness of any proposition that may at any time be put forward by a group purporting to be in the interests of these workers. If there is any common ground where the workers and farmers can get together for the benefit of both we want to know about it. Knowing just what we want ourselves, the main problem is to find out what the farmer wants, whether it is practical to get it for him, and how it will affect us in case he does get it. Also, the chance of securing his support for the things that we want will bear investigation.

### In Spite of Paternalism and Privilege the Farmer Seems to Be Always in a State of Poverty

There is no group in America that has been as much pampered as the farmers. Homestead laws, public experiment stations, free instructions through bulletins and correspondence, public irrigation projects, cheap government loans; in fact, anything and everything in the way of encouraging the individual to set himself up on a small piece of land. Yet the farmer is always being held up to us as a subject of public sympathy. In spite of all this help he seems constantly to be getting himself in deeper and deeper water and laying the foundation for more paternalism, more help and more sympathy.

J. N. Watt, master of the Sacramento County

(California) grange, gave a rather gloomy picture some time ago of the condition of the American former, which, on top of what we have been hearing from some of our prominent spokesmen the last few years, is somewhat startling. Our statesmen and writers for the capitalist press have been resenting anything in the way of comparing the "great and prosperous American farmer" with the peasants of Europe, especially of Russia, and have been leading us to believe that instead of being a poverty-stricken peasant he is a very prosperous, shrewd and intelligent business man.

However, according to the authority mentioned above, the average income of the American farmer for 1924 was $876.00—a sum considerably below the cost of a decent livelihood, while nearly a hundred thousand farms were deserted during the same year. The value of farms shrank fifteen billions in five years. The latter fact is the more serious when we remember that the shrinkage often represented all that the farmer had in his farm, the holder of the mortgage getting the balance. Thirty per cent of the population and 25 per cent of the country's capital is engaged in agriculture, and receives 18 per cent of the total income. These are the facts. As a remedy he proposes that no more land be reclaimed by government aid but wants the government to assist in the matter of marketing, and in general recommends a policy that would mean higher prices for us who have to buy.

### Nothing In Common

In fact, the only remedy that any of the farmers' "friends," from the president down to the curb-stone communist, has to offer is a higher price for the farmers' product. Viewing the matter from the standpoint of a cockroach mind they never seem to suspect that there may be something wrong with the productive end of the game. They never ask themselves why it is that Henry Ford with his flivver getting better and cheaper all the time can pay nearly three times what the average farmer pays, while our loaf of bread and sack of spuds is either constantly going up or shrinking up. Then, too, Henry's bank account is increasing while John Farmer's is usually in the form of a mortgage held by the bank. If Ford were to attempt to build a flivver by the methods of production corresponding to those in vogue on the average small farm, it would cost him five thousand dollars and you would be afraid to ride in it when finished.

The claim that the farmer and wage worker have much in common has generally been accepted by most workers without question. However, these same workers will tell you that they have no desire to secure employment on a farm, and generally crab about the price of farm products. If asked to explain this apparent kink in their logic they try to tell you that the trouble is with the middleman. While it may be true that there is considerable profiteering and waste in the distribution of farm products, it is doubtful if it is any greater than in other lines. Most commodities sell for several times their necessary cost of production, and most farm products are difficult to handle and may suffer considerable loss in transmission.

Although the I. W. W. preamble states that "the working class and the employing class have nothing in common," and the farmer is a member of the employing class this circumstance does not necessarily prevent the worker from taking advantage of the differences that arise between the farmer and other sections of the employing class. Employers benefit by taking advantage of our disagreements so there can be no objection to a farmer-labor party from the standpoint of that principle. If it were true that the farmer is producing as cheaply as could reasonably be expected and that his product is being unduly inflated by the middleman, it might be possible for the farmer and city wage worker to get together and both gain something to their advantage. But the farmer is not producing cheaply and I think the facts will bear me out when I say that the history of farmers' marketing ventures proves that they have had a tendency to inflate rather than reduce the price of their products to the consumer.

### Is the Farmer a Producer?

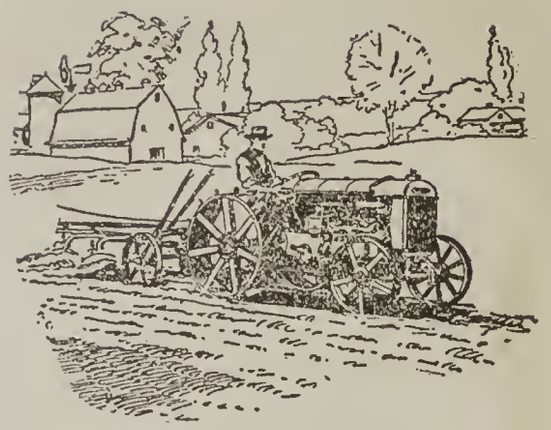
The trouble is that the farmer-labor advocates consider the farmer only in his capacity as a producer and that without any consideration of his ability in that line. The fact is that his place in society is a complex of several functions—employer, food speculator, real estate speculator and least of all, a producer. I think it can truthfully be said that the farmer is far more concerned about raising the price of his product or inflating the value of his farm on the real estate market than in increasing the quantity of his yield or cheapening the process, except where it can be done through a reduction of wages. As a producer he is especially inefficient. Most farms are small and the process of production is carried on in a more or less primitive manner. Most farmers are grossly incompetent. In the directing of operations, in the care of the soil and the breeding and care of stock, farming is both an art and a science capable of almost unlimited development. It is safe to say that two-thirds of the farm land in this country is in the hands of persons no more competent to manage a farm than I am to operate a steamship line. Probably the worst feature of the present farm situation is that due to incompetent farming, the total output is far below what it could be made. This incompetence and inefficiency render low wages and hard conditions a necessary complement to farming on a small scale. As a food speculator he is at war with the whole of society and if successful he only encourages the planting of more crops and in the end wars on himself. As a land speculator he is hopelessly bound up with the real estate shark and whenever he enjoys a short period of prosperity the price of land is forced up so that when-

ever it changes hands it requires more money to swing the deal. This means heavier mortgages and more interest to the bank so that in the next crisis you hear a greater howl than ever about the farmer being robbed, and the same old demand for lower wages, higher prices and helpful legislation to save the "poor farmer" from bankruptcy. It is a question if the American system of individual ownership of small tracts of land that we hear so much bragging about is not inferior, from the standpoint of the farmer himself, to a tenant system similar to that prevailing in some parts of Europe. It would seem that the American farmer, owing to the complex and contradictory character of his several social functions is the victim of a vicious economic circle, so that any action to raise him up will create a reaction that will drag him down again.

I hold that this is the economic law governing the price of farm land: Land is worth that sum of money which if placed on interest would yield an amount equal to the income of the land minus the cost of labor and upkeep. I hold that the small farmer's income can not rise beyond farm laborer's wages plus interest on investment. Since a large part of the interest on investment goes to the money lender while the farmer is compelled to assume all the risk, he would be much better off if land were cheap and wages high. But the individual farmer is so completely tied up in his investment that he is forced to war on both labor's interests and the interests of the farmer class as a whole. But supposing that it were possible permanently to render the farmer prosperous, how would that affect the rest of us?

### A Copper-Riveted Reactionary

Since the farmer is essentially a "petty bourgeois," and the most reactionary type at that, a prosperous farmer class would form a bulwark of reaction that would be a serious stumbling block to all progress. It will be noted that the farmer is always the special pet of the reactionary forces that are constantly trying to narrow our visions and circumscribe them within the bounds of nationalist and provincial bigotry. Between the farmer and the more advanced capitalist interests, the industrial worker should always stand for the latter. As for the middleman: if the farmer succeeded in eliminating him and gaining control of the marketing of his product we would be more than ever at his mercy in his frantic and never ending scramble for higher prices. In fact, there is no other branch of the employing class of which it can more truthfully be said that the working class and they have nothing in common than the farmers. Insofar as the demands of progress are concerned, there is no farmer problem except that of eliminating the small farmer and industrializing the agricultural industry. We have the machinery, but owing to the fact that the land is cut up into small holdings unsuitable to large-scale production it cannot be used. The small farmer is a permanent obstacle



MACHINERY PLAYS AN EVER LARGER PART IN AGRICULTURE

to the progressive development of the industry.

We sometimes hear complaints that the government can find time to grant the railroads a rise in rates, but no time to help the farmer. They forget that the government is run in the interest of progressive industry, and further, the railroads have had their rates regulated downward and the hours of labor as well. If the government would first regulate the price of farm products to that which would render a reasonable return on the investment where agriculture is carried on by the most advanced system of machine production and then establish an eight-hour day it would be more reasonable to ask for aid in a crisis. The farmer has enjoyed absolute immunity from government interference. Child labor laws, eight hours, workmen's compensation. Nothing regulates the farmer. He enjoys special privileges granted to no one else. While workers are sent to the penitentiaries for organizing to raise wages he is aided and encouraged to organize with the deliberate purpose of gouging us with high food prices. The more immunities he enjoys the more he will regard himself as a member of a privileged class, and the less sympathy he will have for labor. About the only time he shows an inclination to be "radical" is when conditions are such that he begins to have visions of himself as a wage slave. It is plain that the workers should never allow themselves to be wheeled into supporting the farmer-labor movement. It is easy to see why craft union leaders have shown an interest in the farmer lately. Since the record of the craft unions for defeat the last few years has been practically one hundred per cent complete, the farmer-labor movement is a splendid crutch for a crippled labor leader.

### The Nemesis

Most of the land in this country was cut up into small tracts before the era of machine production and where large scale farming was sometimes practiced in isolated parts of the West the location was such as to render marketing more or less difficult and rotating and fertilizing impractical, so that it was more profitable to sell small tracts to suckers who would work their families to death to pay in-

**SLIGHTLY SHOPWORN CHRISTIANS**

It is an axiom among radicals that missionaries go to save the heathen from happiness, and to save money for the capitalists who finance the missions. Recent actions of the young men and women of China have abundantly confirmed us in this opinion. But it has not occurred to many that there is a field for investigation among these strange and romantic creatures, the missionaries themselves. I suspect that one would have to have been born among those who feel "called" to "push the heathen to the gate" to understand them as Raymond Weaver, the author of a new novel, "Black Valley," seems to understand his material—the missionary settlement in Kurodani, a small, probably fictitious but probably typical out-of-the-way town in Japan.

Very likely Weaver is really telling his story in the story of Gilson Wilberforce, Japanese born son of a huge missionary man who is a regular wild bull of Bashan for energy, and tactlessness, and a self-sacrificing missionary mother who quite cheerfully lets herself die by inches from a cancer in the breast, and conceals it, until the last stages, for fear that her pain would interfere with the happiness of her very noisy, and very literary husband, or of her clever young son.

For the son apostasizes: He gets too darned Japanese, by growing up among the little Jap kids, and by taking short cuts through the local red-light district, and bandying repartee with the ladies who call to him. He cultivates the acquaintances, also, of Buddhist priests, and Shinto fortunetellers, and it all has a very bad effect on his proper, puritanical outlook on life. Even the proprieties and conventions of New England he disregards, in order to go swimming with the natives in the river.

"For Japan had not begun to cultivate those final flowers of Christian civilization, the smirk and the innuendo; and being genuinely modest, nakedness, as such, was to his Japanese friends casual and uninteresting. This innocence is now being jeopardized however, by national vanity; for Japan is tenderly solicitous of foreign approbation. And Japan may end in being filthy out of a pious endeavor to appear respectable. Until recent years it was a universal native custom to go swimming naked in mixed company; a state of affairs that shocked both Christians and tourists. Some years ago, to preserve international confidence in native decency, there was promulgated from the throne an Edict commanding that every Celestial put on a bathing suit before taking a plunge. The Edict was most literally and wholesomely interpreted. Down to the beach came congregations of Japanese with their kimono sleeves jauntly waving in the breeze. Off came the kimonos, each bronze body stripped and shameless in the sun. They played ball on the beach, napped, gossiped and idled. But immediately before going into the water, each squirmed into a pair of trunks, touchingly obedient to the Edict from the Throne."

However, Gilson clung to the gods of his fathers until he got away from Japan. The author suggests that his unbelief was being prepared, like a photographic plate, but was not developed yet. Mrs. West seems to have developed it. She was the sixty-year-old, shrewish but kindly, and cynical and skeptical old widow he met on the steamer, on his way to America to be educated.

Some idea of the clash between Mrs. West and the missionary ladies can be gained from her conversation with one of them at the breakfast table, two weeks out in the Pacific.

"Isn't prayer wonderful!" says the little missionary lady. "Yes, prayer is very wonderful," loyally asserts Gilson. And the reason is developed under Mrs. West's questioning:

"You were one of the few not seasick last night. You are a good sailor?"

"Oh, no!" pleaded the little woman, "I am not a good sailor. It is the power of prayer. All my friends in China are praying for me, and I haven't been seasick all this trip."

"A shrewd preventive," was Mrs. West's com-

ment. "And your husband and your sister missionaries?"

"Mr. Westbrook has been just awful," the small creature woefully drawled with an earnest wag of her head.

"Weren't his friends praying for him?" Mrs. West continued with malicious curiosity.

"Oh, yes!—But Mr. Westbrook has a weak stomach!"

Gilson returns from his "education" in America, to find the cattish lady missionaries, and wives of missionaries, sitting in groups and rending to tatters the reputation of a good woman of fifty, who has suddenly fallen in love with a sea captain and has come from the field of the Lord in China to marry him in Kurodani. He finds also a pretty young converted Japanese girl, whose father stayed Buddhist, and is mightily angry at her for leaving the parental rooftree. The missionaries hide her away, and Gilson falls in love with her. But the capitalist Caucasian and all his agents are always a caste apart, in the Orient, however much they may preach of the fatherhood of god and the brotherhood of man, so Gilson is only tempted to marry her—he doesn't quite.

He finds also Alurid Wilberforce, his father, panting for him to become a servant of the Lord, and push the heathen to the gate for a while in Kurodani, leaving the old man free to finish his big book, twenty-five volumes already and still going strong, Historia Imperii Japonici. This old man seems to be the regular archtype of a missionary:

" . . . Over six feet in height, the upper reaches of his legs decently extinguished in billows of frock coat, he sent his voice rolling up from the cavernous depths of his giant figure to thunder out through the wilderness of his Assyrian beard. He was not designed for trivialities; though unredeemed Japanese urchins, it is true, had been known to dare —always at a safe distance—to jeer at him as a hairy devil. But Alurid took the flaunt with becoming dignity,, and recalling the Biblical parallel of the naughty little Jews crying 'go up, thou bald head; go up, thou bald head' to the prophet Elisha, he did as Elisha had done; 'he turned back, and looked at them, and cursed them in the name of the Lord'. When in Hebrew he recites appropriate verses from the Twenty-sixth Psalm: 'Judge me, O Lord; for I have walked in mine integrity: therefore I shall not slide.—I have hated the congregation of evildoers; and will not sit with the wicked. Lord, gather not my soul with the sinners, in whose hands is mischief. But as for me, I will walk in mine integrity'."

His opinion of the Japanese he was saving was unflattering to them: "The Japanese fancy themselves highly affronted," he wrote in the tenth chapter of the tenth book of his Historia, "by the endeavour of some who busy themselves to draw the original descent of their nation either from apes, from the lost tribe of Israel, or from the Chinese or other of their neighbours. They claim a birth much higher and nobler, and esteem themselves no less than offspring of their very heathen deities—all of which deserves no credit, and must be entirely rejected as forged and fabulous. The Japanese are, moreover, at a loss what to answer when asked how it came about that Amaterasu O-Mikami, a being endowed with so many excellent and supernatural qualities as they ascribe to her, begot so poor and miserable a race as that of the present inhabitants of Japan."

It will be seen that what with Gilson's backsliding and his matrimonial preferences, and the old lady from China and hers, the author has created a situation in which the air is charged with something more than the Holy Spirit.

When twelve days go by without the fiance of the dear old lady showing up to marry her, and when the Japanese convert begins secretly to meet her lover in the mission garden, the spiritual side gets more possibilities.

Then when the old lady goes for a walk in the garden at night, and find Gilson and the Japanese girl in what would have been a connubial embrace, had they not dispensed with one of the rites of priestcraft, the old dame has a cat-fit. The author does not really tell us whether it is because her maiden modesty is outraged at the sight, or whether she suddenly is made aware of the hopelessness of there ever being anything half so beautiful in her life as this illicit love passage of these two not-quite Christians who find more to please them in the mission garden than the mission church.

So when the captain comes with a perfectly good excuse for being late, he is dumbfounded by being howled at, raged at, accused of philandering, and driven ignominiously from her presence by the bride herself.

The captain does not know any Japanese, has never been in the town, and wanders forlornly about until two of his own Japanese sailors find him and take him straight to the red-light district. Everybody is so nice to him that he thinks he is in some perfectly proper hotel, and proceeds to drown his sorrows in drink. The more he drinks, the more respectable he feels, and when he is made aware of a woman brazenly entering his room he throws her out. After that "the heathen rage" and they and the captain just naturally get to fighting, and a mob gathers, and the missionary settlement is rudely awakened by a Japanese policeman who hammers with his sword on the door and in three or four very crude Anglo-Saxon words of one syllable states just where it is that the captain is, and that he is fighting—will the ladies come and get him out?

It takes the whole mission force to get him away —and that is about all there is to the story. The plot is rather thin, but the yarn is rich in embroidery, in clever little quips at the expense of missionaries, and delightful half-page revealing descrip-

tions of their attitude. I know of nothing better than the spectacle of the drunken captain, barred within his room, the curious crowd of disreputable characters and police watching, and Alurid Wilberforce, (Gilson's father) soundly lecturing them all on their sins. Standing on the steps of the brothel, he felt the urge to speak thuswise to them all:

"These whoremongers! — These adulterers! — These drinkers of damnations!" — Alurid burst forth, as Gilson sat on the lower entrance step, occupied in his haste to get his feet out of his shoes. "These open sepulchres, filthy with concupiscence, and fornication, and uncleanliness, and lasciviousness, and idolatry, and witchcraft, and hatred, and wrath, and strife, and sedition, and treaty-breaking, and drunkenness, and persecution, and blasphemy, and unthankfulness — — "

"Treaty-breakers," ah, that's a significant word in the mouth of a missionary. Trade follows the flag—but the cross precedes them both and prepares the way, the soldier and the missionary are the agents of capitalism, in all of its slave raids into the Orient.

The picture of the missionaries, in spite of individual cases of great heroism and devotion, is that of slave raiders, enslavers, who regard the heathen as so much raw material to be worked on, so many souls to be "saved" and so many bodies to be worked. The best that can be said is that they are just as cruel to each other as to the natives. When Gilson's mother does die (as a matter of fact Mrs. West murders her to relieve her sufferings), the ladies are rather pleased.

"Funerals are such beautiful occasions," * * * "especially the funerals of the saved. For while we're alive so many things do sometimes happen. But once they're dead, then you know they are same." **Card 794514.**

**BLACK VALLEY, By Raymond Weaver, published by The Viking Press, New York. Price, $2.**

**Business Plus The Stars And Stripes**

Scott Nearing and Joseph Freeman have collaborated to produce a study of American territorial acquisition and business expansion that for comprehensiveness and clearness has never been equalled. The following statement uttered by President Taft in his Inaugural Address, March 4, 1909, was "the first avowal of the policy which, under the Taft administration, won the title of 'Dollar Diplomacy' ":

"In the international controveries that are likely to arise in the Orient growing out of the question of the open door and other issues the United States can maintain her interests intact and can secure respect for her just demands. She will not be able to do so, however, if it is understood that she never intends to back up her assertion of right and her defense of interest by anything but mere verbal protest and diplomatic note."

But while the genesis of the phrase "Dollar Diplomacy" dates from 1909, its spirit is much older and Taft was simply reasserting an avowal which governed the State Department especially from the time of the McKinley administration. It means that Big Business—predominately finance capital—in its foreign spheres of investment will be aided in every way by the Government of the United States, including the use of armed force.

The authors review the manifestations of this diplomacy in their various aspects; peaceful economic penetration prosecuted by business houses; economic penetration under government control; economic penetration with political interference—political regulation; armed intervention; acquisition without annexation; acquisition by conquest and then purchase; the evolution of American imperial diplomacy; the Dawes Plan, and so on, with appended copies of the different documents by which the leading acts of this diplomacy have been made classic examples for the technique of the American imperialists.

Here in 353 pages, including the index, is a vast amount of information set down very much to the point and with ample evidence to constitute the volume of damning, irrefutable indictment of this hypocritical government that finds no acts of oppression too inhuman to inflict and no phase of its exploitation and violence not amenable to the noblest of explanations compatible with the largess of benefaction.

Canada is cited, with numerous statistics, as an example of peaceful economic penetration, and the fact is made clear that the United States investments in the Dominion are greatly in excess of those of Great Britain which led there until the World War. Capital introduced into a country which gives it the right to operate is shown by such cases as the Argentine Government permit to Swift and Company to build a dock at La Plata, and of the Cuban Government permit to the United Fruit Company legalizing the company's docks at Sama. But greatest of all is the Bolivian loan which is secured by the Republic's bank, its revenues and the property and revenues of certain Bolivian railroads. A fiscal commission exists to administer the provision of the contract, and the whole financial system with far-reaching political checks is in the hands of Wall Street bankers. Should it become necessary for these bankers to call on the State Department of the United States for assistance in gaining the discharge of the Bolivian obligation this government, by its diplomatic creed, is pledged to use all the power it commands in aid of the financiers.

The book shows how the revolution in Panama was instigated when the Columbian Congress adjourned without giving the United States the land wanted to build the Panama Canal. Panama, under the protection of American warships, and with the direction of the American State Department, was established as a republic, and a strip of land ten

miles wide was ceded to this government. It took fifteen days to accomplish this revolution from the time the warship commander was notified to prevent Columbian troops from landing in Panama until President Roosevelt recognized the minister of the new republic that American statecraft had created.

There are accounts of the Hawaiian Revolution (American manufactured) by which the islands were annexed; of the suppression of the Philippine Republic in the interests of American business and military strategy; of the many devious maneuvers by oil and other American interests in Mexico backed by this Government to the point of military occupation and diplomatic direction of the internal affairs of a supposedly sovereign power; of the Cuban occupation; of marines in Haiti, Santo Domingo, Nicaragua; of the purchase of the Virgin Islands and the oppression endured by the inhabitants under the "free flag of the United States."

In discussing the Dawes Plan the authors explain how the German people are bound over for an indefinite time to their victors who have exacted from generations still unborn economic tribute of a magnitude never before known in history. This is a case of strong powers inflicting heavy penalties on other strong states.

There is an explanation of the Open Door diplomacy by which American capitalists forced their way into Manchuria to set up a "sphere of influence," and then secretly negotiated with other foreign powers to shut the door again on those not yet in the exploiting ring.

The story of Admiral Chester in the Near East is most absorbing. Chester got concessions in the Mosul district (rich in oil and a large number of other resources) and these were later contested by England and France. Together nationals of these governments and of the United States have formed a company to exploit the Near Eastern oil fields. This is the Turkish Petroleum Company. It is interesting, to say the least, to read this remarkable statement issued from the United States Bureau of Naval Intelligence:

"We have extensive interests in the Near East, especially in tobacco and petroleum. Early in 1919 several American destroyers were ordered to Constantinople for duty in the Near East . . . The possible development of the economic resources of this port of the world were very carefully investigated by representatives of American commercial interests. These representatives were given every assistance by the Navy, transportation furnished them to various places, and all information of commercial activities obtained by the naval officers in their frequent trips across the Black Sea given them . . . The Navy not only assists our commercial firms to obtain business, but when business opportunities present themselves, American firms are notified and given full information on the subject. . . One destroyer is kept continually at Samsun, Turkey, to look after the American tobacco interests at that port. . . The American tobacco companies represented there depend practically entirely on the moral effect of having a man-of-war in port to have their tobacco released for shipment."

It will readily be seen how intimate is the connection between American business concerns seeking bargains, loot and expansion in foreign lands, chiefly "backward countries," and the State Department when the vigilant commanders of the Navy are employed not only to act in a police capacity as at Samsun, but as ferrets to find the quarry and give American business "full information on the subject." The American worker seeking an elusive job in the hours of industrial crisis tramps or rides box cars; the American investor questing economic prizes afar receives the proffered hospitality and protection of war vessels, and "full information."

This great work of Messrs. Nearing and Freeman floods with light the machinations of the American Empire, and in this light we are enabled to understand better the cryptic utterance of Admiral Fletcher, of Tampico infamy, that: "Navies are the insurance for the wealth of leisure classes invested abroad."

The authors have shown many presidents up in their true colors, among them being McKinley, Roosevelt, Taft, Wilson, Harding and our own matchless dumbbell, Calvin. Those who still think that the late Princeton prexy was an idealist should be sure to read about his deliberate lies in the interest of American oil kings, and of his very practical switching whenever the big bosses cracked the whip. Wilson often let his love for words lead him astray but he always ended these ruminations when the hard heads of American capitalism called a halt, and by reading this book one is certain to get quite a revealing view of the spell-binder who "kept us out of war"—like hell.

It may be well to bring these remarks to a close by giving you a Hughes quotation which appears in the volume. The former Secretary of State said: "Foreign policies are not built upon abstractions. They are the result of practical conceptions of national interest." This national interest is the interest of the financial monarchs, of predatory powers growing fat and arrogant on the surplus value extracted from wage slaves in America, and they use this surplus further to enslave our fellow workers across the seas. It is our business to organize industrially and put an end forever to this exploitation by putting a summary end to the wage system.

—Robert Grayson.

**DOLLAR DIPLOMACY, Scott Nearing and Joseph Freeman, B. W. Huebsch and the Viking Press, New York. Price, $2.50.**

**Uncle Sam Hangs Out Three Balls**

This is an excellent reference book. It has 421 big pages, packed with "the dope" on the doings of American financial imperialists. There are six pages of bibliography for anybody who wants to dig deeper into the misdeeds of Wall Street. There is an index of tables and lists, another of countries and geographical areas, another of corporations and persons. These are in addition to a very full and descriptive table of contents. When you want to find anything in this book, you can find it.

The material there is worth finding, too. It seems to have been gathered in the true scientific spirit of digging up and exposing the facts to public knowledge, without much regard for public propaganda, and without any extravagant claims to omniscience. Indeed the last sentence in the book is rather charmingly modest, in view of the real value of the revelations; it says: "The information contained in this volume, while not guaranteed, has been obtained from sources which are believed to be reliable and correct."

The first two chapters tell the story, largely with figures, of Uncle Sam's change from the status of a debtor to that of a world-wide creditor. Throughout practically the entire life of the nation, up to 1914, the U. S. A. borrowed money, principally from England. It lent a little to countries still less developed, but on the whole it borrowed—for it was establishing a great industrial plant.

The plant seems to have been pretty well finished and in operation just about the time the great war broke loose in Europe. Probably America would have ceased borrowing money anyway, even without a war, but the needs of European nations, particularly the needs of the allied countries, made the change quick, easy, and spectacular. In 1914 American capitalism was about three billion dollars in debt to Europe; during the war two bililons of this was bought back, and in addition, a billion and a half of private loans were contracted in the U. S. A. by European capitalists or governments and considerably over seven billion dollars was raised by the U. S. government and lent to European governments, mostly in 1918. Remember the "Liberty Loans"? That is where the money went.

Very little of this has been paid back; interest is accumulating on some of it, and more and more has been borrowed since the war. The year 1924, a full decade after the fatal autumn of 1914, saw the biggest peace-time loans of all—$125 million to Japan, $110 million on the Dawes Plan to Germany, $100 million to France to save the franc (after a while the franc backslid from salvation again), $90 million to Canada (to the government), $50 million to the Belgian government, and $40 million to Holland. Since then, there have been other loans, but the figures on which Dunn's book is based do not go much beyond 1924. They do include the prophesy of the New York Times that the loans and investments abroad by the capitalists of the United States (including the government itself) will amount to twelve billion dollars by 1926. Whether the figure has been actually realized or not, we do not know, but probably it was a good guess.

A large section of the book, and the part most useful for reference, probably, consists of material arranged under the names of various countries, all victims of the great American Eagle.

We open at random, and turn up Equador. This is not a very large, nor a very important country; it lies in South America, and it is rather undeveloped, as compared with some other of the states in that continent. But the first sentence under the name catches out interest, it is symbolic of the whole recent process in international finance. "Our investments in Equador are now estimated at $30 million, or six times the figure set by Ingalls in 1920" (and of course there is a footnote giving the reference to Ingalls—there are lots of such footnotes; whoever cares to follow them back to their source will get a wide and liberal education in diplomacy, statistics, banking, foreign and domestic commerce, etc.)

Then, still under the heading, "Equador," we find the names of the particular Wall Street vultures who have begun to feed on the living body of Equador's proletariat. We see at once the Standard Oil Company functioning under two separate names; and two other oil companies of lesser importance in active operation likewise. We find that the South American Development Company mines gold "most of which is exported to this country." (Trust your Uncle Sammy for that!) The S. A. D. C. sent us about a million dollars' worth of gold in 1922. We find just which shipping lines and which railroads are owned by Americans. And proof is given that the electric light and power system, and the street railways of the capital of the nation are likewise owned by Americans. It would indeed be a fair deduction, for one having a knowledge of the ways of American street railways and power companies, to suspect that some of the people in the capital city of Equador are likewise owned by these same American capitalists!

So it goes with all the countries of the world. A very good book to look into when you suddenly find it stated in your Daily Liar that such and such a South American or Asiatic land has forsworn civilization, and is simply begging for stronghearted, hard-fisted American marines to come and keep it from "committing excesses."

The last half of the book is a collection of sample contracts, granting concessions, bankers' loans, and regulating government obligations. These contracts are all interesting, but too long to paraphrase here, or even to give the story of the swindle, the graft, the treason and corruption that accompanied their birth in most cases. Wall

Street seems to have adopted Walpole's most famous principle, "Every man has his price," and added thereto, "When the price is too high, start a revolution." Anyway, they have all the little states of the Caribbean nicely mortgaged with, in most cases, the U. S. government made a partner to the deal, and the Latin-American government told in pretty plain words just when to borrow, when to pay up and how, in what manner to revise its constitution, to avoid having the marines landed. The use of the U. S. Navy as collector of bad debts has extended to Europe, and even Belgium finds that when she borrows money from the bankers of Manhattan, she has to have the blessing of Manhattan's agents in the War, Navy and State Department Building at Washington. Of course when France borrows from Morgan, the U. S. Army is not mentioned. France has an army too.

Dunn's book considers very briefly the future of this sort of thing, but in this relation only, the question of the probable extent of future loans abroad. The possibility of the debtor nations (their capitalist classes) adopting that method of liquidation of debts which was once popular in the Mississippi valley region, by which hot lead is made to take the place of cold cash, is not adequately investigated. Indeed it probably lies outside the proper scope of such a work as this. As we have no room for it here either, except to point out again what all students of history know, which is that France, one of "our" biggest debtors, when she owed Germany a considerable sum of money toward the end of last century seriously debated the question as to whether it was cheaper on the whole to pay or to fight. If she had owed a little more, she would have fought. And Europe now owes the U. S. A. a tremendous sum. It is no accident that as France more and more realizes her obligations to America, anti-American propaganda occupies a greater place in the theatre, in the press, in the utterances of public officials in France.

—Vern Smith.

**AMERICAN FOREIGN INVESTMENTS, by Robert W. Dunn, published by B. W. Huebsch and The Viking Press. Price, $5.**

After a silence of a decade Theodore Dreiser has written a long novel—An American Tragedy. In two volumes of more than 800 pages he follows the progress of a life from childhood poverty to the electric chair. Clyde Griffiths is the son of street evangelists, poor, miserable, tenth-rate, unordained preachers who are ever urging their unfaltering faith in the God who will sustain them. The precocious boy, wiser than his brothers and sisters, wonders why the divine aid is always in the offing, when it is so desperately needed in the existence of the poverty-stricken family.

**A Study of Environment**

At little street meetings, all but deserted, passers-by often pause to wonder at the smudgy fire of faith in the ill-clad group and at the wail of belief the parents raise to meet the strident noises of the city. The boy is ashamed. This is frequently noted by the observers, and they pity him. He frees himself at the first chance from these humiliating, freakish prayer-meetings by going to work. He is first a drug clerk, then a bellboy, in Kansas City and Chicago.

By the time he is twenty he is in Lycurgus, New York, where his father's rich brother owns a large collar and shirt factory. Clyde, after months at a very menial place in the plant, is put at the head of a department, over a group of girls. One attracts him. She responds favorably, and a liaison ensues. Soon, however, he is taken up by a rich girl, introduced to her set, and he wants to forget the factory girl, Roberta. Rich Sondra is lovelier; she moves in a world that to the young man, used to poverty, is enchanting. All might have been arranged well enough, only Roberta becomes pregnant. Clyde tries to have an abortion performed, but he is very "green" and fails. Then he drifts, puts off deciding about the girl, while she is lonely and desperate because her reputation is at stake. She wants him to marry her. Her parents are impoverished farmers, and very religious.

Then he is tempted. He plans her death by drowning. She thinks they are on the way to a place to get married. It is summer, and they row out on a beautiful lake. It is very lonely. He fails at the last moment, losing his nerve. He can not kill her. She sees the strangeness of his eyes mirroring she knows not what terror. She rises to assist him. She stumbles. He strikes out, a camera in his hand. She is struck. Then they are in the water, and Roberta can not swim. Now that the accident is doing for her what he could not go through with, he leaves her to drown, and strikes out for the shore.

He is apprehended, convicted on circumstantial evidence, and the prosecutor fights to kill him because the prosecutor wants to become a judge at the fall elections. Clyde is condemned to die. His mother comes on from the West to try to save him. A frightful year passes in the Auburn death house. A youthful clergyman sympathizes with him, and becomes his friend. This minister and Clyde's mother go to see the governor, who refuses executive clemency.

Dreiser's description of that death house with all its horrors is the most damning denunciation of capital punishment that has ever been penned, and even Hugo's masterful "Last days of a condemned man" seems peurile by comparison. Dreiser tells of the score of condemned Chinamen,

Negroes, Jews, Irishmen, a cultured lawyer and Clyde, victim of circumstances that rode him to his doom. On a night before one of their number is to die the condemned can not eat—"Sometimes it is so bad that even the guards can not eat." At four in the morning curtains in front of the cell doors are drawn. Every victim is awake to die with the one who is pushed beyond the last door and forced into that chair of annihilation. The shuffle of feet follows the screening; then a clergyman's intonations from the psalms. Then the victim calling out, "Good-bye, boys, good luck." The same circuit that shocks life from the doomed also illumines the incandescent lights in the cells. When the lights suddenly dim, and after a minute of indescribable dread, dim again, and then again, someone calls out that all is over, and the "survivors" renew their deadly vigil, dying over and over again.

Clyde suffered in this way for about a year. Some are held for two years. The clergyman thought he had succeeded in converting Clyde, but the boy doesn't really know if he is guilty of murder. He can not repent because he wanted to have nice things, and to be somebody. Contrition is struggled for but he does not feel its comforting power. He is young and wants to live and to be happy. He does not want the credit of eternity, but the cash of here and now. And he must die. The minister thinks he has saved a soul, but when he sees the boy die he wishes that he had done something to save his life.

Toward the last Sondra writes a short note. It is on plain paper, typewritten and unsigned. Her social position and that of her family have been guarded throughout, she being referred to in the trial as Miss X. Clyde feels how futile was his daring plan of destruction. For Sondra he got into the fatal scrape. She was going to marry him. And now at the point of violent death just an unsigned note of sympathy. Already she probably was looking for another prospective, and this time socially respectable, husband. Clyde senses the unfathomable social gulf between the class into which he was born and her class.

Scattered though the many pages are word pictures of rarest beauty. exquisitely charming and compelling. The characters are not mannequins or caricatures. They are real people, living and breathing and loving and hating and idling and working. This vivid artistry more than makes up for the imperfections of construction that rouse the dogs of critical damnation, who with all their ability to parse and to analyze and to castigate are as so many small fry before this literary giant in the labor of creation.

Dreiser sees much, he looks into the hearts of men and women, and he seems sorry for their sorrows and weaknesses. With unforgettable strength and penetration he exposes the inhumanity, the shallowness and callousness, the injustice and barbarity of modern society. His strokes sear the brain with white hot shafts of truth—showing the individual to be destiny's plaything. That is the way he sees life, and as an artist so he represents it.

Beyond that he need not go. The social revolutionary must go beyond. He must be a physician wherever necessary, and a wrecker and builder when the hour of his class strikes, when the wage slaves advance a united cause to upset the regime of plunder. Among other duties and privileges of the new society of industrial freedom shall be that of abolishing the fearful taking of life by the social group. We shall tear down the walls and bars of prisons, for as today society is the real criminal, so on that glorious tomorrow, the cause of crime vanished, dungeons shall have no purpose of class oppression and social brutality to serve.

—Harry Silverson.

## WEAR YOU WELL?

At times the **welfare** of the people is a very thin shell "affair"—**shell fare**—much resembling cell fare.

To put it mildly, it is **fell fare** compared to the succulent **jell-fare** of the parasites. And I fear, **lest the slaves organize,** that their **welfare** means **knell-fare**—for, even now, the dumbest of critics call it hell-fare. Fare thee well.

—T-b. S.

P. S.—It gets my goat when people who can't tell **fare** from a **sows-ear** yell "fair," leaving the impression that here and there slaves dwell fair, or on swell fare—just as if they were getting something that's good enough for 'em.

**Nothing but the best is bad!**

## OREMUS

Editor Omaha Daily News:

I promised the heavenly Father I would write to the Omaha Daily News if a certain prayer was answered. It was, and many more. I am praying for something that will mean much happiness to me. Will others pray for me?—(Clipped from the eminent Omaha Daily News).

## LAW REBUKES PRACTICAL CHRISTIAN

Saying "Here I lay me," a migratory slave, minus gainful occupation, went to sleep in a lodging house bed for which he had paid his last six bits. In the morning, looking for inspiration, being a religious person, he opened his pocket Bible. At the first turn he read the instruction, "Take up thy bed and walk!" As he had no more bed than a jackrabbit he rolled up the landlady's blankets and started to walk. John Law nabbed him. Taken before hizzoner the migratory explained that he had merely obeyed biblical instructions. The judge couldn't see it that way and gave him thirty days.

## MALE HELP

WANTED: Construction superintendent with a capacity of 1,000 barrels a day.

## THE WIPE

A famous London comedian who need not be named was invited to a peer's house during the festive season. After dinner he was reciting a few of his best yarns, and in the midst of one of the choicest was interrupted by a guest, who said to him: "Excuse me, but your handkerchief is hanging half out of your pocket."

"Thank you very much," said the actor gravely, as he adjusted it. "You know the company so much better than I."

## HIS DAD WAS A UNION MAN

Teacher: "Johnny, if four men are working 11 hours a day—"

Johnny: "Hold on, ma'am. Nix on them non-union problems, please."

### IT'S ONLY TOO TRUE

Writer: I'm trying to write an article on what the miners got out of the coal strike, but I can't think of enough to fill half a page.

Adviser: Well, why don't you write on what they didn't get? That ought to fill a book.

### SOUNDED THAT WAY

Anthony: "Where's Cleopatra tonight?"
Maid: "Oh, sir, she's at home with tonsilitis."
Anthony: "Another of those Greeks, I suppose!"

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# May Day Song

(AIR: "Flag of the Free")

By RALPH CHAPLIN

O, Labor Day, O, First of May,
  Welcome and honored on land and sea.
Winter so drear must disappear,
  Fair days are coming for you and for me.
We, of the old world, building the New,
Ours is the will and the power to do;
  Then let us sing, hail to the Spring—
Hail to the Day we can strike to be free!

Banner so red, high overhead,
  Hated and feared by the powers that be!
In every land firmly we stand;
  Men of all nations who labor are we.
Under one banner, standing as one,
Claiming the earth and our place in the sun.
  Then let us sing, hail to the Spring—
Hail to the Day we can strike to be free!

O, Labor Day, O, First of May,
  Warm with the gleam of the bright days to be!
Join in the throng, fearless and strong—
  One mighty Union of world industry.
Shoulder to shoulder, each in his place,
Ours is the hope of the whole human race.
  Then let us sing, hail to the Spring—
Hail to the Day we can strike to be free!

# International Labor Day

WINTER is a repression, a fettering, and a sleep for all things that live. Winter is the time of crystalline beauty, yes, of ice, and snow, of fantastic things, but of stillness. The seed lies unsprouted, the cold grain is buried in the frosted earth, the stream is silent, gripped by an icy clutch, all wild animals move slowly, and sluggishly, or move not at all. It would seem to a creature whose life were not longer than six months, that this stillness, quietness, this deadly order, like the regularity of the tombstones in a cemetery, is a thing that must last forever, and probably has lasted forever. Just as a college professor regards the capitalist system would such a creature regard the Winter.

But this is May and about this time of the year a change takes place. The queer old world swings over, and the sun is closer. The seed that was cool and sleek as a stick of dynamite bursts, and with irresistible force cuts, pries and upheaves—there appear green and growing, expanding, living things where but a few days before was only torpidity and stability. The bare and beaten branches of old brown trees take on great glory, and the scent of leaves and of flowers spreads over the land. It is a revolution.

*

Prisoners in their lonely cells peer out past polished bars and painted gratings, look out over barren earth quadrangles, and from their fortresses of masonry and steel which enshroud them as cocoons envelop silk worms, see distant hills once as white and sterile as the whitewashed cell houses, shed their palls and become energized. Heat is energy, sun's heat is life, and the prisoner reacts with a deeper breath and lighter heart. Hope springs again; he looks and listens eagerly for the news of marching thousands on May Day, for the tune of the Internationale—in his mind's eye the Red Flag flaunts itself in the dawning sun, and spreads along the Western sky at evening, victory perched above it, and the name of a new society written on its ample folds.

*

Just so, we prisoners of the system. No bars of steel constrain us, but the impalpable bars of custom and law cut across our pathway and keep us pent like driven cattle, lowing for pastures we may not tread upon. We are worried and harried treadmill slaves, who turn and turn and strive and strive, always along the little runway the master has prepared for us, always grinding the grist of others, and shrinking from the lash, the whip, the spur of necessity, from the stern command of those who are wardens in the bleak jails of industry.

Even as the chill of Winter lies over all Nature, so does the fear of our Master lie over the whole of industry, pervading all crevices of our minds, choking the noble heart, and making it to beat slowly, chilling the generous imagination, and tuning it to the deadly monotony of the business man and the hack. Fear is our ball and our chain, ignorance clutches at our legs like a shackle; despair is round our throats like the collar of a serf, and over all is the pall, the cloud, the monotony and dull

order, the restraint of the system. We are no less frozen than December, no less prisoners than the numbered men in San Quentin.

*

We need revolution; the world needs recurrent revolutions; all progress is by waves, and this is the ebb tide, and the space between the waves. It is hard to break old habits of obedience, and we have no sun, as the seeds have, to burst off our cramping shell, and let the new society flourish and grow great. We may know, in a dry, statistical way, what is wrong. We may think about class struggles, but man does not advance by thought alone. We are creatures of tropism, suggestible creatures, we will not do things because they are logical, or because they are correctly thought out. We must think, that is true. He who does not think hardly exists. But we need emotional reinforcement. We need something hotter than cerebration, something more generous than a syllogism, something with passion and drive in it.

*

The time has gone by when revolutionists thought that the enunciation of the truth would alone be sufficient to set us free. We do not any longer shout with Stirner, "I blow my breath, and kings and empires totter." We know enough psychology now, if we have not learned anything else in the last few decades, to realize that men, even working men, are prejudiced things. The thought, the theory that seems good to them, that they can readily believe, that they do believe, is the thing that is habitual with them, so long as it be not too obviously challenged by material circumstances. This makes of them a great, dully resisting mass, full of opposition, not logical but psychological, always passively, sometimes actively, resisting the new thing, even if it is for their own interest, always afraid to take economic power into their hands, afraid to use such social power as they may happen to possess, delaying until the very last possible moment to open their eyes to the inference of their surroundings, when these inferences contradict the teachings of their youth.

The few forward spirits that the world calls radicals, the far-sighted, the fiery, the impetuous, hack and lunge at this clogging, obstinate force of conservatism, until they are worn out. Then they become "tired radicals." When a "tired radical" falls in with any progressive or revolutionary zealot he feels ashamed of himself for quitting, and looks around for excuses, which, of course, any intelligent person can find. At least he can find excuses good enough for himself, and on the basis of these reasons for being against radical action, he usually builds farther and farther to the right until he ends as a reactionary, maybe as a Mussolini, or a Rossoni.

We must, therefore, in self-defense, deliberately give ourselves up occasionally to an emotional bath, that will cleanse the battling mind of the dirt and sweat, the poisonous vapors of the detailed fight with reaction. Who goes to May Day celebrations this year will not be a "tired radical" for two years to come. We are able, quite consciously, to give ourselves the emotional energy that will sweep out for some time at least the petty discouragement and gnawing weariness of the every day struggle. On May Day those who have been for too long a time too close to their work can step back and get a perspective, forget the resentment towards other fellow workers, and broaden out.

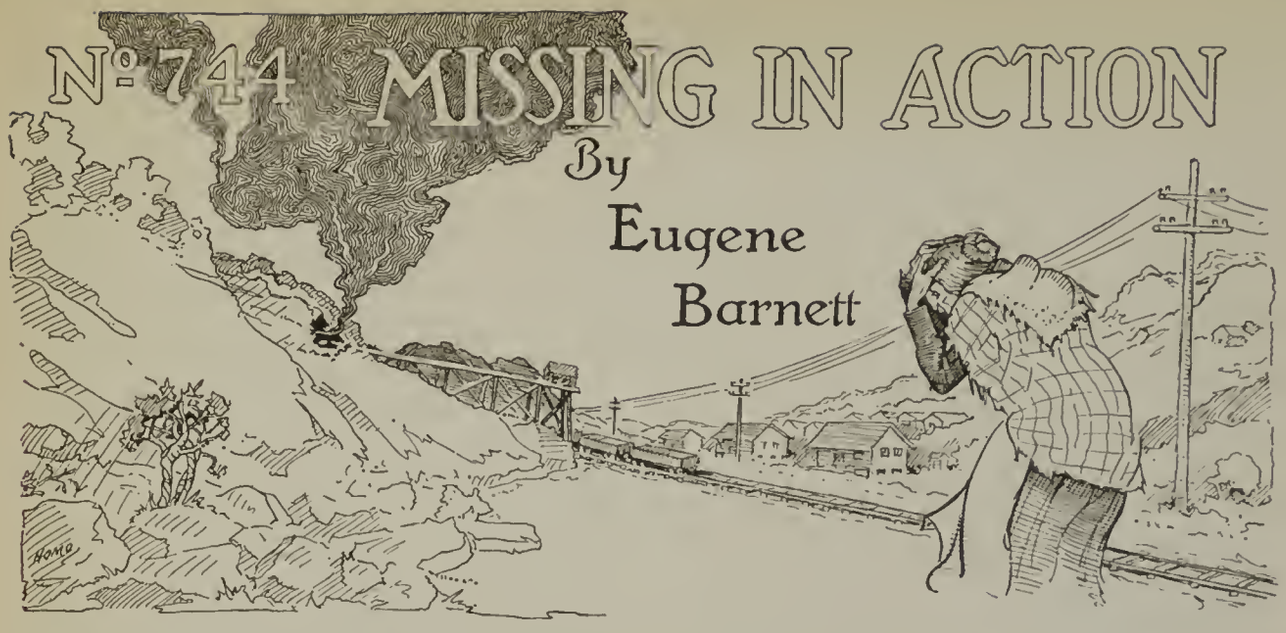
Our pagan ancestors celebrated the first of May with green boughs and bay leaves, with mistletoe and the May Pole, a beautiful symbolic representation of the resurging of life.

For us, who live in a sterner age, our color is red. The green love of nature that inspired primitive communism may come again, but the way to it is signaled by the red flag of international working class solidarity; it is a hard and glorious road to a goal already within sight.

The first of May is when we practice revolution—millions of men in Europe and the Americas will lay down their tools and divest themselves of the livery of slavery; the great processions will wind thru cheering streets, and red flags will flaunt themselves by thousands and thousands in hundreds of towns never heard of across the seas. May Day is a gigantic demonstration of the solidarity in spirit of the rebels of the working class, however they may differ in organization theories and tactics. May Day is the emotional reinforcement that makes possible another year of revolutionary deeds. May Day is the sun of freedom, the burst of color and of growth; it is one more wave thundering against the rotten citadel of capitalistic oppression—make the waves come stronger and stronger, each year greater than the last, until the bars and the bonds of all prisoners are struck away and the red flag waves triumphantly over "the commonwealth of toil that is to be."

# No. 744 MISSING IN ACTION

By Eugene Barnett



**This Bit of Fiction Offered to You by an IWW Class-War Prisoner Is a True Description of Coal Mine Life**

IT was seven o'clock a. m. in the little mining village in Somerset County, Pa. A beautiful glow was in the eastern sky, heralding the rising sun and giving promise of one of those balmy Indian Summer days that reach perfection in Pennsylvania. The low rolling hills were gray and brown and the woodlands were resplendent with the gay colors of Autumn, the beech, maple and dog-wood leaves having changed to the most gaudy colors, while the other hardwoods rivaled the rainbow with their various hues. To all this the hemlock, spruce and pine furnished a background of evergreen that blended so harmoniously into the picture that an artist would have turned green with envy, or been driven into ecstacy on beholding such exquisite beauty, which he might forever strive to imitate but could never equal.

The "Chickaree" as the pine squirrel is called in Pennsylvania, scampered through the leaves in quest of nuts for his winter's store or perched on the stub of a dead limb of some tree and gave voice to his chattering song for the sheer joy of being alive in such a beautiful world on such a glorious day.

But, alas! All hearts were not as light as Chickaree's on that wondrous morning. The first "man-cage" had disappeared into the bowels of the earth with its human freight of ten souls. Men were grouped around the mine shaft awaiting their turn to be dropped into the subterranean darkness. In a minute and a half the cage would reappear and hesitate for a moment while ten more miners would crowd onto it after which it would again drop into the darkness like a plummet dropping into the dark depths of the sea. Men were coming from all directions and joining the waiting group at the shaft gates. As each newcomer arrived he went to a large board on the power house wall and picked a brass check bearing a number from among the hundreds of checks hanging on hooks on the board. Many of the old miners placed that check in their wallet as carefully as you would a twenty-dollar goldpiece, for well they knew that before the day was done that disk of brass might be the only means of identifying their mortal remains.

There were many small boys among the men. One little fellow, smaller than the others kept looking wistfully at a group of boys playing ball in a school yard on a hill near the mine. He knew the boys and could identify them even at that distance. There was the Super's boy at the bat, the Doctor's boy on first and the boss's boy was pitching. One by one he picked them out and they were all of the privileged class, not a miner's son among them, for Somerset was non-union and fathers were forced to take their boys into the mines as early as possible to help make a living for the family. "Liberty and justice for all" the boy thought bitterly as he looked at the Stars and Stripes waving over the group on the school ground and then at the deep dark shaft with the smoke and steam rising out of it into the fresh clear air.

The little boy was of fair complexion with finely moulded features, big blue eyes and light brown hair. He was of slight built and although he was nine years old he did not appear to be more than seven. The miner's dinner bucket he carried hung down almost to his ankles. He had been born in Tennessee and he had often stood at his grandpa's knee and listened to how his great-grandpa had stood barefooted in the snow at Valley Forge and fought the "Red Coats" to free America from the tyranny of a foreign king. He had been told of how his great-grandpa had been one of

those mountaincers who had done such deadly execution with their old, long muzzle-loading squirrel rifles that a British general had reported to 'is Royal 'ighness across the sea that "The Americans don't fight fair. They take aim."

Then he had been told of how his father had left Kentueky as a small boy and joined the Union forees to free the black men and drive chattel slavery from the land. His father had earried a drum in Sherman's march to the sea and he told of "How the turkeys gobbled when they heard the gleeful sound. How the swcct-potatoes even started from the ground. How the Darkies shouted when we marehed through the towns while we were marching through Georgia." While all these stories were passing thru the boy's mind and he was gazing wistfully at the boys on the hill or at the woodland he loved so well, it came his turn to go on the eage for the sudden drop into the dark recesses of the mine. But his attention was so absorbed with his thoughts that he did not notice that the men ahead of him had gone onto the cage until a coal and iron policeman sprang from behind one of the huge timbers that supported the tipple and which he had been hiding behind listening to the conversation of the men, trying to catch some miner grumbling over the many grievances they all had against the company. The big burly guard grabbed the little lad by the shoulder and shoved him roughly toward the waiting cage, cursing him profusely and ending the tirade with the query, "What in hell wuz ye ganderin' at?"

The little fellow made no reply. The abuse had bewildered him and besides he knew from past observation what happened to anyone who attempted to talk back to these armed mercenaries of the coal barons. He was so flustered he did not even shudder —as he usually did, when he saw the signal given for the cage to be dropped from beneath his feet. Somehow he never eould get used to that cage and the sudden drop into the mine. It always seemed as if his body fell faster than his intestines, so that they seemed to rise up inside of him about a foot every time the eage dropped. As the cage got below the surfaee of the ground and all became inky blackness, one of the miners blurted out his just indignation against the guard who had man-handled the kid. "The damned beast couldn't do that in an organized camp," he said.

"Hush, Pete," whispered a miner near him, "You know that is how old man Stone got murdered last month—talking union. I tell ye ye can't tell who to trust in this eamp."

Fifty feet from the bottom of the shaft the falling cage was eheeked in its swift descent and slowed down until it finally eame to rest on the two wooden sills at the bottom of the shaft. Electric lights strung along the roof for a distanee of two or three hundred feet made it quite light and miners were grouped around the lights priming their carbide lamps, preparing for the two or three mile hike to thcir working places. The little lad adjusted his light and trudged off into the darkness.

Half a mile in he found the "stone gang" already at work cleaning up a fall of rock which must be gotten out of the way before the motor could take in a trip of empty cars for the diggers. The little lad climbed over the fall and passed on up the dark entry alone. At the end of two minutes hc came to a large oak door of double thickness that reaehed from rib to rib and from top to bottom. A canvas flap was even fastened to the bottom of the door to keep any air from passing under it. The big door was what is called a trap door in the mines and his job was to keep that door elosed as mueh as possible. For every minute the door was open the air current was broken and the lives of the diggers farther in the mine made more miserable by the accumulation of smoke and foul air in their working places. So he must only open the door long enough for the motor to pass through with its trip of cars and then close it again. Never must he allow himself to fall asleep during the long intervals between trips whieh to him all alone with his dim little light seemed doubly long. For then the motor or a runaway trip (as often happened) might run through the door and break it. He put his bucket in a niche in the rib then busied himself digging the coal from under the bridle of the latches where the traek branched off into another entry.

At last noon came. The last trip before dinner had gone out. The BOOM! BOOM! BOOM! of the first shots had already set the air aquiver. At every BOOM! the trap door would vibrate against its jambs and rattle as the very air surged back and forth jerkily. The little lad had seated himself on an empty powder keg behind the door, with his bucket between his knees. The big mine-rats were coming closer in the gob (rock piled along the side) and squealing for a part of his luneh. One old fellow was squealing angrily and chattering his teeth in a menacing way. The boy pulled the rind from a strip of bacon and threw it to him. Just then a windy shot made the old mine rock and half a seeond later a terrific explosion swept through the mine tearing the big door from its hinges and hurling it on top of the boy. A minute later a second explosion a hundred times more terrific than the first roared through the mine carrying cars, timbers, ties and huge lumps of coal before it.

When thc heavy door hit the boy it stunned him and he lay under it unconscious when the second explosion came. The fact that he was still under the door when the second explosion oeeurred probably saved his life. When it roared through the dark passages of the mine lighting them up with the fiery glow of a blast furnace it snatched the door off the boy and smashed it to smithereens against a row of props a few yards down the entry.

Pulpwood on the Michipicoten River. It is floated 120 miles to the Soo and the paper mills.

# Canadian Pulp Wood

## THE INDUSTRY THAT PRODUCES THE CONTINENT'S NEWSPAPERS

By E. L. CHICANOT

IF the millions of fertile, cultivated acres in Canada were suddenly to lose their fruitfulness, if the prolific fishing grounds off both coasts and the inland waters should unaccountably dry up, if all the fur-bearing denizens disappeared from the woods, and the exploitation of the great and varied mineral wealth ceased, the Dominion of Canada would still occupy a prominent and enviable position in world regard, and especially in that of the United States, by reason of the magnificence of her forests. This is particularly true because every day these wooded fastnesses are coming to a greater extent to supply the raw material which enters into the manufacture of the newspapers read in every city and town of the United States.

In the glorious expanse of Canadian forest, stretching from coast to coast, lie the continent's last extensive timber resources, and the source of its newspapers for the next century. In the lavish and prodigal manner in which the United States has treated her own immense timber wealth lies the cause of the Republic's necessity to look across the international border for her present and future supplies of wood and wood products. Very largely it is this insistent and never ceasing demand which has developed the Canadian pulp and paper industry into the Dominion's premier industrial activity.

Canadian manufacturing industries, for the main part, become dwarfed when compared with similar activities in the United States or Europe, but this is not true of the pulp and paper industry, of which any country might be proud and Canada is justly so. In its every phase it is a mammoth industry in which nothing of expense in construction or engineering, nothing of human conception or endeavor has been spared. The world's largest single newsprint mill is at the plant of the Abitibi Com-

pany at Iroquois Falls, Ontario; the fastest newsprint machines are those of the Laurentide Company at Grand Mere, Quebec. The world's largest ground wood pulp mill is owned by the Chicoutimi Company at Chicoutimi, Quebec; and its largest kraft mill by the Wayagamack Company at Three Rivers, Quebec.

The Canadian pulp and paper industry is the first manufacturing activity of the land and is only relegated to second place by agriculture among all the sources of Canadian revenue. In the export trade of the country it has come to take second place to agricultural products, even animal products giving place to it. At the present time it is practically impossible to determine to any approximate extent just what relative position it is going to occupy in Canadian economics, for despite its premier importance it is anything but staple, but continually expanding Considerable increases in the various capacities took place in 1923, whilst others are under way, and still others projected for the immediate future.

The forests of the United States were so rich and boundless, so inexhaustible in any but expert opinion, as the demand for newsprint and other paper products increased, pulp and paper plants sprang up so profusely in every wooded sector, that the Republic reached a position in the industry where it seemed she would remain supreme for all time. But lavish usage, criminal wastage, and an awakening to the needs of conservation that was too late, played havoc with such terms as "inexhaustible," and at the present time Canada is, in one phase of this industry at least—newsprint production—rapidly overtaking the United States, and in the output of other pulp products the United States maintains her premier position merely through drawing heavily upon the Dominion for the raw materials.

Paper has actually been made in Canada for over a century though the actual development of the industry has taken place within the last forty years, its real birth synchronizing with the completion of the Canadian Pacific Railway in 1881. Its rapid growth may be briefly summarized in the facts that in the four decades concerns making pulp and paper in Canada have increased from 5 to over 100; the invested capital from $92,000 to close upon $400,000,000; the number of persons employed from 1,000 to more than 30,000; and the annual value of the products from $122 in 1890 to $160,000,000 last year.

The Canadian pulp and paper industry is increasing so rapidly that it is a most difficult matter to keep accurate track of it. The government statistics for the year 1922 show that there were 104 plants throughout the Dominion in that year in which there was a capital of $381,006,324 invested. This latter was divided among the provinces as follows:—British Columbia $32,763,965; New Brunswick $16,310,952; Nova Scotia $6,667,234; Ontario $133,749,364; and Quebec $191,514,809. It is thus made clear how the industry has come to cover the entire Dominion in its scope, mills being located in every province from coast to coast where suitable timber resources are found. Even the so-called Prairie Provinces, with relatively small timber resources, have been called upon to aid the industry and 1923 saw the first prairie mill located north of Winnipeg.

It is interesting to note that while the Canadian pulp and paper industry has largely been built up to its present important status through the United States demand for its products it still remains an essentially Canadian industry. In 1920 when a census of industries was conducted by the Dominion Bureau of Statistics the total value of securities of incorporated joint stock and incorporated companies in pulp and paper industries was $294,551,000 Of this it was discovered that 69.5 per cent was held in Canada, 20 per cent in the United States, 7.4 per cent in the United Kingdom, and 3.1 per cent in other countries. Thus, contrary to popular conception, the Canadian pulp and paper industry is largely operated by Canadian capital.

Just what this United States demand has become is made evident in the trade figures of the last calendar year. The value of the pulp and paper exports of Canada in 1923 amounted to $140,798,453, as compared with $115,863,742 in the previous year, an increase in value of $24,934,711 or more than twenty per cent. The greater part of this increase was accounted for by newsprint which increased from $68,362,817 to $85,611,258,

## WE ORGANIZE IT!

On March 1, the ballots of the referendum vote were counted by officials of the Lumber Workers' Industrial Union, section of the One Big Union of Canada, and it was discovered that this large organization had voted to join the IWW. This means that in the very part of the country described by E. L. Chicanot in this article, the revolutionary I. W. W. starts an organization campaign with a membership of 2,000 as a beginning. It is to be hoped that some of the information in this article will be of use to the job delegates who go into this Canadian Pulp Wood territory.

An incident in the life of a marine worker.

# "Oh, for the Life of a Sailor!"

By Publicity Committee,
New Orleans Branch,
MTW of IWW

**MORE stories have been written about sailors than perhaps any other group of workers and these stories have run the gamut of love, adventure, murder, piracy, romance, and in the last few years, since the passage of the Eighteenth Amendment, rum smuggling has been a favorite theme for the imagination of our fifteen cent magazine writers.**

**If the stories have not been written around the captain's beautiful daughter, whom some low ruffian wanted and incited the crew to mutiny in order to carry out his brutal designs, only to see them fail because of an heroic college graduate who is sailing before the mast for adventure's sake, they have been about some "bucko" mate or hard-boiled captain who made the crew understand that they were kings and masters on the high seas. During the last few years, since the MTW of the IWW has made itself felt in the marine industry, there have also been a few stories by doubtful authors about the terrible "bolsheviki" or agitator who tried to take possession of the ship but did not succeed because some of the one hundred per cent Americans in the crew would not stand for it. And so on, ad nauseum.**

These are the stories read by the workers ashore and consequently they gain a very false impression of life on the rolling deep. They come to believe that a sailor's life is one continuous round of pleasure and excitement; balmy breezes, dark-eyed senoritas, palm-fringed lagoons, fine weather, brave, firm officers, who always treat the men fairly and justly—in short, a bed of roses.

Nothing would give us greater satisfaction than dispelling these illusions and getting the real truth about the life of the marine slaves before those who serve the master ashore and in this article we attempt to depict the hardships of a sailor's life and show conditions as they really are. We will also try to present a few contrasts showing the difference between the quarters and living conditions of the men who sail the ships and those who, having sufficient money, take pleasure trips on Mother Ocean.

Whenever any of the latter class decide to pass the time aboard one of the liners which plough majestically through the ocean in a hundred different directions, they have for sleeping quarters a nice, comfortable stateroom similar to the one shown in the picture on the next page. After they have gotten their sea-legs and are able to appreciate food, they take their meals, and they are always good ones, in a dining room similar to that shown in the picture to the right.

While they are eating or resting after one of the big meals their thoughts may turn to the "tramp"

While the sailor braves the stormy sea, the parasites going down to Cuba for their year's supply of Haig & Haig are feasting and flirting, clean and dry.

steamer they can see in the distance; they may feel better after seeing her; the ocean is a lonely place and a ship seen after two or three days' gazing at an empty wilderness of water gives one a feeling of confidence. Their thoughts may turn to the men toiling on the deck and in the stoke-hold of the cargo tramp and being full of stories of the sea and sailor life, they may wish that they, too, were aboard her as she plugs her monotonous way across the trackless waste, living life in the raw, and enduring like the heroes with whom they have become acquainted through the columns of the fiction magazines.

### A Chasm Between Classes

But if they were aboard the tramp their ideas of the romance of a sailor's life would receive a rude shock. If they had to sleep on the foc's'le head, like the sailors shown in the picture, in order to escape the vermin-infested, filthy quarters provided for the men who toil aboard ship, they might not think life on the ocean wave was such a romantic proposition after all. If, when they needed food to furnish energy for mankilling toil in the stokehold or long hours' labor on deck or at the wheel, they had to wade across a deck waist-deep with water in order to get to the galley instead of having that beautifully appointed dining salon in which dainty tid-bits, guaranteed to tickle appetites of jaded parasites are served; sailing as a life work would go down several more notches in their opinion. And if they had to eat the grub

Where the Monied Idler Has to Sleep—Artificially Cooled.

The Luxurious Quarters of the Crew—Too Hot to Go Below.

usually handed out to seamen, you can gamble that back on the liner they'd wish to be.

Yes, friends and fellow workers, the life of the men who "go down to the sea in ships" is a little different from that described on the pages of our fiction magazines; and it is also a trifle different from that of the passengers on the liners.

In contrast to the enclosed promenade deck of the passenger ship we have an open, wave-swept deck, as shown in the pictures, to cross in order to get to our work; for no matter where our work lies there is no other way to get to it. There is no escape for us; between foc's'le and galley, between "lookout" and wheelhouse (if there is a wheelhouse) we must face that open deck.

Then, if you still think that there is romance to be found aboard ship, take a look into the stokehold where the energy that drives the ship is produced. There the firemen and coal-passers sweat and swear for about five hours at a stretch, twice a day, in a temperature of from 120 to 150 degrees, with a seven-hour rest period in between—if it is possible to rest. The reader, who possibly never handled a slice-bar or hook, may say that it is impossible to perform such strenuous labor as shoveling tons of coal in such a high temperature, but if you think so—just ship as fireman on one of the coal-burning cargo ships—you'll find out it has to be done.

### Bugs Not Romantic

Two four-hour watches a day making steam and one-half to one hour either before or after his regular firing duties, hoisting ashes from the stokehold, is the lot of the coal-burning fireman on the tramp steamer. He comes off watch, winter or summer, grimy and sweaty from head to foot, gets his pail and goes to the galley for water, then across that open deck to a little cubby-hole of a bathroom hardly large enough for one, and awaits his turn while three, four or six men bathe and wash their clothes. After that he rolls into a bunk filled with bedbugs and cooties—and tosses in sleepless agony for four or five hours unless the weather is warm enough for sleeping on the foc's'le head. Some life! Some romance!

(Continued on page 42)

# The Meaning of Revolution

By ARCHIE SINCLAIR

**In this forceful article the writer points out clearly and dispassionately the forces at work in modern capitalistic society which are making for its replacement. He stresses the difference between the real meaning of revolution and those commonly attributed to it by those who see in our chaotic present-day society the apogee of possible human achievement and shows that violence is not a necessary companion of revolution. In addition he points out that revolutions never come until there are good and sufficient reasons for wanting a change and emphasizes the fact that when these reasons exist, and the evolutionary processes occasioned by them have progressed to a certain point, any attempts to prevent revolutions, are, and always have been, futile. Perhaps his active participation in the class struggle in one of its most bitter phases, the Criminal Syndicalism persecutions in California, has enabled him to see things in a clearer light than people not so situated. At any rate he has presented the subject in a manner which should not fail to interest both those who are trying to make California and the rest of the world a better place to live in, and those who are trying to retard such progress by inhuman persecution. We recommend a close perusal of this article to both.**

IN "English Synonyms, Antonyms and Prepositions," by James C. Fernald, we find a very good definition of revolution, and also a clear distinction between the different synonyms that, to some minds, are identical. The synonyms given are: **anarchy, confusion, disintegration, disorder, insubordination, insurrection, lawlessness, mutiny, rebellion, revolt, riot, sedition, tumult.**

"In defining the word revolution, the author says: The essential idea of "revolution" is a change in the form of government or constitution, or a change of rulers, otherwise than as provided by the laws of succession, election, etc; while such change is apt to involve armed hostilities, these make no necessary part of revolution. The revolution by which Dom Pedro was dethroned and Brazil changed from an empire to a republic, was accomplished without a battle and almost without a shot. "Anarchy" refers to the condition of a state when human government is superseded or destroyed by factions or other causes. "Lawlessness" is a temper of mind or condition of the community which may result in anarchy. "Confusion," "disorder," "riot," and "tumult" are incidental and temporary outbreaks of lawlessnes, but may not be anarchy. "Insubordination" is individual disobedience. "Sedition" is the plotting, "rebellion" is the fighting, against the existing government, but always with the purpose of establishing some other form of government in its place. When "rebellion" is successful it is called revolution; but there may be revolution without rebellion; as, the English revolution of 1688. (When William of Orange replaced James the Second; parentheses are mine.) A "revolt" is an uprising against existing authority without the comprehensive views of change in the form of administration of government that are involved in revolution. Anarchy, when more than a temporary disorder, is a proposed disintegration of society, in which it is imagined that social order might exist without government. **Slaves** make **insurrections; soldiers** or **sailors** break out in **mutiny; subject provinces** rise in **revolt."**

The distinction between the words supposed to be synonyms is clearly defined. The purpose or lack of purpose conveyed in each term is made plain, as for example, sedition is the plotting, but when it breaks out in fighting it is called rebellion; revolt is a spontaneous outburst against some wrong. Revolution is always successful, rebellion never successful.

### What About Provocation?

The author might have added that in all cases there is a reason for dissatisfaction and agitation that precedes any kind of demonstration against the existing order, or against those in authority. Soldiers do not mutiny unless they are being unjustly treated by their officers, or because of starvation or some other cause equally disastrous. Subject peoples rise in revolt only when they are being abused. Revolutions come only when the conditions are ripe, they are the culmination of evolutionary growth.

Still another phase of the question was overlooked or ignored by the author; that is, that not all revolutions are of a political nature. In fact, if we read history we find that all political revolutions are preceded by industrial revolution. Industrial revolution is brought about by the steady growth of change in the mode of production. Old, worn out methods of production give way to newer and better methods. Laws and governments based on the archaic mode of production—all government, and all laws are based on the mode of production prevailing at the time of their birth—cease to function properly. This causes political disorder and confusion which may or may not result in political revolution. Capitalism, in turn, gave place to ultra-capitalism about the year 1890 when the trustified form of production came into being. This, too, was industrial revolution.

Ultra-capitalism, plutocracy, the Oligarchy, call it what you will, is quickly becoming passé and is no

longer able to function efficiently. This causes disorder, wars, rebellions, industrial unrest, political upheavals and the disintegration of several countries, namely, Czecho-Slavia, Jugo-Slavia, the Balkan states, and even Russia and Germany. This is not the fault of any group or political government. The rulers are impotent to stay the change. The masters are not to blame, neither are the people who are no longer able to bear the burden. It is a natural result of industrial change that will culminate in industrial revolution. Our rulers, industrial and political, sense the coming change, but do not understand; they never do understand. They seem to think as did the Bourbons of France, that the workers are somehow to blame. The Bourbons firmly believed that the workers and peasants were revolting out of pure malice, that conditions were ideal; they were—for those who were on top.

**Revolutions Come**

Industrial change is going on all the time, and industrial revolutions come whether we believe in them or not. It is not necessary that the people of California believe in earthquakes, the earthquakes come to that benighted state every week or so whether the natives believe in them or not. Ask a real estate agent in Los Angeles whether they have earthquakes there or not and he will probably tell you that San Francisco has them but there are none in Los Angeles, whereas Los Angeles is visited by them every week or so. So it is with the industrial change that is going on all the time. We may deny that such is the case, or we may deplore the change, as does the Sacramento Bee, that would like to see the clock of progress turned back to the era of the petit bourgeois, but the wheels of progress do not turn backwards, they always forge ahead.

Super-capitalism is crumbling, the masters are impotent to retard or prevent, they are unable to efficiently carry on production under private ownership of the machinery of production. With all the great wealth producing machinery, one hundred times as great as fifty years ago, the mass of the people are ill fed, ill clothed and poorly housed. This causes discontent and industrial and civil strife. The law enforcers, judges, police, jailers, sheriffs, etc., not understanding anything of the underlying causes of this, punish those who are forced to revolt against the conditions that have caused all the unrest. The only reason that the authorities punish the workers who revolt is because they are the servants of the men who have the industrial power. They are cruel and oppressive because they are stronger than the ones who revolt. One is reminded of the little boy who was whipped by his father and on being asked if he knew the reason his father whipped him replied, "Sure, because he is bigger than me."

The rulers are ignorant, distressingly ignorant of the change that is manifesting itself in industry, and being reflected in the political life of the country. They are blind as bats, and like the rulers all through history refuse to heed the signals. The whole economic and social fabric is pointing the way to social ownership of the machinery of production, but they refuse to see. They sincerely believe that industrial unrest is being stirred up by a few professional "agitators." And the pity of it all is that the workers themselves refuse to see the coming change. The stupidity of the workers, their apathy and indifference is appalling. Nevertheless, the change is coming, and coming quickly.

There is one way that the workers can make ready for the coming change. The transition period from private ownership to social control can be made as peaceful as the changing from summer to autumn, by the workers organizing industrially. If they could only see that by organizing in industry, solidifying their forces; they could not only run industry as they do now, but would also be able to step into the executive positions the rest would be easy. "By organizing industrially we are forming the structure of the new society within the shell of the old."

# Don't Call Me a Scab!

**(A Scab has been defined as one who is a traitor to his class)**

YES, I'm an outcast, a tramp and a bum,
I am friendless and down and out;
I don't care a rap for your smile or your frown,
Not a whit for your praise or your flout.

I live like a beast, as you say in your scorn,
I'm a flaw in society's plan,
And you're right—I'm all these and more than all that,
But—I have never yet scabbed on a man!

I'll steal when I'm hungry, and fight when I must,
And lie—when it pays me the best;
I'm lazy and shiftless and drink like a fish,
And I'd murder, perhaps, if hard pressed.

I'm a vagabond, worthless, a curse to the race;
I admit it, so just save your gab;
I'm crusty with dirt, but I'd have to go some,
To be dirty enough for a scab.

I'm low and degenerate, scarce fit to let live,
A target for every cop's sap;
A hand-out my banquet, the gutter my bed,
As I travel the face of the map.

You may call me scoundrel, a liar or cur—
They'll all fit, so just take a grab;
I'll not kick at the dirtiest name in the lot,
But—for Christ's sake, DON'T call me a SCAB!

**—Anonymous.**

Through seas of KNOWLEDGE we our course advance, discovering still new worlds of IGNORANCE.

# Labor Under Industrialized Agriculture

By JAMES LANCE.

**THERE was a time in the history of this country when nearly all of the population was engaged in agriculture. Just before the Revolution in 1776 only 8 per cent were not engaged in tilling the soil. Today we see an entirely different story; the last census shows that there are about 54 millions of people in the cities and only 51 millions on the farms. Quite a change, isn't it? The census also shows that the gainfully employed workers in agriculture now number only 10,953,158 while those engaged in manufacture total 12,818,524, almost 2 million more than those employed in agriculture. The onward sweep of the machine is daily lessening the relative number of farm workers and big business is bankrupting the individual farmer through economic pressure.**

**Government statistics show that 2 million farmers left the farms in 1922 and although figures for 1923 are not yet available there is little doubt that an equal number gave up the "independent life of the farmer" to become wage slaves last year. These same statistics prove that about one-third of the farmers left on the farms are bankrupt—a sad commentary on the glowing pictures often presented to us depicting the farmer as a man above the sordid struggle for bread; a man sufficient unto himself, a man on whom the world depends for food and clothing.**

And what do these lugubrious figures prophesy? Just what do they portend? Obviously, the farms must be worked; grain and livestock, fruit and vegetables, cotton and wool must continue to be produced; we must eat; and we must have clothing; therefore, as farming as it has been practiced up to the present is a losing game for those engaged in it, as it no longer affords them sufficient bread and clothes for themselves, let alone providing them for others, a change, a radical change will have to be made. And what sort of a change will it be? What will be the future of agriculture? The answer is self-evident. Agriculture will be modernized, fully mechanized, really industrialized as the other industries have been.

### Proletarian Farmers

The day of the hit and miss farmer has gone or at all events it is swiftly going. The agriculturist of tomorrow will not be the "independent farmer," the freeholder of a certain number of acres to cultivate as best his intelligence and experience permit —no, the agriculturist of tomorrow will be a wage slave; just as much so as his fellow workers in the manufacturing, mining or transportation industries. Already there are numerous examples of the trend of agriculture towards industrialization, a few of which we will deal with in this article.

And will wage slavery on the farms of the future be any better than that of today in the cities? Will the hours, wages and conditions measure up to a higher standard than that now prevalent in other industries? Or will industrialized agriculture mean a backward step for labor, one that will place it nearer to chattel slavery than emancipation? Perhaps a study of the findings of a government investigator in a region in which agriculture has already taken a long stride toward industrialization will be illuminating. He spent some time on "the eastern shore" of Maryland; listen to his report on conditions there. Says he:

> "Some time ago the children's bureau at Washington made a study of the truck farm regions of Maryland. Child welfare experts

THE SLAVER'S VICTIM.

say conditions on the Maryland truck farms are as bad as years ago in the coal regions, or in the textile mills and factories before the movement for protection of child rights got started.

"The infant 'floater' is perhaps the worst victim of the child labor exploiters and in the truck farm districts of Maryland his lot is especially hard.

"Boys and girls in migratory families are becoming transient laborers at 8, 10, and 12 years of age, and they are drudging eight to eleven hours a day in the fields.

"The families are recruited by padrones in the tenement sections of Baltimore, and they are herded in shanties, without privacy or sanitation, under conditions which make truck farm camps appear the 'worst slums in the civilized world.'

"Narrow pens, six feet long and four to six feet wide in tumble down shacks, form the living quarters of a 'floating labor' family. The pens are separated only by boards ten inches high, and men, women and children, as many as one hundred in a single shanty, huddle together at night and sleep on straw or the bare boards.

"This is one of the accompaniments of industrialized agriculture."

Pretty picture, isn't it? And it is even worse than he says. The writer of this article put in a summer on "the eastern shore," among the canning factories and truck farms and in all his wide and varied experiences in casual labor he never put up with as rotten conditions anywhere. Some of the things which happen on that eastern shore are almost beyond belief. No editor would print them. One little fact might get by; the eastern shore is the favorite hunting ground of the runners of the white slave rings of New York and Philadelphia. Girls, broken, physically and mentally, by the monotonous labor in the fields and factories are easy prey for those who offer "the easy way" out of wage slavery. Sometimes, after they have promised the runners, they attempt to back out; then indeed are scenes enacted in some of the shacks mentioned in the quotation which are unprintable. But the runner always gets his slave. The law is inoperative on the eastern shore during the truck season; that is, so far as helping any of the slaves who gather the berries, peas, tomatoes or other truck is concerned. The harvest hand in the midwestern wheat fields knows all about this kind of legal helplessness. "Just a floater," the officials say. "Why bother?" But this is a digression; let us return to the subject.

We go on a little farther in the investigator's report and the conditions under which these victims of industrialized agriculture try to live are described more fully. Listen to this!

"In May every year, when strawberries, beans, and peas are ready to be picked, families recruited by labor agents migrate from Baltimore to Anne Arundel county.

Cottage of a Modern Yeoman—A Lean-to Back of a Country Store.

"Any day trucks laden with household goods, kitchen utensils, and feather beds, with women and children seated on top, may be seen moving from Baltimore to the country for what the padrones picture as 'a nice vacation in the country at good pay.'

"Arrived at the camp, however, the squalor is often found worse than that of the city slums. Here is a description of the 'flops' out in the wide open spaces.

"Most of the camps contained but one building, known as a 'shanty,' which serves as sleeping quarters for the workers. This building, usually two stories high, was erected on piles or rough stones. In most camps it was weather beaten or unpainted and the windows usually lacked either glass or shutters or both.

"As a rule there was but one room on each floor, with stairs on the outside leading to the upper room. On each side of a narrow aisle down the center of the room the floor was divided into pens by boards ten or twelve inches in height. Each pen was about 6 feet long and four to six feet wide and covered with straw for a mattress.

"Each family was allotted one of these pens, the larger families sometimes securing those six feet in width. At night men, women and children partially clad, one family separated from the next by the plank ten inches in height, lay side by side.

"Many of the shanties containing two such rooms often were used for sleeping purposes by thirty to fifty persons of both sexes and all ages.

"Little attention was given to sanitation. More than one-half the families had no toilet facilities. Many families described the way in which they lived as 'like hogs,' 'like sheep,' and 'like cattle beasts.' "

So these are the conditions the future holds for the wage slave in the agricultural industry! For remember, Maryland today is just a forerunner of agriculture in general tomorrow.

We need not look at Maryland alone; we can go clear across the continent to the shores of the Pacific and see the same sordid drama enacted in the state of California. There, too, armies of women and children toil in the fields and canning factories and live under almost unbelievably rotten conditions while gathering the fruits and vegetables which form such a large portion of the products of the so-called Golden State.

There too, we can see other evidences of the future of agriculture. We can see the famous Miller and Lux ranches, covering whole counties; the Kerr county Company's holdings, the Baldwin ranch, the Moulton ranch, the Vina ranch and many others which are owned by companies and corporations and on which the workers are subject to the same rules and regulations as in any shop or factory in a city.

### Pitiful Wages

The middle west has its examples also; notably the Adams and Cook ranches in Iowa and the Rankin Farm in Missouri. New York state has a number of large agricultural holdings such as the Lipton Company and Welch's. Everywhere the trend is becoming more apparent.

And the hours and wages, what of them, in industrialized agriculture? Let the investigator tell what they are in Maryland.

> "The study indicates that the earnings are low even for whole families. At bean picking, for instance, daily earnings were seldom over $3 even for families of three of four members. On a sample day only ten families earned as much as $5, while forty families earned less than $2.
>
> "The survey found children of tender years spending long hours in the fields, not only picking berries and hoeing vegetables but also ploughing, harrowing, working machine cultivators, and transplanting. Many of them were younger than ten years..
>
> "With few exceptions children 8 and 10 years of age worked the same hours as older children and adults."

There we have the facts in the case; not in the wild ravings of what the bourgeoisie call "irresponsible radicals," but in the clear, cold, unbiassed language of a Government report. Undoubtedly much more could be said; these were the outstanding, inescapeable facts; facts that pushed themselves into view, that could not be overlooked or gainsaid. The conditions under which these men, women and children were forced to live in Maryland, the miserable wages that were doled out to them are what the future wage slave in agriculture may expect everywhere on the farms. This report shows us just what we will have to endure tomorrow.

### The Union Is Ready

And what are we going to do about this slavery which will be fastened on us? Is there any means by which we can prevent its realization and make the industrialization of agriculture a forward step for labor instead of a reversion to what is almost, nay, worse than chattel slavery? There is: one thing and one thing only can be used. The answer of farm, orchard and garden labor to the industrialization of agriculture can be nothing less than industrial organization.

And, fortunately, for the agricultural slave of the future, there is already an industrial union for agricultural workers. The Agricultural Workers' Industrial Union No. 110 of the IWW is a union which understands the problems of agriculture, both present and to come. It is a union organized to meet just such problems as those presented by the report of the Government inspector in Maryland; it is a union which, in fact, does not need reports of investigators to enlighten its members as to what is going on in the agricultural industry because they are in closer touch with these conditions than any investigator ever gets. It is a union which has long realized the trend of the industry in which it functions towards industrialization and it has the proper program to offset the vile conditions, long hours and miserable wages, to which unorganized workers on the farms, orchards and gardens of tomorrow will be forced to submit. For several years it has successfully fought the battles of the agricultural workers in the wheat fields of the middle west and in the fruit orchards of the Pacific slope. Wherever the members of 110 have instituted campaigns for betterment of wages, hours or conditions, victory has been theirs.

In this union lies the hope of the agricultural workers; industrial unionism in the very nature of things, is the only possible instrument which can successfully combat the agricultural trusts of the future. If the wage slaves of industrialized agriculture hope to escape the slavery which lies in store for them there is only one way out; they must become industrial unionists and AWIU No. 110 of the IWW is ready and waiting for them.

## REMEMBER THE CENTRALIA CONSPIRACY

**The General Defense is now issuing Ralph Chaplin's "The Centralia Conspiracy," much revised and expanded by the author. There is a great deal of new material in this book; it is now a complete history of the way eight members of the IWW were falsely convicted of murder for defending their hall against a lynch mob in the lumber town of Centralia, and the revelation of trust rule that followed. The conspiracy took place in 1919; the world has yet to hear of it. Get this book and circulate it widely! Price 50 cents.**

# A Worker's Wanderings—from Italy to South America

By JOHN ASHBURN

Monday Morning In Spain.

(Continued from December Number)

AT sunset our vessel was still driving thru the broad Elbe waters, and we passed the Elbe's mouth shortly before ten o'clock p. m., where our pilot was taken off board by a motorboat and several German stowaways who did not hide themselves very well were unloaded. At noon time of the next day we steamed through the Channel of the Northern Sea and were able to see on one side the chalk-rockies of England and on the other side, in a foggy horizon, the French town, Calais; and then for four days we had no land in sight. During this time, I made acquaintance of my co-passengers.

Our steamship was of about 8000 tons and divided into two classes. It had first class and third class, a comfortable steerage which had cabins and common sleeping rooms (dormitories), a dining room, a library, a salon for women, and a smoking room. There was no second class at all.

### Enjoy European Summer

The few passengers of the first class were composed of South American ranch owners, German business people and emigrating German capitalists, who fled from Germany before the entire downfall, in order to save their money, sucked vampire-like, from the starving German working class, who famished beyond the sea horizon whilst those leeches enjoyed a life of leisure at the workers' expense.

The Argentinean capitalists enjoying the European summer in Germany or France returned to their native country in order to arrive in season for the South American spring and summer. With such a life of birds of passage, it is no wonder they feel alright.

On my usual morning walk on deck I became acquainted with nearly all of the steerage passengers. Besides the German emigrants there was a group of Bulgars, who brightened the whole steerage with their melancholic chorus songs resembling in manner, the Russians.

Two Argentine fellows, one of them a socialist, a good chap, who had studied the European situation, became a friend of mine. His parents came in the year of 1906 from Besserabia (Russia) to Argentine, but he was entirely romanized, latinized and argentinized, or whatever you would call it. He had travelled extensively. He also had been in the U. S. A. He gave lessons in the Spanish language to the German workers.

Then, there was a Viennese, a young man. He must have read stories of adventurers, because his behavior was like an adventurer's. He had only a few things with him. When we arrived at Buenos Aires, he was the next day already south-west-bound. Now he is a cowboy in the Pampas.

### Two Blackshirts

There were two Italians of Northern Italy going to Cordoba, Argentine, where they had relatives, who cultivated vine-yards in this region. They were glad to find somebody who could act as an interpreter, as none of the ship's officers spoke Italian. They made the voyage from Italy across Switzerland, through Germany, in order to save money on the passage, which was cheaper on a German vessel, including the railroad expenses, than to travel the much shorter distance from their native village to Genoa and take an Italian boat.

> The IWW aspires to be international. It is peculiarly fitted for such a functioning, due to the fact that the propertyless proletarians of which it is composed, travel widely, see and observe. This is the story of what one worker was impressed by in his journeyings.

We concluded an amiable friendship, but the next day both appeared in shirts, which I dislike as a bull the red flag, that is to say, they wore "black shirts." I took immediate steps and explained to my fellow-pasesngers . that these black shirts are worn by the Italian Fascisti and nearly all of the German passengers, mostly industrial workers inheriting Socialistic ideas, turned enraged

against these two Italian fellows. The latter came to me and accused me of propagating an unreal fact and asserted vigorously they are not fascists, but adherents of the "Partito Popolare," which is also a severe enemy of the fascists—its followers are partly Catholic workers.

### A Reactionary Idea

"But why do you wear these shirts, signifying a reactionary idea, against which the major part, not only of the passengers, but also of the crew is opposed," I asked the two innocent Italians. They promised to me they would never wear the black shirts again, and they kept their word. We became very good friends for both agreed that the fascists are scoundrels.

The much feared Bay of Biscay was passed without accident, and the passengers were glad to see, on the fourth sunrise, the Northern Spanish coast, in the aforementioned bay, there had sunk, some days before, a German vessel, the "Hammonia."

It was a pretty cold morning, a Spanish early autumn, with a sharp, cutting, metallic air and a cloudless sky, but as soon as the sun sent its rays upon the globe, it became pretty lukewarm.

We anchored in La Coruna, a little harbor of Galicia, a Northern Spanish country. Spanish vendors, selling many different fruits, especially grapes, drove a bum boat way round the ship. A shrieking, haggling, crying blustered and the crowd encircled around us; nobody could understand what the Spanish sellers said, and vice versa. It was a real Babylonian tower.

The German ship officers tried to speak to Spanish custom officers as well as they could, although most things were misunderstood. A good observer could notice how the Germans got a little more vivid and talkative, for, with the silent, moist, foggy, cloudy northern autumn landscapes, together with sullen folk, finally left beyond the horizon, the Nordics warmed up more and more as the latitude degrees neared zero, that is to say, the Equator.

### An Enthusiastic Mood

To hear again Southern people, with soft, poetical sounds on their lips, after travelling from beautiful Italy through the Nordic country, put me into a certain enthusiastic mood and I shouted emphatically, in my first-learned words, to a boat loaded with fruit, in which was seated a Spanish female youth as follows: "Hermisísima hija de España, deme uva." (Most beautiful daughter of Spain, give me grapes.) She smiled and handed a basket of grapes aboard.

Just before the departure of the vessel, the Spanish emigrants to Argentine, mostly agricultural workers, were embarked. They had only bundles under their arms, which contained all of their goods and chattels, and were dressed up in colors, women as well as men, as if they were going to work in some camps in the neighborhood. Brave charming folk! When the Spaniards secured their berths, the disciplined Germans were very reserved against this "lumpen proletariat," an unreasonable word; but the Spaniards soon broke the ice and concluded friendship with the distressed Germans. Most of these, single people and married people with children, were penniless, for they had raised the last money to be able to pay the passage, while the Spaniards had some travelling money of good value.

At four o'clock that afternoon, our steamship put to sea. The echoes of the whistle thundered back from the bald mountains. Before sundown we had a fine spectacle. Fishes jumped along the starboard side over the heavy waves, greeted every time by a roaring salutation from the Spanish boys, who were very much interested. The cold Germans could not understand why they made so much noise. Since we got our new passengers on board, life on the ship was entirely changed. There was now a spirit, a movement, a cheerfulness and everybody was amused.

### Magnetized Germans

Before we had arrived in the Spanish port, the two Italians, the Argentinean and I, romanized Goth, could not magnetize the Germans with joviality, but now the Germans forgot for a while their unknown dark future, wherefore they were grateful to us.

That same evening, wild Spanish dancing took place. The Spaniards are never in need of musical instruments, and we always had a Spanish concert. All laughed and cheered up, even the first class passengers looked from their deck and perhaps envied this amusing, unrestrained crowd. Among them were beautiful natural Spanish girls, who are not painted and dusted with pounds of powder like our modern flappers and foppish puppets, but with a natural color, given to them by mother sun and air.

In the late night, when all slept and a queer taciturnity possessed me, I hummed gently the melody of Ponchielli's opera "La Gioconda" "Cielo e mar" . . . (Ocean and Sky). I stood on the poop of the vessel and looked in sublime fancifulness northwards to the glittering and sparkling firmament. The polar star neared more

**Cowboys of the Pampas. They went on a great strike two years ago, and were shot up by the military.**

and more to the horizon line, until it was submerged entirely in the billows of the infinite ocean. Standing on the prow of the ship and looking southward one could observe the emerging of the wonderful constellation of the Southern Cross and the most gleaming fixed star, that is, Sirius. The waves situated within the shadows of the ship phosporesced. Our planet Venus reflected her light from the depths of the sea. She is shining more like a minor moon than a star beyond there. I asked myself and philosophied: "Is she inhabited?" "Are her beings living in a better and more advanced social system than ours?" Nobody replied. . . . Complete silence. . . .

### Nearing the Equator

After departing from Teneriffe, one of the Canary islands, where we loaded coal, and passing by the Cape Verde Islands, we neared the Equator. It was pretty hot, but nevertheless, I used to take sun-baths on the highest deck of the ship. It was announced by the Captain that the vessel would pass the Equator line about half past one that afternoon. The right time. It is customary among sea folk and sailors to celebrate this event with practical jokes. Three imaginary geographical lines drawn by man around the globe, namely, the Equator, the Northern and Southern Polar Circles are to be celebrated by stepping over them.

At one o'clock, Neptune, Roman God of the Sea, arrives with his court, composed of his wife, an astronomer, a pastor, two barbers, four negroes and others. They are all sailors. Sailor music opens the baptismal ceremony. Everybody who passes the Equator for the first time has to submit himself to same.

At first the pastor delivers a funny speech, criticizing the whole crew, beginning with the cook and ending with the captain, regarding their services.

Then the astronomer rises from his seat and asks the captain if he will permit him to take over the command of the ship, whereupon he looks thru big glasses towards the sky in order to ascertain if the Equator line is already visible to him, and then he announces with a great theatrical gesture, that we are on the geographical latitude of 0 degrees 2 minutes and three seconds, then 0 degrees 1 minute 1 second. After a short while he announces emphatically and solemnly that we are at the present time on the latitude of 0 degrees 0 minute 0 second. (There was given to him a hint from the officer on duty on the conning bridge) and the steamship whistle confirms his announcement. After that declared he returns the command of the ship to the captain.

### Neptune's Baptism

Thereupon the baptism ceremony begins. Firstly the fair sex is baptized. The girls and women get off very well, with only a little piece of ice and a glass of cold water poured down their necks. But the men have to submit themselves to a very unpleasant procedure, for they must be clean and purified from the sins and dirtiness of the Northern world. First they get shaved by a barber with a huge wooden knife, wooden shears and lathered all over the face with a big brush, and then they are thrown into the water.

Beautiful and ugly names and certificates of baptism are given to each person baptized. I got the name "Motorboat," and was therefore lucky. But others got names like swine-fish, stink-fish, etc. The fair sex got names like nymph, sea rose, etc.

With such variety in our amusement we hardly observed that our destination approached, and the German emigrants grew a little depressed and uneasy about their future in a new continent.

San Fernando, a Brazilian convict island off the Northern Brazilian coast, passed by. We arrived at Rio de Janeiro on the 25th of October. I arose very early that morning, about half past three, so as not to miss the rare opportunity of gazing on one of the three most beautiful cities on our globe. These are Constantinople, Naples and Rio de Janeiro. The first two mentioned cities I had already seen, and therefore, I could compare them all. Constantinople I saw from the ship, and its panorama, with its many minarets, made many impressions upon me. A typical oriental town. It was the panorama of Naples, the great bay bounded on one end by the always smoking Vesuvio, which brought me to exclame: "What a wonderful spot!" The Italians say "Napoli e dopo mori." ("See Naples and then die.") But it has an equivocal meaning. The term "mori" means to die, but "Mori" is also the name of a village in the vicinity of Naples. So you can choose between "to die" or to visit "Mori" after you have seen Naples. But Rio is an unforgettable city. It is a tropical garden town with the most magnificent, natural bay.

### World's Greatest Port

Rough weather prevailed throughout the morning. Lighthouses were visible on the horizon. At 6 o'clock that morning we entered "the greatest bay of the world," in which all warships, freight ships of all sea-faring nations could find place.

After passing the natural gate of the bay, formed by two strange mountains, one being called "Sugar Loaf," we still could not see Rio de Janeiro, so big is the bay. But then, an overpowering wonderful view was offered us.

The British immigration officer, a colored man, came aboard and examined the passports of the newcomers. These are admitted without extravagant difficulties, for they are very heartily welcomed by the government. Only married people are allowed to stay on the "Ellis Island" of Brazil as long as they have no other shelter. The Brazilians are the most nationalistic people of South America, and are very proud of their immense country, although they do not look down upon other races as inferior.

After getting permission to pay a visit to the town the Argentine fellows and I strolled thru

the main "Avenida," I forgot the name. The automobiles were chasing with a tremendous and dangerous speed through the streets. Imagine all taxis of New York driving with a speed like the fire brigades! Thereby many disasters occur.

### On Main "Avenida"

The main "Avenida" is not very long. Most of the houses are only one or two stories. The sidewalks are bordered by young trees. The automobiles, mostly Fords, are parked in the middle of the streets. Many chairs, belonging to the divers coffee houses, are posted on the outer side of the sidewalks.

Here one can find people at all times discussing different things from business to art, theatre and so on.

Accompanied by the Argentine Socialist, I went into such a coffee house and drank pure strong Brazilian coffee and looked with southern idleness upon the passersby. We were soon entangled in a discussion by our table neighbors, asking where we came from, and these people look, speak and treat one as if they have known one for several years, and one feels likewise. One misses, with joyfulness, the Nordic stiffness and the words sputter like bubbling water.

At noon time the streets are deserted on account of the hot sun rays, though it was early spring at the time. We then rode on a trolley car carrying us through an aisle of high palm trees. From time to time we could glance through gardens at the wonderful bay arched over by an azure air ocean. Nature, she is ambrosial at Rio!

### A World Exhibition

That evening we visited the world exhibition of Rio de Janeiro, at which nearly all nations were represented. Some pavilions were still in course of construction. Great Britain had a magnificent palace called "Britannia." My mind is still impressed by the relief map of South America in large size. The volcanoes of the Andes mountains, beginning from the fire land, stretch as far as Columbia, just over the Equator, and they gleamed and smoked in the electric light. When I stood by this map I had a desire to pass over these strange and very scantily populated ranges. My adventurous blood began to boil. Three months thereafter I realized my ambition and travelled as a tramp through these regions.

England exhibited mostly machinery, agricultural implements and so on. Norway had a very pretty pavilion which was erected in Norwegian framework style.

Norway exhibited its pulp industry and its products, and propagated Nordic ideas. There was a large picture representing the voyage of Eric the Red and his Viking fellows to America. Below the picture were written the following words: "America was not discovered by Christopher Columbus in 1492, but by Eric the Red in the year of 1000 A. D."

South American Labor Poorly Paid, But Beginning to Think for Itself.

### Departure for Buenos Aires

Next morning at 6 o'clock, we departed from Rio, and we have been informed that the vessel is due at Buenos Aires the 1st of November. A third of the passengers remained on Brazilian soil. After a four day's southern course, the ship turned westward, and the waters of the Atlantic Ocean became green and then increasingly yellow. We entered the huge Rio de la Plata. On the north, the Uruguayan coast hove in sight. Very low monotonous plain-lands passed before our eyes during a day's ride, but, at last, there appeared some hills that evening, and we drove into the harbor of Montevideo, Look-out Mountain, the capital of Uruguay. After half an hour's stoppage we steamed on to Buenos Aires at a very low speed.

The Rio de la Plata is an immense river, the banks of which one can hardly see. In the middle of it there is a channel staked out, this being the only way for ships to Buenos Aires.

A wealthy German came aboard at Montevideo and greeted the German immigrants in the name of the German colony at Buenos Aires. He advised them what to do regarding settlements, getting jobs and so on. His main purpose was to tell them to avoid Buenos Aires, because it is overrun, and to start as soon as possible to the "campo" to do the hard work of a "peon." These "peons," agricultural workers, get very low wages, about 30 or 40 pesos, equal to between 10 and 13 dollars monthly, with living and sleeping in windy tents. The Germans, most of them coming from industrial centres of Germany, cannot compete with the agricultural Italians and Spaniards, and there is not much need for metal or other industrial workers, except in a few professions. (To be Continued.)

# Rebel Girls Help the Fight for Solidarity

By E. L.

**IN EVERY CLASS STRUGGLE THE IWW IS FOR THE WORKERS**

MEN and women trickling out of doorways and gathering in groups of five and six on the sidewalks. Faces appear in windows above; peer down on the assembling crowd along the street. Those below beckon to those craning above them, calling encouragement to the timid.

Moon-faced bosses sit on the upper sills, looking anxiously at the increasing number of people on the walks. A curious look of resignation settles on their faces as though their thought were one: "What is there to do?" accompanied with shrugged shoulders.

The little knots of girls and men begin to straighten into a wandering line. There is no semblance of an organized march; just this rippling impulse along the line towards a certain objective.

It is only another skirmish in the long labor war. Ladies' garment workers of Chicago are striking another blow at their greedy masters. The same quiet demonstration is taking place simultaneously in three different districts of the city. Rebel girls of the IWW participate with other militants in the fight with the garment bosses for better life.

Striking workers assemble in various dingy halls where Federation of Labor officials endeavor to arouse them with trite phrases and stale promises of "full support." After the mass meetings the real tactics of the battle are discussed in shop groups and each striker is assigned his place in the field.

Picketing begins. Everything peaceful. In a few days injunction notices have been posted on all the main shop doors and burly blue-coats are "picketing" with big-bellied sluggers. Arrests begin and multiply to wholesale dimensions. The bosses have run to their political friends for aid and "protection."

Settlement workers join the pickets and are treated to "joy-rides" to a filthy police station and charges of "disorderly conduct" along with the rest of the pickets. College students become interested and walk their "beats" with the pickets until nasty weather makes snug shelter more attractive. Snow and wind do not stop the strikers.

Brutalities against the active pickets are soon reported. Uniformed and plainclothes thugs beat the girls with their heavy fists and make grandiose gestures to intimidate the sympathizers. One little picket is knocked unconscious by a policeman.

Sheriff's men, mayor's men, state's attorney's men, and dirty plainclothesmen from private agencies (and heaven knows what foul pools of the underworld!) array themselves on the bosses' side and gloat over their arrests and beatings of defenseless girls. The bosses keep the throats of these hirelings well moistened with booze. They strut bleary-eyed after their "game."

The comfortable labor officials of the Federation feel an urge to demonstrate their interest and organize a Committee of Fifteen to investigate state's attorney Crowe, who properly should not take part in the strike policing, but who actually directs it with his most disreputable forces. The Committee takes a newspaper reporter's account of police brutalities to the mayor and protest. His lordship is moved to remonstrate mildly and winks violently with his left eye while he utters that beatings will stop, and the guilty officers be dismissed.

Brutalities continue. No action on the floor of the city council. The "labor" alderman, Oscar Nelson, will not "embarrass the mayor." He is attorney for the garment workers' International in the municipal courts. He raises the "red" cry at any hint of mass action by the Federation of Labor. The officials keep their comfortable seats.

A "Citizens' Committee" of liberals is formed and arranges for Public Welfare Commissioner Mary McDowell to call a conference of union officials and dress manufacturers. Strikers storm the meeting to tell their grievances. Members of the committee take turns amusing the crowd while the real conference goes on in another room.

**"No Compromise"**

The union officials are willing to let the liberals' god of Reason guide the conference, but the bosses won't appear. No light shall penetrate their darkness. The distraught "citizens" offer to thoroly investigate the strike or to report at once to the mayor. The little strike dictator chooses the latter and lives to regret. The Citizens' Committee report at length to the mayor and divest themselves of the whole annoying situation, as tho it were a dirty apron.

The labor Federation congratulates itself at last on the Committee of Fifteen's published review of the foul Crowe's activities as state's attorney. Thousands of dollars spent convicting labor in Chicago while bootleggers, thieves, murderers, swindlers walk their ways untouched! The old blackbird's feathers are pretty carefully picked by the earnest labor officials. The move is politically useful for them.

Meanwhile Judge Denis Sullivan, slippery old hard-boiled "his honor," sits in the misnamed "Equity" court as judge, jury, and public, dealing out fines and jail sentences for "contempt of court" to pickets caught under the bosses' injunction. The court room is full of dicks with roving, spying eyes, and perked ears. The lawyers have given each paid player his part before the farce begins. The dicks and sluggers' captain know the signals and can testify anything the occasion demands.

(Continued on page 41)

# Hellish Conditions in Eastern Kentucky

By ALONZO WALTERS

**The Industrial Pioneer in printing this article is following a definite policy: that of exposing rotten industrial conditions wherever they are brought to our attention. This is the fourth article of the same general nature printed. The first exposed the misery of the stockyards workers in Chicago; the second, "Labor Hells in Dixie," dealt with conditions in the state of Louisiana and last month "Slavery in West Virginia" was featured.**

**There is one outstanding feature in all of the above mentioned articles and this is also true of the following one: lack of organization, in every instance, lies at the bottom of the misery experienced by the workers. These articles carry with them a moral which thinking workers cannot fail to see and act upon.**

SOME time ago—in the October, 1923, number, I believe it was—the Pioneer published an article written by J. W. Leigh, entitled, "LABOR HELLS IN DIXIE." In that article are described the miserable conditions that exist for wage earners, white and black, native and foreign-born, children and adult, in the state of Louisiana.

Now, I want to call your attention to another spot in the Southland—much less distant than Louisiana—which is, in my opinion, one of the most detestable holes into which it is possible to drag workingmen. Down in the

### Coal Fields of Eastern Kentucky

men are working for wages that a Chinaman would scarcely accept. The MINIMUM wage is a little more than $2.00 per day—for "trapper boys," sand dryers, and the like; the MAXIMUM a little over $5.00 per day, for trackmen, pumpers, wiremen, blacksmiths and other skilled workers. The loaders are paid an average of 55 cents per ton, each ton being approximately 3,000 pounds. The employes have no checkweighman at any of the mines, and the "weigh boss" is invariably one who has worked himself into favoritism with the mine officials, and one whom said officials FEEL ASSURED THEY CAN TRUST.

Letters which I receive every week from friends in Eastern Kentucky give the information that the mines in that coal field are now, and for several months past have been, working only about half-time or a little better—that is to say three or four days a week. Thus the earnings of a coal miner, assuming that he is one of the most highly paid day men, will be, for a half-month period, about forty dollars. If he is a loader, and loads an average of—say twelve of the big company tons in a day, which would be doing exceedingly good work, taking into consideration all the "jack-rock" and slate which must be removed, his earnings would be $52.80, if we give him four days to the week. From this must be taken the cost of his powder, paper, fuse, carbide, lamp, tools, cost of "blacksmithing," etc. After all these items have been taken out, the earnings of the coal loader will be just about the same as those of the most highly paid day men—about $40.00 for a two-week period. When from this meager sum is deducted all the little pickpocket items which the company takes from the pay envelopes of their employes, more often than otherwise the miner finds himself

### In Debt at the Company Store

The prices which miners have to pay for goods purchased in those stores are outrageously beyond reason in price. But they have no other choice. In most cases there are no other stores near enough for their convenience. Even where there are, the coal miners are usually not well enough known to obtain credit at those stores, and, needless to say, their employers always see to it that they never have money enough ahead to pay cash. Knowing thus that they have the poor slave completely within their greedy clutches, the coal barons hold him up in the most shameful manner imaginable. They stoop to some of the most rascally little tricks and practices that it is possible to think of. To illustrate—Before an employe can do any trading at

the company store it is necessary for him to go to the office and draw "scrip" for the amount of goods which he desires to purchase. Before he can draw this "scrip" he must present at the window his "scrip card," which was issued to him at the time he signed up for employment. If this card gets lost or misplaced he is made to pay for a new one—the price being in most places fifty cents. Think of being forced to pay a merchant for the privilege of trading at his store! How much more outrageous is the custom of forcing an employe to pay for the privilege of handing back to an employer, who has already robbed him of the lion's share of the product of his labor, a part of what still remains of his slender earnings! This is only one of the many robber "stunts" that are practiced by the coal barons upon their serfs.

The mines in which the men work are simply

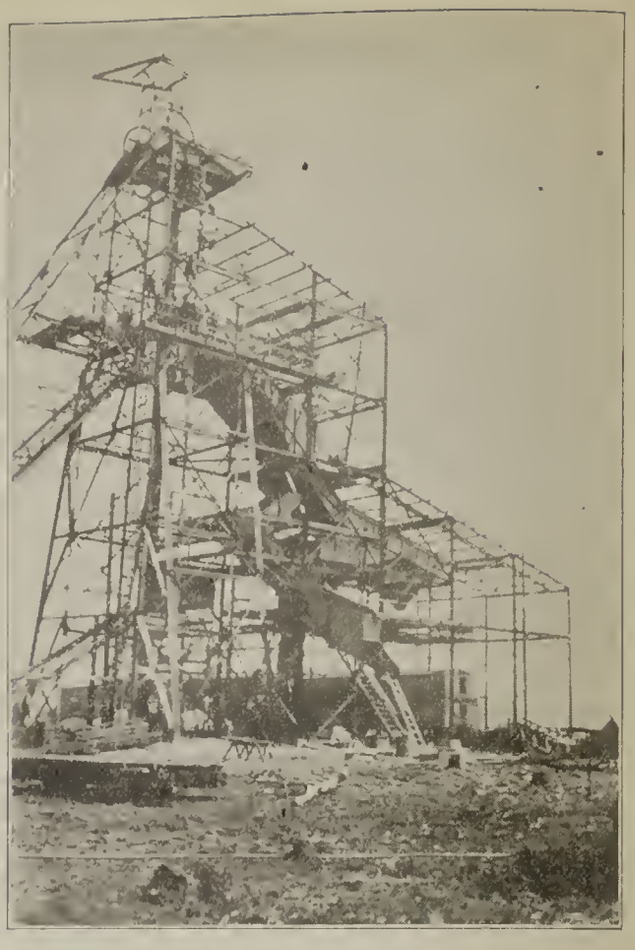
**Death Traps**

in every sense of the word. When a man enters one of them he is simply taking a gambler's chance of ever seeing the light of day again. I receive every week a copy of a local weekly newspaper published at Hazard, Ky. Almost every issue I receive has one or more deaths from mine accidents to tell about—accidents that have happened just within the vicinity of that one little town.

Most of these accidents could be very easily prevented. Most of them result wholly from criminal negligence on the part of the coal mine owners and the public officials whose duty it is to enforce the law, and make conditions safe, so far as is within their power, for the men who work in the mines. A short time ago a friend of mine was killed in the mine of the Hazard-Blue Grass Coal Corporation, at Hazard, Ky., by being caught between his motor and a "hog-back"—an uneven bump in the roof—which the company had failed to remove in compliance with the law. I am informed by people living in that camp that THE MINE HAD NEVER BEEN VISITED BY A STATE MINE INSPECTOR SINCE IT WAS FIRST OPENED, nearly ten years ago. The coal operators are heartlessly indifferent to the dangers amid which their wage slaves are obliged to work, and so, apparently are the state officials.

**Another Danger**

that stares Eastern Kentucky miners and their families in the face, and one equally as great, if not greater, than the danger of mining coal is the risk that must be run every year of being stricken down with typhoid and other diseases arising from the filthy and insanitary conditions in which they are forced to live. The outhouses used by the miners and their families are always in such a filthy condition, and situated so near the dwelling houses, that the odor which comes from them in hot weather is nothing less than stifling to the entire camp. The miners get their water for drinking and cooking purposes from wells that have been dug for their use in various parts of the camp, there being usually two or three wells for the entire camp. I remember one of these wells in a mining camp at Allais, Ky., which is within thirty or forty feet of a barn where



It Looks Like a High-Class Gallows—It's Really a Modern Coal Tipple.

the company horses and mules are kept. Of course the water that comes from those wells is full of the germs of typhoid.

Each camp has a PHYSICIAN, too. This physician receives a regular salary. A deduction is taken from the pay of each employe to pay the doctor this salary. In addition to this, the doctor "charges extra" for certain kinds of cases, such, for instance, as attending to a woman at childbirth, or for treating any kind of venereal diseases. But altho the doctor receives his pay from the men, he takes his orders from the bosses, for it is at their will that he holds his job. Hence he dares not, even if he wished, start a too vigorous "health drive," that is to say one that would mean the expenditure of any money on the part of the mining company—he dares not do this or raise too big a howl about the conditions which prevail within the scope of his practice. Such a course would most surely result in the loss of his position.

With the exception of a few scattering locals along the Cumberland and Big Sandy rivers, all the mines in Eastern Kentucky are NON-UNION. The officials of the United Mine Workers of America have shown very little interest in that coal field, altho at various times the men in that section have shown unmistakable evidence of rebellious and resentful spirit against their oppressive conditions.

As the situation stands today the

### Coal Barons Rule With An Iron Hand

Their will is the supreme law of the land. Their employes are absolutely at their mercy. If one dares to raise a protest against his conditions, he is promptly fired and blacklisted so that it is impossible for him to get a job anywhere in that field. In addition to that, since all the miners live in company houses, he and his family are thrown out of the house in which they live—out on the road to get by the best way they can. I knew one miner, employed in a mine near Hazard, Ky., nearly four years ago, who had refused to sign the "yellow dog contract"—which was then being introduced in Eastern Kentucky for the first time, and which is today prevalent thruout the entire region. This man, on the day after being discharged, made a trip to Hazard to try to find a house to move into. He knew, of course, that he was liable to be evicted at any time from the house where he was then living. While he was away the mine superintendent, assisted by some deputies and other scum went out to the man's home and piled all his household goods and his family outside. Not only that—he gave orders to the neighbors of this victimized family that if any of them took them in, even for one night or one hour, they could expect the same kind of treatment. There was some snow on the ground, and the wife was ill, she being at that time the mother of a little baby only a few days old; but these circumstances failed to soften in the slightest degree the beast who had evicted them. When the husband returned and found his family in such a helpless state, of course there was no choice for him other than to sign the humiliating "yellow dog" pledge.

One circumstance in particular which gives the coal barons such unlimited power over the men is the fact that, Eastern Kentucky being only in the infancy of its industrial development, coal mining is practically THE ONLY INDUSTRY IN WHICH EMPLOYMENT CAN BE FOUND. The coal miner, realizing this, quietly submits; for he never has enough money ahead to enable him to leave his unhappy environment, and seek employment elsewhere.

The Coal Kings of Eastern Kentucky also, as a matter of course,

### Own and Control the Public Officials

the public schools, and the local press. The judge is their servant; so is the sheriff; so also are all the others. One or two deputies are kept in every mining camp to "keep order." These deputies remain within reach of the beck and call of their masters, the mine officials, and are always punctually on hand to do their bidding, whatever it may be.

The PUBLIC SCHOOLS are taught in buildings that belong to the mining companies. In addition to his regular salary the teacher, in most cases, receives a regular monthly compensation from the

Kentucky Hillside Coal Mine.

mining company. They make no secret of this practice—it is an openly admitted fact. Nobody back there seems to wonder at it. Everybody seems to take the view that the poor teacher is justly entitled to all the compensation he receives—and undoubtedly he is, for is he not engaged in the noble, notable and worthy calling of training the children of dirty and ignorant miners to become one hundred per cent Americans; endeavoring, to the best of his abliity, to drill into them the particular kind of PAY-TRIOTISM that is most pleasing to their masters?

In some camps this teacher's subsidy is raised by deducting a "school tax" from the over-weighted pay-envelopes of the mine employes.

Such are the conditions which must be daily endured by the thousands of coal miners and their families who dwell among the rugged hills that wall in the winding valleys of the Kentucky River, the Cumberland and the Big Sandy. The only reason or explanation that can be offered for the fact that Eastern Kentucky has not become as publicly notorious as the coal fields of West Virginia, Colorado and some other states is the fact that the miners in Eastern Kentucky have always been kept SO COMPLETELY UNDER THE THUMB OF THEIR MASTERS, so closely and carefully held down, so utterly at the mercy of the tyrants who rule over them, that they have never had the opportunity to make themselves heard by the outside world. It is for this reason that I humbly request for them a respectful hearing in the columns and among the readers of this magazine. It is for this reason that I appeal to this magazine to plead the cause of a downtrodden and oppressed people, who, for reasons beyond their control, are unable to lift a voice in their own behalf.

Promote self-development by ample facilities for wide reading in an atmosphere of freedom and morality.

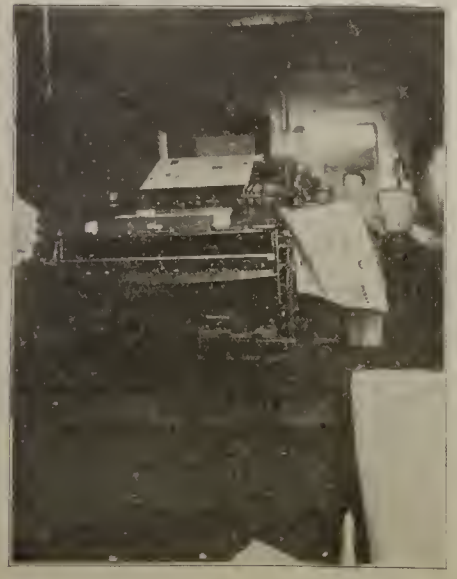
Books are the most enduring monuments of man's achievements. Thru them civilization becomes cumulative.

# Peeps at Your Pioneer in the Making

The idea hehind this group of pictures is to familiarize the readers of the Industrial Pioneer with the different processes necessary in making their magazine. Tbese six pictures only show the major operetions; there are several others, such as proofreading, making up the pages, correcting galleys, folding the covers, mailing, etc., whicb we cennot show here for lack of space.

In the picture at the left the first operation is shown. On this hattery of linotypes not only the type for the Pioneer, but also that for all other IWW puhlications printed st heaquarters, is set. When this picture wes taken, the operator at the first machine was setting copy for the Hungarian weekly, Bérmunkás; the man at the center machine was setting Pioneer copy and the one at the end machine was working on the Bulgarian paper, Industrialen Rahotnik.

The picture at tbe right shows the compositors putting tbe final toucbes to one form of tbe Pioneer. They are making page-proof corrections just before the form is locked up to go to tbe press-room. This form contains sixteen pages and three of them are needed for each issue of tbe magazine. These men, as are all others working in the shop where your Pioneer is printed, ere members in good standing in Printing and Publishing Workers' Industrial Union, No. 450, of the IWW. It should interest memhers to know that tbeir magazine is made by fellow workers.



This view shows the Pioneer on the press. Note tbe size sheet on which it is printed. The sheet is 32x44 incbes and sixteen pages are printed at one impression. To print a complete copy of the Pioneer this press makes three revolutions, and to run each issue ahout thirty-six hours of press time are required. This press hesides turning out 90,000 copies of the Industrial Pioneer last year, also printed 84,000 copies of the Finnish magazine, Tie Vapauteen; 2,450,000 two and four-page leaflets and 500,000 pamphlets containing from eight to one hundred and thirty-six pages.

One of the principal reasons for the ignorance and passivity of the workers of the world is the sort of reading material dealt out to them hy our capitalistic masters. This press has heen doing its hest to offset hoss propaganda for five years and in that time has turned out millions of pieces of working class literature.

If every printing press in the country had such a record for workingclass propaganda and education, the end of the capitalist system would he in sight. Since tbe April numher of the Pioneer was printed, 15,000 constitutions, over 100,000 leaflets and 20,000 I. U. and General Office Bulletins have heen run off on this press. It's a husy machine.

Here we see the next step in making the Pioneer. This machine takes the press sheets, 32x44 and making four folds, reduces them to the page size of the Pioneer, eight hy eleven inches. Ahout thirty hours continuous operation of this folder are necessary for each number. The press in the background is the one on whicb the covers of the magazine ere printed. A sheet of last month's cover had just come off the cylinder as the picture was snapped.

This press and folding machine are also used in printing the Finnish magazine and ere valuable assets to our organization in its effort to educate the workers of the world. Just a little to the right, enough to keep it out of the picture is another folding machine on wbich the covers are folded, and behind the camera is the large weh press on which the newspapers are printed.

Here we see the Pioneer getting the rough edges trimmed off preparatory to going to the shipping room, from whence it is mailed, not only to every part of this country, but to nearly every country of the world. Rebels in Japan, Australia, China, Spain, Italy, England and many other countries look forward to the coming of the Pioneer with its revolutionary news and views of the American workers eacb month.

These pictures will give our readers some idea of tbe labor entailed in making the Pioneer, from a mechanical viewpoint. Of course, tbey do not show tbe multifarious duties of the editorial department, in gatbering material and pictures, and preparing the copy for your magazine.

The pictures will also give our members a good idea of the kind of print-shop our organization has and perhaps give them more confidence in their task of organizing the workers. No better way of spreading workingclass propaganda and education can he found than keeping these machines busy. Our print-shop is one of the hest owned by any labor organization in America and the Industrial Pioneer is its pet product. Boost tbe Pioneer. It's yours alone. A magazine written hy rebel workers, printed hy rebel workers, for rebel workers.

The picture at the left shows the bindery girls putting the covers on the Pioneer and stitching the folds. These girls also mail the single copies to suhscribers. Besides the Pioneer, these girls work on Solidarity, Il Proletario, Bérmunkás, Industrialen Rabotnik, Solidaridad and Tie Vapauteen. Tbey also make tbe little red cards, now famous all over the world; 80,000 of them last year. Song books, pampblets, leaflets, constitutions and industrial union hy-laws also flow from tbeir department in a steady stream. Time never hangs heavy on their hands—there's too much to be done.

# The Stuff They Fight About

By CARD No. 455306

Prevent War—Join Oil Workers' Industrial Union No. 230 of the IWW.

**THE black fuel oil burst from the pipes, there in the fireroom of the Horace Luckenbach, and gushed over the floor plates in an ugly mess as a fireman turned the wrong valve.**

**Followed furious work with rags and shovel before we emerged, sweaty and smeared.**

**"That's the goddam stuff the world goes to war about," remarked the water-tender who had been cynically watching us wipers swab up the mess.**

**He was right. That black, sticky stuff we were cleaning up there in the bowels of our big freighter, running north along the western coast of Mexico, is that "goddam" stuff that brings revolutions in Mexico and Central America, world conferences at San Remo, Genoa and Lausanne and may soon plunge the nations of the earth into a titanic "war for democracy" and oil.**

I have just been reading two volumes on the clash of world oil interests—just published. They are books that every member of the Marine Transport Workers' Industrial Union or the Oil Workers' Industrial Union, or, in fact, every class conscious worker anywhere would do well to read in order to keep posted on latest developments of this source of power and wars. Both the books are written from a capitalistic bias but they contain facts of importance to the workers whom the capitalists will expect to fill the trenches in the next imperialistic struggle for oil. One is the "World Struggle For Oil," by de la Tremerye, a Frenchman, and the other, "Oil and Anglo-American Relations," by two Englishmen, E. H. Davenport and Sidney Russell Cooke.

As I said, both are written from the capitalist viewpoint. The labor problem hardly occurs to the writers: they are unfolding the growth and development of titanic commercial enterprises which are competing for world power. Both books are written from a more or less nationalistic bias—the one French and the other English, but—fortunately for their value to American readers, the nationalistic blinkers they wear are not made in America. So both give the facts readily as they see them about the American government's relationship to Standard Oil, the relationship which is expressed very aptly by the Frenchman when he says: "The American Government bows down to Standard Oil."

**"The American government bows down to Standard Oil."** This statement sounds very commonplace to readers of the Industrial Pioneer, but these oil books spice up their conclusion with some real paprika facts drawn from the field of international oil diplomacy. Again and again they prove that the Standard Oil is the government, as far at least as the foreign policy of the State and Navy departments are concerned. They show, for example, the American government thundering its demand for the "open door" (for oil concessionaires) in Persia and the British government "bribing"—yes, that is the word used—bribing the American government, mind you, by a concession to the Standard Oil. The little concession was nothing less than half the oil rights of Northern Persia. The American government had been getting rough, not only as far as Persian oil fields were concerned but elsewhere, so this juicy morsel was handed its other self. Uncle Sam's identity with the Standard is again shown in a dispute for the "open door" in the great 4,000,000 acre Djambi oil fields in the Sunda Islands of the Dutch East Indies. Standard found herself barred and the black gold flowing into the coffers of Royal Dutch Shell. So our arrogant American oil lords walk right into the legislative halls at the Hague and demand the right to operate in the Dutch colonies. "Who is this?" asked Dutch legislators. "Is this just a private oil company or the American government that talks so boldly?" The answer was not long in coming. Whiskered Hughes sent a haughty note from Washington that showed Washington and Wall Street

were a little closer even than Siamese twins. Again we see Ameriean naval forces rushed to Central Ameriea at the behest of Standard Oil and the Washington government again on the job sabotaging Mexican governments that were slow in coming through to the bleeders of 26 Broadway.

Little of this Standard oil dope has been eoming out in the Teapot sewage. If you follow the scandal flow you will notiee that our progressive senators have been busy shoveling out the Sinelair and Doheny muck but that the Gargantuan cesspool at 26 Broadway has hardly been touched. The Wheelers, Brookharts and Co. are letting the masters of America alone.

* * * *

Just as the Standard is baeked by its government in its oil demands so the Royal Duteh Shell and the Anglo-Persian are backed by their government. So, if the American worker is thrown into the trenches in a eamouflaged war for democraey whieh is really a war for oil, he will be just a pawn in the game between the Ameriean and the British oil trusts.

Let us look more elosely at these three oil powers:

The Standard is still the mightiest and she is baeked by the most powerful capitalist country. Her annual turnover is more than 30,000,000 tons a year as eompared with the 16,000,000 tons of the Shell and the 3—4,000,000 tons of the Anglo-Persian. It is true that the Shell and the Anglo-Persian may eontrol greater undeveloped fields whieh will make them bigger faetors than the Standard in the future unless war wrests these fields away, but as far as the present situation is eoneerned the Ameriean saphead can still boast that his trust is the "biggest."

The Standard is hundred per eent Ameriean in its ownership and eontrol:

The Royal Dutch is basically British. Even her chief, Sir Henri Deterding, has dropped his original citizenship for the title of "Englishman." The Royal Duteh Shell is allied with the gold of the Rothsehilds and with the American banking house of Morgan; in fact, it has huge American interests, but for all that it is an English eompany and the British foreign office has again and again gotten behind it.

The Anglo-Persian is hundred per eent British. In faet it is a state owned octopus. Two-thirds of the stoek is owned outright by the British government and the other third is controlled by the Admiralty through the Burmah Oil Company. Its produets were formally marketed through the Royal Duteh Shell, but of late there has been eompetition though it stands with the Shell in a erisis as against the Standard.

So there they are: the three great oil giants. Giants, nay, Titans, sweeping governments in their trail and with interloeked eorporation eonneetions that make them invulnerable to anything exeept eaeh other and the power of labor.

The rivalry between the Standard and the British trusts has beeome more intensive in the last few years. That is beeause the evolution of industrial scienee has made oil enormously more important than it was a dozen years ago. The market has expanded while oil fields have been playing out. So the rivalry is both for the bigger and more luerative markets and for the newer oil fields from which these markets must be supplied.

In the days when Rockefeller got his start they burned kerosene in lamps. Today oil is running most of the ships of the world, driving stationary engines, speeding loeomotives, millions of autos and motor trueks and providing fuel for the airplane and the dirigible. World oil production is nearly as great in one year now as it was in the ten-year period from 1890 to 1900. And America, the most industrialized nation, and consequently the greatest oil user, has become an importer of oil. She still ships oil abroad, it is true, but this is far more than balaneed by the oil she ships in from Mexieo and other outlying fields. This new and erying need of American capitalism for outside sources of oil supply led to the seleetion of an oil president in 1920 (Wilson having been rather a Morgan-banking president) and has ehanged Ameriea's foreign relations.

The Standard is now showing unbridled haste in going after the world's oil resources. Unfortunately for her these fields are nominally under the control of her rivals. The old Standard—the oldest of all the oil trusts—had gotten kind of stiff jointed and allowed Royal Duteh Shell and Anglo-Persian to slip in where she now wants to be.

The Standard did not need to own the home oil fields to exploit them. By owning 69 per cent of the pipe-line mileage, by ownership of refineries and influenee with railroad eompanies she eould skim the cream off the independents' milk. But this didn't work so well abroad and today she finds that her British rivals eontrol the grat bulk of the world's potential oil supply. The Standard exploits most of the present production but the future production is in the hands of the Royal Duteh and Anglo-Persian unless the Standard can shift the balanee by foree or diplomaey.

This she is now trying to do. Her diplomaey, it may be explained, is a threat of foree, a threat of foree by the American government which she eontrols. Sometimes the foree is aetually exerted, as in the ease of Central Ameriea.

* * *

The case for war or not seems to depend on whether the Standard (Ameriean government's) threat of foree eontinues to work or whether she will have to make good by hurling her eountry's war legions at the British eombine.

We mentioned before that the British government bribed the Ameriean by giving the Standard fifty-fifty rights in Northern Persia. Britain gave away "rights" she had won by a long series of

bribes to Persian officials and by her military operations during and after the war for democracy.

It is the opinion of Messrs. Davenport and Cooke that this bribe won't work. It appears that the maw of Standard Oil is insatiable. The question is how far Britain will give way before she fights.

* * * *

If America goes to war for oil it will be comparatively soon. Think this over, workingmen, for you will be the ones to fill the trenches and graves of the next war and the only oil you will get out of it will be the oil that sticks to your hands in fueling the ships and the motor lorries that are used in fighting for the big loot.

The reason why American imperialism is playing her oil hand hard now is that every year she waits makes her rivals stronger in oil and being stronger in oil means being stronger in war. The oil fields Britain controls in the four corners of the world are largely undeveloped or else in the hands of Soviet Russia. The actual production needed to fight a war with still comes largely from the western continent. If a war broke now England would be in severe difficulties unless her tankers could bring oil from Mexico and other fields on the Carribbean Sea—and U. S. submarines would be in a position to play havoc with those tankers. But if the war can be delayed until after Mosul and Mesopotamian fields are in a well developed condition, England will be sitting prettier.

* * * *

Oil was not such a basic power factor in the war of 1914-1918 as it is today, but it was just this important that it turned the tide of war.

And American oil won the war. This fact is mentioned not from reasons of patriotism. I get no patriotic thrill out of America's part in the saturnalia of bloodshed that has just passed. It is mentioned only to show the strategic force of the situation.

The Allies won the war when the Standard Oil finally agreed in 1917-18 to forego its rivalry with the Shell. The Standard, which had helped to keep the American government out of it for a time finally saw the light and in its language to Lord Northcliffe said, "It's our war as well as yours."

A concrete instance of how oil changed the face of the war is shown by France. At the beginning she used railroads and coal. Her oil production in 1914 was only 476,000 tons. By 1918 the production was 1,000,000 tons. In 1914 she was shipping troops by railroad. By 1918 she was shipping them by motor lorries, driven by gasoline. That was partly because German shells tore up railroad lines, partly because motor lorries were a more mobile form of transportation. In addition she was using thousands of airplanes. Statisticians tell us that in 1914 France had only 132 airplanes, 110 motor lorries and 50 military tractors. By 1918 she had 4,000 airplanes and 8,500 motor lorries. And the German offensive in March of that year found itself resisted by adequately fuelled lorries and airplanes. American oil won, for France, over German coal.

It might be said in passing that the war put out of business the great German concern that was tending to dominate Europe—the Europeanische Petroleum company which went down with its government.

* * * *

The Standard Oil, the Royal Dutch Shell and the Anglo-Persian may go to war among themselves, with the Standard on one side and the other two on the other side. Again, it is possible that they will get together into a great world trust. That possibility is hinted at by de la Tremerye and the possibility seems more plausible when we consider the financial interlocking of the Shell subsidiaries with American capital.

BUT, in any case, the working class has a war with all of them—the class war for the industrial power they now have. Until the workers do take control of the industries they will be the military slaves of the oil trusts and allied concerns during imperialistic wars and the civil slaves during times of "Peace." (What irony in that word?)

"If the workers take a notion," as Joe Hill would say, they can stop all scheming oil trusts, by taking power themselves.

Both of the two oil books we have been considering give different tips to capitalist governments as to how to get world economic power. These tips are just as good to the workers.

The Frenchman's book lays all the emphasis on oil. "Who has oil controls the seas," he says. Well, that is in line with our program. So "oil power to Oil Workers' Industrial Union."

The Englishmen lay the emphasis on the seas. "Who controls the seas controls the oil. Seapower is first," say these Johnny Bulls, advising their government that unless they continue to control water transport their outlying oil possessions won't be of any value to them in case of war.

Again we agree. "All power on the seas to the Marine Transport Workers' Industrial Union," we say. The MTW will show these greedy plutes who's the boss on the water.

All power to the workers. The Oil Trusts are arrogantly parcelling out the world with the aid of their governments. The industrially organized workers must be just as arrogant as Standard Oil; just as arrogant as Royal Dutch Shell; just as arrogant as the Anglo-Persian.

The workers created all the wealth that Rockefeller and Henri Deterding are flaunting and they are going to take it with the arrogance that goes with conscious strength.

# No. 744, Missing in Action

(Continued from page 6.)

As the boy had fallen in a depression between the track and the gob the explosion passed over him without doing him further injury. Slowly consciousness returned to him. He opened his eyes.

All was quiet and so dark he could feel it. Luckily his light had been extinguished thus, probably he was saved from fatal burns while lying unconscious under the heavy door. He sat up. "Must have been a 'splosion," he commented. His cap and lamp were lost in the darkness. He began feeling around for them, but he could only search with one hand. His left arm was broken.

At last he found the lamp. Gas was still spurting from the tip. He placed the lamp between his knees to hold it while he placed his hand over the reflector to accumulate a pocket of gas before rolling the sparker. Then a thought flashed thru his mind—"Will there be another 'splosion when I light this?" He hesitated and sniffed for a smell of gas. He then breathed through his mouth. Ah! Black damp, dead air. He could taste it. He knew the taste. It made him want to spit and spit some more. He remembered how the taste had lingered for days after the time the fan was stopped for two days without the men being notified. And how sick all the men had been that second day when they had all gone out in a body. He remembered how some had fallen while walking out and were carried the rest of the way by their buddies. And of how many others had keeled over too weak to stand after receiving their first breath of pure air.

EUGENE BARNETT

**One of the "Centralia Boys." Serving a sentence of from 25 to 40 years in Walla Walla penitentiary.**

All these thoughts flashed through his mind in the moment he hesitated. But the taste of the black-damp warned him that he had not a moment to lose. He knew that even then every breath was bringing certain death nearer. So he rolled the steel and sent a flood of sparks into the tiny stream of gas spurting from the tip of his lamp. The flame did not look white like a gas light, but red like the setting sun, for there was but little oxygen in the air. He looked at the place where the door had been. Only the collar or cross timber at the top remained and one end of it hung loose. He could not find the door but he remembered a piece of canvas he had seen in a cross cut not far away so he hurried there half expecting to find it gone. But the cross cut had been out of the path of the explosion and although the wooden brattice in the cross cut was torn down the canvas was still there. He dragged it up to the place where the door had been and hung it over the collar the best he could then piled coal and rocks on the bottom of the curtain he had formed.

"Now," he said, "if the fan starts that coal and slate will hold the curtain down and force the air to go up the air-course and if any of the miners are yet alive—it may save their lives." Just then a heavy fall of slate in some remote part of the mine caused a hollow Boo-oo-oom! to reverberate through the mine and the little lad struck a trot toward the bottom of the shaft. He expected the whole mine to start caving any minute. He passed the still forms of several miners, twisted and burned beyond recognition. They had been in the main path of the explosion and some of them were literally torn to pieces. The poor kid shuddered and hurried on. At last he reached the bottom of the shaft only to find it jammed with wreckage.

On top another scene was being enacted. The tipple crew had just seated themselves with their dinner buckets in the warm sunshine against the power house when the explosion occurred. The shaft belched forth a mass of flame, smoke and wreckage very much like the eruption of a volcano. The tipple was wrecked and a section of it thrown high in the air. The men ran into the power house, the blacksmith shop or any place they could think of to escape the falling debris. Then from all the miners' shacks came a wail of despair and hundreds of women and children came running toward the shaft.

An immense cloud of smoke began to spread from over the shaft and settle over the camp like a black pall. As soon as the heavy debris quit falling the men rushed out from their places of refuge and took a look at the wreckage. The tipple was a wreck. Huge timbers lay criss-crossed in all directions and one side of the iron fence that had surrounded the shaft was down, leaving an open passage to the yawning hole that had been the shaft. Ends of timbers and lagging could be seen hanging out from the sides of the shaft and the whole shaft seemed to be working; grinding and creaking noises came up from below as the loosened casing settled. And frequently a hollow boom! would denote the falling of another timber to the bottom of the shaft. All the men began giving orders at once. Naturally all orders were different. While they were arguing an old man with white hair, a wrinkled face and sparkling

blue eyes came running from a house nearby. "Here, boys," he shouted, "don't argue, but do as I tell you." There was authority in his voice and not a bit of indecision. "Two of you put up that fence," he ordered, "and four of you keep the women from jumping into the shaft while the rest of us get the fan started and organize a rescue party."

No one seemed to question the old man's authority though none of them had ever seen him before. They seemed glad to take orders from the old fellow and started working feverishly at the tasks he had set for them. The old man with the rest of the men hurried to the fan-house and inspected the fan. They found that the explosion had not affected the air shaft at all. The fan was all right and all it needed was power to make it go. A stairway in the shaft served as a manway up which the miners could climb if any remained alive. The old man hurried to the power house and found the electrician working feverishly to get the power on again. There was a short circuit and a lot of grounded wires somewhere inside the mine, so he had to make some changes in the wiring and run a temporary line to the fan-house.

Upon inquiry the old man learned there was only one safety lamp and it was at the Super's house and him away attending a meeting of the operators called to devise ways and means of keeping the union out of Somerset County. The old man turned to one of the miners and said, "Get that lamp." The miner soon returned with it and no questions were asked as to how he got it.

The temporary line from the power house to the motor in the fan-house was connected up by then and as the current was turned on and the big fan began to roar, a rescue crew composed of the old man and eight volunteers were starting for the head of the stairway in the air shaft when a wail from the crowd of women caused them to look toward the shaft. Black coal smoke was rising out of the shaft in a veritable cloud. The worst had happened, the mine was on fire. The women screamed, some fainted as their last hope was killed, and others broke away from the crowd and ran screaming toward the shaft, intent on jumping into it, to perish as their loved ones had perished. It took the combined efforts of the men and the less hysterical ones among the women to keep them out of the shaft. Just then an angry shout from the road caused all to look in that direction. The manager and the superintendent had alighted from a large touring car and a dozen or more coal and iron police armed with riot guns were jumping out of other cars.

**Class-War Widows and Orphans**

**Wives and children of the members of the IWW incarcerated in Washington State penitentiary at Walla Walla. Mrs. Eugene Barnett is the woman in black to the right with small son standing in front of her. Gateway to prison grounds in back.**

"Hey!" shouted the manager, "Why in the devil don't you reverse that fan? The Super says you are driving the fire right into the development work."

"To reverse that fan means to burn everybody, dead or alive that is in the mine," said the old man who had been leading the rescue work.

"To hell with the bodies," said the manager. "They are dead. We must save my coal. Tell the engineer to reverse that fan."

"No," said the old man, "I will never tell him! It will be murder to do so if any of the men are yet alive and to value coal above a human body is certainly inhuman. You should be ashamed to burn the bodies of the men who have created your wealth."

"Who is this son of a——?" the manager asked turning to the Super. But he never heard the answer for the epithet had scarcely left his lips before he was knocked flat by a well directed uppercut to his fat chin. A rush was made at the old man by the guards, and one sneaking from behind hit him across the neck with an iron bar he had picked up as he sneaked through the blacksmith shop to get behind the old fellow. The manager got up as soon as he saw the old man felled by the gunman. "Fine work, Shamrock," he said.

"His neck is broken," said one of the other gunmen after he had turned the fellow over with his foot.

"Good!" said the manager, whose name was Slurwind, "Drag him out of the way and tell that engineer to reverse the fan."

When the little fellow in the mine found the shaft blocked he started for the manway that led to the foot of the air shaft. Through a narrow winding passage just wide enough for a foot path he hurried. At last he reached the end of the passage and came to a strong oak door. He often tried to open that door in the year and a half he had worked in the mine and never had he been able to do so. The air pressure in the air course on the other side had always been too strong for him and now with a broken arm he had little hopes of being able to do so. He placed his shoulder against the door and put his combined weight and strength against it. It opened so easily he lost his balance and almost fell on his face. In his haste and excitement he had forgotten that the fan was not running and consequently no air pressure against the door. The air was a little better now and he hurried forward to the foot of the stairs and began to climb in a down-pour of water that almost took his breath.

Up, up, up he climbed, around and around. The shaft was square and the staircase wound up in spiral, eight steps up, then a landing, then a quarter turn and up eight more steps and the water pouring down on the steps in front of the boy was continually spattering in his face and eyes.

He was weak from breathing the gas, and he suffered agonies from his injuries, but the grit that seems to be inherited in miners' families kept him at his task.

Shortly after he began ascending the stairs the fan started and although the fresh air felt good in his lungs it chilled his wet body and drove the water down with greater force than before. But he threw out his chest, took a deep breath and climbed with renewed vigor. Finally he reached a spot one hundred feet below the surface. The air pressure from the big fan was immense and it would have been impossible for anyone to have climbed much farther in the draft of that big fan. It would also have been folly to try to construct a stairway out of wood strong enough to withstand that gale. So for those reasons the shaft had been driven double width the first hundred feet down, and a wooden partition divided it in the center. One side was the air shaft and the stairway led up the other to the outside. A heavy oak door closed the doorway in the partition at the bottom of the double shaft.

Naturally, this door opened into the air shaft and the air held it shut. So great was the pressure that only a strong man could open the door. Try as he would the little lad could not open it. At the very moment the old man was trying to prevent the fan from being reversed the boy was tugging at the door crying and shouting for help. He was so near the top and yet so far from being out. His loudest cries were but a whisper in the roar of the big fan. To climb the slimy, water-soaked planks of the shaft casing would have been impossible even with two hands, so the poor kid sat down and cried. As he sat there trying to think of some way to open the door the air stopped whistling down the shaft. The fan had stopped.

Quickly he sprang to the door, pulled it open and began running up the stairs. The fan began to roar again and he felt a draft of hot air from below. The fan had been reversed.

By the time he reached the top of the third flight above the door the smoke was so thick he was groping his way feeling the stairs with his hand. The sulphur fumes in the smoke were choking him. The carbon monoxide gas was deadening his senses. Still he struggled upward. The smoke grew hotter and hotter. He felt like a spider suspended above a candle. He tried to hurry, to climb faster.

Only fifty feet more, he must make that.

The staircase burned through some place beneath him and he felt the stairs sag then tear loose above and start sinking toward the bottom. He made a blind rush up the stairs in a last mad effort to reach the top.

When he reached the place where the stairs and casing had pulled apart he ran around on the landing feeling for the next flight of stairs which was hanging in the air about a foot above his head. Could he have seen he might have climbed up and got onto them and climbed the remaining thirty feet to safety. But as it was he stumbled over the edge of the casing and fell in behind it, between it and the shaft wall. The fall rendered him unconscious so he did not know when the shaft became a seething furnace a few minutes later. The fan was soon a mass of warped steel and as it ceased to turn the flames began to recede into the mine again.

Several months later Shamrock was sitting in the Super's office and the Super remarked: "I can't see what became of that Brown kid that was trapping in the Main. His check is the only one we haven't found. He was sure a game little devil. We found one of those old curtains that we tried that fire-proofing solution on a year or so ago lying on the track where his door used to be and it had slate piled on one end of it. Part of the collar was under it where the fire could not get to it, so it looked as though he had tried to put up a curtain after his door was blown to pieces. We found his bucket there, but not a sign of him.

"That old cow of a mother of his has been talking to those newspaper reporters and we have had to buy off two that had slipped in. She told them all about her old man and the other two boys getting killed. She claims she had a dream and the kid came to her bed and told her he would have gotten out if we hadn't reversed the fan. I got a telegram from Johnstown, saying a traveling delegate for the IWW is headed this way. We must head him off and keep him out of camp, or if he gets in, see that he never gets out. If

that old woman ever got to him with her story and he got out of camp with it the jig would be up with us, for you know every one of the delegates are correspondents for their paper—Industrial Solidarity, and as it is owned and controlled by the rank and file we couldn't possibly buy it off. He may be looking for that old grey-haired duck that got his neck broke the day of the explosion, too. You know we found an IWW card on him."

A few days later a gang of men were putting a new casing in the air shaft when one of the gang found a charred body of a small boy in the crevice of the rocks, about forty feet from the top. It was burned to a crisp and could not have been recognized by anyone who had known it in life. But none of the crew had ever known the boy, for they were a new crew. The few men who had been outside the mine the day of the explosion had slipped away under cover of darkness to escape the brutalities they knew would be meted out to them by the Pennsylvania Cossacks if they were caught leaving. None of the men had known Bobby Brown but in the ashes that had been washed from around the body a brass check was found with the figures 744 stamped into it. That was the number that preceded the name of Bobby Brown on the company's books. One of the men took the check to the Super's office and reported the find. The Super hurried to the shaft and ordered the body left there until dark when it could be removed without attracting the attention of the women in camp. Then pulling the shift boss to one side, said: "It would never do for his mother to find out that he was that near out when we reversed that fan. She would make us no end of trouble; we are having hell with her at it is. You tell the crew to keep their mouths shut about it and they will each get a bonus when the job is finished. I will see the old lady this afternoon and try to get her hushed up."

That night Shamrock, accompanied by two other gunmen, took the remains of little Bobby from the shaft and buried them in the dump below the mine. As the dump was burning continuously, his ashes would soon be mingling with those of the old, grey-haired man who had so nearly rescued him on the day of the explosion and whose body had also been consigned to the dump.

When the Super called on the boy's mother he was as nice as pie. "Howdy! Mrs. Brown, I called to see if you need anything in the way of groceries or anything," he said.

"No, not from you," she replied.

"Please don't take that attitude, Mrs. Brown," pleaded the Super. "The company wants to help you. I have spoken to the manager about offering you a position if you can see your way clear to accept it."

"Oh! You want to buy me off again, eh?" she answered with fine sarcasm. "When you came to our little log-cabin home in Tennessee and persuaded John to sell our little corn and bean patch and come here, you pictured a paradise, with good schools and good houses and a good job for John at wages that would enable us to have a real home and educate our children. You made all kinds of fine promises. But after you got us here you put John in the most dangerous place in the mines. Then after you got him and the two oldest of our boys killed I was foolish enough to let you take my Bobby into that old place and get him killed too. I needed his help to feed the other children, but now,—but now,—" she had choked up and began crying.

"Please don't cry, Mrs. Brown," said the Super. "I know it's hard. But remember it is always darkest just before the dawn. We all have our ups and downs, but every cloud has a silver lining and we will help you if you will let us. It will pay you to listen to reason. You know you can't possiby win a suit against us. We have the best lawyers in the state and we have the contract you signed when the boy went to work saying he was sixteen years old. No jury would ever believe that you signed those papers without knowing what was on them. Personally, I would like to see you win. But I know you haven't a chance. We don't want to be hard on you, but we have to protect ourselves. Better think that offer of a position over and I will call again in a day or two. Good day!" He went out and down the hill muttering to himself, "Damn her! She is liable to cause us a peck of trouble yet. I know what I will do. I will have Miss Kaufman call on her in the guise of a Friend (Quaker) and talk her into dropping the suit.

The following day a demure little Quaker knocked on Mrs. Brown's door. "Good morning!" she said, when the door had been opened. "I am doing relief work among the families who lost their loved ones in the mine accident and I heard of thy trouble and have come to help thee. I brought thee a few groceries and some cookies for the children," she held out a basket and asked "Will thee accept it?"

Mrs. Brown took the basket and thanked her and then placed a chair for her. They talked quite a while and finally Miss Kaufman or Miss Baker, as she had introduced herself, managed to lead the conversation around to the right point for her to ask about Mrs. Brown's plans for the future, without arousing suspicion. In half an hour she had persuaded her to accept the job the Super had offered her. She promised to sign the contract the next time the Super called and Miss Baker took her leave. Half an hour later she stepped out of the company hotel and tripped over to the Super's office—a typical flapper. "Well, old dear, she fell like a ton of brick!" she exclaimed as she entered the office where the Super was awaiting her.

Next day the Super appeared at Mrs. Brown's door and asked if she had decided anything definite about that "position." "Yes," she answered, "I have

(Continued on page 48.)

# Canadian Pulp Wood

(Continued from page 8.)

practically all of which is to be attributed to United States demand. Paper exports to the United States from Canada increased in the year from $65,000,332 to $86,-625,488. Exports of chemical pulp increased from $27,546,783 to $31,-274,416. Mechanical pulp exports increased from $5,536,578 to $7,-522.477.

Over 77 per cent of Canada's pulp exports found their way to the United States, and more than 92 per cent of her newsprint exports. Of a Canadian production of 1,-263,000 tons 1,137,000 tons of newsprint were exported, this being the first time newsprint exports have crossed the million mark. Of this the United States took 1,115,-355 tons, leaving a total of 22,607 tons for shipment to overseas countries. The value of Canada's newsprint exports account for 60 per cent of the value of her total pulp and paper exports.

Laurentide Pulp and Paper-Mill

This newsprint phase of the industry is the significant one at the present time and the day is practically within sight when the United States will have fallen behind Canada in production, and the Dominion have a world supremacy in this regard. For some time the tendency has been evident for United States mill production to decline while that of Canadian mills rises. Canada's newsprint output in 1923 of 1,263,000 tons was 16 per cent greater than in 1922, and 56 per cent greater than in 1921, while the United States production of 1,485,000 tons for the same year was only 2.5 per cent greater than in 1922, and the first recorded increase for some time.

Canadian mills for the manufacture of newsprint are continually being expanded and added to as increased demand across the line calls for a greater output and a larger volume available for export. The total average daily production of Canadian newsprint machines in 1922 was 3,825 tons per day; in 1923 this capacity was 4200 per day; throughout 1924 recent additions are expected to make the average daily capacity about 4,700 tons, bringing the production for the present year in the neighborhood of the United States 1923 output.

The reason for this rapid increase in production is, of course, the declining supplies of raw material in the United States coupled with a steadily increasing consumption. In 1923 there were in the United States sixty newspapers alone which had a circulation in excess of 100,000 copies. During the year these dailies averaged 27 pages and the Sunday issues 101 pages, proportions never before attained. The consumption of newsprint by the Republic has shown a surprising growth since the commencement of the century. In 1923 there were 50 pounds of newsprint available per capita in the United States as compared with 15 pounds per capita in 1900. This increase of 230 per cent explains why the United States now consumes more newsprint paper than all other countries of the world combined, and the reason why, having largely drained her own resources, she must perforce call on Canada to supply her needs. From 1913 to 1923 Canada's exports of newsprint to the United States increased from 219,602 tons to 1,115,355 tons, or by 863 per cent; showing the inability of the Republic to keep pace through her own manufacture with her increasing consumption. As a matter of fact the United States has come to depend on Canada for 95 per cent of its newsprint supply, and the Republic consumes 85 per cent of the Canadian fabricated product.

The pulp and paper industry of Canada differs basically from that of the United States in its every phase by a sense of permanency. According to reliable computations few mills in the United States have raw supplies which will keep them busy for more than ten years longer. Canada's timber resources loom up magnificently vast because they have, as yet, suffered comparatively little exploitation or depletion, but with the same prodigal methods pursued definite limits could be placed to their length of existence. The permanent nature of the Canadian industry rests, not upon the illimitableness of resources, but upon the intelligent methods of utilization followed by the corporations owning them, and a close supervision maintained by the various governments.

# WOBBLES

## AND FOR GOOD REASONS

Three men met on a corner and started to talk about the different unions they belonged to. One was an AFL man, one belonged to the Brotherhood of Trainmen and the third was an IWW.

The Trainman asked the AFLite, "If you were not an AFL man what would you be?"

"Oh, I'd be a Trainman, then," answered he.

"And you," asked the AFL man, of the Trainman, "what would you be if you were not a Trainman?"

"Why, I'd be an AFL man," said Bill Lee's follower.

Then turning to the Wobbly they inquired, "Now, if you were not an IWW what would you be?"

Quick as a flash came the answer, "I'd be ashamed of myself."

## FOOD FOR THOUGHT

Critics are funny fellows—when they do not take the pains to know completely what they are criticizing. Occasionally they remind us of an impulsive pup we once knew. His favorite outdoor sport was jumping at conclusions. Every automobile that passed, every horse, was an enemy to be driven down the street in ignominious flight. After causing each successive auto or horse to flee in terror, as he thought, that pup would lie down and pant with satisfaction. One day he spied a sleepy old nag ambling down the highway. As usual, the pup leaped at once to a conclusion: This time it was a mule's conclusion he leaped at; now that pup travels with a limp.—**Writers Monthly.**

Moral:—**Look before you leap; know before you attempt to criticize.**

## HE KNEW WHERE THEY WERE

An Irish sailor making his first trip was ordered by the captain to clean his binoculars. As the glasses were very valuable he was cautioned to be very careful and not lose them. An hour later he appeared before the captain. "Say, Captain, if you know where a thing is, you couldn't say it was lost, could you?" he queried.

"Why, of course not," answered the captain.

"Then your glasses are not lost," said the son of Erin. "They're at the bottom of the ocean."

## NO CHANCE TO ENJOY LIFE

"What kind of a fellow is that efficiency expert?"

"Well, he never enjoys an ocean voyage because there is so much salt going to waste."

No—Not The Angelus

# "Bill and the Boss"

## The Boss Gets a Rude Shock From Bill this Time

By LLOYD EMMONS

THE Boss was out to the camp again yesterday. He had not been out for several weeks owing to other important business. He had to aid Mrs. Rich and the children to get started on their regular winter trip to California, a trip their family physician said was very necessary to Mrs. Rich's welfare as her nerves were all unstrung from attending to her many social duties and supervising the work of her servants.

It is reported that Mrs. Rich gave to the Salvation Army over $1,200.00 worth of clothing, to be given (for cash) to the poor and needy of the city before she left for her much needed rest. Mrs. Rich was always very charitable to the poor, and often said she felt **so sorry for the** unfortunate **creatures.**

Of course it will be a hardship on Mr. Rich to be separated from his family for two months, but as his friends all know, Mr. Rich is always ready to sacrifice his own interests whenever the welfare of Mrs. Rich is involved, and he has already engaged "Dolly De Swift" (unbeknown to Mrs. Rich) to supervise the household during her absence.

The Boss, too, had to attend "The Lumbermen's Association" meeting as there were some very important questions to be threshed out.

Persistent rumors had reached the bosses' ears that the IWWs were busy in their (the bosses') camps and they must resort to some very drastic, concerted action or they (the Wobblies) would all quit work in the spring and their (the bosses') profits would suffer, so they decided to shut down some camps altogether and to run the rest only half force and that would keep many of the workers hungry and on the labor market, and they would be only too glad to "scab" when the Wobblies called the strike.

### The Old Soft Soap

That, too, fits in with scissor-bill psychology but it seems the bosses would know by this time that the Wobblies would as soon starve off the job as on it, and they would not be taking nearly the chances of being killed.

The boss on reaching camp, in his new Pierce-Arrow, had several questions and a lot of "bull" to shoot at Bill, but Bill is not as good a target for "bull" as he used to be for he has been studying and thinking for **himself** (instead of for the boss) and reading quite a lot of IWW literature, so the boss instead of finding him the plastic clay, the meek and humble slave, as in the days gone by, soon found he was fooling with TNT.

After a cheery "Good morning, Bill" and an inquiry as to Bill's wife and kiddies in Seattle, the boss soon warmed to the subject that was nearest his heart and pocket book.

"Say, Bill," says the boss, "you no doubt, being right on the job have heard some of those Wobblies hinting about striking this spring, and you know that prosperity **to me** means prosperity **to you**—but if those **damned wobblies** strike and are able to tie up our camp you can see I'll not be able to support my own family the way they are **used to,** to say nothing of supporting you and your family, but with the aid of you and some of the other men that I can depend upon **we** can keep them from tying up **our** camp, and then **we** can give them the laugh when they see that **our** camp is running, and . . ."

"Back up. Back up," says Bill. "Sure, I've been right here on the job, and it sometimes seems that a job is as necessary to me as a trunk is to an elephant, but when I've got a job all I get is abuse and a meager existence and I exist without the abuse when I haven't any job—so I've quit worrying about that. And as to the Wobblies **hinting** about striking—they are not hinting a **damned bit,** but say they are **going** to **strike** and **strike** and **strike** until **you** and **your** class of parasites open the jail doors and free the workers that realized they were in the working class as long as they lived, and were the **men** to tell the other workers that as individuals they were absolutely helpless and that they must organize into a union of their **own** class and fight **you** and **your** class at **every foot** of the way.

### The Cold Hard Facts

"And they are, too, going after higher wages, less hours per day and all around better conditions. And then they are going to **strike** some more until the **profit system** is a thing of the past, and that will of course end **'wage slavery.'**

"And say, boss, that **'prosperity to you means prosperity to me'** stuff—how do you get that way? Last year you made more in the lumber business than you ever made in one year before, but was I prosperous?

"Not so you could notice it. I slaved out here in the sticks every day until the winter shutdown and when I went into Seattle, in less than a month my money was all gone, the rent day rolled around as usual, and the grocery man (who is in business for profits) told me he could not trust me for he would be taking a chance as to my paying him, and if I could not, it would be killing the **profits** from his cash customers. The wife, the children and I could not get sufficient clothes and food so we went **cold** and **hungry.** I saw **you** and **your** family riding about the city in your limousine, dressed nicely and warmly, and none of you looked hungry. That was proof a-plenty that you made profits from the 'surplus labor hours' of your slaves when they were employed in the summer to keep **you** and **yours** in luxury and ease in the winter, with lots of profits to spare.

"Was your prosperity my prosperity? No!

"You sat in your office last winter and laughed at me as I **begged** for a job. **Yes, begged.** The jobs

are not mine so I have to **beg** the **privilege** to work to keep from starving. If I beg on the streets I am apt to get pinched.

"What is the difference from begging on the street to get something to eat and begging for a job to get something to eat?

"And you spoke of supporting my family and me. I used to believe that bunk, but a Wobbly delegate that was here a while back told us how the workers were born **bridled** and **saddled** and you **booted** and **spurred**, ready to jump into the saddle to ride upon their backs until their backs weakened; when you put them in the bone yard.

"He read to us the U. S. Government report which stated that the average daily value of production of the wage workers is about $15.00, and how at night time the workers could buy back about one-quarter of the $15.00 value they had produced.

"The three-quarters of the value that you took (but did not work for) he termed 'surplus profit' and said that the Wobblies were going to keep on reducing that 'surplus profit' until you could not detect it with a microscope, and then you would be out here in the sticks with us, in **overalls**.

"He said that one of the very big problems that you and your class had to solve was the finding of foreign markets for the **overproduction, (that had to be)** under the present **sickly, capitalist system,** and that after you had found the foreign markets, and fields to exploit—if you could not get them through **'diplomacy'**—you threw us into another war—and **we** fought the war for you—and you got all the gravy.

**"Fine system, eh? Yes, for you.**

"And he explained to us that there was really no overproduction.

"The **overproduction** was only because we could buy back at night only about one-quarter of what we produced that day, and because production was carried on for **profit** instead of for **use.**

"He said **all wealth** was produced by **labor,** applied to the natural resources, and he **proved** it, too.

"Say, boss, do you see those big fir and pine trees standing over there on the hill?

"He pointed them out to us how they might stand there for a hundred or two hundred years to come and would not have any value (except a small intrinsic value) until the **workers** got busy on them.

"When the **fallers,** the **buckers,** the **rigging crew,** the **loaders,** the **railroad workers,** and the **mill crew** and **other workers,** all did their bit on them they would have a value. Those trees would pass through an 'economic evolutionary' period, so to speak, and would be lumber.

"Then the lumber would be loaded onto the cars and shipped to the city; other **workers** would unload it and take it where **workers** were building a residence or commercial building. There the **carpenters** would fit and join it into its proper place and it would have attained its **'full value.'**

"**Workers** do **all** this, but you do not get any **pitch** on **your** fingers **at all.**

"You say **we** workers should be satisfied. Well, I used to try to be, and sung 'Oh, How I Love My Boss'—but now I'm going to sing 'Solidarity Forever.'

"Say, boss, you came out here to talk to me, but I've done most all the talking, and intend to talk more from now on. I suppose you'll send me down the road, but what the hell is the difference?

"I'll go singing—'To Hell With the Job I Left Behind Me!' "

# The Stain

By ADELINE M. CONNER

**(A Child's cry in the darkness curses deeper than a strong man in his wrath.)**

IN the fragrant, sunlit garden,
Where the palm tree casts its shade,
Little children are playing—
Gleeful and unafraid.

Their faces are bright and bonny,
They lift glad hands to the sky,
And call with songs and laughter
To each smiling passerby.

But I'm thinking of other children—
Wee, sorrowing ones of earth—
Robbed of the joys of childhood,
Its innocent, carefree mirth.

I hear their sobs in the darkness,
Their whispers of pain and fear;
And see in their eyes the longing
For all that a child holds dear.

Weary are they, and helpless;
Toil-worn are they, and sad—
Whose voices should thrill with laughter,
Whose faces be bright and glad.

O, men of a mighty nation,
Hosts of a far-flung land,
Do we need the wealth we garner
From a baby's toil-scarred hand?

If we smile when young hearts are breaking
And carelessly turn away,
Unheeding the woes of children
Too weary to shout and play:—

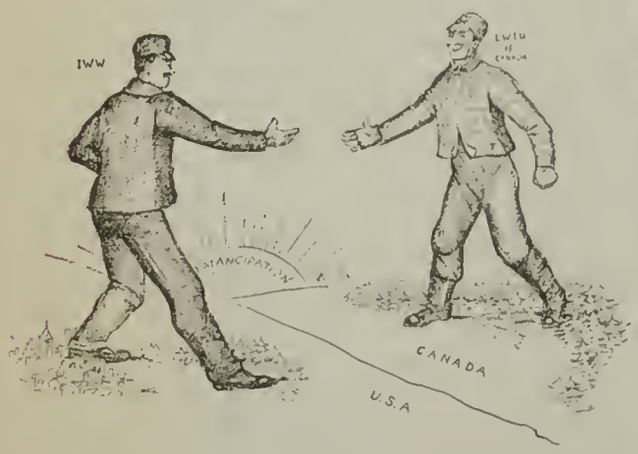
Some day at the bar of Judgment
We shall stand with this stain defiled,
And read our condemnation
In the face of a little child.

# Drawing the Lines of the Class Struggle

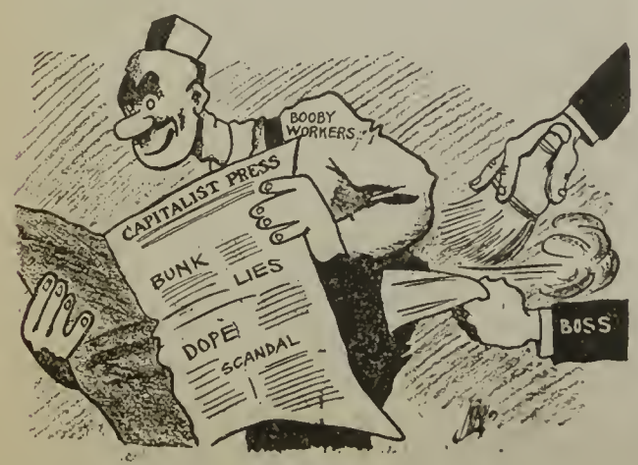
## Some of the Events of the Month as Seen by the I. W. W. Press

### Special May Day Number

All IWW publications issue special May Day numbers. Industrial Solidarity uses a special front page design and puts out an eight-page number. Industrial Worker prints an eight-page number in two colors. Industrial Pioneer has special cover design and May Day article. The foreign language press observes the day.



Above and below, two cartoons from Industrial Solidarity. The upper one illustrates the accession of 2,000 new members in Ontario where the Lumber Workers' Section of the One Big Union of Canada has voted to merge with the IWW. Below is a smash at the Capitalist Press. Evidence was unearthed in Chicago to show that big newspapers were bringing people to their "goldfish rooms" where they were beaten and tortured into giving exclusive news stories to the papers.



Above is a picture which shows an incident in the great British Columbia strike in the woods. A group of strikers is bringing in the fuel for a fire. This strike has now been returned to the job, with every possibility of successful termination.

Below is the special front page cover design of Tie Vapauteen, IWW Finnish language monthly; it is symbolic of the sort of education that is going on at the Workers' College and in Wobbly branch halls. The diagram on the table is the IWW chart of the industrial unions.

# Our Sham Civilization

By H. A. GALLOWAY

THERE is so much talk of men being free and equal, that it is hard to convince some that all of the people have not an equal chance under the present system. When a man cannot be fully educated, cannot exercise his full mental ability, through training and associations, he must degenerate from one generation to another, until he is either a criminal, poverty ridden laborer, beggar or imbecile. He must sink lower and lower in the social scale, while those having the benefit, advantage and opportunity of education, environment, money and idleness in and with which to develop their talents, are improving themselves and their offspring in the so-called civilized society, thus causing an over-fed, over-educated race superior to the over-worked, under-fed, poorly educated mass of working people who produce the wealth of the earth for the capitalist class of idlers. It takes very little common sense to see that the offpring of the overworked, underfed, uneducated people of the slums cannot have the same chance of wealth as the offspring of educated parents, who have the opportunity of developing their mentality and that of their children. Is that fair to the child that is brought into this world without his consent? No, I don't think so. Everyone, especially the child, should have an EQUAL CHANCE in life.

### "Where Men Decay"

This system is what makes the thieves, murderers, degenerates, prostitutes and fills the jails, lunatic asylums and homes for the aged, infirm and homeless, and the streets with cripples and beggars . The city from which I write (New Orleans) is filled with this last class. Everywhere in the city you can see crippled beggars, blind beggars, and degenerates of all kinds on the streets while in the saloons (which run wide open) you can see boys ranging in age from twelve years up, playing slot machines. This civilization was built upon profit. And profit has been the cause of nearly every war known to history and most of the sufferings of the human race—thirst for plunder, wealth, power and fame in varying degrees has set brother against brother for the glory of those in power and made the world a shambles time and again.

The masses are sinking lower and lower in the social scale every year while the wealth of the world is being accumulated into fewer and fewer hands. The only two recognized classes in society are the moneyed or capitalist class, and the wage earners or working class.

Small business men have little chance today. The chain stores, factories, and utility services see to that. Each year the labor supply of the world is increasing owing to the small business men being forced into the wage earning class and the gradual increase in the world's population. Instead of a decrease in child labor there is an increase owing to machine production and also the cheapness of this class of labor. In place of these children being forced to the point of production by the necessities of life, these jobs should be held by able-bodied men, plenty of whom are unemployed. Laws of nature force us to eat. Laws of man force us to hide our nakedness with some kind of covering. But laws of man do not compel Capital to give us these necessities of life unless Capital sees fit.

### What Can They Live On?

Investigators are continually investigating to determine just how low a wage Capital can pay and still keep the wheels of industry turning. Men are forced to underbid each other to keep body and soul together or else break the man-made laws of society and take the consequences of such infraction. Able statisticians say that eighty-five per cent of the people sixty-five years or over are dependent on others for support, and one of the largest employers of labor (Standard Oil Co. of N. J.) seems to want to lower this dependent age twenty years judging by a letter I saw in an employment office here a few days ago.

This letter was a complaint to a shipping master that he had sent a man on one of treir tankers who was forty-five years old, reminding him that the maximum age limit for employing men in this company was forty-five years. There is no sympathy or sentiment in Capital. It is strictly a survival of the fittest and devil take the hindermost, regardless of circumstances. A man serves his usefulness on a bare living wage under this system and is then cast aside to starve if charity does not take care of him. Sympathy and charity are not what we want. What we want is our just DESERTS and that is what we are going to get as soon as the working class realizes how foolish they have been through the ages and demand the full product and full revenue of their labor and thus eliminate Capital which is only stolen labor.

Then and not until then will we have equal rights and free speech. Then we will have no street beggars; our sons will not be forced into thievery, our sisters into prostitution, and our old grey-haired mothers into the alms-house. Then we will have little use for jails and insane asylums, for the cause of these institutions will pass when Capitalism passes. Join the IWW and speed the day when this sham society, this sham civilization will be but a memory!

# Learning From Henry Ford

By J. E. AND J. D. C.

## A JOURNEY INTO THE LAND OF MECHANICAL AND HUMAN AUTOMATISM—WHERE CENTRALIZATION AND DECENTRALIZATION MEET

**To describe the Ford Company is, vulgarly speaking, to repeat a "chestnut." It's an old subject, worn threadbare to some. To others it is ever new because of its many-sided interest, and its prime importance as a foremost phase of modern industrial development.**

**Below will be found the impressions of recent visitors to the principal plant of the company. They approach the subject from several new angles, that will, most likely, interest our readers.**

WE dropped off the municipal car. Before us was the Ford plant. We looked at the surface cars. They were inscribed in big letters. "The City of Detroit." And we looked at the auto works. Across their towering chimneys was spread the simple word, "Ford," in gigantic proportions. As we turned from the cars to the chimneys we realized we were confronted with two tendencies. On one hand was public ownership, on the other private, with the latter looming larger and dominating the scene.

Ford has been much be-written, especially by himself. Capitalism has plenty to sell and to defend, and the printed word is its greatest medium and bulwark to these ends. Further, Ford represents the last word in the machine process and too little is known of what he really personifies from this angle. Hence these lines.

We had come to see the Ford industrial system for ourselves and here we were contemplating one of its most conspicuous units from the outside! And this, at the most, is all that's permitted. True, visitors are allowed inside. You see and hear much. **But Labor is not heard;** and the inner penetralia of the works—the executive offices and meetings—are closed to you; and, essentially, you know as much when you leave as when you entered. And that's what is told to you.

But there we were contemplating the Ford Detroit plant. Before us was a very compact series of brick and steel buildings, with white stone trimmings. Five stories high, many blocks wide and hundreds of acres deep all told, they recalled the modern electrical power structures seen in large cities.

We moved towards them, and as we went we became conscious of a human rush. Men and women—the former mostly—came in currents from up and down the avenue. They focussed on a path, leading down a step into a semi-basement, into which they disappeared. As it was shortly after noon, we concluded that shifts must be changing. Nevertheless, it was a stirring mass that enveloped us on all sides—a quiet, quick-moving mass intent on arriving—where? we were soon to learn!

And now we were in the visitors' waiting room. It looked like an auto salesroom, with many autos on exhibition. We helped ourselves to stacks of literature, advertising and many phases of Fordism; and reflecting its far-reaching ramifications. We scanned the map on the wall, setting forth these ramifications in a vivid, comprehensive manner, with their 600 millions of capital and 157,500 employes. Then we signed a card absolving the company from damages for injuries received, due to unforeseen accidents; and, also, incidentally soliciting information regarding our status, present or prospective, as auto owners and subscribers of the Dearborn Independent, Ford's weekly organ. "Business as usual."

Then we waited for the guide to take us through the works. While thus engaged we were conscious of a giant concussion—an immense throb—that accompanied the steam exhaust in the nearby powerhouse. To us it appeared to be the heartbeat of a mighty organism, that overawed us and impressed us, accordingly. And we wondered how far this feeling of organized vastness overwhelmed and hypnotized the uninformed workers into submission and worship, just as the vastness of the universe has made idolators and bigots of others, also overawed and uninformed?

for the tour of the plant, and so we cease musing, to rally about him.

Now, none but a highly competent technological engineer can describe the Ford plant. It is a collection—a concentration of machine-tools—devoted to auto building. As such it is a marvel representing the highest expression in mechanical ingenuity and methods. These machine-tools are varied in design and purposes. They plane, stamp, bevel, sharpen, convey, raise, bore, press and do a thousand and one different things. They represent centuries of growth and development—the cumulative wisdom of ages and myriads of men. They are united, despite their divergent character and history, into a system in which the old time fable of placing a dog in one end of a machine and getting a string of sausages at the other, is a reality; only here iron and steel castings are placed in one end and autos come out at the other.

We are not technological engineers and so we will not attempt to describe Ford's technologically. We are impressionists, given to impressionistic studies, especially in this instance. And so we will give our impressions only.

Well, into the wilds of the Ford plant we go. We say wilds advisedly; for tho system is evident on all sides, though method is too evidently prevalent, there is a clatter and a din, a rush and a turbulence that is distracting and suggestive of madness, rather than deliberate planfulness. Maybe this is prophetic of the outcome of such industrialism. Who can tell?

Well, on we go! We see men, workmen! They are standing besides, are being paced by, machines, conveying machines! They seem numerous, too numerous! They stand alongside of one another, in an economy of space that is marvelous! They perform simple, minute movements. One wipes the oil from a hole in an iron casting. Another inserts a bolt. The third attaches a nut. The fourth tightens it. And so on down the line! Marx says skill is unskill multiplied. Here unskill is skill decentralized, that is decomposed into the simple unskill in whose multiplication it originates.

Economy of space, simplicity of function, quick, automatic motion, big output—that apparently is the Ford formula for huge profits; and it succeeds.

But what of the workers? What manner of men are they? How do they appear in this drama of mechanism par excellence?

To begin with the aged, they are few and far between; practically absent in the departments on exhibition. The majority of the workers are apparently young men, with many middle-aged men and boys among them. The beefy, phlegmatic type seems to prevail; the sensitive, nervous type is conspicuous by its absence. Endurance and stamina appear to be the strongest qualifications. Otherwise the monotony and the speed would be impossible to stand.

Ford, despite his serious inventiveness, is a man of humor. He says his object is to make work pleasant and expressive of the workers' individuality. Judging from the evidence in his plant, his workers have a queer idea of pleasure and an individuality akin to that of the automaton! "Ford's" is mechanism grown monstrous and subversive of feeling and intellect!

We shouted, above the terrific din, Ford's idea of work to two young men in our touring party. They laughed outright at it. "This isn't work," said one of them. "This is slavery. It won't be long before most of these fellows are nervous wrecks, as a result of it."

As one English critic said, "Ford is not only making autos; he's making fools as well."

We wonder, as we follow the guide, how many of Ford's workers are either killed or injured? As said before, they are numerous and appear to be in one another's way. They are always tense and alert. We saw some workers lying on their backs on small trucks that, propelled by their feet, went along with the conveyor, while with their hands they fastened nuts on the underside of the running board of the auto above them! These men could not see very well ahead of them; and, their stint done, they sat astride their trucks and manipulated them back to the starting point with an alacrity and precision that was marvelous. But can they do that all day and every day without accident? We wonder!

As we said above, Labor's side is not heard in Ford's. Ford is the boss; he speaks for all. And, to judge from his own statements, Ford is an idealist, one of those, apparently, obvious of the realities of life, at least as far as his workers are concerned.

**They Come Out To Look at The Camera—High Speed Workers—Absolutely Unorganized.**

Nevertheless, Labor at Ford's is being heard. Workmen there write to tell of the degradation that employment at Ford's involves; that the six dollars which he pays is cheap indeed, considering the results secured; and that many work there only long enough to secure funds enough to go elsewhere, where employment is neither so strenuous nor so nerve-wrecking.

Labor turnover at Ford's is of the highest Though he has a welfare department that strives to mitigate the severities of toil and the paltriness of pay, Labor does not linger long with him, if it can help it. But then this is characteristic of big industry in general. The workers, denied redress through their own organizations, migrate to pastures new, with the result that the labor turnover is now a problem of capitalism. It is the new strike method of labor! "If you don't like your job, quit!" And labor is quitting in a way that is taking on a wholesale character.

Out into the street we go again. We board the municipal car. So do three dozens of Ford's employes. We notice that six of them read newspapers. The others appear to rest, to gaze into space with a sort of tired expression. Some talk; one turns his head and works his eyes and hands with an automatic rhythm, as though he was unconsciously repeating a motion now no longer necessary.

And we look at the policeman on the street, and recall the large number of the same tribe that appeared in Ford's. Watchmen and straw bosses everywhere, were there! And we look also at the conductor and the motorman, and compare them, to their own advantage with the workmen we had seen before. At least, their work seemed trivial in comparison. So did that of the waitress in the restaurant where we went to get a bite!

As we look back at Ford's now we have an impression of thoroughness; of a regard for detail. Every part is clean. Every part dovetails into some other part. There is no squabbling about centralization versus decentralization there. To the concentration of capital there is added the specialization of labor. To production on a vast scale there is added a minute consideration of individual aptitude! The result is a gigantic whole.

When will Labor learn this lesson? When will it organize as a class, with a regard for all of its parts? Where crafts and castes of all kinds, and union patriotisms and antithetical theories will give way to practical co-operation and operation?

We wonder!

# Rebel Girls Help the Fight for Solidarity

(Continued from page 20)

The Employers' Association have loaned the petty garment manufacturers their special labor prosecutor, Dudley Taylor, infamous in the building trades cases. The garment bosses have no worries about expenses. The combined resources of "big business" in the city are backing their fight against labor unity.

Samuel Gompers, fat little Sammy, has been in Chicago for a week. He is staying at one of the best hotels, and he is not at home to any of the strikers. And what is he doing in Chicago? Why he says that he is carrying out the instructions of the last AFL convention, and is making a study of women in industry, with a view to eventual organization. But he is not at home to any of the girl strikers. He has not been seen on the picket line. He has not defied the Denis Sullivan injunction, in spite of the fact that at conventions and such like places Gompers' voice is loudest of all when he calls on workers to defy "government by injunction." Of course, Sam isn't a worker, but he has gone farther than to ask workers to defy the injunction, he has shouted, with emotion choking his vast mouth, that he "longed for the day when he might take his place in jail for Labor's rights." However, he hasn't been seen on the picket line, nor at the police station.

After six weeks the strike is dragging. The labor Federation has made no grand gesture of defiance; has given the minimum fulfillment of its cheap promises. Officials pass the buck to the little leader of the strike, the vice-president of the International Ladies' Garment Workers' Union. Perlstein has his eyes on the coming convention of the International and mumbles "eeny, meeny, miney, mo" to himself.

The spirit of the girls has kept up snappily. They go undaunted day by day to the picket line. They are not going to let all the bosses of Chicago stop them!

Whatever the outcome, industrial unionists will find their lesson in this strike. They can point out the ineffectiveness of craft organization and tactics. They can see again the need of directly elected officials. They need not be reminded by this strike that protests in council are hard to obtain and weak when achieved; that attempting to influence politicians with words is like trying to coax an unfriendly dog with an empty hand. The power of the injunction weapon when used by organized big business against labor is clear to wobblies again in this strike.

Completest possible organization is the only answer for workers to make to the ever more defiant challenge of hard-pressed capitalism!

# Oh, for the Life of a Sailor!

(Continued from page 10.)

Perhaps this will give those unacquainted with life aboard ship, except as it is pictured by our sea-story writers, some conception of what a seafaring man has to contend with, without going into details about the food, most of which is unmentionable and indescribable. Does it look like a bed of roses?

Still, whenever or wherever we try to improve such conditions and raise our pitiable wages, we are called agitators and trouble makers, and oftimes worse. Call us whatever you like; we are going to fight for better conditions and higher wages until we get them. Words do not bite as hard as bedbugs and cooties, and the pangs of an empty stomach are worse than any epithet.

These are absolutely true facts of the situation in the marine industry today; these pictures were taken aboard a cargo ship and photographic evidence cannot be disputed. We of the MTW of the IWW feel that we can alleviate the misery which besets the sailor on all sides. We know that the MTW is the right kind of an organization; we know that industrial unionism is the only hope of any kind of workers in any industry, and in spite of the contumely heaped upon us by those coke-headed, twisted-brained fiction writers in the popular-priced magazines and the intellectual prostitutes of the daily press, we are proud to be members of the only real, honest-to-goodness union that ever went to sea and got its feet wet; proud to be members, and fighting members of the only organization that is really trying to better the conditions of the thousands of men who spend their lives at sea. Look at the pictures of our daily life and ask yourself if such conditions are not to be fought against. Ask yourself what you would do were you compelled to labor under like conditions, and then decide whether we are right or wrong—whether the life of a sailor should be worse than that of the old time slaves or whether men who have the guts and courage to daily risk their lives on the broad bosom of the waters should not also have the guts and courage to resist such impositions and the intelligence to organize to change them. Then ask yourself if you, too, would not agitate unceasingly—even though the fiction writers called you "bolsheviki."

**"Oh, for the life of a sailor!" Yes, but we intend that it shall be the life to which the useful labor we perform entitles us; "the life of men."**

# All Over the Map

By DANIEL TOWER

ONE of our staff of international observers now in England sends us a story about Lloyd George that the cables didn't carry. During a speech before the general elections, the ex-premier was touching upon the late war, and said something about the "fruits of victory." And instantly a rebel in the audience sang out: "Yes, we have no bananas."

* * *

At our cafeteria the other day one of our companions quoted London Punch as saying: "The United States has practically all the world's gold reserve, but apparently it has no bananas. . . . ." "I suppose," said another, "that that is a specimen of British humor. . . ." "No," said the first, "I think Punch meant it seriously."

* * *

Something must be done about this immigration problem. . . . Yesterday in a barber shop on Dearborn street a barber of Latin origin dropped a hot towel on a Nordic customer's face. The customer bounded upward from his chair. "You moth-eaten, cast-off synthetic specimen of indifference," he roared, "what are you trying to do—crack my face open?" . . . "I—I——I couldn't hold it any longer," said the barber.

We don't know what kind of a moral is proved by this: An old side-kicker of ours, on shore-leave in London, saw in a shop window a lot of statuettes of Edith Cavell. He went inside to inquire the price and discovered on the bottom of one of the statuettes the words: "Made in Germany."

* * *

Ten years ago today, or thereabouts—the Chicago Tribune published the now classic headline: "Body of Man Found in Empty Barrel."

* * *

An art expert is one who has learned from experience that a water color is not a picture painted by a man on a raft.

**GET INDUSTRIAL SOLIDARITY**

**OFFICIAL ORGAN OF THE IWW**

This big newspaper is published weekly in the heart of the Central Industrial Empire. Office located right on the edge of the biggest slave market in the world. Contains all official announcements of the General Hearquarters of the IWW and all industrial unions. International connections—the Labor News of the World. $2 per year. Address, 1001 W. Madison St., Chicago, Ill.

The Piano and Fragments of Furniture After the San Pedro Police Department had Finished Raiding the IWW Hall. They Met with Absolutely No Resistance, But Vandals Could Not Have Acted Worse.

WRECKAGE INSIDE THE OFFICE.

## BRASS BUTTONS AND HOODS

ON the evening of March 17, the IWW hall in San Pedro, Cal., was the scene of a conference of Oil Workers' Industrial Union No. 230 of the IWW. During the conference fifteen Ku Klux Klan cars filled with white-night-shirted men began to circle around the building. This was at half past eight, and a drizzling rain was falling.

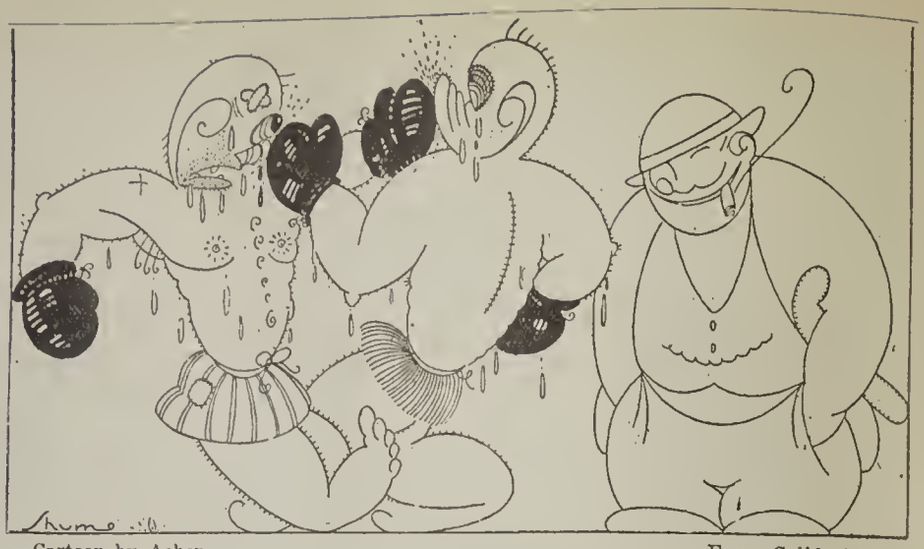
Fifteen minutes later, a squad of police entered. With drawn revolvers the police ordered the members to line up along the wall, selected Archie Wright, B. Jellovich, and William Walsh for arrest, and ordered the rest out of the room.

Meanwhile the fifteen Ku Klux Klan cars had stopped circling, and were parked in front of the hall; the passengers in the cars entered the hall.

Then began an example of modern police methods, as practiced in Los Angeles, California. Every stick of furniture, the secretary's desk, the chairs, the piano and all else, was smashed into bits, and piled outside of the hall, in the rain. The police stole (it is stealing to seize property without warrant) the cash box of the Prison Comfort Club, stole $130 worth of organization literature, $20 worth of defense literature, and $150 worth of books. They allowed the mob to carry off some of the books. Even a light globe was unscrewed from its socket and carried away by the driver of automobile No. 540-543, which is not a police car.

The IWW continue to hold meetings.

## THEIR VOICES SHALL BE HEARD THOUGH THEY SPEAK IN SPANISH



—Cartoon by Acher. —From Solidaridad.

**THE BOSS: Fine, boys, fine! When you get through I'll lick the winner.**

The upper cartoon on this page was drawn by Juan Bautista Acher, a man without hope, save in the class-conscious workers of the world. It was drawn in prison in Barcelona, Spain, where Acher lies, under sentence of death, a sentence that has just been confirmed by the highest court of the land. It was drawn by a man without hands, for Acher's were blown into shreds by an explosion, two years ago. He does his drawing by pressing the pencil against his chin with the stumps that are left at his wrist.

Juan Bautista Acher, under the name of "Shum," has been a labor cartoonist since his childhood. At present he is only 22 years of age. When he was twenty he was talking to some girl garment workers in a sweatshop. A bomb exploded in the room below and flying fragments shattered the skilled fingers that capitalists hated so much. Who planted the bomb is not known, but the police made it the excuse for arresting Acher under a charge of having knowledge of the bomb, that is, of conspiracy to commit murder; there was no evidence, so they 'railroaded' him, and now he must die unless Labor saves him.

—(Solidaridad Photograph)

Ten men are pictured to the left. Two of them, J. M. Rangel and C. H. Cline, are members of the IWW. It was their feeling of international solidarity that got them into prison for 99 years and life, respectively. During the attempt to drive out of Mexico the bloody butcher, Porfirio Diaz, shooter of strikers and jailer of union organizers, these two men accompanied by others tried to enter the Republic of Mexico by crossing several counties of Texas. They were stopped and eight of them including Rangel and Cline, were given long prison terms. Diaz is dead and gone, and many of his successors have gone too, but the heroic ten are still in prison. There they will remain until Labor sets them free.

# Book Reviews

## THE FASTING CURE

By EDWARD E. ANDERSON

PERIODICALLY, that is a large portion of each winter, thousands of the migratory workers inhabiting Chicago's "Hobohemia" abstain from food either totally for days or in part. It is not, however, the regulated, intelligent, purposeful, voluntary sort of abstention called "fasting" but that dreaded, fear-haunted, involuntary kind called "going hungry."

It was a weird sensation to read "The Fasting Cure," and to hear at the same time the tales of the hungry as they patrolled the borderland of starvation.

As I go west on Madison Street each evening when through with my day's work I am often approached by men looking for a little assistance, too often to help all. I felt like telling the first one who "hit" me after I had read "The Fasting Cure," what a great benefit to his general health his empty stomach was. But I happened to catch his eye and there I saw something that made me remember Mr. Sinclair's mention of the danger of fear in fasting. Silently I fished a quarter from my pocket. As he hastened on I thought, "The Fasting Cure holds no message for such as he."

**The Fasting Cure. By Upton Sinclair. Published By Upton Sinclair, Pasadena, Calif.**

## THE SWEET AND LOVELY SOUTH

By GEORGE MORESBY

EVEN in these days of disillusionment, the Northern and Western public still largely accepts at face value the tradition that the South is a hospitable region; that the real people there—the "better class of whites"—are a generous people. "Dixie" is still applauded when played by Northern orchestras. And despite the inroads which prohibition is making on oratory, speeches continue to be made before rotary clubs and chautauquas glorifying the South for its "snowy fields of cotton, its magnificent race horses, its beautiful women, and its chivalrous men."

But the "sweet and lovely South" is a myth. Instead it is a shadowy land. Chattel slavery has been done away with below the Mason-and-Dixon line, but something worse has taken its place—the system of farm tenancy under which the average black man is not better off than when he was a slave, and the poor white farmer is on the same level with the black. Rule of caste predominates, the Ku Klux Klan in many places seeks to compel all persons to think alike, and in the mill villages the owners regulate the lives of their employes in all things.

Frank Tannenbaum has recently made an extensive tour of the South, observing, questioning, weighing values. He has done a good job of depicting Southern life in a book, "Darker Phases of the South," in which he deals chiefly with the KKK, the virtual burial of Anglo-Saxons, prisons, and the single crop.

### Ku Klux Engendered in Monotony

Tannenbaum sees the Ku Klux Klan as an expression of war hatred engendered in the monotonous existence of small town life. "It gives the small town a daily drama," he declares. "It takes him who has lived an uneventful life, and who is nobody in particular, and makes something of him. It gives him a purpose; makes him a soldier in a cause. The very existence of the KKK is proof of emotional infanthood. It would not be possible in a community where the people lived full, interesting, varied lives."

Tannenbaum views the Klan as a danger not because the motives of those in it are evil, but because their motives are sincere—hysterically sincere.

Good, sturdy Anglo-Saxon stock is in the mill towns—the orators boast that the best blood in the country flows in the veins of the mill workers. The towns in which they live are owned by their employers, who elect the municipal officials and pay the policemen. Each house is like the next. The mill owners watch over their employes, and keep the villages moral—if any of the workers "go wrong" they are turned out of town. Many villages are so moral that other villages have been settled almost exclusively by "gone wrong" people who have thus been exiled.

Mill workers stay in the mill towns, and marry their own kind. Tannenbaum objected to one employer that all this sameness of life tended to destroy everything beautiful and worth while in human life-interest beyond the immediate. The employer replied:

"But we keep the family together. In the world at large the family would drift apart. The children would go from their parents; they would marry away from home; the family would be destroyed."

When Tannenbaum repeated his statement and pointed out that the employer's reply was beside the point, that it was the complete submersion of a population that the former was talking about, the mill owner said solemnly: "You don't mean to tell me that you advocate the destruction of the family, do you?"

Tenancy is increasing in all cotton areas, Tannenbaum reports. The farmer wants money, the tenant wants money, the cropper wants money, and in their efforts to get it, each increases his burden of debt. The single crop makes the farmer dependent upon a money income. His money, however, comes but once a year, and so he has to borrow against his crop. Failure of a crop or over-production leaves him in debt.

**Men in Chains Under the Sun**

Terrible but undeniable cruelties to human beings are set forth in the chapter on prisons—convicts whipped and tortured, men building roads under the hot sun with heavy chains upon their ankles, men sleeping chained together in cages with tin roofs, healthy prisoners bathing in the same tub with diseased men, prisoners going to sleep so hungry that they wake up trying to feed themselves in their sleep. In Georgia, straps in the prisons weighing from five to nine pounds. It was with such a strap that Martin Tabert was beaten to death in a Florida convict lumber camp. In Alabama, the convict lease system. In Georgia, negro women stripped to the waist and placed in stocks while being whipped. . . . A chapter to stir any decent man or woman to anger.

There is one unfortunate defect in this book, which must be charged to laziness either on the part of Tannenbaum or of his publishers. The prison chapter at least was originally an article published in Century magazine, and in the Century all of the atrocities detailed were cited without any mention of the states in which they occurred. Presumably the Century was afraid of libel suits, and thus Tannenbaum's report on prisons was robbed of most of its value.

One might expect, however, that he would rewrite the article before it went into a book, and supply the missing information in the context, or at least supply footnotes containing it. Instead of that, all of this missing data on prisons and numerous afterthoughts on the other chapters, appear as an appendix. This means that one must turn to the back of the volume sixty times to get the information omitted from the forty-five pages in the prison chapter.

## GANGWAY FOR THE WORKERS

By CARD No. 794514

"Platz Dem Arbeiter" (Room for the Workers) is printed in German but you don't have to know German to understand it. It is filled with pictures, even the cover is crowded with them, showing labor, hypnotized, deluded Labor, going off to war with flowers stuck in the rifle muzzles; and coming back home with flowers too, spread out over coffins. There are a few photographs of victims of master class warfare, men with great holes in the sides of their faces, and eyes, noses, and mouths strangely distorted and remodeled by the freakish action of shrapnel and high explosive.

Minor's famous cartoon "The Fatherland Calls" is given a place of honor. It shows a helmeted skeleton leading off a new recruit, chatting friendly like with him, undoubtedly filling his heart with great love for his native flag and his own master class.

The book is dedicated to the new culture, the proletarian civilization that is coming into being through the decadence and collapse of Occidental Bourgeois civilization. The opinion of the author as to how this newer and better world will emerge from the shell of the old is set forth by a cartoon which shows a big dog, fat and ugly, sitting in front of a sausage much desired by a half dozen starved little pups. The big dog says, "Now children, see this sausage. If you should take it away from me, that would be Revolution. But if you wait until I eat the sausage, that would be Evolution."

**Platz Dem Arbeiter, By Julian Gumperz, First Year Book, Der Malik Verlag, Berlin.**

---

**STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,**

**Of The Industrial Pioneer, published monthly at Chicago, Ill. for April 1, 1924.**

State of Illinois )
County of Cook ) ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared **Emily Hayes,** who, having been duly sworn according to law, deposes and says that she is the **Business Manager of The Industrial Pioneer** and that the following is, to the best of her knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of publisher: **Industrial Workers of the World, 1001 West Madison street, Chicago, Ill.**

Name of Editor: **James Lance, 1001 W. Madison Street, Chicago, Ill.**

Name of Managing Editor: **James Lance, 1001 W. Madison St., Chicago, Ill.**

Name of Business Manager: **Emily Hayes, 1001 West Madison St., Chicago, Ill.**

2. That the owner is: **Industrial Workers of the World, 1001 W. Madison St., Chicago, Ill., Tom Doyle, General Secretary-Treasurer, 1001 W. Madison St., Chicago, Ill.; Joe Fisher, Chairman, General Executive Board, 1001 W. Madison St., Chicago, Ill.**

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: **None.**

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by her.

**Emily Hayes,**
Business Manager.

Sworn to and subscribed before me this 21st day of March, 1924.

[SEAL]

**J. Levinson, Notary.**
(My commission expires Feb. 14, 1927.)

# Editorial

## OIL AND GRAFT

THE entire civilized world is gasping with amazement at the revelations of graft that have taken place recently in Washington. About half of the Coolidge cabinet is stuck in the dirty mess; Coolidge is implicated; and even President Harding's corpse in its honored tomb in his own home town seems to be somewhat spotted. There is evidence that the living Harding had at least guilty knowledge of what was going on, when his departmental secretaries accepted one hundred thousand dollar bribes in return for the small favor of granting out to private oil companies several millions of dollars worth of government land, at a tenth of its value. Moreover, the Harding family shared in the dope graft, in Federal penitentiaries.

By such people we are governed, jailed and enjoined not to strike!

And lest anybody take too much comfort in the clean-up that is going on at present, let us point out that the senator most concerned with the exposure is Wheeler of Montana, and he is an oil company attorney!

The whole investigation seems to be merely the result of bad faith on the part of some of the chief servants of capitalism. Two great forces struggled for mastery in the United States, after the defeat of the small capitalist, and the submergence of the farmer. These two giant forces or cliques were the Rockefeller family with their oil and banking companies and the Morgan family with their railroad and banking companies. They fought for mastery, for the right to favor themselves, with laws that would injure their rivals, for the right to use the army and navy in their interests, and against the interests of their rivals. In the course of the battle they were both so badly injured that they made peace, and divided the government offices.

Now it is understood, by all who think, that in America big business is the government. Big business puts into office such men as will not obey their oath of office, nor administer justice, nor permit free speech to workers, nor preserve neutrality in strikes. In other words, big business needs and has in the highest governmental offices in the land social burglars, crooks and sneaks, liars and careerists. Any other sort of man would not be a good man for big business.

But there is little honor among thieves, and there was also Sinclair and Doheney. These own independent oil companies, that have crept up under the wing of the Standard Oil, and now, probably by English and Dutch gold, have bought the Standard Oil cabinet right out from under Rockefeller's nose.

When Rockefeller and Morgan wrote the "My dear Senator" letters of a decade ago, they had nothing against corruption in high office. But for these master thieves, such corruption is no longer necessary, or advisable. They buy political parties before election and rely on party discipline to keep men in line afterwards. The whole trouble in this case is that Daugherty and Denby, Weeks, and perhaps even Harding, didn't stay bought. Having sold themselves to Rockefeller in his sphere, and to Morgan in his sphere, they dared to sell themselves again to the fly-by-night Sinclair and Doheny, upstart adventurers, given to the crude old method of dodging up a dark alley with a suitcase full of greenbacks, and buying the influence they need, directly. Such stuff outrages the now respectable Rockefeller dynasty. The living Rockefellers feel towards it exactly as a successful wholesale bootlegger feels towards a second-story man. It's crude, and it hurts business. It weakens the entire capitalist class, and justice must prevail against it. Hence a senatorial investigation.

Keep your eyes open, Fellow Workers, and learn what you can. It's a revelation in the art of government in a capitalist country. But put not your trust in Wheeler, Borah, or La Follette. Put your trust in yourselves. The gentry in Washington have nothing to offer you, aside from a lesson. The moral of it is that cash, control of the industries, ability to distribute the surplus value, is the ruling power. Since there are several factions of capitalists, there is just now some lively tilting at each other among them—but taken as a class they rule you. They are fighting now among themselves for a certain right or privilege. It is the right to the first chance to rob you. The loser will have to take what the winner leaves behind. But both will take it from you. Both will want to shoot you, if you go on strike—they are capitalists first, and members of capitalist factions secondly.

It is not to your advantage to try to decide which of these bold robbers shall get the lion's share of the spoil you contribute. It is to your advantage to cut them off from the spoil altogether, to keep for yourselves the whole net value of your product. The first step in this direction is the organization of powerful industrial unions, class unions, revolutionary unions. When the working class is organized, it will take the wealth for itself, that is now used to bribe senators and members of the President's cabinet. Then graft will cease—and not before.

# Brickbats and Bouquets

## MARAT MAKES A FRIEND

Fellow Worker Editor:—I have just finished looking over the April Pioneer. It is good stuff, well turned out as the leading working class magazine ought to be. I was especially pleased with the article by Marat.—**Card 814270.**

## IT MADE A HIT HERE

Fellow Worker James Lance:—I have just finished reading the April Industrial Pioneer, and believe me, it was a great joy to see such an up-to-date magazine. The IWW writers can't be beat. The most interesting articles, in my opinion, were "510's Fresh Water Campaign," by a Lake Sailor, "A House and A Castle," by Eva B. Pillsbury, "Crossing the Mason-Dixon Line," "Sunk by Scabs," by James Lance, "Experience versus Thinking," by J. H. Larsh, and best of all, "The Age-Long Struggle," by J. A. McDonald. Well, all power to the Pioneer. I will do my best for the spreading of the circulation of the Pioneer. It can't be beat. —B. M. K.

## BRIGHTENS DARK CALIFORNIA

Redding, Calif., April 3, 1924.

Dear Sirs:—Please find enclosed 25 cents for Pioneer for April. I sure like it. Fine. I hope to be with you soon, as it is the only way out of slavery. I remain a friend.—**E. Starrine.**

P. S.—Please send me the Worker also. I will send you 5 cents extra.

## LET GOD DO IT

Of course we get a brickbat now and then. This is the sort of thing that stands in the way of workers' control of industry. The following letter is from Chicago:

**I. W. W.: I got your Industrial Pioneer and give it right away to American Legion and if they dond punish you God will shame on you! I wurk in steel mills and work hard and me and wife and eight kids got purty hard time but we got more ideals in minit than you lazies got all your life and I am for God and Holy Catholic Church and America First and Poland and not just hours and wages if I can do it you can shame on you!—L. Satkowski.**

**The comments on this page refer to the April Pioneer, edited by Fellow Worker James Lance, who deserves all credit for editing and make-up. Readers of Industrial Pioneer will be pleased to hear that Fellow Worker Justus Ebert is now nearly recovered from his illness, and expects to return to the editorship on May 5. This assures us all that the splendid features which have earned the Pioneer a high place in the estimation of class conscious workers will be continued. Everybody get behind the Pioneer and keep the circulation up!—Vern Smith, Editor Pro Tem.**

## OIL WORKERS FOR IT

**The following resolution, called "Resolution No. 18," was adopted at the Oklahoma City Conference of Oil Workers' Industrial Union No. 230 of the IWW.**

* * *

Whereas, The Industrial Pioneer is our most demanded publication, and

Whereas, It is an up-to-date, well edited and highly illustrated magazine, and

Whereas, Casper, Wyo., and Oklahoma City, Okla., news stand dealers handle said magazine, and

Whereas, These news stands are permanent salesmen and get the people of all phases of life; therefore, be it

Resolved, That we, the membership of OWIU 230 go on record to do our utmost to secure news dealers in all cities in the oil belt to handle the Industrial Pioneer; and, be it further

Resolved, That a copy of this resolution be sent to all branches of OWIU 230 and to secretary-treasurers of all industrial unions and also to the editor of the Industrial Pioneer to be published in the Industrial Pioneer and the IWW papers. 719,-475.—Carried.

(Continued from page 32)

decided to accept it if it will pay enough to enable me to keep a home for my children and to keep them in school."

"Well," he replied, pulling the contract from his pocket, "here is the contract. It specifies that, 'For a consideration of thirty dollars a month and free house rent for a period of ten years from date, Mary Brown agrees to relinquish all claims, real or imaginary, against the Queermanhogging Coal Co. and does further promise to render faithful service to the company in the capacity of charwoman for the duration of that period." Then followed a lot of legal phrases and places for names of witnesses.

Mrs. Brown accepted the terms and signed the contract. A few days later her household goods were moved to a two-room shack in the part of camp known as Hunkytown, from the fact that nearly all the people in that end of the camp are Slavonians, and there she lives to this day. If you ever visit the camp you will see her washing spittoons, scrubbing floors, or washing windows around the company's store, hotel or offices, and if you will ask her she may whisper to you as the tears steal down her withered cheeks, the story of little Bobby—No. 744, Missing in Action.

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

Printed by Printing and Publishing Workers' Industrial Union No. 450, I. W. W.

# Big Scale Organization

THIS is the day of organization on a big scale.

We live in a society in which big organization rules.

Industry is organized on a big scale. So are the trusts. So also are the financiers. And they rule all.

The workers alone are not organized on this gigantic scale.

The vast majority of the workers are not organized at all. Those that are organized are practically disorganized into crafts, castes, and impotent little groups.

How long, workers, is this to endure?

While we remain unorganized and disorganized, our tasks are greatly increased and our hours are lengthened.

Our output grows, while our death and accident rates leap out of all proportion to our wages.

We become, together with our women and children, mere automatons paced by machines.

We own not even our jobs. Operating the capital of others for their profit alone, we are mere trespassers upon their property and can be dismissed and driven off the premises when our status of wage earners for the hour or day is ended.

We are ignoble indeed!

Let us, oh, workers! resolve to change it all.

Let us resolve to organize on a scale in keeping with the big business which we alone make possible and which oppresses us.

Let us organize in big industry as we work therein, on a big, interlocking scale.

Then can we improve our conditions and abolish the wages system that degrades us.

Through big organization we can solve big problems.

Through big organization we can build the big, new society of the future.

Let us have done with little organization.

On to big scale unionism; and big scale victory!

# The Political Earthquakes

**What Is Behind the Teapot Dome and other Investigations? Is it a Sincere Desire at Political Reformation or a Conflict of Gigantic Interests? What Part Does Henry Ford, the Water Power Trust, the Standard Oil Company and the House of Morgan Play in Them?**

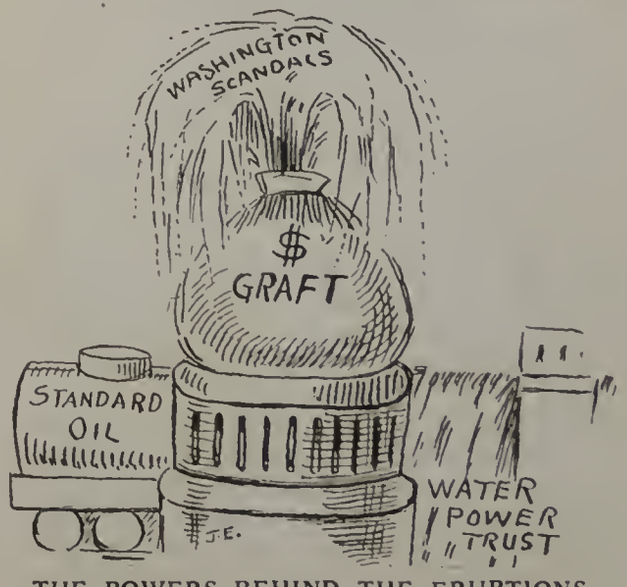
## A Review of Developments that Throw Light on the Federal Scandal from Various New Angles.

By NEIL GORDON

**The political life of the nation is being rocked as it was never rocked before. On the eve of the great presidential nominating conventions, the Credit Mobiler scandals of the days of General Grant are being surpassed in the exposés attending the Veterans' Bureau, Teapot Dome, and other investigations. A veritable volcano is in eruption at Washington, D. C., accompanied by a federal earthquake whose successive shocks have resulted in the overthrow of strong political personages and the cracking of more than one party alliance and the undoing of more than one party slate. And the end is not yet; for tbe coming elections will also be marked with fissures directly traceable to this destructive upheaval and quake!**

What does it all mean? Is it merely a case of "playing politics"? Is it simply a result of party or factional differences in "our" political life? Or is it the outward manifestation of some gigantic conflict going on behind the scenes in the economic life of the country? Surely, the impotent Democratic party has not, of itself, strength or life enough left to challenge the dominant plutocratic Republican party, with its alliance with the big economic factors involved in the various federal investigations? What's "the nigger in the woodpile," anyway?

The Falls, Denbys, Roosevelts, Daughertys, etc., are big political personalities, with strong economic backing, that gives stiffness to their spinal columns and inches to their own individual and collective statures. The Dohenys, Sinclairs, Mitsuis, etc., are representative of vast corporate interests, that are either separately or jointly immense factors in all



THE POWERS BEHIND THE ERUPTIONS

phases of modern life, with widespread and extensive ramifications to boot.

**In order to attack these political personages and corporate interests successfully some other element than Democratic party decadence is necessary. This element must be, basically, a power that transcends all others in its immensity and scope; a power that can grasp and utilize a situation in which a weaker, punier force would break down and go to pieces. What is this element? What is this power behind the political turmoil? What is this inherent volcanic force that causes the cracks and fissures in the political structure of the country?**

Some there are who will contend that what is being exhibited at Washington is the logical sequel of war-time graft. "It's merely a case of thieves falling out." Others contend that this is the resultant, the climax, as it were, of capitalist development, along corrupt lines—the uncontrollable outburst of illegitimate tendencies in modern economic life.

But none of these contenders seem to recall that, as in the case of Daugherty, for instance, some of these matters had already been investigated, whitewashed, and declared closed incidents. Why these sudden reopenings, these savage outbursts, these damning investigations again, then?

Of course, there is no definite telling what the real cause of this new turn of affairs is. There is no positive evidence going to show the underlying cause of it all. But certain things have happened that it might be well to recall and consider in this connection.

**The French, in cases of crime, have a guiding principle, "Look for the woman," as they believe sex is at the bottom of criminality. And we say, in cases of corruption, look for the economic interests, as we believe big business is at the bottom of crookedness.**

Let's begin, then, with President Calvin Coolidge; let's begin with his campaign for re-election but a few short months ago; how everything seemed in his favor and he, apparently, had an unobstructed walk-over! And now his chances of success are very much imperilled, as he is being exposed for what he really is, namely, an undesirable political accident, as was Roosevelt before him, only, compared with the latter, he is mediocrity personified.

Yes, "Cautious Cal," apparently, once had everything his own way. Had not Henry Ford, his only formidable opponent, visited him and declared, "The President is good enough for me"? Could anything be better than this withdrawal from the race; this elimination of a rival of the first magnitude?

Following this visit, the President declared himself in favor of giving Muscle Shoals to the generous Henry, for a mere song, payable to the federal government. Then the volcano broke anew! Then began the quakes that have since rocked the nation. Ever since "Cautious Cal" has had his administration torn to pieces, and his chances of re-election are in jeopardy, indeed!

**Now, let's take anotner tack in this review. There appears on the scene, besides the Falls, Denbys, Roosevelts, Daughertys, Dohenys, Sinclairs, and Fords, one Frank Vanderlip. Whom does he represent? What's his part in this eruption?**

To hear him tell it, Vanderlip is merely a disinterested citizen, intent on preserving the fair reputation of the great American republic, via the purification of its federal politics.

Of course, as the boys in the street would say, "that's all bull." Vanderlip is so closely allied with the Morgan-Standard Oil industro-financiers in the control of this country, as to make disinterested political action on his part impossible.

To put it mildly, at the present time, Vanderlip appears to be playing the leading villian in this political drama. According to his own language, he's standing with his own private secret service behind Senator Wheeler. Apparently, he's preparing the shot that Senator Wheeler fires.

Having taken a look at Vanderlip, let's turn back to Doheny and Sinclair once more. They are, at times, friendly to Standard Oil interests; at other times, they are at war with them. Where possible, they unite; and where impossible, they compete. This is usual with capitalist groups. It looks as if Doheny and Sinclair had beaten the SO in California, interfered with its Mexican invasion, and, in the case of Sinclair, got the best of it in Russia and Persia.

Can it be that SO is behind the political downfall of both Doheny and Sinclair, not to mention Denby and Daugherty? Can it be that SO is trying to create a situation in which they will be forced to surrender to it, both at home and abroad? We don't know. We only know that such a course is not unusual among capitalist factions. We also know that SO is, together with the Morgan group, the biggest economic, financial and political factor in this country. And what, besides this gigantic combination, is likely to be behind this terrific political upheaval? The appointment of Stone, a Morgan man, to succeed Daugherty, lends force to this conclusion.

Next consider Henry Ford. Thanks to his vast industrial and selling organization, he is one of the greatest political powers in this country. Also one of the greatest economic powers. His increasing ascendancy imperils the domination of both the Republican and Democratic parties, as his possible candidacy illustrated. It also imperils the Morgan control of water power in this country as Muscle Shoals demonstrates. Ford is, further, encroaching on Morgan territory in the manufacture of agricultural machinery; and he is also threatening SO with gasoline competition. Finally, he is at war with the Morgan-SO financial domination of the country. From all of which it must be obvious that those who stand with him must array them-

(Continued on page 20)

# Quoth The Raven Evermore, "Yes, We Have No Bananas, But We Have Opportunities Galore"

**Wherein Is Exposed the Great Significance of the Rise of Mr. P. E. Crowley from Section Hand to the President of the New York Central R. R.**

By A RAIL FILLOSOFER

**This is the day of Opportunity! The way that opportunities for advancement to power and greatness abound and are lying 'round loose for the workers of this country to grab is at once the delight of this great and glorious republic and the wonder of an awe-stricken world.**

**"Every day in every way" "we see by the papers" "the unlimited opportunities for achievement" besetting, obstructing and colliding with "the humblest toiler in the land." Go where he will, he can neither evade, side-track nor dodge the summons that Opportunity is serving on him like a subpoena-server in a Senate Teapot Dome investigation.**

**So we pause to marvel at Opportunity as she is, while our capacious chest expands with all the capabilities of real chestiness, and our strong, robust heart palpitates with a transcending joy over the tremendous unfoldment of individuality and personality which it implies; so much so, that we are threatened with acute cardiac troubles and rendered liable to become a liability upon our life insurance company, instead of an asset, as heretofore.**

**Yes, so persistent is Opportunity that it is killing us and increasing the death-rate of the insurance societies.**

Consider first our great political opportunities open to all, regardless of sex, color, or previous condition of servitude. Every four or eight years, if the present incumbent runs again, tens upon tens of millions of voters have each an opportunity to become a great President of the United States, as great as President Coolidge, for instance. Sure there are movements afoot seeking to extend the President's term of office, but even at that, who would deny that it is not possible for political opportunity to be more widespread? We repeat who would deny? Echo answers, "who would deny?"

Ah, but our opportunities are not all political. Something even greater than the Presidency lies in wait for us. Like a villain on a dark night, bound to "croak" us, there stands Opportunity ready to make oil kaisers, steel trust princes, financial rajahs, coal barons and lumber lords out of us; not to mention their bigger brothers, the telephone King Tuts and the waterpower monarchs, whose name is not Mud but Morgan and Ford.

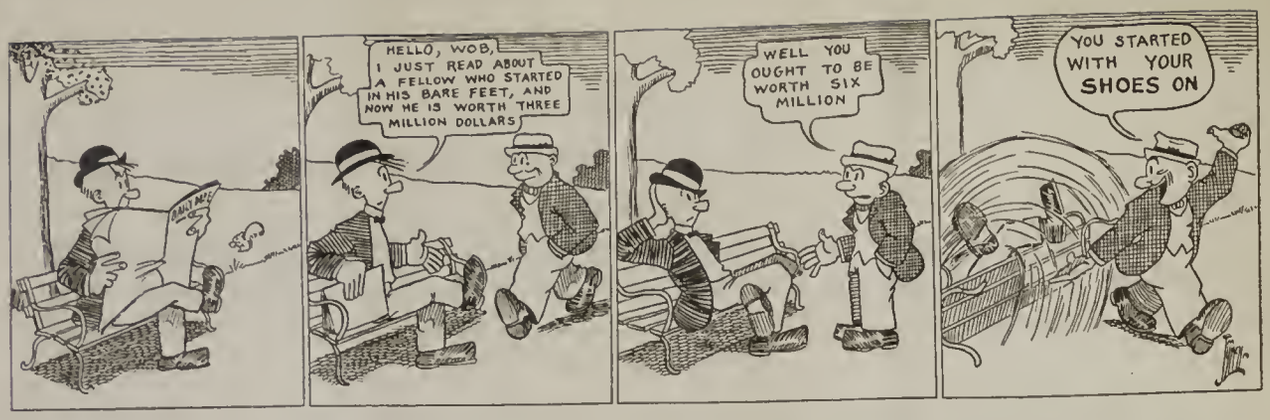
All these are said, in certain quarters, to be more powerful than the political rulers of the land, controlling them as the showman controls his marionettes—all these does Opportunity lie in wait to force on us; in fact, says we must be; and believe us, Opportunity is a real George Washington, it never, no never, tells a lie, nor do liars ever speak for it.

Yes, so great is Opportunity for every woman and child in the spheres of economics, finance and transportation, that it may be said "without fear of successful contradiction" that Opportunity was never so opportune as it is at present!

INTRODUCING MR. CROWLEY
**Who Secured a Presidency After a Half-Century of Toil—Such is Opportunity.**

There's Henry Ford, for instance. Gaze upon Henry! Look at his billions, present and prospective; and then take a glance at his 157,500 employes. They do not bulk very large in comparison. Yet everyone of them has an opportunity to become Henry and have as many billions as he has. Yes, Opportunity makes it possible for each and every one of them to head a giant personally owned corporation that puts the U. S. mint in the shade as a money maker. Could anything be simpler?

It will not do to say, with the pessimists, that



HELLO, WOB, I JUST READ ABOUT A FELLOW WHO STARTED IN HIS BARE FEET, AND NOW HE IS WORTH THREE MILLION DOLLARS
WELL YOU OUGHT TO BE WORTH SIX MILLION
YOU STARTED WITH YOUR SHOES ON

157,000 Fords are impossible! Nothing is impossible in this country! This country is a marvelous country whose marvels are inexhaustible. And the least of these is a Henry Ford in every Ford employe.

Nor will it do to say, with the pestiferous socialists, that, under the present industrial sysem, there must be armies of workers to make the few Fords possible by their co-operative manual and mental labor and their exploitation for capitalist profit. Such doctrine is treason to the state and destructive of the family; it also undermines religion, resulting in the end, in a denial of God and the extinction of humanity!

No! let us hug Opportunity, not as a fond delusion, but as a great reality rendered greater still by ideality, imagination and determination; especially a determination not to hear anything said against it. Opportunity is the sheet anchor of the present system; and with it we either sink or swim, survive or perish. And if we don't stick together with Opportunity, we'll all hang separately.

In this spirit, let us next consider P. E. Crowley, who rose from a lowly section hand to the presidency of the great New York Central Railroad. Starting at 14 years of age, Mr. Crowley, at the age of sixty, stands on the heights of railroad preeminence. From a poor boy, after a half-century of toil, he has become one of the highest salaried railroad officials in the world! Could anything prove more sublime and inspiring? And to what is it due, if not to Opportunity that comes to every man, woman and child, once every half-century?

Think it over! The financial interests in control of transportation must get their managerial and executive ability from the workers in their employ. Without the intelligence and the ability of the workers capitalism is impossible! And so the dominant capitalist interests must draw on the armies of Crowleys, or workers, whom they hire and fire as wage-earners and salaried subordinates. They must, through decades of development, cultivate the good personal and technical qualities of these Crowleys and otherwise prime them for their future important positions. They must, further, rely on their multiplication and increase in every way, for the more Crowleys there are, the more the supply exceeds the demand, the lower the wages and salaries will be. And so they make the most of Opportunity. They exploit it, dilate on it, glorify it, and make a fetich of it, if not a God, possessed of the miraculous powers of transformation of all the Gods. And so we have Opportunity galore. Opportunity to the right of us, Opportunity to the left of us, volleys and thunders, while all the world wonders.

Of course, there are those who will say that Mr. Crowley is only one out of 175,000 employees of the New York Central and that to talk Opportunity to the other 174,999 is to talk remote and meagre possibilities, indeed! There are others who will say that Mr. Crowley's attainments, after a half-century of unremitting effort, are neither inspiring nor conclusive. Then there are still others, who quote pernicious agitators like Scott Nearing, who, taking 1914 census figures, shows that out of 1,710,296 employes in the railroad industry, 5,750 are general officers, 11,153 other officers and 87,106 clerks; thus demonstrating that the general and minor officers and clerks number only 10 in one thousand or one per cent; so that Opportunity is only a one to 99 shot in the gamble of economic life. It will not do, we repeat, to give heed to these dissenters and agitators, with their statistics!

On the contrary, let us assert, despite such assertions and statistics that Opportunity exists for all! Let us assert it continously and vociferously, until we all believe it, and, believing it, become immune to the doctrines of industrial unionists and revolutionists who fain would undermine our fair republic by denying to us our traditional beliefs and humbugs.

Rather than face conditions as they are, let us hug fond delusions to our bosoms, so that our employers may set us to compete for the places above us that only one in a thousand can get, thereby enriching them to the utmost, while keeping ourselves poor indeed, through our failure to organize our intelligence and ability as we should, namely, in our own interests as railroad employees and members of the working class.

# The Late Hugo Stinnes; Germany's Real Kaiser

**Dominated Its Government and Life through His Industries—Debased Currency Enabled Him to Oust Middle Class and Impoverish Labor to His Own Enrichment—Capitalism's Finest and Rottenest Fruit—His American Counterparts.**

## AN ESTIMATE AND COMPARISON

By ALOIS SENNEFELDER, JR.

**The death of Hugo Stinnes in Germany, during the month of April, was an event that students of contemporaneous industry and history can ill afford to overlook.**

**Stinnes was the personification of giant industry—of modern capitalism; and a study of his personality and power is a study of its basic principles, tendencies and results. As such, intelligent workingmen will find much in his career to ponder over and apply to their own class interests.**

**Hugo Stinnes was Germany's industrial Kaiser. In its attending details, his death was reflective of his great power. Its approach created panicky conditions on the German stock exchange. And the populace paused in their daily activities to inquire, with bated breath, about the progress of his illness and to speculate as to the probable effect of his end on the nation at large. So great was the general interest in the outcome that even the Dawes report on reparations was overshadowed for the time being.**

**And when he died, Hugo Stinnes' funeral was attended with great pomp and circumstance. Prominent men in all walks of life were present. Leading cabinet officials, ministers of finance and industry, were there, as were workmen's bands and representatives. All joined in doing the final honors to Stinnes' remains—honors in keeping with his predominant power.**

**In Hamburg, where his overseas shipping and export interests bulked large in commercial life, even the bells of the leading churches tolled during Stinnes' funeral.**

Hugo Stinnes boasted that he had never seen the Kaiser in all his life and that he would never go out of his way to look at him. He had no need to do so. He was Germany's real Kaiser; its real ruler. The controlling figure in 120 corporations capitalized at 10,000,000,000 gold marks and branching out into every important industry and country, he controlled the economic and financial basis of Germany's internal and external political life and so became the greatest power in Germany, if not in all Europe, as well.

As becomes the dominant capitalist power, jealous of its strength and authority and brooking no other rule than its own, Hugo Stinnes hated the lingering remnants of the old feudal aristocracy; though he was not adverse to using their reactionary movements whenever the safety and promotion of his own private interests required it.

Stinnes' personal wealth is said to have been enormous. It was believed to be so great that even he himself knew not its exact extent. He himself declared that he was so wealthy that he could buy any man in Europe without missing the purchase price. Apparently, he entered the market often, and instead of diminishing his wealth, only added to it, through the many purchases thus made.

Apropos of Stinnes' great wealth, one who knew him well, said of him, "Stinnes is not so much a billionaire as a juggler of billions." Which is only possible, as his career proves, with one favorably situated. Beggars or proletarians are never so fixed as to be able to juggle anything more than plugged nickels. Shoe-string financiers have no place in the big capitalism of the day; especially in Germany, with its many bankrupting changes.

Stinnes' vast industrial enterprises embraced oil, mining, shipping and newspaper holdings. He **owned 60 leading newspapers, through which he moulded opinion in a manner favorable to his own**

**Hugo, the First, Industrial Kaiser of Germany.**

interests. In addition, he owned outright a score or more of the largest hotels in Berlin, Hamburg, and Bremen. With his friend, August Thyssen, and a few others, he shared control of the iron and coal industry in Germany and occupied a dominant position in the entire inland navigation of that country. He was also interested in many financial institutions and banks.

So great was Stinnes' control of Germany's industry, trade and commerce that at one time he was on the high road of becoming the country's political dictator as well as its economie one. This was during the days of Germany's political crises and the rise of Mussolini, when dictatorships for and by capitalist reaction were all the rage. But Stinnes denies ever having had such aspirations. Perhaps, he thought it unnecessary, for, as it was, he was Germany's private political factor, controlling the German People's Party, and so manipulating his economic affairs as to make politics his most humble and submissive servant, indeed.

This was especially seen in his influence in the Ebert government, which was largely dependent on his policies and support, and which was officially and conspicuously represented at his funeral, as already noted.

It was his manipulation of politics by way of economic pressure that caused Hugo Stinnes to be called Germany's malevolent genius. It was Stinnes who led the German industrialists in their negotiations with their French counterparts and government; negotiations that made the industrialists' interests paramount to the interests of the great mass of Germany's population.

In this connection Stinnes has been accused of indirectly causing the assassination of Walter Rathenau. Rathenau was the founder of the General Electrie Company of Germany and one of Stinnes' most formidable rivals. He wanted Germans to pay French reparations in raw material; while Stinnes wanted payments in gold: Stinnes eontrolled the gold, and wanted the German railways. When Rathenau seemed victorious, he was stricken down by the assassin's bullet. This gave a clear field to Stinnes. He added eoncern to concern and invested in Austria, Hungary, Italy, Russia, Argentine, the United States—everywhere.

Between Rathenau and Stinnes there existed the difference between an idealist and a realist. Rathenau sought to bring about a rejuvenation of Germany on policies of reapproachment with France; while Stinnes saw in Germany's imperialism and defeat the realization of his own ambitions as a super-capitalist and profiteer.

Certain it is that Stinnes profited most by paying off obligations with debased money whieh finally became valueless and in which debasement he was a great factor. No less an authority than the editor of the Chicago Tribune charges the industrialists with having gutted Germany by means of worthless currency. This reduced wages and killed off small business; thus making greater world-competition and industrial concentration on the part of Stinnes possible.

Stinnes himself is reported to have favored a German cataclysm as a means of squeezing out the middle class and impoverishing the working elass, thereby entrenching giant capitalism and ereating a great supply of cheap labor, to the competitive advantage of Germany's industrial magnates, among whom there was none greater than himself.

Stinnes also urged longer hours and more output as a means of Germany's salvation. This would enrich himself and his elass, as more hours and more production would not only pay reparations but net them greater profits in addition. Not one pfennig should these bloated industrialists pay, even though labor languish and the nation starve. Let the charity and generosity of the world look out for the latter, while they (the industrialists) reaped profit and prosperity galore. Capitalist property, Stinnes' property first, even though the nations fall—such is the slogan of big capitalism in Germany,—as exemplified by Stinnes and his class.

**"The Laughing Mandolin Player"**

**The classical painting for which the chain restaurant owner, J. R. Thompson, paid 250,000 dollars. The laugh must be on Thompson's employes, whose low wages make such high art prices possible.**

**Hugo Stinnes, as befitted his world-wide economic interests, was an international capitalist, as well as Germany's industrial Kaiser. He flitted from Berlin to Paris; and from Paris to London; and once it was reported that he was coming to Wall St., in search of more capital and affiliations. He had interests, as already indicated, in Austria, Hungary, Poland, Russia, and Argentine, as well as in France**

## OUT OF WORK

**This bit of Russian sculpture depicts the effects of unemployment. Thoughtful, self-respecting workmen become enervated and demoralized during its prevalence. At present, there is considerable unemployment in this country.**

**and Germany. He was an international Colossus,—a great imperialist—with whom England had to reckon and even American capitalists dealt with profit. In brief, Hugo Stinnes was the German representative of the small group of industro-financiers who are gradually dominating the world, while its varied populations quarrel with one another over fancied and promoted national differences.**

Stinnes was inordinately proud of his possessions. He grew irascible when anyone doubted the size of his fortune. He had no hobbies, excepting novelties and toys. Art, literature, music, the stage, nature —none of these appealed to him. His business was his sole appeal and activity. He was what we Americans would call "a money-making machine" and nothing more. His main pride was to show the size of his "roll" and to dilate upon it ad nauseam.

Aside from this, Stinnes' main joy was his family. He made its members his co-workers, partners and advisers. His wife, sons and daughters were informed of his affairs and included in their participation, down to the minutest detail. In this, Stinnes, as modern as he was, was simply continuing the old German patriarchal family; wherein every member was subject to the head, while bound to it by filial ties.

When Stinnes died, his fortune was left to his widow. She is admonished to consult her sons and daughters in all things affecting the magnate's private and business affairs. To his eldest son went the direction of the properties in the Ruhr and the Rhineland, while the younger son will oversee the family's interests at the headquarters in Berlin and care for the shipping and foreign properties.

Stinnes, in a statement made a few years ago, compared his methods with those of the super-capitalists of this country. According to this statement he had two great principles. The first was the working jointly of all the industries under his control. He did not agree with the founders of the great trusts in this country that every industry is independent of the other. They are bound together. He began, for instance, with coal as the foundation of his industrial undertakings. Then he went into the metal industry; then into the building industry; bought ships for inland and oceanic traffic to transport his coal. On the other hand, he went into the soft coal business, then took up forestry and paper-making before going into the newspaper game. So intermingling his activities, he built up his career to gain the highest profit with the smallest cost.

Stinnes' second principle was to work together with the general union of workers. His electric works on the Rhine are partly owned by the employees. Stinnes declares that he lived for months with the workers in order to understand their problems. He professed himself desirous of interesting himself in the problems of the workers in order to better their condition.

Thus we have a picture of Stinnes as painted by himself. Viewed in the light of contemporaneous events, it is not a pleasing picture. As painted by Americans particularly, Stinnes is a sinister figure. He was a "grab-all"; consolidating everything for himself primarily. Yet he was the essence of all capitalism, wherever found. In its essence, capitalism extols private gain and property at the expense of social welfare and progress. What Stinnes has done in Germany is daily being done here. Do not "our" Rockefellers create wheat, oil, and other corners in order to extort unprecedented profits? Do they not make of imperialism and war the means and occasion for vast enrichment and greater reactionary entrenchment at social expense? Do they not use the Federal Reserve and gold systems to deflate and bankrupt the farmers and make greater industrial concentration possible? Have they not bought up the press, corrupted politics and moulded religion even to their own advantage? Are they not reaching, with grasping hands, to the small countries in South America and Central America? Are they not international in their exploitation and domination; threatening Japan here, Russia there, and China over yonder?

**Finally, like Stinnes, they, too, hire and fire millions of employees, who, by their co-operative, collective mental and manual labor make possible their great industrial enterprises and successes the world over; and whom they too, rule and ruin in**

**undemocratic, Kaiserliche fashion when their interests so demand, which is, generally, most of the time.**

Stinnes' statement of principles would seem to make American capitalism inferior to his own. But this is only apparently so. Fundamentally, there is no great difference between them. It is true, as Stinnes states in the exposition of his first principle, that American trusts are organized according to industry. Nevertheless, they are bound together and made one, through interlocking directors, U. S. Chambers of Commerce, and other devices and institutions. Some of these trusts are also, like his own, organized from the bottom up. The U. S. Steel Corporation (the Steel Trust), for instance, is almost complete in itself. It has its own mines, blast furnaces, mills, ships, railroads, banks, construction companies, selling and export agencies, etc.; in brief, everything from raw supplies to consumer. The Standard Oil is similarly built in the oil industry.

Then there is Henry Ford. He refutes Stinnes' arbitrary classification best because he resembles Stinnes most. Ford began with an improved, cheap auto. All its parts were made by outside companies. Gradually Ford began to make these parts himself. At the same time, he began to acquire his own sources of supply, until now he has his own mines, forests, glass works, tanneries, power works, blast furnaces, railroads, foundries, assembling plants, ships, railroads, banks, newspapers, etc. And he is going abroad, extending his operations to seven different countries besides his own; while looming large as the competitor and opponent of organized capitalism.

Then consider Henry Ford, the political dictator. The man who, through his widespread manufacturing and selling organization, boomed himself into a presidential candidacy that imperilled the two leading parties and enabled him to cause the Coolidge administration to accept his Muscle Shoals offer as the price of his withdrawal. Therein Henry, like Hugo, considered his own private gains first, while leaving the so-called public to go hang! Could Stinnes have done worse to society and politics? We doubt it!

Henry Ford, however, differs from Stinnes in the application of the latter's second principle. Ford does not believe in workers' unions. According to Ford, labor unions are the creation of Jewish bankers, organized to ruin industry and to thereby enable the aforesaid bankers to secure control of it. Of course, this doctrine of the origin of unions is absurd; it's refuted by history. Nevertheless, it accounts for much of Ford's bitter antagonism to labor organization. He will not tolerate it.

Nor does Ford permit his employees to participate in the ownership of his many properties. Even employees' stock ownership is unknown in his many industries.

What is herein said of Ford's anti-unionism is also true of all the big trusts not controlled by him. The Steel, Tobacco, Oil, Sugar, Shipping, Insurance, Financial, and other big combinations of capital, are anti-union and open shop. They assail labor organization by every means and in every way possible. Labor espionage, the blacklist, frame-up, and a thousand and one other devices are employed by them to exterminate labor unionism of every kind, no matter what it may be, whether craft or industrial in form or character.

It is only in the building trades, coal mining, railroading, shoe-manufacturing, and a few other industries that big capitalism allows unionism under conservative and national civic federation auspices. Some of them also permit stock ownership; and otherwise keep their employees bound to the capitalist system.

From all of the foregoing it would appear as if Stinnes, in his treatment of the workers, was wiser and more liberal than his American counterparts. But it must not be forgotten that Stinnes' attitude was one of dominant paternalism. Compared with his own ownership and power that of his employees was insignificant indeed. Further, co-operation with the workers in Germany was a capitalist necessity,—a means to the development of capitalist policy, to the greater gain of capitalism and the undoing of the entire German nation in its interests. All this is obvious in the results to the German workers. Of what avail was Stinnes' recognition of their unions in view of his power to gut and ruin Germany to his own greater entrenchment and profit? This recognition merely makes more certain the workers' own ruin and destruction! Out on such liberation and generosity! We have much of it in this country, too. Beware of it.

Then we have Stinnes' love for his family and his will in behalf of his widow and children. How lovely; how charming!! Surely, despite his exaltation of private gain above social welfare, this proves Stinnes to have been a blessing to mankind! Are "our" capitalists, with their frequent divorces and "love nests," as devoted and as filial, as was Stinnes? As upholders of the monogamous family, how do they compare with him?

Of course, this is an old trick! The man who destroys the organism of the many for that of the few, is always a hero, especially to those who believe most vociferously in "the greatest good to the greatest number." Every tyrant "points with pride" to his love of family while he wades up to his knees in the blood of humanity! Kaiser Wilhelm loved his family, too. Should we worship him therefore, any less than we'd worship Kaiser Stinnes? Henry Ford loves his family, too. Every big member of the American plunderbund loves his family likewise. In fact, they all leave their wealth to their families; so that this country groans under the exploitation of what one authority, viz., Henry Klein, calls, very appropriately, "dynastic wealth." —the wealth of the Astor, Gould, Vanderbilt, Armour, McCormick, Rockefeller, Morgan, Ford, and other families of plutocrats.

# Is Industry Slowing Down?

**Or Is It on the Gain, Producing More than Ever Before, with the Consequent Result that Thousands of Workers Are Being Laid Off, Only to Compete with those Employed?—The Facts as Gleaned from Record Outputs by the Great Steel Corporations.**

By FRED W. BOWERMAN

**The present condition in industry—the growing number of workers who are being laid off at this plant and that—remind me of the revolving pulley and the fly.**

**It was a hot afternoon in July in a small machine shop located in southern Indiana. We had just finished with the noon hour lunch period and bits of food which lay about on the floor at our feet, had drawn in through the open windows a large number of flies, who buzzed from crumb to crumb.**

**To one side, on the testing block, stood an oat-crushing machine, with its newly painted pulley. A slap of the hand or a wave from the newspaper and the flies would scatter in all directions and the freshly-painted pulley drew its share. Upon this they alighted and seemingly enjoyed its flavor as well as any other food substance.**

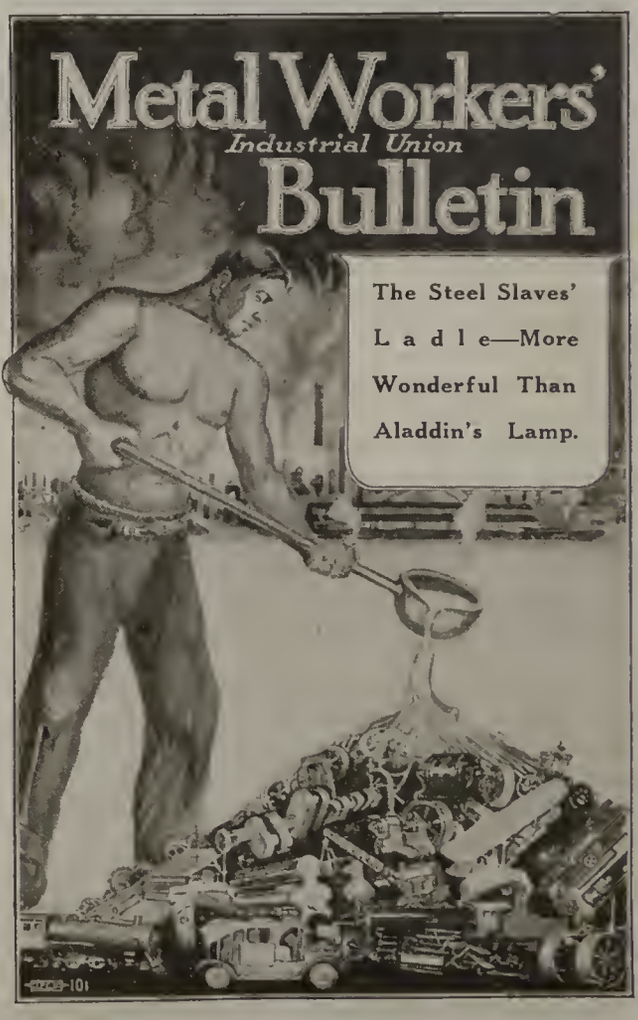
**The old sweeper, in charge of starting the power, usually started the main line shaft about five minutes of starting time, so all would be in readiness when the whistle blew. With the turning over of the big drive wheel in the engine room the oat-crusher on the testing block would start rolling and its pulley begin moving around, slowly at first but faster and faster with each revolution.**

Those flies would hang onto that pulley eating the paint, as they turned around through space, as if nothing had happened. But with the increase of speed, the centrifugal force would throw fly after fly to one side, until not one remained.

The flies on that pulley reminded me of the industrial situation that confronts us today. Workers are asking, "Why am I getting laid off?" when the boss hands them the pink slip. "Didn't I produce enough?" is the question of another. "I always worked hard and here the company lays me off," is the comment of a third. "Why—we produced more in our department than ever before, and now they let us all go," is the expression of others.

When the wheels of industry turned slow, it seemed there was always room for another man; but as the wheels of industry were speeded up, fewer and fewer of us were needed at the bench and the machine. We workers are like the flies on the revolving pulley. When it turns over slowly we can hang on. But as the speed increases, more and more of us lose our hold and slip off into the great army of job hunters or what might be properly termed, food hunters. We, like the fly, are being slung off into space with the increase in speed of the pulleys in the shop, mill and factory.

That is happening right now in the great manufacturing establishments of the country. The wheels of industry are being speeded up, faster and ever faster. The papers say "industry is slowing down." Nothing is farther from the truth. Industry is on the gain. More production is the order of the day. The mills are turning out more tonnage. The auto factories more cars. Every machine shop more parts. What is happening is that production has



**New Cover Design**

been increased and with this increase fewer workers are needed on the job. They are being laid off in large numbers as a result of the hurry-up policies the companies have introduced and carried out. Yes—as far as the workers are concerned it might appear that industry is slow, because they are looking for new jobs, but the output in all lines for 1924 will no doubt surpass that of 1923.

For instance, the workers at the Indiana Steel Company broke all production records for January. And then in March they broke the January record by producing 320,000 tons of ingots, which was an increase over the January record of 48,000 tons. The workers in the billet mill, not to be outdone, also broke the record in January and then increased production in March by producing 120,000 tons, which was 22,000 tons greater than January. Yes, industry is **not** slowing down.

In Lackawanna the steel workers in the Bethlehem like their boss so well that they also broke production records during April and the General Manager, Mr. Timothy Burns, took sixty of the pace-setters over to the Hotel Buffalo for a feed. I suppose they called him "Tim" that night and he spoke to them as "my boys."

The auto industry makes like reports of record-smashing production. And machine shops from the manufacture of typewriters to farm machinery also follow suit. The owners of these shops, mills and factories look at them like the gamblers at the race tracks view the horses. Only here, on these inside race tracks the workers are supposed to do the racing and seem to be doing a pretty good job of it.

What is the effect of this increase in production? Well—it affects the boss this way: The faster the workers go—that is, the more speed he can get—the less pay envelopes there will be, because fewer workers will be needed, and the less pay envelopes there are to be filled the more profits he can ring up. Speed and profits, profits and speed, 'tis a fine game for the boss. But the effect upon the workers is entirely different. The workers who keep these wheels of industry going faster and faster soon find this department and that reducing its force. As fast as they get laid off they enter the army of job hunters, because, with the present wages, saving money is something to wish for instead of carry out.

A year back the Metal Workers' Industrial Union No. 440 of the Industrial Workers of the World issued a leaflet, which dealt with this job question and at that time a warning was issued, that if the shorter day was not installed in the steel mills and auto factories, and the production per day per man reduced, the time would soon arrive when we would all be looking for a new job. It was a case of "Don't work yourself out of work." At that time the steel workers and others in the metal industry were urged to organize for the shorter workday to offset the increased production and the general lay-off that was sure to follow.

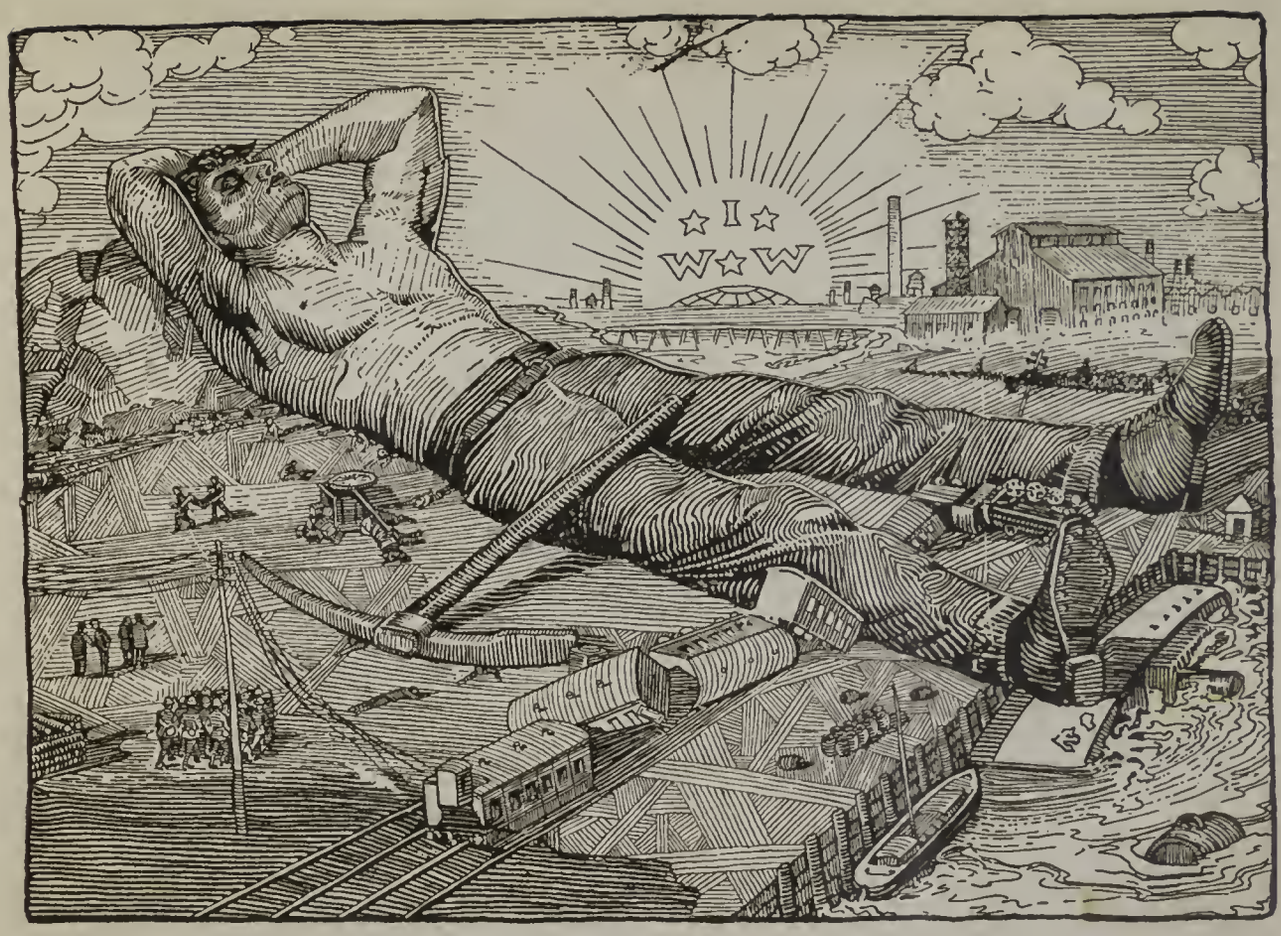
Now the time has arrived when metal workers are paying the price of overproduction. Plant after plant is reducing its force. The Studebaker plant at South Bend cut its force by two-thirds. Other auto plants and machine shops are doing the same thing. The steel mills are also laying off men. Furnace after furnace is being blown out. Fires are being banked, and it looks like there will be plenty of labor on hand to install the eight-hour day in the steel mills, if that is worrying Mr. Gary. But it isn't; because the steel mill kings and auto plant owners and the rest of that crowd want just such a situation. They want plenty of unemployed labor on the market looking for a job and starved to the point where they will take any job under any condition. Increased production means a big labor supply. Plenty of men looking for jobs at the mill gates means cheap labor. Low wages and long hours mean greater profits and that is what they are in business for.

You, as a worker, are either helping these owners of industry in their game of breaking labor, or you are helping to stop them. There is but one way to effectively stop them. That way is to organize. The Metal Workers' Industrial Union No. 440 holds out an invitation to you to join with them. We are not going to fall for the "half a loaf is better than none" stuff. We are going after the whole works. This industrial union is out for shorter hours. We want to see the eight-hour day universal in the steel industry. We are organizing to that end and realize that as the workday is shortened and more men are put to work, demands can be made for higher wages and better conditions. This unemployment shadow is now falling across the pathway that leads to better things. We have to organize.

The union has succeeded in enlarging its membership in the past year. Delegates have been appointed in the majority of the metal centers. At many places local unions have been chartered and it has had a healthy effect upon wages and hours at several plants.

But the union cannot move faster than the metal workers move. Let the present situation in the mills and shops act to hasten our work of organization. Let it be a warning of what is to follow if we stand by and do nothing about it. The start has been made. The workers of this industrial union have laid out an organization program for 1924, and call upon every metal worker to join with them.

Let's not be like the flies on the pulley and just hang on until we get slung off. Let's organize and as one body of metal workers, who with our intelligence and strength make the steel and shape it into the many machines and uses it is produced for, use this same intelligence and strength to gain for ourselves some of the good things in life which we play such an important part in producing.



# When the Giant Rests

The above picture, reprinted from Il Proletario, Italian IWW weekly organ, tells its own story.

It shows what happens when the giant, Labor, sleeps; that is, stops his various mental and manual activities.

Everything becomes disarranged and falls into chaos; nothing goes right.

The steamships are prostrate; the railroads are paralyzed; communication is down; the mills are still; in brief, "There's nothing doing" and "everything is all balled up."

Every big strike, every big storm, every acute panic, every destructive war, that either causes the cessation of labor or prevents its useful application, is a substantiation of the correctness of this strikingly vivid picture.

All of them go to emphasize the dependence of human society on Labor. They stress the fact that the constructive progress of the race is dependent on Labor. And that culture and development are impossible without Labor and its ability to operate industry and produce wealth.

This picture, together with all that it implies, should serve to inspire Labor with a consciousness of its own importance. It should serve to bring home to Labor its own great economic power; and should cause it to so organize that power industrially as to make it conduce to Labor's own improvement and emancipation, instead of Capital's profit and oppression.

# Industrial Tendencies

WHITHER is industry tending? The Lithographers' Journal for March throws some light on the question! It devotes an article to "Lithography in 1921," that discusses industrial tendencies of interest not only to lithographers but all other workers as well, no matter how or where employed, as the facts contained therein are typical of tendencies in general.

This article, taking the census of 1921 as its authority, shows that in that year there were 296 lithographic establishments in this country as compared with 336 in 1914. Or a decrease of 40 in number. Further, the average number of employees decreased from 15,171 in 1914 to 13,971 in 1921. Or a loss of 1,200 all told.

However, at the same time, the capital invested increased from $35,685,000 to $60,817,000 for 1919, the latest figures available. This is an increase of more than 65 per cent. The horsepower employed also increased from 15,178 in 1914 to 18,624 in 1919, or over one-fifth.

**But, most impressive of all, is the increase in output from $39,136,000 in 1914 to $79,472,000 in 1921. This represents an increase of over 100 per cent.**

The Lithographers' Journal observes that "from those figures (it) can be seen, that lithography is growing as an industry; at least its mechanical equipment is growing apparently at the expense of man-power."

This growth is characteristic of many industries. These industries show great increases in capital, horsepower and output, combined with a decrease in establishments and employees. The latter decrease, too, despite great growths of population, which would seem to warrant their expansion rather than their contraction.

These industries reflect the ever-persistent tendencies to concentration in huge consolidations and combinations of capital, coupled with the extended introduction of automatic machinery and the speed-up system, which is its inevitable accompaniment; all of which acts to the detriment of competitors and wage workers, both of whom are displaced and rendered unnecessary thereby.

It is regrettable that the Lithographers' Journal did not have the figures to show the difference, if any, between 1914 and 1921 wages paid in lithography. The 1921 statistics, as given by the Journal, show the total "mechanical payroll" to have reached the sum of $21,085,435. "Thus, the average yearly earning of the individual wage earner is $1,508.58 1-2, or $29.02 per week." Of course, this average is established primarily by adding the high-paid wages and the low-paid wages together and then dividing the total by the number employed.

Probably, had a comparison been made between the wages paid in 1914 and 1921, it would have been shown that the wages of lithographers do not increase in the same proportions as does their output; and that, though their wages are higher than formerly they have, relatively speaking, suffered a decrease. This is borne out by general statistics. Geo. Soule, well-known economist, has shown that, while output on the whole has recently increased 30 per cent, wages have only gone up 5 per cent. And the indications are that they will not remain there long. For even now there are newer and greater combinations of capital afoot, together with a greater introduction of automatic machinery and a determined movement to reduce wages, all requiring greater resistance via organization on the part of the working class.

Need more be said? Or is a hint to the wise sufficient?

## PIGS AND PIGS

One day a farmer who had a large herd of pigs decided to kill one. His experience in the past had taught him that pigs will attack a person who is doing injury to one of the herd. He told his hired man to get a large club and get into the pen and drive back the other pigs while he killed the one he wanted. This the hired man did and the farmer was successful in killing the one he wanted.

Now there are working men who join together in groups called "unions" but when the boss wants to lick one of the unions all the other unions stand quietly by and watch the licking go on. Have working men as much sense as pigs? THINK IT OVER.

## NEXT MONTH! NEXT MONTH!

**The Industrial Pioneer will publish one of the most gripping tales from the lives of the workers ever penned by a proletarian. It is called**

### "The Boy from Washington"
### By Bob Pease

**General Organization Committeeman of Lumber Workers' Union No. 120, Industrial Workers of the World.**

**Get this story and learn how the boy was transformed from a dreamer into a man of determination. It's one of the best things written since the days of Jack London's "People of the Abyss," and every bit as vivid and as virile! Read it and find out for yourself.**

**Other good things in next month's issue will include two pages of photos of big construction jobs now being built by members and sympathizers in the city of Chicago.**

**See the wobblies at work at dizzy heights, putting massive steel beams in place and painting broadcasting towers. And take a look at some of the bridges and other useful structures that they have also helped to build!**

**In addition, there will be the usual articles on economics and other problems of the day. Subscribe now; interest your friends now!**

# Busting a Boost!

## OREGON'S NATURAL BEAUTIES FAIL TO REPRESS THE IRREPRESSIBLE CLASS STRUGGLE

By OREGONIAN

**With the Summer Season Drawing Near and a Profitable Tourist Business in Sight, the Chambers of Commerce Are Publishing Alluring Advertisements, that Appeal to the Workers, Cause them to Migrate and Land Amid Conditions Worse than Those From Which they Fled. Below Will be Found a Criticism of One of These Advertisements that Gives Many Facts that Are Otherwise Lost Sight of.**

The Portland Chamber of Commerce is boosting "Oregon and her captivating modern cities." The advertisement calls on all and sundry to "Plan a real summer adventure in the land of the snow peaks and great evergreen forests, deep roaring canyons, tempting fishing streams, wondrous lakes, ocean and beaches. Nearly 2,000 miles of incomparable paved highways lure the motorist."

And then it continues:

"Here is the greatest lumber producing section of the country, the second in furniture manufacture, the center of hydro-electric energy—a land with tremendous potential agricultural resources and unlimited possibilities of industrial development."

One would conclude, upon reading this advertisement, that Oregon is, in biblical language, "the land of milk and honey." It's a habit all boosters have: they picture the bright side and leave the shadow to be depicted by those who live in it and are, therefore, most familiar with it.

**Take California, for instance: There's a land of earthquakes, situated on one of the worst geological formations in the country, and, as such, likely to crack wide open when most unexpected. Remember 'Frisco!? Now, no booster ever boasts of that. No; he prefers to have you forget it and think of California as the land of sunshine and flowers.**

Then there's the way California, through its so-called criminal syndicalism laws, sends workmen to jail from one to fourteen years for organizing. One, to read the advertisements of California's realtors, would never think that California is so mediaeval and ornery! According to them, it's positively civilized, which, however, is not the fact.

And then there's California's land and oil swindles—but what's the use? Let's get back to Oregon! It's the same there, too. Them "2,000 miles of incomparable paved highways" that "lure the motorist" sometimes lure the migratory worker as the best way out of it. And those "snow peaks and great evergreen forests, deep roaring canyons, tempting fishing streams, wondrous lakes, ocean and beaches"—they're all picturesque and inspiring. But when logging and the sawmills shut down yuh can't eat them, nor can you get staked for anything because of their existence. The reader of those advertisements wouldn't believe it, but Oregon, like California, has the class struggle, too. The irrepressible conflict between employer and employe rages just as fiercely here as elsewhere, though the chamber of commerce advertisements say nothing about it. Oregon has her criminal syndicalism laws too,—which means that the organized capitalists here, as in all the other states, are desperately engaged in trying to stifle the aspira-

A JAMMER IN ACTION

In The Sugar Pine Country 'Round Southern Oregon.

A CATERPILLAR HAULING BIG WHEELER

With Sugar Pine Logs in Chains in the Vicinity of Klamath Falls, Ore.

tions of the workers for better conditions and a better society, by means of forcible repression rather than civilized consideration. Thanks to organization, however, the criminal syndicalism law in Oregon is practically a dead letter.

Portland, Oregon's leading city, with its misleading chamber of commerce, was the scene of a typical labor struggle in the fall of 1922. On that occasion the members of the IWW and other progressive unionists went out on strike. They resisted an attempt at discrimination against them. That is, they resisted an attempt to take their means of livelihood away from them because of their ideas on labor organization and the future society.

Mayor Baker rushed into this affray with characteristic official zeal and stupidity. He lined the police and other municipal departments up against the strikers and did his very worst to break the strike. But publicity won the day. The strikers issued bulletin after bulletin, giving their side and exposing the lawless mayor. It all ended by his backing out of the affair, with as much grace as his defeat allowed.

This Portland longshoremen's strike practically drove shipping away for the time being. It was an intense, long drawn-out conflict, typical of the labor situation in Oregon generally.

The intensity of the class conflict is further shown in the attempts now being made to drive the IWW out of the logging camps of the state. Thanks to its efforts, the camps have improved considerably since last spring. The majority of the lumber companies have installed blankets, white sheets and pillow slips. Further, owing to its great strikes in 1917-18, eight hours have been a day's work in the Oregon woods.

While these things tend to make life in the camps more agreeable to the workers employed therein, there is still room for improvement. "High-balling," that is, the speed-up system, is in vogue. Board is also not very good in many of the camps. In addition the workers can only get jobs through employment agencies. The workers must pay all the way from $1 to $10 for them. Despite this there is no certainty that when they get to the camp they can go to work. Sometimes, if they are broke, they will have to walk back to town and go through the same process again.

The IWW is trying to remedy these evils, also; and in view of its success in improving camp conditions and reducing hours, the employers wish to

(Continued on page 29.)

# Pioneer Makes Big Hit

Our May Day issue, edited by Vern Smith, made the greatest hit of all Pioneers. It was enthusiastically greeted, as will be seen by the following excerpts from letters received:—

**The Pioneer for May was fine. Getting better all the time!** Thought the Barnett story was splendid. It hit the spot in the right way.
San Francisco, Cal. **Ed. Delaney.**

---

I am glad you renewed my subscription so promptly. **I wouldn't miss an issue of the Pioneer. It's one of the best magazines published.** It has some very good educational articles in it.
Walla Walla, Wash. **W. F. Mondy.**

---

Just finished reading the May Day Pioneer. It is good stuff, well edited and well set up. **In my opinion we have the best revolutionary magazine in the world today.**
Bangor, Me. **I. U. No. 120.**

---

Allow me to compliment you on the May issue of the Pioneer. **It is a dandy so far as I have gone.** The first article is a real peach. What I noticed particularly was the choice of words for their expressiveness and also for their musical effects. No name is given, but the one who wrote this can write. Then there is the Peeps with the cuts that show the Pioneer in the making, and it is a fine piece for any magazine to have.

I do not like Chaplin's song as well as some of his others, but believe me that boy is there on the art, even if I have contended that he is better with the pen than the brush.

I have also read No. 744, Missing in Action, and it is fine. I am going to treat myself to the rest of it when the wife comes home, for she will read it aloud. But so far as I have gone, International Labor Day beats them all. It has everything that makes great literature. **The thing that hits me is that we are getting the best that there is in the men out of them. I have this feeling of the IWW as a great training school for citizens of a free society each time I read the Pioneer.**

Sincerely yours for the IWW.
Vancouver, B. C. **J. A. McDonald.**

---

Elsewhere in this issue will be found other appreciative words. These should serve to enthuse our readers to redouble their efforts to make the Pioneer the biggest success ever in labor magazine circulation.

Get your friends to subscribe to it! Get newsdealers to sell it. Get schoolboys to sell it after school hours. Contribute your mite. Every little bit helps. With all of our readers boosting, the Pioneer is bound to grow as it should.

All together! Let's go!

---

## PROMOTES DOMESTIC HARMONY

I MUST write and tell you how well we all like the Pioneer. It's sure a dandy! I don't know how it could be better; but each one seems better than the other.

When our youngster comes home with it, he begins to yell before he gets into the house,

"Hey, Ma; I got the Pioneer!"

I hustle out and get it.

I'll write you a little scene at our home the other evening.

Hub (coming home for supper): "What, burnt biscuits!"

Myself: "Well, sweet cats! I can't help it!! The Pioneer came today. The kid brought it just as I put them on. And the Worker, too! I just had to look them over and forgot all about the biscuits."

Hub: "What? **The Pioneer??** Where is it???"

Myself: "Well, never mind. Supper is ready!"

Hub: "I've got to glance at it, anyway! I can't eat supper without looking it over any more than you can watch biscuits."

So you see we like it fine. The Worker and Sol are fine, too. Couldn't get along without them!
Calder, Idaho. **Card X7443.**

## TO THE UNEMPLOYED

If you are out of work and wish to retaliate against the present capitalist system for placing you in such a position, push the Industrial Workers of the World. Help it to organize the workers.

Push especially its publications, like the Industrial Worker, Industrial Solidarity and Industrial Pioneer among the workers still at work or able to buy them.

In these ways, YOU can make known to them the causes of unemployment, together with the other evils of capitalism, and the way to remedy them.

At the same time you will be making it possible for the Industrial Workers of the World to maintain its press and carry on its work of organization among the workers everywhere; while also making a few cents for your own pork chops.

For more particulars, address The Industrial Pioner, 1001 W. Madison Street, Chicago, Illinois.

---

## THE WOMEN ARE INTERESTED

Fellow Worker Editor:—It was quite interesting to read the two letters from "A Stenographer" and "A Mother" in the April Pioneer. Both of these touch on vital questions. . . . Indeed our press does reflect too little industrial union activity on the part of the women wage slaves, and the Pioneer is a very appropriate medium in which to discuss these things.—**Card 70624.**

At Haledon, N. J., in 1913. Paterson Strikers Listen to IWW Speakers Address Them on Situation

# IWW Comes Back in New England

## Conditions Cry Out For It—History and Tradition Favor It—One Big Union of Lawrence Co-operates With It—Old Timers Rejoice Over It—Push It All!

**History and tradition are often condemned as fetters that bind the race and retard its progress. Man does not regard the future as an untried experiment, through which everything is possible, would he but do and dare. Man is a timorous creature. He fears to go onward with new ideals. And, in his conservative cowardice he calls on the failures in history and tradition to justify his paltry course. He cites precedent and quotes the croakings of his great, great grandmother to prove himself and his ilk right as against others more progressive.**

But, as in everything else, history and tradition are sometimes exceptional. Sometimes they, too, will be found on the side of development and progress. There is, for instance, the history and the tradition of the great IWW victory at Lawrence, Mass., in the year 1912. On that occasion, 25,000 textile workers rose in revolt against a wage cut. For ten long weeks, during the intensely cold months of January, February and March, they withstood the fiercest kind of opposition. Press, pulpit, police, militia, craft union, detective agencies and dynamite frame-ups were arrayed and used against them.

Though speaking a score or more tongues and working at many different trades these 25,000 textile workers, under the banner of the IWW stood as solid as a rock and, in the face of all misrepresentation, brutality, craft union treachery and capitalist oppression generally, won one of the greatest triumphs in the labor history of the country.

### Fires Labor's Imagination

It was a glorious, epoch-making conflict, was the great Lawrence strike of 1912. A new and greater unionism had come to inspire labor—a unionism founded on industry instead of trades and having for its objects not only workers' improvement but also workers' control of industry. The great Lawrence conflict of 1912 not only fired its participants with an unbreakable enthusiasm amounting to religious fanaticism, but also the revolutionary imagination of the working class throughout the entire

Women Were Prominent Factors in Lawrence Strike Demonstrations and Movements to Raise Funds and Care for Strikers' Children.

Mass Demonstration For Release of Ettor, Giovannitti and Caruso, Lawrence Strike Victims, Union Square, New York, 1912.

One of the Age-Long Evils of the Cotton Mills: Children at Work Tending Looms — Scene in the South.

land. It opened up to them the vistas of a new society and outlined the means of its attainment, by and through the workers industrially organized. It was truly a remarkable strike, reverberating throughout the states in its remarkable ramifications and influences.

The practical result of the great Lawrence strike of 1912 was to put from 5 to 15 million dollars more per annum in the pay envelopes of the textile workers throughout the land; that is, its results were not only local but widespread; for the Lawrence strike caused textile mill corporations throughout the land to act favorable to the workers employed therein. In others, they acted in anticipation of the stimulating effects of the Lawrence strike on the textile workers everywhere.

The spiritual results were even greater, in that it left an ineffaceable impression on the memory of the workers, especially in the textile centers of New England. For a half decade the Lawrence strike of 1912, such were its impressions, caused mill corporations to hesitate to cut wages, in fear of its triumphant repetition. Among the workers 1912 was a tradition to an even later date, influencing their actions for the best, and setting up standards by which to be guided in the struggle with capitalism.

Since 1912 there have been other big strikes in

New England, especially in Lawrence. Strikes as vast and as important but not as far-reaching, nor as effective, nor as impressive in their varied achievements. Through them all, the history and tradition of the Lawrence strike of 1912, led by the IWW, have survived and held sway. And though the war and other circumstances, including the influx of new quotas of workers from various climes, drove the IWW out of New England, a minority of the textile workers, imbued with this history and tradition, have yearned for and made possible its return!

And now the IWW is coming back again in New England! Now again are textile workers holding meetings under IWW auspices in its textile centers, with headquarters at Lowell, Mass. Best of all, the One Big Union unit in Lawrence, Mass., has voted to co-operate in the new IWW movement to organize the textile industry now going on there. The textilers are coming back; they are rallying 'round the IWW once more.

This come-back is good news, indeed! It thrills old timers like the writer, who was at Lawrence in 1912 and took part in some of the most dramatic events enacted there at that time! It, further, recalls the vast demonstrations in favor of the strike that took place in every great industrial center, as Boston, New York and Philadelphia; demonstrations in which men, women and children took part and all the various labor elements were represented; for if the Lawrence strike did one thing, it united all the forces of labor in a way that they had never been united before or since, such was the force of its inspiring example everywhere! It recalls also the succession of big strikes at Little Falls, N. Y.; Paterson, N. J., and elsewhere, to which it gave impetus and inspiration.

### Prestige Still Survives

Aye! Lawrence,—the Lawrence of 1912—as the first giant demonstration of industrial unionism, set in motion a train of events whose significance is not without prestige and influence! They are even now taking part in the revival of the IWW in New England. May they lead to a revival of the IWW everywhere! For never before was the IWW as badly needed in the textile industry, as at present.

In New England towns, like Providence, R. I., for instance, the depression has caused such destitution as to make the Mayor afraid to disclose the amount of funds expended in poor relief. He fears a revolt if the exact sum is disclosed. In other textile centers,, like Fall River, Mass., the situation is practically the same. There, as in Providence, "hard times" are rampant!

Elsewhere, as in Dover, New Hampshire, strikes are on against more work without more pay. The number of looms are being doubled, in some cases; and the tasks imposed are being multiplied; with threats of wage cuts all 'round. It's the old story of increasing output out of all proportion to the actual wages paid.

In Philadelphia, with its 70,000 textile workers; in the South, with its new capitalism and child labor particularly,—everywhere in Textiledom do conditions cry aloud for the IWW. And it is certainly a pleasure to know that the cry has the most practical backing in New England.

The IWW is coming back in the textile industry! History and tradition favor it!

---

## WHAT'S BEHIND TEA-POT DOME?

(Concluded from page 4)

selves in opposition to his competitors and thereby incur their titanic enmity, which seems to be the case with Coolidge. It is already clear that his espousal of Ford's Muscle Shoals involves the Coolidge administration in a scandal besides which that of Elk Hill and Teapot Dome are small indeed.

Under these circumstances, it would appear that what we have been witnessing in Washington is not a political reformation by the Democratic party, but a struggle for political supremacy between big capitalist economic factions, in which the political parties are only a means to an end, to be used as the dominant interests require. In this connection, the Democratic party, decadent though it is, serves plutocratic ends; and **should there be no compromise between the economic interests concerned in the Republican party,** the Democratic party stands a good chance of having big plutocratic backing in the coming campaign and winning out because of it. SO will rally to Governor Smith and elect him.

The coming presidential campaign is likely to excite multitudes of workers. They will grow hysterical over it, as many have already done. This, however, is nonsensical! For what difference does it make to them, whether Ford or Morgan or both rule at Washington? They will continue to be fleeced at their place of employment of all that they produce above their wages. Then, as now, will their labor be exploited for the aggrandizement of their capitalist employers, whether small or large, whether individual or corporate in character.

So we say to them: don't get "het up" over this scrape. Pay attention to your own interests. Organize industrially to secure more of your products, until you get them all and are thereby enabled to inaugurate the workers' commonwealth.

---

## WHAT WORKMEN NEED

Man does not live by bread alone. Nor does the worker's drudgery alone make him class-conscious. Education is also needed.

With education will come organization and idealism. Without these the worker will be a mere grumbler, an ineffective kicker. With them, he will become a revolutionist and a credit to his class.

Get the workers to read! The capitalists fear those who read and, reading, understand the iniquities of capitalism and the remedy therefor in organization.

# From the Hell of Wage Slavery to Industrial Heaven

By PASQUALE RUSSO

(See Illustrations on Page 2)

### The World Unrest.

THE structure of modern capitalist society is crumbling before the advancing forces of the united proletariat and we now realize that the prophetic words of Karl Marx are in accord with the fact, "The capitalist system has produced its own grave-digger." Due to the greed and the intensity of exploitation during the capitalist regime the world is now in the throes of a great agitation. In every corner of the globe the toilers are in open rebellion against a barbaric system of wage slavery. In every country the intensity of the class struggle has come to be the most serious question of the hour. In every land and on every sea the workers are demanding freedom.

In the midst of all this turbulency the great American empire is not immune. Here, in this "land of the free and plenty" the laboring classes are struggling against the tyranny of the capitalist regime.

The situation, such as it is, leads many to ask: "Who is responsible for this unrest among the working classes?" To which we may reply by saying, it is caused by the selfishness and greed of the capitalist class. All the machinery of production and the natural resources of the country are in the hands of this class, though numerically they are insignificant, while the working class, the producers of all wealth, are vast in numbers but extremely poor.

This conditions is brought about by class exploitation and a system which reduces the majority of mankind to wage slavery. Therefore, the Industrial Workers of the World not only protest these conditions but also fight for the liberation of the entire working class of the world.

### The Priest

Finding themselves in such straits what is the best course for the toilers to pursue? According to the Father of the Fourteen Points, ex-President Wilson, the workers should adopt religion as a remedy and "Look to the Lord for help." Judge Gary, who on one occasion denounced ex-service men (who demanded a bonus) as "bums and disloyal", tells the wealth producers that their salvation is to be had by "giving their hearts to Jesus." Such sentiments, seductive as they are, redound to the interest of the capitalist class and contain nothing of value to the workers. The workers have prayed for two thousand years without result and while praying have been deprived of the fruits of their toil. To Jesus they have given their souls, but their stomachs remain empty. It is now time that the workers began to realize that in order to enjoy life in this world it is necessary that they take what belongs to them. It is not to be had for the asking. nor will prayers avail—it must be seized and held.

One of the chief instruments of capitalist oppression and the strongest bulwarks of slavery, opposing the emancipation of labor, has been the priest. At all times the priest has functioned as a defense for the oppressors and as an obstacle in the path of progress. By instilling in the hearts of the workers a fear of a cruel, vindictive, christian God he has made them docile slaves. It is tacitly understood that the task of the priest is to protect private property, hence religion as expounded by the priest has a distinct economic value, looked at from the standpoint of the owners of property. A portion of this value is returned to the priest in the form of emoluments and reduces him to the position of a servile lackey of the ruling class. The priest, therefore, is but a tool of the robber barons of industry and according to common practice must play the tune demanded by those who pay the piper.

Thomas Paine in his work "The Age of Reason" writes of the priest in this wise: "It is impossible to calculate the moral mischief, if I may so express it, that mental lying has produced in society. When a man has so far corrupted and prostituted the chastity of his mind, as to subscribe his professional belief to things he does not believe, he has prepared himself for the commission of every other crime, he has taken up the trade of a priest for the sake of gain and, in order to qualify himself for that trade, he begins with a perjury and can we conceive of anything more restructive to morality than this?"

Every Sunday the priest (agent of organized capital) fails not in admonishing the wage slaves in docility and patience. In a soft and velvety voice he delivers his sermon and in effect says: "Brothers and sisters, be good. Your own salvation demands that you give up your desire for the possessions of the rich. Toward them you should be unselfish and covet not material things. Toil hard for your master, be ye meek and lowly and some day you shall inherit the kingdom of heaven, which is a place where the poor are welcomed. 'Blessed are the poor . . . Woe unto the rich.' (Luke: 20, 21.)

"Furthermore" says he, "Don't worry, your oppressors shall be punished for their sins in the next world. Do not rebel and should you fall into this error you shall suffer the torments of hell throughout eternity."

The priest, day after day, robs, deceives and keeps in darkness the great mass of the people while pretending to uplift, benefit and serve. How comes it, that in such an age of enlightenment, the priest and his hypocrisy are tolerated? It can only be explained by taking into account the ignorance of the great mass of the population.

To these millions, the priest's promises of heaven have so deluded them that their economic exploitation has come to be a matter of course. This dream of heaven, fostered by the clergy, has been a chlor-

oform that dulls the workers' minds. When a worker bows in prayer, the injustice of the wages system is excluded from his consciousness. The priest, living in a beautiful mansion and clothed in his silken garments informs the workers that they may have those things in a land beyond the sky.

Nor is this the least of the indictment. Owing to his influence the world has for thousands of years been drenched in blood. A subtle magic, the cross and the bible, are the means by which he performs such atrocious wonders. By such means, also is the subjection of the workers brought about; through them he creates a fear of hell. Hell, we are told, is a lake of fire which burns eternally and coming as it does from an alleged authentic source, the uninformed and ignorant have a superstitious dread of it. By inculcating this fear, the priest maintains himself in power, conscious of the fact that its absence would deprive him of his sources of wealth and influence.

Only by fear of this mythical hell and a hope for a mythical paradise, on the part of the large majority of the people is the church supported and its spokesman the priest tolerated. But there is some evidence now of enlightment and we are assured, in this stress of modern culture, the working classes will demand from the priest some tangible proof of his assertions.

However, we admit, that in a sense there is a hell; that at present it is upon earth; that its tangible form is in poverty, hunger and crime; that it is the handmaiden of industrial autocracy and may appropriately be called wage slavery.

Also, we are aware that there is a heaven, it is upon earth and enjoyed by the ruling class for the very good reason that they own the earth and everything upon it.

To avoid this hell of poverty and participate in the heaven of security is to organize for the purpose of taking possession of the soil and secure control of the machinery of production. Such action on the workers' part will bring an era of industrial freedom and purge the earth of superstition, despots and priests.

### Hell and Heaven

The capitalist class own the earth, by means of which they control all the necessities of life. For them this is heaven. On the other hand, the workingman, selling his labor power for a day by day existence, incidently increasing the wealth of the capitalists, creates for himself a condition bordering on hell..

The capitalists do no work, yet benefit from all work. For them this is heaven. The workingman, in times of peace, toils long and hard, day after in order that he may live. In the turbulence of war the worker is sent forth to die upon the battlefield of inperialism. For the worker this is hell.

The wealth of the United States is about 319,-357,000,000 and is controlled by less than two per cent of the population. This two per cent is the plutocracy and for them access to all this wealth is heaven. Reversing the picture we see that the American working class receive less than the amount required to keep an animal in good physical condition. For the wealth producers this is hell. Further, Wilford I. King in "Wealth and Incomes of the People of the United States", points out that 65 per cent of the people own no property; 15 per cent value their possessions at one thousand dollars; 18 per cent own two thousand, and the large remaining balance is owned by about 2 per cent of the population. The figures are startling and indicate that the United States is a heaven for the rich but a hell for the poor. Professor Richard Henry Edward, of the University of Wisconsin adds to this indictment in his work "Concentrated Wealth" by saying, "One per cent of the American families control more of the general wealth than the remaining ninety-nine." So we see that virtually the one per cent enjoy a golden paradise or heaven. Contrasted with this are the conditions of the working classes, millions of whom receive but seven hundred dollars per annum for their labor.

But the intolerable phases of this situation are in the wastefulness and extravagance of the rich. Recently, a very wealthy physician expended eleven thousand dollars on the burial of a pet dog. From this we may reason backward and see that dogs during life are well fed, wear silver collars, are bathed properly and enjoy the services of a special attendant. For the children of the rich this expenditure is even on a more elaborate scale; they reside in beautiful mansions, are well fed, wear expensive clothes and without exertions have all the comforts of life brought to them. These facts may be contrasted with Robert Hunter's statement in "Poverty": "One in every ten persons who die in New York City are buried at public expense in the Potters' Field."

Thus we see that the dogs of the rich are well provided for, but the children of the poor live in tenement houses reeking with filth, and when seen in the streets are clad in rags and worn out shoes. At school, when examined, they are found to be weak and feeble due to under nutrition, subsequently to die for a lack of the common necessities of life. This is hell indeed.

For a glimpse of heaven we must look to the industrial lord, who rides in fine limousines, attends the opera, dines at the club, plays golf; surrounded by ease and comfort, pleasure and enjoyment. For him all the beautiful mansions and automobiles are built by slaves who are denied the privilege of using them. When the maker and builder of these conveniences rides it is in the crowded streetcar or in a public conveyance to the poor house or the insane asylum, or at last, after being starved to death, he rides in a hearse. A hell worse than this cannot be imagined. Frequently for the worker, conditions become stressed and unbearable and to relieve this he goes on strike. Here he is met by the police and the soldiers. If they but

(Continued on page 27)

# The Land of Sunshine and Serfdom

By CALIFORNIAN

**The Redwoods of California, Showing their Big Circumference**

**"Oh! Liberty, can Man resign thee,**
**Once having felt thy glorious flame?**
**Can dungeons, bolts or bars confine thee?**
**Or whips thy noble spirit tame?"**

The old courthouse on Fifth street, Eureka, California, rang with the words of the anthem that swept 100,000 French peasants and artisans on to revolt, more than a century ago.

What was the cause of the rejoicing in Eureka? Had Labor achieved a victory? Aye, more of a victory than would at first appear. Nine men were being returned to their cells after sentence had been passed upon them; after they had been found guilty of treason to the industrial overlords of Northern California. Wherein, then, lies the victory? The victory lies in the fact that although they had been condemned to serve from one to fourteen years in San Quentin prison, they were not subdued. The masters and their vassals had failed in their efforts to compel these industrial rebels to kneel in submission at the feet of Mammon. They had seen the "vision splendid," had caught a glimpse of the Promised Land wherein Labor shall receive its just reward. Nine sons of the forest, sturdy loggers of the redwoods go to San Quentin to join their fellow workers who have gone before; Hammond and the rest of the timber pirates lie in opulent ease, secure from arrest and imprisonment, and laugh cynically at the efforts of their militant wage slaves to gain better economic conditions, and yet these men who have just been sentenced by a creature of the oligarchy are the victors. Truly we can ask:

"Oh! Liberty, can Man resign thee,
Once having felt thy glorious flame?"

### Trial a Mockery

It is not the intention of the writer to here review the case that has just ended in Eureka. This has been done in the IWW papers. I just want to stress a few points and to tell the readers of this magazine of a stirring scene that was enacted in the courtroom when the men were brought in to receive sentence after the jury had rendered their verdict.

The trial was a mockery, a farce. Judge Tyron, who presided, is a vassal of the Lumber Octupus. Like the good servant of King Lumber that he is, he obeyed his master and rendered faithful service. So prejudiced and unfair was he that the attorney for the defense was forced to conclude his case abruptly because of his inability to secure even a semblance of justice and fair dealing.

The less said about the jury the better. They were serfs of the Hammond Lumber company and other timber pirates. We would not say that the jury was bought outright, our opinion on that score we will keep to ourselves. Suffice it to say that the Lumber Octupus had given orders and they were obeyed to the letter. So much for the rape of justice in Eureka.

Now comes the scene in the courtroom when nine men, Henry Powell, William Bryan, John McRae, J. C. Allen, Alex Nicholson, R. V. Taylor, L. V. French, Jack Beavert and William Longstreth, were called before the "bar of justice" to receive sentence for violation of the state criminal syndicalism law.

Judge Tyron, still retaining his mask of impartial fairness, asked the usual question of each defendant, whether or not he had anything to say why sentence should not be passed upon him.

The spokesman of the group arose and addressed the court:

### "Justice" Rebuked

**"We go to San Quentin with clear consciences; this is more than you, judge, or the gentlemen of the prosecution can say.**

**"We did not receive justice; we did not expect to receive it in this courtroom.**

**"Some day you will be tried before a tribunal of working people, and on that day you will receive justice, something that was denied us."**

The judge turned red with shame, as the words rang clear and distinct through the courtroom. Then his face turned white with rage. What manner of men were these, who, in the shadow of the prison walls, refused to cringe and plead for

(Continued on page 26)

# The Building Boom

THE premier of Great Britain recommends an extensive building program as a solution of the unemployment problem.

This recommendation demonstrates the fact that the labor government of England is headed by "a wise guy."

He must have been studying conditions in the great U. S. A.

Here a big building boom has been going on for the past three years, with the result that "prosperity" has prevailed.

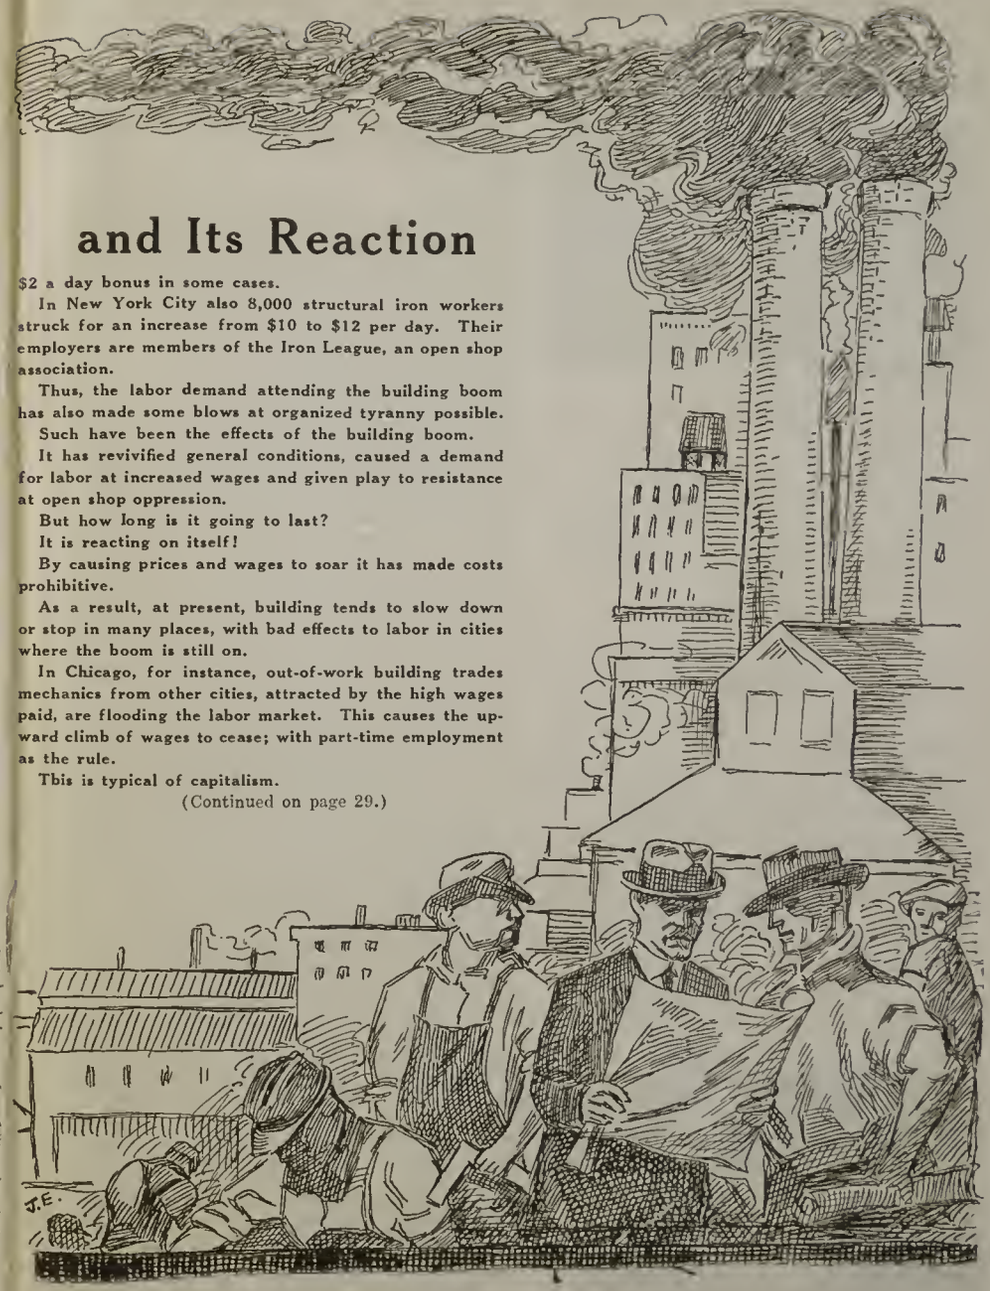
Thanks to tbe shortage of housing facilities caused by the world war, building has been the backbone of present-day industrial activities in this country.

Where wildernesses, waste lands and farms once existed, extensive suburbs and new cities now greet the beholder. Labor, tlie magician, has transformed them all!

In addition, there has been considerable building of a commercial and industrial character, consisting of garages, factories, warehouses, skyscrapers, etc., etc.

The result has been a great demand for labor. In the building trades particularly has there been a persistent cry for skilled and unskilled workers in all branches.

In New York City, for instance, bricklayers were enabled to demand as high as $12 a day; with an additional



# and Its Reaction

$2 a day bonus in some cases.

In New York City also 8,000 structural iron workers struck for an increase from $10 to $12 per day. Their employers are members of the Iron League, an open shop association.

Thus, the labor demand attending the building boom has also made some blows at organized tyranny possible.

Such have been the effects of the building boom.

It has revivified general conditions, caused a demand for labor at increased wages and given play to resistance at open shop oppression.

But how long is it going to last?

It is reacting on itself!

By causing prices and wages to soar it has made costs prohibitive.

As a result, at present, building tends to slow down or stop in many places, with bad effects to labor in cities where the boom is still on.

In Chicago, for instance, out-of-work building trades mechanics from other cities, attracted by the high wages paid, are flooding the labor market. This causes the upward climb of wages to cease; with part-time employment as the rule.

Tbis is typical of capitalism.

(Continued on page 29.)

## THE LAND OF SUNSHINE AND SERFDOM

(Continued from page 23.)

mercy? It was beyond the comprehension of this modern "bloody Jeffreys" with the myopic vision and prostituted mentality. His voice trembled with rage:

"That will be enough of that," he shouted. "Stand up to receive your sentence, all of you!"

**"On with the dance,"** said another of the defendants.

"What's that?" bellowed the dispenser of Lumber Trust justice.

**"I said, 'on with the dance',"** replied the logger in an even tone.

The judge glared at the offender mumbling under his breath, then in a hurried tone, without looking at these men who had laughed at his attempts to bulldoze them, he read the sentence that condemned nine innocent men to prison.

The men were surrounded by deputies and taken back to the county jail. As they were leaving the courtroom they raised their voices in song:

"Oh! Liberty, can Man resign thee. . . . "

So ended the farce in the Eureka courtroom. In the court records it is labelled, "The case of the People versus Henry Powell et al;" in reality it is the Lumber Trust and their vassals, versus The Industrial Workers of the World.

### Scenes In Sacramento

The scene shifts to the county jail in Sacramento. On the fourth floor of that temple of Democracy, fifteen men are entombed. They are all workers. If one chanced to meet these men on the street, he would know at once that they were migratory workers, men of the class who harvest the crops, who build the railroads, who mine the ore, dig the coal and perform the thousand and one tasks so necessary in the great state of California.

Like the men who have just been found guilty by a jury of lumber trust serfs, they are charged with violation of the state criminal syndicalism law. By no stretch of imagination could one consider these men dangerous criminals. They are just a group of happy, carefree men who are enjoying an enforced holiday from wage slavery. Why, then, are they crowded into a loathsome, ill-smelling hole, forced to sleep on the concrete floor, because of the overcrowded condition of the jail? The answer is easily found. **The masters of industry fear these men as they fear the men of Eureka, and the men in San Quentin and Folsom. They fear the organizing ability of these obscure toilers. They are afraid of the potential power of the workers. They know that if the workers heed the message of industrial solidarity that these men, and their fellow workers preach, that the rule of the overlords is ended.**

Sacramento is the Wall Street of Northern California. Here the financiers live, move and have their being. Here the masters come to barter, and the slaves come to sell their labor power. It is the congregating place, the mart of buyers and sellers. Here are hatched the schemes and swindles that have made "Superior California" a byword for corruption and graft. It is the capital of the state, the temple of the people; but, like the exploiters, merchants and money-changers in Jerusalem, they have made of it a den of thieves. Is it any wonder that they are frightened of these men who, despite the threat of imprisonment persist in telling the workers of the way out of bondage? They do not want the workers of Sacramento Valley to learn of the principles of the IWW. They do not want their serfs to become imbued with the spirit of industrial solidariy. That is the reason why James Elliott, William Rogers, Ray Atkinson, James Farrell, William Dawson, George Ackerman, William Lee, H. E. Hartline, John Morgan, Robert McAdams, L. A. Gibson, B. Kenny, Ralph Stevens, Mike Hurley and Thomas Ryan are in jail awaiting trial on the charge of criminal syndicalism, and why Joe Coya died from sleeping on the cold stones of their bastille.

It is impossible to describe on paper the spirit of the men in the Sacramento county jail, as it is impossible to describe the scene in the court room or the magnificent spirit of the men confined in the twin hells of California—San Quentin and Folsom. As I write a refrain comes continually to mind

> "Lend us no ear that pities!
> Offer no almoner's hand!
> Alms for the builders of cities!
> When will you understand?
> Down with your pride of birth
> And your golden gods of trade!
> A man is worth to his Mother, Earth,
> All that a man has made!"

**The industrial war continues in the Earthquake State. Long and harsh and cruel and stern has been the strife. The men in the front line trenches have never wavered. Their faith in the principles of the IWW and in the solidarity of Labor still remains firm and warm. Loyal hearts are these who go singing to prison. Can we afford to remain inactive amidst such stirring times, and while true men are being sacrificed on the altar of Mammon?**

**Let us give to the defense of these men the same enthusiasm that they have given to the cause of the working class.**

# From the Hell of Wage Slavery to Industrial Heaven

(Continued from page 22)

knew, workingmen, soldiers and policemen have an identity of interest and should by all logic be friends. Adroitly the masters prevent this amalgamation and induce the police and soldiers to defend capitalist property. Although there are cases on record where the police were in need of higher wages and resorted to a strike to obtain it. Here they are met by the state militia which demonstrates that the masters will go to any length and without mercy crush any or all who interfere with the prevalent system of exploitation. This is well illustrated by the policemen's strike in Boston. President Coolidge was at that time governor of Massachusetts, and has since evidenced some pride in the fact that he crushed the Boston policemen's strike. Were the police alert, to them this should be a lesson and teach them to hereafter cast their lot with other workers, and present a united front to the common enemy.

Let us summarize the whole matter in a few brief sentences thus: Cats, dogs, pigs, mules and horses have nice warm places to sleep. The animals are protected by the humane societies. For the animals this is heaven.

The children of the workers are also workers and are paid from two to eight cents an hour for their labor. Hardship is their lot and they receive no consideration at the hands of the industrial lords. This is hell for the children.

The department of agriculture expends millions of dollars each year to promote the breeding of better swine and the care of the offspring after birth. This is heaven for swine.

In the United States, every year, twenty thousand mothers die during childbirth to which the government officials pay no attention. However, on its negative side they are quite active because all advocates of birth control are summarily prosecuted. This is hell.

The capitalist class spends millions of dollars entertaining such tyrants as Lloyd George and Marshal Foch. While doing it they are in heaven.

In the year 1923 in the United States there were twelve thousand officially recorded cases of suicide, the major portion of which were attributed to poverty. Certainly this is hell.

The capitalists in the United States are so protected by the laws that they can steal from the workers or the government with equal facility. In 1838, one Samuel Swartout, while collector of the Port of New York appropriated $1,222,705 to his own uses and after trial was acquitted with the explanation that "he was a victim of odd circumstances." Such an arrangement is heaven for the rulers. It establishes precedents by which they are enabled to buy and bribe legislatures, congresses and churches.

Not infrequently the worker is compelled by

**An Ill Wind—By Steinlein.**

circumstances to steal a loaf of bread to feed his starving children. After apprehension he is invariably remanded to jail, which is hell.

On the other hand the capitalist spends his summers in the north and the winters in Florida, which is heaven in either case.

The only travel the wage earner has is to and from his work. This is hell all the time.

In the United States the industrial lords are all born equal. Which is heavenly.

But let us look at the colored race in their struggle for freedom. Thousands of colored men have been lynched, but the wrath of race hatred has not been appeased for the persecution of negroes goes forward apace. Negroes, though born in the United States, are not wanted in restaurants or other public places. Also the landlords object to them as tenants and as a consequence they are compelled to live in dark holes and insanitary basements. All of which is hell with a vengeance.

Though they lose thousands of dollars at the gaming table, the rich have no cause for worry. They live in a heaven of money and are well supplied.

When the wage slave loses his job, with the rent due, it is hell.

Early in the year of 1917, during the World War, the American imperialist class decided to join the Allies in order to protect European investments made by American financiers. Thus was the millionaire's heaven apotheisized.

Some time later a draft act was passed in which preachers, priests, bishops and other professional men were exempted from military duty. No such provision was made for any part of the working classes. To the surprise of everyone they were compelled to cross the ocean, willy nilly, and fight the battles of the exploiters. The class character of the war was evident to Woodrow Wilson, who

as President in 1916 said: "The European war is a capitalists' war." When President Wilson made this remark the United States was a heaven of free speech.

Two years later, on June 16, 1918, Eugene V. Debs, speaking in Canton, Ohio, declared: "The workers have nothing to gain from a capitalist war." For this and similar utterances he was sentenced to serve ten years in a federal prison. This came to us as a shock, a shock from hell.

During the war the government was robbed of billions of dollars, but not a single person engaged in this gigantic steal has ever been prosecuted. Possibly this is due to the fact that the United States is a heaven for grafters.

On the other hand, the money trust began a barbarous persecution directed toward several labor organizations, particularly the IWW, many of whose valiant members were flogged and sent to jail, the crime alleged being opposition to a capitalist war and the hardihood of challenging the master's right to rob the slaves. That is hell.

For the ruling class, this land is a heaven. It is a place of Equality, Justice and Freedom.

For the workers the case is somewhat different. In the various state prisons hundreds of workingmen served sentences for opposing the war and many others were confined in the federal prisons for more than five years. The federal prisoners have finally been released, but only after a vast amount of effort and agitation. Such, in brief, is the story of the political prisoners in this land of the free.

While the soldiers were preparing for their departure to the various battlefronts, they were liberally supplied with music, chocolates and cigarettes. Incidentally each soldier was promised a farm for a home, when the war was over. For him such promises transported him to heaven.

In due course the war came to an end and the boys came home, some mutilated, others blind and shell-shocked and being in need of monetary assistance they requested a bonus. Which they received —like hell.

Fellow workers, for centuries you have been looking to the sky, while the masters of industry were robbing you. For years you have been praying, failing to get an answer from the "Divine Master." The time has now arrived when you must lay aside the bible, and devote your study hours to economics, science and history. You should realize that this is a beautiful world, rich in every way, with an abundance of food for all; there is plenty of land, stored with coal and minerals. Unfortunately, the master class has them all in their possession. You have the power to change all this. You have but to reach out and take what rightfully belongs to you. But it cannot be accomplished by prayer. You must organize on the industrial field, ever conscious of the fact that the politicians, preachers and bankers will not help you. The only aid you will receive will be your own effort. It is clear that we are now living under an industrial autocracy, and to change this we need a thorough going organization of the working class and by this means take possession of the entire world.

Fellow workers, observe the dog. When hungry and seeing what he wants, he obtains it without asking questions. He cannot talk, nor can he reason, but his instinct, poor as it is, impels him to satisfy his natural wants. What advantage have you? You have reason, and if you use it correctly you can supply your every need.

Workers, you must unite and through unionism work for your emancipation. You must stand together, fight shoulder to shoulder and on all occasions carry the gospel of industrial unionism into every shop, mine and mill.

Your work is before you, forward with the class struggle and through solidarity you can abolish the capitalist system. With the downfall of capitalism, the ground is clear for the creation of a heaven on earth and the inauguration of working class emancipation and the Commonwealth of Toil.

## HUGO STINNES

(Continued from page 10)

But let's end this review and comparison. Capitalism is capitalism, wherever found. There is no essential difference in the various brands of capitalism, wherever found. It's a philosophy of me and mine as against us and ours, the former very few and the latter very many.

However, this philosophy, in the long run, depends on us and ours. It depends on our acceptance and support of it. As long as we believe that life is only possible by permitting the Stinnes of all nationalities to exploit us, for their own exclusive profit, so long will this philosophy prevail. As long as we believe private, capitalist property is the end-all and be-all of mankind, so long will nations be butchered in order to swell it out of all proportion to the humanity which it dwarfs into insignificance.

Let's refuse to support this philosophy. Let's refuse to be hypnotized by it. Let's understand that there are other and better ways of living; for instance, co-operative and collective industry for, of, and by all instead of for a few. When we cast out the capitalist class as useless, parasitic, and destructive of human development, life will be more than one damn money bag after another; with one damn war after another, simply to distend them until they burst! It's coming; evolution is hastening it and points the way.

Come, help it along! Boom our own labor press! Organize into interlocking unions of all the industries, with compact executive administration. Organize as we work for our own improvement and emancipation.

**Build the structure of the new society within the shell of the old, on the job, in the shop; throughout the nations and the world!**

## New Recruits in Age-Long Labor Struggle

# Busting a Boost

(Continued from page 16.)

abolish it, if possible. And so the class struggle increases in Oregon, "the land of milk and honey," a la the chamber of commerce advertisements.

The sawmill workers in Oregon are worse off than the loggers. Their wages are not as high. Their hours are 10 hours in some mills; eight in majority. The work is tense. They get $3.60 and up a day; while the choker setter gets from $5.25 up in the woods. The sawmill workers are largely unorganized.

At Astoria, Oregon, 70 or 80 miles from Portland, big fisheries and canneries abound. They are notorious factory hells, with their contracts, low wages and speed-up systems generally.

Bend, Oregon, is a good place to stay away from, according to D. H. Parker of Machinists' Lodge 79, who has written that there are more workers than jobs in the central Oregon city.

Things look bad for the lumber workers in Oregon. Production has been cut down about 70 per cent. Contract work for falling and bucking is the rule.

The Lumber Association went on record in their March meeting for a 25 per cent cut in wages.

The above will give some idea of what it is that the chamber of commerce advertisements have omitted.

See Oregon—but pack supplies **and organize!**

# The Building Boom

(Continued from page 25.)

Prostration follows prosperity and prosperity, prostration, with wealth concentrating in comparatively fewer hands, and the vast majority becoming, in the meanwhile, wage earners otherwise known as wage slaves.

The latter build that others may own! They erect the towering skyscraper or country estate, and reside in the lowly cottage or crowded tenement. The tall chimneys of factories climb skyward under their skill, while their rewards stay down near the ground. And, in the end, their labors are so prolific and generous, as to cause unemployment and destruction among them.

From all of which we must conclude that while the labor head of the British Empire is "a wise guy," in boosting a building boom, his wisdom is only of a temporary character.

In other words, as U. S. experience shows, after that boom is over, English society, in fact, all society, is where it begins, i. e., with unemployment still a problem pressing for solution!

# The Efficiency of Capitalism

By J. A. Mac DONALD

**You show the apologist for the capitalist system the barbarity of that system; that it is using the achievements of science which could be directed to ennoble, conserve, cure and develop mankind for the ruthless murder of man by man on a world scale. Buttressed with the statistics of infant mortality, you show him what capitalism is doing to the child slaves, often starved before birth; you outline the processes by which the ruling system says "suffer little children to come unto me," and then taking them in its avaricious arms red with blood, cradles them in coffins. You show him the waste and ruthlessness of a system which destroys those who might be tbe geniuses and enlighteners of the future, before they are a year old. You show him what the present system is doing to women, and how false are the pretensions of chivalry from the treatment of women in industry; that the social convention of taking off one's hat to women does not justify either a highwayman or a capitalist in. the robbery of women; that courtesy in the method does not excuse a system which says to the sisters of the workers, "you are no longer wanted in the industries which produce commodities, there are too many of you, but one of our other industries, prostitution, has a vacancy for you." You show him the inherent outrage and loot of the workers which is the fundamental of our present civilization, the denial of decency and democracy where these are most essential—on the job.**

Finally, driven from one faulty argument to the next, the apologist for the capitalist system reaches the argument of the economic bats who are the wise old owls in the night of the present system, and you are told:

> "Capitalism is far from ideal, but this is not an ideal world. You must be a realist. The means by which efficiency can be attained are not ideal, they are sometimes brutal, but capitalism gets efficiency."

And when the apologist for capitalism gets this far, he leans back with a self-satisfied smirk. He considers that here is an argument that is unanswerable. Many short-sighted workers, bearing on their bodies the marks of the efficiency of capitalism agree with him.

### The Efficiency of Unemployment

The efficiency of capitalism! At the present time there are approximately 10,000,000 workers unemployed on the North American continent. According to the latest governmental reports each worker produces on an average about twenty dollars' worth of wealth each working day. Since this was arrived at, owing to the acceleration of the development of the machine this amount has been increased, and it is well within the truth that unemployment represents a productive loss of one billion dollars every four days. This amount, which is lost through the efficiency of capitalism, would build 330,000 homes costing five thousand dollars each week.

In every city one can see battalions of this immense army of labor denied even the right to work —a right which labor never had. In every division point and at water tanks one can see their camp fires illumine the night. In these jungles of the working class, due to the jungles of capitalism, one finds shoemakers with their toes sticking out through the remnants telling their owners of the efficiency of capitalism,—an efficiency which puts shoemakers into the jungles or the bread lines, while millions of workers are without shoes, and the machines that could be making shoes are idle, rusting.

Listening for the whistle of the freight which is to bring them from the jungles at the division points to the jungles in the cities, are tailors without decent clothing. The machines of steel and iron and the machines of flesh and blood for the making of clothing are idle and unused with millions ill clad.

**The World's Reconstructor**

Those who could be producing food and to spare that all the world might eat, are boiling "seconds" from coffee grounds by camp fires in a world which is crying for bread.

And with these are the lumberjacks who should be producing logs; the carpenters who should be making the lumber into homes. But they are idle in a world where millions are homeless.

But why further enumerate the ever increasing loss through the social waste of unemployment—the incalculable waste in wealth, and the waste in the greatest of all social values, in the degeneration of that which creates all values, the workers. They die

under the wheels of the trains which they have made. They are run over while passing through the tunnels they have built. They starve in the deserts they have reclaimed and made fertile. They are strangers and pariahs in the cities they have built. In the waste places of the earth the coyotes sing their burial services, and with it the requiem of a system which destroys and degenerates the source of all that creates its wealth. And this is the efficiency of unemployment, just one feature of the efficiency of the capitalist system.

### The Efficiency of Wasted Labor

The efficiency of capitalism! That is well displayed in the millions of men who are working, yet producing nothing of social value, or worse, whose activity is anti-social. In the modern cities under capitalism there is an amount of useless and wasted labor that would be sufficient, if properly directed, to destroy disease, enlighten mankind, and forever clean the earth of the scourge of poverty. There is an enormous rush and bustle, but the amount of labor that is sufficient to level off the Rocky Mountains in a year is expended uselessly. We find thousands of business establishments selling the same product. A woman goes four or five miles from the east end of the city to the west end to buy some article and has it delivered. At the same time another woman from the west end of the city goes to the east end and has the same article delivered. The two delivery wagons meet each other at great speed on their foolish waste of time and effort, which is known as business efficiency. Thousands of useless clerks do their work for hundreds of useless business institutions, where under a sane system two or three central stores would be sufficient. Millions of dollars are wasted each week in useless advertising, such as "buy your Pears soap at Robem's," met by "buy your Pears soap at Skinem's" and the rest of the insanity which adds to the selling price of the commodity without adding in the least to the social value of the product. Hundreds of salesmen, middlemen, wholesalers all part of an inefficient commercial system are part of the "efficiency of capitalism."

We find competing factories, each with its separate staff of salesmen, with its million dollar advertising fund, engaged in taking a few grains of some food cereal, adding immense quantities of air—the greater the amount of air the more nourishing the product. A product denatured and puffed with air and touted with hot air is sold at a fancy price in fancy wrappers, and all that the people get for the vast outlay of labor involved in this competition is a difference of name and a difference of color in the paper in which it is sold. I have not the space to go into these wastes fully, but the waste in useless labor is equal at least to the waste in unemployment.

### Waste in Destructive Mental Opium

But this useless labor in feeding you air is not so serious as the useless labor in feeding air loaded with opiates for the mind. The printing of newspapers and other publications represents in the involved distribution of the present system an outlay of labor that is enormous. The printing press could be an immense social force for human enlightment, to guide and light man along the rugged road of human progress. Instead, the enormous force represented by the printing press and by the almost human machinery is largely lost or worse.

What is the average magazine when it is not touting the mediocrities that capitalism needs in the political life of nations, the blind that lead the blind into the pit of reaction and ruin? We learn that all lumberjacks are heroes unless they belong to a union—then they are villains. And all the heroes marry the boss' daughter so that logging camps are filled with camp superintendents living happily ever after.

There is danger that cowboys will get forty a month after furnishing their own horse and saddle. Into the breach comes a magazine editor. Montgomery Ward cowboys, clad in the gay regalia of the western plains according to the specification in chapter 10 of the story of the west written by the maiden lady of Back Bay, Boston, leave Chicago with their spurs on, after visiting the Stock Yards to get the proper atmosphere. The cowboys are saved from forty a month and for industrial slavery and all is well with the world under the best of all possible social systems.

### Romance and No Work

There are not enough miners to cut the wages to the standards of the boss. A thriller, all romance and no work is written, and men looking for the romance come west to grow up with the country. And they grow up like the country—all full of humps and hollows. The humps are on their backs not their stomachs, and the hollows in their heads and pockets. The efficiency of labor wasted or worse than wasted, the labor of the workers used to stultify the thought processes of the people are part of the efficiency of capitalism.

And the banalities of the moving picture. But most of them, coming from California, where the cattle caught the hoof and mouth disease from the politicians of that state, are boycotted.

The efficiency of Capitalism. Capitalism spends billions every year on the North American con tinent to make the people moral, virtuous, to make them law respecting without the logical effort to make the laws respectable in themselves and in their enforcement. Virtue and morality are noble, admirable, but as the apologist for capitalism puts it, "This is not an ideal world. You must be a realist." And as realists we must realize that while capitalism may strive to preach that honesty is the best policy, capitalism while legal cannot afford to be honest; that it is itself based fundamentally on the robbery of the workers. As realists we must recognize that the survival of the slickest is the biology of capitalism. When it speaks of honesty it is not saying that clothing is made of shoddy but that honesty is paying the price of wool for the shoddy. Capitalism is based on the mythical thing,

"honor among thieves." Its morality is not written on an honest typewriter; it is written on a cash register. While it prates of honesty the realistic truth is that capitalism places a premium on dishonesty and that the man who wants an honest system must first abolish the present one. And as a result we find that while capitalism spends billions on institutions to make people honest, virtuous, law abiding, in every way except by the precept of example, because these institutions do not work, it has to spend in the United States a half billion dollars according to the statistics of 1923, for punishing those who break its laws. The emphasis on the need for honesty, and the increase in crime due to the dishonesty of the present system are phenomena under capitalism. Man is not naturally vile, rotten, corrupt. The average man is a decent individual, but unfortunately he is living in a system where decency is not marketable, and where the ethics of the market place emphasize and call forth all that is most vile and corrupt in the nature of man. Capitalism's own statistics show the inefficiency of its system for making men moral and its efficiency in creating criminals.

### Capitalist Efficiency in Operation in Calgary

Recently I was in Calgary, Alberta, and found another of the indications of the efficiency of capitalism which is so evident to the observer on every hand. Thousands of workers lured by the siren songs of prosperity had bought their own homes. They had believed in that "prosperity" which is one of the mirages of the present system. Then in the dark years of 1914 to 1919 they went to France under the lure of another siren song: "A world fit for heroes to live in." Then some of them came back to the darker years of undiluted Wilsonian democracy. And now they are living in the era of capitalistic efficiency in a world where war is ended. But they are not living in their own homes. More than half of the homes in Calgary are owned by the city, taken over for the taxes.

But this was in Canada, unblessed with the full effulgency of democracy such as exists on the other side of the line where they have the Ku Klux Klan. But the last day I was in Calgary I found on picking up one of the papers that a similar efficiency exists on the other side of the line where they have complete democracy mixed with crude oil, all the hallucinations of grandeur and the psychosis that they are still living under the American constitution. Here it was the story of the city of Salem, where they did not have enough money to feed the prisoners in the city jail during the months of May and June, and were forced to release them. Horrible! Conceive of men convicted of vagrancy, the crime of being without work or money, being turned loose on an unprotected society! But there was even worse in the story. I shed a silent tear for city officials who could not be paid, and who had to go to work. I was sympathetic, for I know better than they the horror of work under this efficient system. Even city officials themselves must be beginning to doubt the efficacy of a system that can no longer support city officials.

The efficiency of capitalism! The efficiency of disease and death. Some years ago, Doctor Woods Hutchinson, one of the great authorities of the world on medical matters, made the statement that within the period of ten years the medical profession could eradicate the white plague, tuberculosis, if they were permitted to get real sanitation, to destroy the breeding places of the germs which each year are responsible for one out of every seven deaths on the North American continent. These germs breed in the dark atmosphere of poverty where the germicidal sunlight cannot enter, is caused by ill feeding and inhuman conditions. But capitalism for its existence demands the same conditions as the tuberculosis germ, and consequently germs fill the place where is to be found the only democracy that can exist under the present system —the democracy of death in the graveyards. The efficiency of capitalism still permits these unnecessary deaths. It has been so busy in its dollar chasing that it has not made the, for it, desirable change of educating these microscopic germs so they can tell a capitalist from a worker.

### The Efficiency of Insanity

But there is a disease more dread than the slow lingering decline graveward of tuberculosis; the living death of insanity. An expert on this subject within the last month made the statement that if the present percentage of increase in this disease were continued the entire world would be insane in another forty years. The whole world will be as insane as the capitalist system in forty years unless the workers take a hand in the management of industry and the reclamation of humanity from the scourge of the present system. Either the workers will organize or within forty years the entire world will be crazy, and being crazy, fitted to admire the efficiency of capitalism, a social system as demented as ever formed the hallucination of a mad house.

Under capitalism there can be but one sanity, the sanity of revolt. But one efficiency, and that the efficiency of seeking to build a new society that will be efficiency, a noble mansion in which the workers of the world can express their spirit of workmanship, and find scope for their creative instincts. And when this mansion of the future has been erected we can complete cleaning out the cesspool of the present system and put on its present location a septic tank for the purification of the filth that will in part be the legacy of the present to the future, until the entire world has been cleaned from the efficiency of capitalism.

# WOBBLES

## IT'S COMING

Mistress (as new cook arrives accompanied)—We don't want a cook with a family.

Cook—She ain't me daughter; she's me sec'etary.

## SURE! WHY?

College Youth—I'm taking political economy this year, dad.

Country Father—That's a useless course! Why learn to econermize in politics? It ain't bein' done.

## ALL THEY EVER GET!

The porter stood before the traveling capitalist in an expectant attitude.

"Well, Georgé," said the capitalist, chafingly, "can I give you anything?"

"Whatever your generosity permits, sir," answered the porter.

"Well, boys," replied the capitalist, turning to his companions and winking, "what do you say to giving the porter three cheers?"

## SMART ALECK GETS HIS

After a painless process of rejection there were five applicants for the post of errand boy left for the head of the firm himself to interview.

It was one of his flippant mornings, and he sought to amuse himself by asking the eager boys puzzling and quite irrelevant questions to test their general knowledge.

"How far away from the earth is the North Star?" was the question he fired at the third shiny-faced youngster.

"I'm sorry I cannot give you the exact figure off hand, sir," was the reply, "but on rough estimate I should say that it is far enough away not to interfere with me running errands."

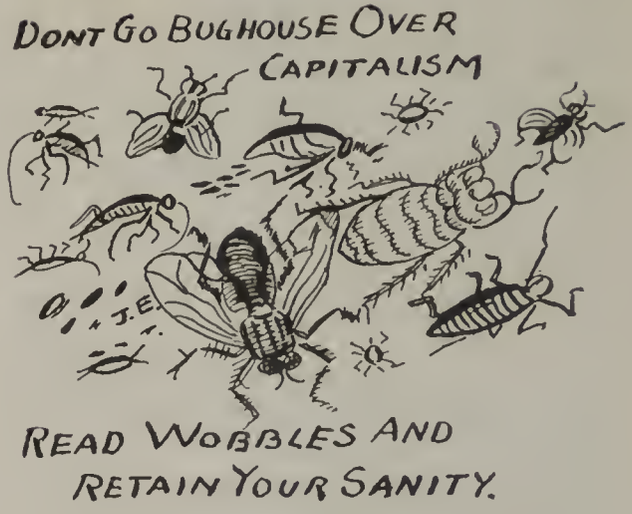
He got the job.

## HAD TOO MANY ALREADY

Lee Tulin tells the following story of a member of I. U. 110 who went to work in a mine for the first time. It might be well to explain that the expression used here, "take five" means take a short rest.

This husky young hay hand went to work in the "Uncle Sam" mine at Bisbee, Arizona. He was given a job as car-man, and his duties consisted of loading ore from the chute into a car and pushing the car to the station where it could be hoisted to the surface.

No one had informed him as to the quantity of work required in a shift, and, as there happened to be two cars at the chute, he loaded both and started to push them to the station. The distance was about a quarter of a mile and the track rough and uneven. He was sweating and grunting and making very little headway when the shift boss appeared. "Why don't you take five?" asked the boss. "Take five, Hell! shouted the exasperated hayhand, "I'm doing damn well to take two."



## OUR OPEN FORUM SPUTIFIERS

A Southern Negro minister, says the Boston Transcript, who was given to the use of big words and complicated discourse, was waited upon by the church committee and told that his style of preaching was not all that could be desired.

"Don't I argify and sputify?" inquired the minister.

"Yes, yo' done argify and sputify," responded a member of the committee, "but yo' don't show wherein."

Which calls to mind some of our open forum orators. They "argify" and "sputify," without showing "wherein."

## AMBIDEXTROUS

The Irish applicant for a slave's job, was signing his yellow dog contract, and in the midst of same moved his pen from his right hand into his left. The possible future boss said, "Well, Pat, I notice that you are able to use either hand!"

"Yis," answered Mike, "me father, God rist his soul, taught me that. He says to me, says he, 'Terence, learn to cut your fingernails with your left hand, because you never know when you'll lose your right'."

## DOUBLING UP

"Mustache" MacDonald is responsible for this one: I was working at Rexford, Montana, loading ties on a box car. My partner was a husky Swede who insisted on carrying a tie all by himself. I sat down and let him do the work. The foreman appeared and shouted, "Hey there! double up on those ties!". The Swede went back and took two ties and carried them into the car.

# Dan McGann

By DUBLIN DAN

Said Dan McGann to a foreign man,
Who sat with him on a bench:
"Let me tell you this," and for emphasis,
He flourished a Stillson wrench,
"Don't talk to me of the bourgeoisie,
Don't open your lips to speak.
Of the socialist or the anarchist,
Don't mention the bolshevik.

"I've heard enough of your foreign stuff,
I'm as sick as a man can be
Of the speech of hate, and I'm telling you straight,
That this is the land for me;
If you want to brag, take a look at our flag,
And boast of its field of blue,
Boast of the dead whose blood was shed
For the peace of the likes of you.

"I'll have no more," and he waved once more,
His wrench, in a forceful way,
"Of the cunning creed of the Russian breed,
But I stand for the USA.
I'm sick of your fads and your wild-eyed lads,
Don't flourish your flag so red—
Where I can see, or at night there'll be,
Tall candles around your head.

So tip your hat to a flag like that,
Thank God for its stripes and stars,
Thank God you are here, where the roads are clear,
Away from the kings and czars
And don't you speak of the bolshevik,
I'm sick of the stuff, I am—
One God, one flag, that's the creed I brag,
I'm boosting for Uncle Sam."

REPLY

The "foreign" man looked at Dan McGann,
And in perfect English, said:
"I cannot see, for the life of me,
What you have got in your head.
You boast and brag 'bout the grand old flag
And the foes you put to rout,
When you haven't a pot in which to spit,
Or a window to throw it out.
You howl and kick about the bolshevik,
The anarchist and wob—
You defend this rotten system when
You don't even own your job.

"Immigration laws would be 'jake' with you
If they kept out the Russian Finn,
The German Jew, and the Frenchman too,
And just let the Irish in;
You're full of that religious bunk
And the priest on your life has a lease—
You're not even blest, like some of the rest,
With the sense that God gave geese;
You're a rank disgrace to the human race,
You're one of those grand mistakes,
Who came from the land, from which I understand,
St. Patrick drove the snakes.

"The boss told you, and you think it's so,
And I guess it is at that,
That your head is a place on top of your face,
Which is meant to hold your hat.
If a thought ever entered your ivory dome—
Which I am inclined to doubt—
You would not rest till you'd done your best
To drive the 'foreigner' out.
You kick about the strangers here,
But you give no reason why—
And without those so-called 'foreigners,'
How would you get by?

"You're working for an Englishman,
You room with a French Canuck,
You board in a Swedish restaurant
Where a Dutchman cooks your chuck;
You buy your clothes from a German Jew,
Your shoes from a Russian Pole,
And you place your hope in a Dago pope,
To save your Irish soul.
You're an 18 carat scissor-bill,
You're a regular brainless gem—
But the time's at hand when you'll have to stand
For the things you now condemn.

"So throw away your Stillson wrench,
You booster for Uncle Sam,
For the language you use, when you're full of booze,
Doesn't scare me worth a damn—
Go fight and be damned, for your glorious flag,
And the boss who is robbing you;
One Union Grand, that's where I stand;
I'm boosting the OBU."

## FROM SWEDEN

In behalf of a small but active bunch of fellow workers over here, I have been asked to urge you to insert a small article in the "Pioneer" telling the Scandinavian workers over in the States to devote some of their energy and time to the getting out of a Scandinavian IWW paper. First, because such a paper will be of immense value to the Scandinavian immigrant worker in the States in learning the general conditions as they are and how to improve them.

Secondly, it will be of great value over here to the future emigrant in getting some facts, as practically all news from the States at present is anti-socially colored.

**C. G. Anderson,**

# The Upper Class

**(Fragment from a play "Vulgarity," By Benzion Liber)**

**In Eagle's house. Time: 1913. Place: New York.**
**Drawing room. Stylish, but tasteless furniture.**
**Guests, among whom two are women, all belonging to the wealthy class.**

**When the curtain is raised, Fanny is in conversation with the guests, who have grouped themselves around her. Eagle is discussing with Wealthon in another part of the room; they smoke and talk inaudibly; after a while they get up, walk a little to and fro in the room, go out talking and later come back.**

FANNY—You must not forget that life in Russia is not at all like here.

FIRST GUEST—Of course, of course. You have an aristocracy which dictates the forms and conventions to the people as a whole and so the rabble . . . .

FANNY—You are greatly mistaken about that. They are freer from conventionalism in Russia than you are here. Even the aristocracy is less conventional. Besides, the Russian aristocracy which you Americans seem to adore so much is strictly separated from the people. We have two different distinct nations, one of which is the conquered and submerged nation.

SECOND GUEST—Would it not be more correct to say: one is the uneducated class and the other. . . .

RASCARD—The miseducated class. (All laugh).

FANNY—You are right there.

RASCARD—And both are always drunk.

FANNY—Never mind that, Mr. Rascard, there is a great difference.

RASCARD—Of course, the difference between champagne and vodka.

FANNY—Well, we do have a large uneducated class, but if the others are educated, it is at the expense of the first ones.

FIRST GUEST—Which is as it should be. Who, pray, should keep up those who teach the people and take care of them, if not those who are being taught and taken care of?

FANNY—But the teachers and the caretakers are very reluctant to teach and are careful to neglect the welfare of their charge.

THIRD GUEST—What a difference between our American democracy where everybody has an opportunity to . . . .

RASCARD—To steal or to starve . . . .

THIRD GUEST—We don't mind Mr. Rascard. He is an old joker and he is proud of his cynicism. . . . You cannot deny that we all have an opportunity . . . .

RASCARD—Certainly. Everybody may become President of the United States. A hundred million presidents . . . .

THIRD GUEST—(Good humoredly) Oh, please, let me finish. I meant to say that our democracy is superior to . . . .

FIRST GUEST—Not at all, not at all! WE are really the aristocracy here.

FIRST GUEST—But . . . .

FANNY—(Laughs aloud) You have no idea with what contempt a real Russian nobleman would look down on an American capitalist!

FANNY—I know, they respect your money, your ability to make money, but they would not exchange places with you. Many of them have too fine an artistic temperament for that.

FOURTH GUEST—All of our rich men are art lovers too.

RASCARD—Some art lovers!

FIRST GUEST—They all buy pictures, at least.

RASCARD—And sometimes they look at them too.

FANNY—But some of our noble families have also produced artists and writers.

FIRST GUEST—I know that. I have read in the papers that you have quite a rich literature.

SEVENTH GUEST—(Coming in from an adjoining room) The Great Climax is a wonder.

FANNY—What is it? A new book?

FIFTH GUEST—Book? Who reads books? It is a race horse! He made me lose some money.

FANNY—So you people prefer racing to reading . . . .

FOURTH GUEST—Oh, please, make no mistake, everybody reads in this country. Something or other.

RASCARD—But what?

FOURTH GUEST—We have but few illiterates.

FANNY—I know, I know.

RASCARD—But we read mainly newspapers. And considering what they contain we might as well forget our alphabet. It would be wonderful if the writers could also forget how to write.

FOURTH GUEST—Oh, Mr. Rascard! . . . . Of course, real high-brow literary works are written for professional consumption only, for the inner circle . . . .

FOURTH GUEST—I mean the writers themselves, their friends and those who aspire to become writers.

FANNY—What are you doing in your spare time?

ALL GUESTS—(Together—except Rascard) Spare time? Spare time? What's that?

FANNY—When you don't . . . . When your occupation, whatever it is, is over?

RASCARD—Our occupation is to occupy others.

FIRST GUEST—I am always working.

THIRD GUEST—I am always busy.

FIFTH GUEST—I have always several irons in the fire.

SECOND GUEST—My work is never done. I never cease to . . . .

FIFTH GUEST—It is difficult to explain. Our work is subtle, mostly invisible. For instance, take myself. Not a quiet moment for me! When I read the newspaper over my coffee, I'll note something of importance to my business. When I see my managers and hear their reports—that is, of course, hard work. When I am at the club, it is for business purposes. Chatting with friends is never idle talk. Even telling a joke or listening to one has its value . . . .

RASCARD—In dollars and cents.

SEVENTH GUEST—Surely. It is used out somehow . . . .

FANNY—(To Seventh Guest) How about racing?

SEVENTH GUEST—Oh! that is the most splendid occasion to finish hanging transactions. And then, all sports are nothing but business.

RASCARD—But business is not a sport.

SEVENTH GUEST—Why, racing gives you a chance to meet on the same ground those who otherwise would be lost customers . . . .

RASCARD—Merely transporting the race from one field to another.

FANNY—And when you, ladies, are having your little innocent games in the afternoon . . . .

RASCARD—Not so innocent!

FOURTH GUEST—Why, through our mutual female entertainments we continue what our husbands have begun.

FANNY—But there must be some leisure. When you go to see a show?

RASCARD—It is to show ourselves. An art show is the art to show off.

SECOND GUEST—It is to meet those whom we must meet. My husband . . . .

FANNY—Yet, nobody forces you to buy a picture!

FIRST GUEST—Who speaks about forcing? However, some things . . must be done whether we like them or not. Spending money for art objects is not a vain gesture. Our standing in the business world demands it.

RASCARD—Besides, the papers write about it . . .

FANNY—An expensive advertisement!

RASCARD—Now naive, Mrs. Eagle! You don't know what advertisements cost nowadays.

FANNY—But Eagle told me that you're all good-hearted and charitable.

ALL GUESTS—(Together) Of course, we are!

RASCARD—Our right hand never knows what our left hand is taking.

FANNY—And you are not going to tell me that charity is business!

ALL GUESTS—(Laugh) Ha, ha, ha!

RASCARD—Charity is a business, but business knows no charity.

FOURTH GUEST—I wouldn't put it that way.

THIRD GUEST—Charity and business are inseparable. One is on one side of the medal . . . .

RASCARD—Of the coin, you mean.

FANNY—I am speaking of charity as such. I know that charity cannot exist without poverty and that poverty cannot exist without your various businesses. But . . . .

ALL GUESTS—(Except Rascard) Oh, Mrs. Eagle!

RASCARD—We are awfully charitable! We go so far as to underpay our men and women so that there are people who need our charity.

ALL GUESTS—(Except Rascard) Oh, Mr. Rascard!

RASCARD—You see, charity is a divine virtue and we do not want it to disappear.

SEVENTH GUEST—This is a joke, but . . . .

SIXTH GUEST—Not at all . . . .

FIFTH GUEST—You misrepresent . . . .

FOURTH GUEST—How rough . . . .

THIRD GUEST—I protest . . . .

FIRST GUEST—Please, oh, please . . . .

(All nearly at the same time).

SECOND GUEST—Allow me to say that it is too coarsely explained.

THIRD GUEST—Especially for unaccustomed ears.

FANNY—Oh, this is not strange to me. I have been a student of the social problem since long and I have criticized your class relentlessly. . . .

RASCARD—Tut! tut!

SEVENTH GUEST—That's all right. That's why you are so charming. Such intellectuals as you. . . . .

FIFTH GUEST—Those are the most useful people, provided . . . .

FANNY—No, gentlemen, I have not abandoned my activity among the working people.

FIRST GUEST—Quite right. You need not do that. We are all trying to improve the life of the poor.

FOURTH GUEST—It is our religious duty.

RASCARD—It is a harmless amusement that keeps us busy.

FANNY—By the way, I think I have found a phase of life where you are yourself and forget business. When you go to church and concentrate your thoughts upon . . . .

THIRD GUEST—Correct. But even there we do not escape our fate entirely. Church-going is mostly a necessary duty. And so is the congregational and social work connected with the church or synagogue.

FANNY—How about love? (Guests all glance at each other).

FIFTH GUEST—Alas! It is often mixed with business and inheritance and other interests! . . . .

RASCARD—None can tell the difference and none can tell which pollutes which.

FANNY—(Laughing) But here I caught you! You have certainly relaxed tonight, in our house. With the exception of Mr. Wealthon, who had to see Eagle on some important question, you are all my guests.

SEVENTH GUEST—This is not entirely so for me. I am waiting for the outcome of the conference between your husband and Wealthon.

FIRST GUEST—The same with me—although I have enjoyed your company so much. And as far as I know all these ladies and gentlemen, except Mr. Rascard . . . .

OTHER GUESTS—(Except Rascard) (together) Exactly.

(Silence for a little while. Fanny is very serious and absorbed in her thoughts).

RASCARD—Yes, our market is everywhere!

(They all turn to Eagle and Wealthon, who had come back into the room a little before. They both came closer to the group of guests. Fanny, waking up from her thoughts, presses a button and a servant brings in a tray with cups and cakes. The guests seat themselves, only Eagle standing).

EAGLE—Yes, we are through. We have completed a new plan which has been worked out this morning at my office; a plan to break their stubbornness and tomorrow you will get a confidential communication which will give you all the details. It will also show you how to deal with the little fellows.

SEVENTH GUEST—You mean the . . . .

EAGLE—I mean the small manufacturers who claim they cannot stand it any longer.

FIFTH GUEST—How about the . . . . others?

WEALTHON—One of them, the wildest of them, the most terrible disturber of those simple minds will be arrested soon. Our detective agency has prepared enough evidence . . . .

FANNY—(Listening with intense interest) Who is it, Eagle?

EAGLE—(Trying to evade the answer) Oh, it is unimportant.

WEAITHON—A fellow whom they call. . . . (Eagle pulls him by his sleeve) . . . what do they call him? A fanatic! They'll make short shrift of him.

(Fanny goes out unnoticed, except by Eagle).

EAGLE—And now, ladies and gentlemen, permit me to say a few words of criticism. While talking with Mr. Wealthon, I listened to your conversation. That is, I heard something from time to time and I know its trend. Let me tell you that you are not doing justice to yourselves. You describe yourselves as a class of . . . of . . .

RASCARD—Monsters.

EAGLE—And this little lady, (showing to the door through which Fanny had gone out), may get an erroneous view of your lives.

RASCARD—Oh, we are pure angels!

EAGLE—But you can never tell how it will be interpreted and how words travel. Mrs. Eagle here has not interrupted all her relations with . . . with . . .

THIRD GUEST—(With a wink of one eye) That's all right. That is in our favor.

EAGLE—But she is naive.

RASCARD—Not so naive if she became your wife.

FIRST GUEST—You are right, Mr. Eagle. We have to be careful. A few days ago one of my . . . intelligence men who is a member of the union and is bringing me daily reports of its meetings, showed me a speech of one of their leaders. It was a perfect description of my life and that of my friends. I wonder how they know such things.

EAGLE—Oh, don't think that those people are stupid!

THIRD GUEST—Why, only yesterday I overheard some of them talk to each other right under my window.

RASCARD—The vermin!

SECOND and FOURTH GUESTS—Oh!

RASCARD—Yes! And we—psst! we're among ourselves—the vermin of the vermin.

THIRD GUEST—Since their shops have moved up, they have invaded the avenue and they are coming more and more. Why, after lunch there are hundreds of them near my house!

RASCARD—Where are the good old days when we could chase the rabble with a whip?

SECOND GUEST—It must be awful for your wife to live there.

THIRD GUEST—And think of my children! I am one of the few respectable people who still cling to the avenue. But it has become unbearable and I have just bought another house further up town.

EAGLE—And now, ladies and gentlemen, let us join the larger company in the next room.

(The End.)

# Another Migratory Diary

By JAMES PRICE, Seattle, Wash.

I READ "A Migratory Worker's Diary" by James Foy in the February Pioneer. I will say it beat me hollow. He made $549.82 and some board as well. I made the grand total of $162.49 and no board at all!

I went to both city and masonie employment offices every day I was not working and stayed around them quite a lot, but could not seem to obtain a job hardly and yet the papers are full of prosperity. I have not seen it for some time now!

The IWW paper here printed two of my letters, one about the Jim Hill road, G. N., and one about the fly eops at Los Angeles, the biggest robbing and lying plaee I was ever in, so I thought I would send you this.

I have belonged to three unions: viz., the structural iron workers, linemen, and maintenance of way men; but I got no satisfaetion from any of them, only pay my dues. I do not belong to anything now, only the masons. But if I have any money will join the wobblies next time.

Well, here is the year's work:

Diamond Iee Co., 4 hours, unloading spuds, $2.25; Cowen, Park & 64th St., filling and building garage, 9 days, $40.50; 13 Terry Ave., helping a woman to move furniture, $4.00; unloading sheet iron fixtures for 14 hours, 8.40; Johnson Co., 13 1-2 hours, $8.10; Whiton Hardware Co, 16 hours, $8.00; Associated Oil Co., digging for a drain, 19 hrs., $10.67; digging foundations 8 hrs., $4.50; E. Olive St., cleaning up old shingles around a house, 7 hrs., $5.00; marble works, Westlake, unpacking shipment of marble, 23 hours, $11.47; unloading 2 carloads phonographs, S. Clay & Co., 6 hrs., $3.00; digging and repairing broken pipe, E. Mereer St., 5 hrs., $2.50; night elerk for two weeks at this hotel (Fujii, prop.), $42.00; unloading and stowing away tile flooring, 24th & Jefferson, 5 1-2 hrs., $4.10; Porter Furniture Co., staeking away shipment, 4 hrs., $2.00; unloading two earloads furniture, Railroad Ave., S., 8 hrs., $4.00; total $162.49. Part of this work I secured through the City Employment Offiee and part through the Masons'.

I drew $50.00 interest on two bonds I have; $25 I borrowed from the Masons; I owe the Jap hotel man $16.00 room rent now and the Jap restaurant man $7.50 as well. But that is all business.

I will swear this is all true; every word of it is from the vietim of eapitalists and liars.

P. S.—I am 50 years of age now.

# The Twentieth Century

By EDWARD JAMES IRVINE

WITNESS the grief-torn mother of a son
Who lies within a diteh, (Life's battle done)
Torn from his loved ones by the stern command
Of those who held his destiny in hand.

What tremulous pen could e'er deseribe such shame?
Ruins of red the rulers yield for fame
(A fire that cireles round a mortal head,
Leaving the heart unsatisfied, unfed)

Know you the standard that waves o'er? 'Tis gold,
That, for whieh happiness is sold!
A sentinel called Greed with blazing eyes
Gazes upon a world whieh wasted, lies,
Leers upon homeless ones without a door
To enter, Lo! and laughs, "'Tis as of yore,
When gladiators fought to please a throng
Of brainless beings who eneouraged wrong."

Descend! O! darkness, o'er this mimie play!
The sentry from his post is led away,
Relieved by Famine, Mankind, you did ehide
The bards departed, they who sought to guide
Man's faltering footsteps to a paradise,
Yet, ever their sage eounsel you despise.

Life is the world's birthright, so, may revolt
Strike down Earth's tyrants like a thunderbolt!

# 2,000,000 Leave Farms

"Farmers are being starved off the land at the rate of 100,000 a month, eliminated as income tax payers and their purchasing power cut in two," said Congressman John W. Summers of the Farm Export League to representatives of the press.

Danger that the saerfice of the Ameriean farmer to industro-finaneial policy will go too far is seen in the annouueement of the department of agriculture that **the net loss of farm population to the cities since 1920 has amounted to between 1,700,000 and 2,000,000.** Experts fear that the agricultural system will be unduly run down and that farming will go out of fashion.

## NO HAND JOB

Mrs. Lafferty.—Ten stitches did the doctor have to take in me ould man after the fight last night.

Mrs. O'Hara.—Tin. Was that all? Sure, when the doetor seen me poor husband carried in this morning he says: "Has any wan got a sewing maehine?—**Boston Transcript.**

A well-read worker is a well-equipped worker, an understanding worker, an organized worker. Inerease his number by pushing the labor press and distributing labor literature.

# Snakes and "Seam-Squirrels"

By ADAM NOIR

## A Story of the Southern Levees with their Strange Crews and Stranger Perversions of Libertarian Ideals.

THE work was not hard; just piling brush and mowing patches of Spanish needles and beggar-lice—and pausing occasionally to kill a too friendly moccasin. Much of the boys' time was spent in observation; taking mental note of their surroundings.

They could not understand why every root and particle of wood was being grubbed out of the "right of way;" or why the great trench was dug down the center. At the first opportunity William asked the foreman about it.

He was a friendly sort of fellow and explained that a levee, or dyke, to stand for any length of time, must be composed of pure earth; any particle of wood left in it would eventually rot and leave a seep hole which would gradually grow until the whole embankment was undermined.

Of perhaps greater interest than the work, was the crew. William had worked as a delivery boy for a Memphis grocery, and supposed he was familiar with all kinds of people. James had worked in a shop with a German, an Irishman and two Mexicans. Neither of them had ever met people like this crew.

When James asked his fellow workers where they came from, some said New York, some Chicago, some Philadelphia; others named various places. All places named, the boys knew, were American cities; but all seemed very, very far away.

One lad from Chicago was careful to explain that they had been brought down there because the natives were too lazy to work, and besides, "were not able to do a real man's work." When the boy heard this, they resolved to keep secret the fact that they were born and reared in the adjoining county.

They had been told that the workday was from seven a. m. to six p. m., with an hour for dinner. When six o'clock came, the foreman did climb up on a pile of earth and announced the fact, but the crew seemed in no hurry to quit. Some of them quit of course; among these, the two boys, for they only hired on at one o'clock and were hungry. Others lingered about as if they actually loved their tasks. The foreman was constrained to tell one of them: "Leave that stump alone and go on to camp. You'll have plenty of time tomorrow to finish up—if I don't take a notion to fire you."

Well pleased with the prospect of an early supper, and proud of the fact that in only a half a day they had earned sixty-two and a half cents—full wages for grown men—the boys lost no time in reaching camp and locating the cook-house.

If they thought their fellow workingmen a strange crew, before, that belief became a certainty when they came together at supper. There were great piles of food on the table, but each one seemed afraid he would not get his share unless he hurried. The noises they made did sound like pigs eating swill, but when William watched them perform, he was reminded of Gyp and Lead, two permanently hungry old hounds belonging to a negro neighbor.

And they had such peculiar names for food. When James asked for potatoes, the man at his elbow said: "Say, Shorty, pass this kid the spuds." When he desired cream for his coffee, the same helpful neighbor cried: "Chase the cow down this way, the calf's a-bawlin'!"

The crew slept in little tents, four men to each. When the boys entered the one assigned to them, they found the lad from Chicago and his bed-mate, stripped to the waist and busy picking something from the inner seams of their shirts. The Chicago lad said they were "seam-squirrels," but the other one explained that they were really "grey-backs." William took one in his fingers and, after examination, said it resembled the pictures of "body lice" he had seen in books on Entomology.

Now, the boys had been taught that to become lousy was a disgrace, and that to remain lousy was an unpardonable sin. To consciously permit themselves to become lousy was a violation of the moral code. They began to discuss the proposition of leaving at once.

"But you can't leave," said the lad from Chicago. "God knows, I'd be gone from here now if I could get away. Guess you'll have to stay 'til the job's done. You'll get used to the seam-squirrels."

"I'd like to know how come I can't leave if I want to?" demanded James.

"Why, because you can't. They won't let you. The camp guards will shoot any man that goes beyond that line of trees the other side of the road. After night, they don't even let you get that far."

The boys did not believe this, but when Chicago raised the edge of the tent and pointed out the armed guard, they were convinced.

"Huh," grunted William, "I'll bet I could slip by those guards and they'd never know I was gone, 'til morning."

"Yes," said Chicago, "but what if you did? Away off here, a thousand miles from nowhere. They'd catch you before you got very far."

"A thousand miles, my foot! Why, it's only about eighteen miles west of here to Marianna on the Knoble and Helena road. I heard the Rowena Lee whistle for Walnut Bend this afternoon and I know

it can't be more'n five miles."

Chicago would not be convinced: "Suppose it is only a little way. You've got to go through woods and swamps, and there's wolves and panthers and snakes and God knows what else. No sir, I don't like it here a damn bit, but I'm not going to take any such chances as that."

The boys knew, of course, that the swamps were full of snakes, but it had never occurred to them that snakes should be regarded as a menace to life or freedom of movement. If there had ever been any wolves in that country it must have been when their grandfathers were boys. As to panthers: Well, there might be such creatures, but the boys didn't believe it.

Thinking it wasted effort to converse further with these " 'fraid cats," the boys lay in their bunk and held whispered consultation for several minutes, then arose and passed outside.

As a test, William walked past the line of tents and out into the road. Sure enough, he was halted by a man with a shotgun. He explained that he was a newcomer and unfamiliar with the rules, and was permitted to retire. They tried at several points, but guards seemed to be everywhere.

Foiled in their attempt at open departure, they resorted to the tactics used in stealing watermelons from a particularly cranky farmer.

Re-entering the tent, they crawled under the rear wall and wormed themselves forward on their stomachs. It was tedious and dirty work, and hard on clothing, but ten minutes time found them outside the guard line and, so they supposed, free from further interference. But, they had reckoned without Chicago.

Lacking the courage to attempt escape, filled with spiteful envy by discovering that courage in another—possibly urged on by hope of reward for treachery—Chicago hunted up a guard and reported the departure of the boys.

When they had gone a half mile or so, they heard a great commotion in the camp; men were running and shouting, lanterns were dancing about, there was a occasional revolver shot. In a few moments, there was the thud of many hoofs on the dusty road. Slipping quietly into the bushes, they let the cavalcade dash by.

They knew they could not be caught without the use of dogs; even natives could not trail them through the night; but there was sure to be a guard stationed at the ferry across the St. Francis to intercept them.

With this in mind, they cut straight through the woods and came to the river some hundred or so yards above the ferry. Quite as they expected, there was a guard, with lanterns and a camp fire.

After a time, the boys crept down close enough to hear the guards' conversation. There were three of them. One was saying: "They'll never come this way if they see this fire. Why, I wouldn't be that foolish myself."

A companion replied. "But we've got to have a fire to keep the varmints off. There's panthers and wild cats and all kinds of things in these woods."

"Shucks. I don't believe there is any such thing as a panther."

"The hell they ain't. I've heard 'em many a time. They scream just like a woman when she's scared. Folks say they do that to 'tice men under the tree where they're hid and then drap on 'em 'fore they know it."

This gave the boys an idea. After a brief talk, they parted, one going up and one down river.

Shortly, the men at the fire were startled by a terrific scream, as of a woman in great pain or fright. It appeared to come from a point a hundred yards up river. They were still discussing the probable location, when the scream was repeated from about the same distance down river.

After a pause of several minutes, the up river scream was repeated—this time within fifty yards of the fire. With one accord, the guards began to yell and discharge their guns in the direction of the noise. When they paused to reload, the down river scream was repcated—within a hundred feet of the fire.

The guards now began shooting in both directions; whirling about so fast it is a wonder they didn't shoot each other.

When they again paused to reload, James crept up behind a tree at the very edge of the road, and not twenty feet from the fire, and gave voice to the most awful scream he could devise. The guards went away from there. One of them left his shot gun.

The ferryman of course lived near by, and came to investigate the racket. The boys frankly told their story and he set them across the river. They reached Marianna in time for a late breakfast.

Trains were not frequent on the Knoble and Helena and the boys had to wait until late afternoon to catch one going north. When about to climb aboard, they were arrested by the marshal on a warrant charging them with jumping a board bill at the levee camp! Next morning, they were sentenced to ninety days, and leased to the levee contractor for thirty cents a day.

Leased prisoners were worked in a separate gang and lodged in a separate camp from the free men. They worked under heavy guard, and slept on the ground in a long tent. At night, they were made to lie down in two rows with feet almost touching. A heavy chain was stretched between the rows of feet and the left ankle of each prisoner was fastened to this chain with a bracelet made similar to a handcuff.

After a couple of days of this sort of thing, the boys were desperate enough to try any plan of escape.

Since it had been discovered that they were native to the country and, presumably, "not able to do

(Continued on page 42.)

# The Crimes of Capital

By FRANK MYERS

AFTER reading in the capitalist news sheets from day to day of the crime, corruption and filth rampant everywhere, I cannot understand why the workers remain dormant and tolerate such a damnable, insane system as the one under which we are now existing.

Speaking about crime, how about the recent Teapot Dome oil scandal? And how embarrassing it must be for our hundred percenters, just before election, too!

However, none of these gentry will go to jail, for they are not among those jails are usually built for. Why, they own the jails—as well as the rest of the government machinery!

In due time the case will be nicely whitewashed and the American Legion and the other "superpatriot" organizations will conveniently forget about it and give thanks that they are living in a country run "by the people, for the people."

These robbers of the public domain and treasury are looked upon by some as men with high ideals—good Christians and the country's best citizens. But are they?

**The recent exposures should leave no doubt in the minds of any workers as to the real character of those in the high places of our "peoples' " government. Their escapades reek to high heaven; they're so unspeakably rotten that some of the big guys in the Senate and House have actually got scared. "The foundations of our government never received such a shock," declared one senator in an eloquent speech.**

Perhaps the exposures in the beginning were intended to belittle certain candidates in the coming election; no one can tell just what motives actuate our worthy legislators, but if that was the purpose they have overshot their mark. The first sensational scareheads in the newspapers only mentioned Republicans, but now Democrats as well are tarred with the same oily brush and irrevocably and eternally damned in the eyes of citizens who believe that government heads should be, like Caesar's wife, "above suspicion."

And bad as the exposures are, half of the truth will never be known. Already many newspapers are denouncing the sensationalism and declaring for its suppression. Doubtless, working on the theory that what the people don't know will never hurt them, and feeling that they have already been wised up sufficiently.

**The crimes of capitalism will never be fully revealed until the workers organize as a class and take control of industry. Until then we will never learn anything of the inner workings of "government" except, as in a case like the present one, when one gang of thieves falls out with another over the division of the spoils.**

Can we really hope for anything else? Not so long as the intellectual prostitutes of the capitalist class, the distorters and suppressors of truth and makers of hysteria are the ones who disseminate information. The press is the mouthpiece of capitalism. Surely we do not expect the capitalist system to be convicted out of its own mouth. Unless, of course, when something gets away from them like the Teapot Dome scandal. It got so big they just couldn't help telling us some of the facts. One side started it, and then in justification of their thieving actions the other side had to squawk, too.

However, the robbery exposed by the present scandal need not interest workers particularly, except as a demonstration of the truths we have been trying to point out to an unheeding world for a long time. As T-bone Slim says, "We ain't got a cent in it!" Of course not! Stealing oil, coal and forest reserves means nothing to us. We don't own any of these properties. The robbery we're interested in takes place lots nearer home, right on the job, every day we toil for these thieves who, not content with exploiting us on the properties they already own, have turned their thieving talents to grabbing more properties on which to exploit us.

To those who waste their time worrying over ballots and how to elect "honest" men, Republicans, Democrats or Labor politicians to office to protect "our" public properties and promote the "public" weal, we have this advice to offer. Organize! Organize on the job! A political government, of whatever shade, color or party has no solution for the ills of an industrial nation like the United States.

Thousands of our fellow workers are maimed and crippled ever year in the industries owned by those who seek to blind and befuddle us by political parties, political slogans and other tricks of government. The lifeblood of the working class colors the tainted wealth of those who find enjoyment and recreation in planning to steal more and ever more properties on which to slay and maim more workers. But does the "government" see that the laws which they have passed to "save their faces" are enforced, does the "government," state or national, make any attempt to save the lives of those without whom governments would be hollow farces, empty masks?

Look at the last calamity to befall the working class. Look out into the mountains of Utah and see the weeping wives and children of the 175 miners ruthlesly slaughtered by the coal barons at Castle Gate, because of failure to enforce the state mining laws. Look at the countless other mine explosions, railroad wrecks and factory fires

in which the working class has made the supreme sacrifice for the master class. Look and ponder!

The arts and tricks of government! What have they ever done for those who toil? Just what might have been expected! Nothing. And that is what the workers will get out of worrying and scheming on the political field. We have no time nor the necessary knowledge of this game to ever accomplish anything by playing it, even if, contrary to the very nature of things, anything could be accomplished that way. We are exploited on the job—there must our problems be solved!

To those not yet members of the IWW and who desire the good things of life we say this—do not scoff—investigate. You will find we are out to abolish slavery and robbery and to give to those who toil usefully by brain and brawn the full value of their product. And we do not include such steals as Teapot Dome in our idea of useful toil.

Corrupt political government such as we now have revealed to us in the present scandal is both an attribute and reflex of the inefficiency of the capitalist system. Competition has seeped beneath the structures of the industrial magnates in this case and a few bricks and chimney-pots have fallen. Their house is old and rotten; every succeeding scandal will weaken it correspondingly, destruction can only be delayed, not avoided.

And so it will be as time goes on. We can expect more of these scandals; opportunities are becoming scarcer every day and the mad scramble for the plums gets hotter all the time. And the masters won't be able to keep us in ignorance of their thievery, much as they would like to—and hard as their political puppets will try.

Modern industrialism has outgrown capitalism; no longer can a corrupt political government, which is the only kind of government capitalism can understand, administer the affairs of industrial society. International in scope it cannot be circumscribed by geographical boundaries or other superficial divisions imposed by the whim or interest of those owning or controlling the world's resources and markets. Such a fallacious scheme must be replaced by an industrial co-operative society in which all who perform useful labor, and no one else, shall receive the full benefits. Then and only then can we have real peace, real joy and real happiness.

**To this end the IWW has consecrated itself and while the crimes of capital remain unindicted, while robbery and persecution by our industrial masters and inquisitors continue we shall always be found in the front lines of the battle with our revolutionary banners widespread to the breeze, lifted on high so that the first rays of the dawn of Industrial Freedom may fall on their bright folds and be reflected on a world which shall know the crimes of capital no more.**

## SNAKES AND "SEAM-SQUIRRELS"

(Continued from page 40)

a man's work", they were kept at the task of piling brush and mowing weeds.

The guard over them was inordinately afraid of snakes, and was forever endangering the lives of his charges by shooting at everything that looked like one.

William somehow got hold of about fifty feet of small fishline. Watching his chance, he tied this line to the head of a snake the guard had killed the previous day, and drew it up along his leg, under the trousers. While picking up an armload of brush, he let the snake slide down to the ground. Marching close past the guard, he let the line unwind from his pocket. When he reached the brush pile, and appeared to be working around it, he hauled in on the line. The result was what looked to be a very determined snake, crawling straight for the guard.

That worthy let out a yell of terror and discharged both barrels of his shot gun at the advancing reptile. The instant his gun was empty, William and James were on him, and had him manacled with his own handcuffs and gagged with his own handkerchief before he knew what was happening.

Threatening to shoot the other prisoners if they gave the alarm, the boys took the gun and shells and slipped away into the swamp.

Three days later, they were at home hoeing cotton for fifty cents a day and their dinner. They wanted no more "public work", even if the wage was a dollar and a quarter, and board did include "spuds and light bread" three times a day. They sort of reckoned that sorghum and corn bread and a shirt free from "seam squirrels" was more decent —and more comfortable.

## WATCH YOUR GOOSESTEP

SAN FRANCISCO.—Prof. Tully Cleon Knoles, president, College of the Pacific, had better look out for his job—he must have been reading The Goosestep. He told the Mutual Business Club here that "America is ruled by sixth-grade intellects," and the sixth-grade intellects who listened to him were not very much pleased by his speech.

* * *

San Francisco has the highest cancer death rate in the world, with 500 deaths reported in the past five years, according to a prominent physician in Newark, New Jersey, who has made a study of the disease.

# The Change is Coming

By HAL BROMMELS

FROM far and near both sage and seer
Proclaim a change in human tho't;
With active brain Toil starts to train—
Its mighty weapon's being wrot.
For Labor plans a nobler way
To live—the battle's on today!

But Greed is set on ruling yet
And vows to always run the earth;
And tho we still bow to its will
The Great New System's in its birth.
And all that fearful Mammon schemes
Will never halt Toil's trend and dreams.

The blood of men is hot again—
The years of misery bear fruit:
For Toil unites to gain its rights
And capture Mammon's store of loot.
For Greed has taken all we've made—
With tears and blood its leisure paid.

O, men, prepare to do and dare,
To make our age-long dream come true.
Our power grows, so no one knows
When Labor's flag will call on you.
Prepare—and hurl away your fears
For sure as death the New Day nears!

# Darkness and Dawn

**A Song of Class-War Prisoners**

By RICHARD BRAZIER

THE world outside sometimes I deem
As far off as a distant star;
A vague remembrance of a dream
I dreamt in days, oh! long afar.
It seems then, that this hermitage,
Wherein we pass the endless days—
This monstrous, massive masoned cage,
Is far removed from friendly gaze,
As tho' set in some valley lone,
Amid a pestilential fen,
Where never sun or moon has shone
To reveal us to sight of men.

Yes this sad feeling fades away,
When early sun beams gild the floor
Of my dark cell, and new born day
With golden steps enters my door
And pours with dancing radiance
It's flash of light into my room,
And laughs away with merry glance
The darkness of my steel girt tomb.
And then my soul with joy is filled,
The flame of life glows bright amain;
All doubts and sad forebodings stilled,
I climb towards the heights again.

# Pay For His Sacrifice

By ROAMER

His abode is a cold sombre prison
The reward of a helper of men.
While the wolves whom he sought to throttle,
They sit cozily and warm in their den.

And WE whom he sought to enlighten
Stand by as though born to condone
Victims! Yea, tools of perdition
Our lives, not to claim as our own.

Wake, Comrades! Wake! to the calling
Of the spirit no prison can hold.
A land of true men is no vision
It's a reality of hearts that are bold.

Give ear to each word that he utters,
Each thought, to his deeds of the past;
And know him, as he knows you, brother.
'Twill add cheer to his soul at the last.

He fought like a hero to free us
When our eyes were blinded with blood,
He showed us the chains we were welding
And chained we drifted down with the flood—

Nor yet, are we freed from those fetters.
Torn fragments of our brothers abound—
"Broken tools" of the master class glitter!
Our griefs and our woes to compound.

Come, let us arise—let us waken,
And gird up our loins for the fray.
Show him we're the stuff men are made of
And our debt to his suffering repay.

We could imprison enslavers of children,
And trample the breeders of hate;
Dethrone the high priests of Mammon
And "calm" the sequesterers of Fate.

Then build in the land of God's making
A real home, for all dutiful men,
And establish a brotherhood common;
"We'll have paid for his sacrifice then."

# I Am, The Great I Am

By WOODBY SIANTIFIC

WHAT is the I of Mc and You and the other one billion, five hundred million, nine hundred and ninety-ninc thousand, ninc hundred and ninety-nine specimens of the Homo Genus that happen to be moping around on this dust mote?

My Soul, Spirit, Will, Consciousness, Ego, Mentality and Mind are subordinate to I.

I boast of my strong Will, yet that Will never functions without Initiative from I.

I think of my Mind as a supreme property of the Man, but I frequently say I **Will** change my **Mind.**

Others ridicule my Mind; they may sneer at my mental capacity; my soul becomes rebellious when subjected to great agony; but I have never been humiliated. I will not submit.

There was no dawn of creation; there can be no twilight; but at another point in the cycle of Universal Activity, when protoplasmic cells first evolved out of rock, I was there.

***

I am the author of all Natural Law, but my feeble consciousness has not been able to comprehend these laws. The Human Body, possessed of splendid antennae and three stage set, receives all my messages, but foolishly disregards those designed to interfere with excessive indulgenes.

I have many vices and more virtues. The latter have been largely supressed. Sometimes they are reflected in You, so, if I like you it is the I of me that is admired. And when I hate You it is only the unwholesome part of Me that is hated.

My ascension to happiness is hardly begun. The several weak instrumentalities with which I have to express my great fulness, the beauty and love that urges from within, restrain my progress. My Mentality, associated with the grossly material things that it contacts, cannot vision possibilities. My Will cannot negotiate the high walls of Formality, Precedent, alleged Power, Dogma and **Fear.**

My greatest attribute is **Imagination,** but it is still in the foctal stage. When it is born and large enough to play and co-operate with my other child, WILL, the two of them will arouse the old nursemaid, **Consciousness,** to a new conception of Life.

Old grandmother **Consciousness** will be amazed at the adeptness of these two youngsters. They will quickly explore the small domain in which she lives. They will perceive and comprehend things hitherto undiscovered by her. They will insistently demand greater scope for activity.

Brushing the webs from her eyes she will stare into cosmic depths and behold most wondrous truths. It is almost amusing to contemplate her perplexed expression as she discovers I in every nook and unchinked crevice of the Universe.

Then note the sweet, complaisant smile of satisfaction as she becomes aware, intuitively as it were, that I am firmly but gently guiding her destiny. It will be so, for in that day it will be known that I AM!

# Joe Hill, Song Writer

By HAROLD R. JOHNSON

ALL progressive movements and popular causes of days gone by have had their reflection in the literature and arts of their day, and some were immortalized by a permanent, glowing tradition and literature. In this respect the IWW is no different than those movements of oppressed people recorded in history for their glorious aspirations.

Around the industrial union trend, best exemplified in the organization of the Industrial Workers of the World, has grown a positive class philosophy, art, literature and irrespressible spirit, which has been felt throughout our whole social structure. Words, phrases, ideas and opinions of this revolutionary industrial group have been adopted by groups of divergent economic interests insofar as they were applicable, helpful and non-injurious to their economic position. In music the IWW hopes have also been sounded and Joe Hillstrom stands first in the list of their composers and song writers.

The IWW has attracted many competent thinkers and talented individuals. Besides qualified speakers, organizers and writers, they have their musicians, poets and artists. Joe Hill, as Hillstrom is usually called, was also a poet. His verses and songs are known everywhere that social protest has arisen in group expression.

Numerous of Joe Hill's parodies are of the ordinary qualities of a laborer-rimer or common versifier. Some, however, reveal such rare expression of true gift and talent that they are assured working class permanence. No song has appealed to the world's toilers more than "Workers of the World, Awaken!" both words and music were composed by Joe Hill. As I have heard an orchestra play it my heart throbbed with renewed spirit as I followed its powerful stanzas, and tho't: "The oppressors have crushed your body, Joe, but your soul lives on in the spirit and songs of the triumphant message of the New Day!"

# Going! Going!—The Corner Grocer

By EDWARD La RUCRYTH

**The necessity for big capital, as represented by motor and other equipment, puts the small retailer out of business.**

How many years ago did the IWW predict the demise of that useful person the corner grocer and his institution? When did that organization first forecast and propagate the fall, not only of the little grocer but also the merging of the other small owners including the farmer, into that rapidly increasing class of unskilled workers?

At the very first convention held when the IWW preamble was drafted the significant words . ."entering the management of the industries into fewer and fewer hands . . . .," contained a prophecy which will affect the skilled laborer's commodity and also the livelihood of the proprietors of small businesses. The organization has since backed its preamble and Marx up in contradiction to the boss' phoney economies.

Already the banks have swallowed many small farmers, already have the trusts and the chain stores put many of the small shop owners out of the running. As with every other institution and class that is victimized by evolution the petty bourgeois puts up a frantic fight. They "die hard."

In California, the retail grocers' association starts a campaign of "patronize your neighborhood grocer" advertising. An advertisement to be seen in street cars shows a woman coming home from the large down-town chain stores, which are rapidly increasing in size and number, loaded down with "so-called bargains" and with no money left. The ad complains further: "She calls the neighborhood grocery and asks him to send her a cake of yeast; and charge it!" The association is surprised that the people go where they can get things cheaper. Every day come announcements that some drug store like the Owl chain or some such group of cigar stores as the United, have bought out smaller stores or chains.

The rate at which the little groccrymen are being converted into the unemployed may have something to do with the plans that are going forward for a new penitentiary in Southern California; with the enlarging of county and city jails, and the building of stockades, insane asylums and hospitals. This may also have something to do with the fact that San Quentin and Folsom are crowded past capacity notwithstanding the recent installation of the "road camp system."

"The world owes us a living" is becoming in spite of capitalist objection, and the corner grocer's struggle, a slogan which is being recognized as truth and many fools are rubbing shoulders with the prophets in these penitentiaries, the IWW. One is there because he tried to collect individually and forcibly and the other because he propagated collection of the debt collectively and peaceably.

# The Daily Struggle

The workers are interested in the features of their daily struggle for existence.

Speaking to a longshoremen's delegate in Philadelphia, he said:

"The men on the docks here are interested in the short pay in their envelopes and the slavedriving of their foremen. They want all the pay that's coming to them; and they don't want to be driven like mules."

In other words, the workers are interested in a square deal and humane conditions for themselves. The press and the organization that will help them to secure these elemental aspirations can lead them on to greater and grander things still.

But these are the things that concern them primarily; and these things must be dealt with primarily before their interest in other things can be enlisted.

Get into the daily job struggle!

**The world is big. There's millions of unorganized. When factional feelings get the best of you, don't fail to remind yourself that there is still much to be done. Go and do it!**

# The Evolution of the Steam Valve

By BOOMER

I SAT in the bunkhouse of a logging camp elose to the "Rose City" and turned an ineh and a half globe valve over and over in my hand; I was thinking.

The valve was to be used on the injector steam pipe, so that when the engineer in eharge wanted water in the boiler the valve eould be opened, admitting the steam to force the water into the boiler, so as to make steam to be used to haul logs when the throttle was opened on the engine.

But it was not of that I was thinking. I was thinking of the large number of workers who had expended some part of their labor power to put that valve into my hands. The miners who mined the raw ore; the smeltermen who reduced the raw ore to metal; the foundrymen whose labor had worked it into the required shape; even the transportation workers, yes, even the section men who labored to keep the track in repair that the valve might eventually reach the plaee where it would be of real value to soeiety. All of this was I thinking.

Yes, even the warehouse workers whose labor power had stored the valve away until it was called for to be used. But I could sit with the valve in my hand for ages and it would not be of any real value. No. It must be put in its respective plaee by the application of labor power; even then it would not be of use to society until labor power was applied to operate it as water was needed to generate steam. Then the logs that the engine would haul, would be loaded onto cars and sent to the mill to be cut into lengths, breadths and thieknesses, and be shipped to many parts of the world to be made into things of use to mankind. Perhaps some of the lumber would go to make a coffin for some of those who had labored to help produce the valve.

Now if anyone can prove to me that labor power does not produce all wealth I wish they would do so as I want to be set right .

Being rather versatile I have expended my labor power in many different industries; I have seen trees centuries old that stood in a dense forest, of no value to society until labor power was applied to them; I have seen food lie on the tables of restaurants and hotels unfit to eat until labor power was applied to it; I have seen the shop windows filled with clothing doing society no good until someone purchased it, a clerk wrapped it up and it was earried to a suitable plaee and put onto the body to be worn.

A metal valve does no service to mankind until it is used; food becomes of real value only when eaten; elothing is of value to mankind only when worn to keep the body comfortable; but labor power must be expended in the many processes that transform the raw material into the finished produet, whether it be a brass valve, food, clothing, or anything else used by mankind. We ean safely say that every article of use in this world is the result of the social efforts of mankind, and if we were to try to leave out any group of the world's workers we could not then have the eommodity.

One might go so far as to say that a baby is raw human material, and goes through different proeesses from babyhood to man, or womanhood, and finally becomes a useful member of soeiety, and there is some labor power expended in raising a baby.

So, therefore, sinee labor ereates all wealth; that wealth by rights belongs to those whose labor power ereates it. But the ones who withhold all this wealth from labor are organized in a eompact body and labor is not. The eapitalist elass takes all that labor produces exeept just enough to allow labor to exist and reproduce itself. During the last war for markets they took the finished produet of thousands of mothers, i. e., young men, and slaughtered them upon the battlefields of Europe.

Now the mothers should organize so that they, too, ean enjoy the fruits of their labor in the eompanionship of their sons when grown to manhood and the mothers are becoming old and feeble. Renew again that song, "I did not raise my boy to be a soldier"; sing it, and organize with your elass, the produeing elass—the only useful class in soeiety. Labor produces all wealth, all that is of use to society, labor does not get the full produet of its labor, and it is the fault of labor. Beeause labor is not organized.

---

## THE LIFE STORY OF A STIFF

**Stiffs, By Melbourne Garahan. New York: Thos. Seltzer. $2.**

This is the autobiography of a British sailor who had to leave the mercantile marine beeause of bad eyesight, and who became a stiff, which in England means a philosophic tramp, high above the beggar and hooligan classes. Sometimes the author worked, at advertising-kite flying or at odd jobs; when jobless he "clieked" wherever he could — touched strangers on London streets for the priee of one or more meals on the strength of a hard luck tale invented instanter.

He and other stiffs lived at a eheap hotel divided into many cubieles with just enough room for a bed and a chair. Whoever had elieked would share his funds with those who hadn't. Some of the stiffs profited by singing in publie-house eorridors. One of the gang, known as Cherry, inherited a fortune in Salt Lake City, and disappeared just before a reward notice for him was posted. It was Garahan who trailed him down and got the reward.

Garahan's story has humor, pathos and plausibility. Finally he climbed out of the tramp elass and came to better things in Australia. He eontributes to our language numerous words peculiar to the British migratory. —**Daniel Tower.**

# Brief Editorials

## A Hold Up

The claim that business will not improve until federal taxation is changed so as to encourage it, is merely the way big business has of threatening and compelling legislation in its interests.

Any man who can read the reports of dividends paid by big business in the past ten years and then conclude that taxation interferes with it, should have his sanity examined. There is no evidence to justify such reasoning. In view of the facts, it's irrational.

The fact of the matter is, that big business wants ever more profits and then more profits still. In order to get them, it pretends it cannot prosper under present conditions and so determines to undermine them to its own ends.

In other words, big business is holding up society in order to compel submission to its exactions.

That's a way it has.

## Undone By Superwisdom.

At Bayonne and Bay View, N. J., the Standard Oil Co. of New Jersey has two giant refineries; 14,000 men are employed. Recently they threatened strike for a 10 percent wage increase and representation on the board of directors in accordance with the Rockefeller plan of employees' representation. 700 employees actually went out on strike, and the matter was compromised by an increase in wages.

All this is very significant! The Standard Oil Co. of New Jersey is the most powerful of the Standard Oil groups. Its policy is one of ruthless anti-strike and anti-unionism. It advocates company unionism, employees' stock ownership, and other devices calculated to insure submission, sycophancy and servility. And here it is hoisted by its own petard, thanks to employees who actually believe what it says. Or else are so oppressed as to make revolt imperative! Who knows?

Be that as it may; their course is encouraging. Once more is big industry undone by its own superwisdom.

## The Pacifist Outburst

Conditions alter circumstances. During the war hysteria, pacifism was impossible; it was on the defensive—suppressed. Militarism held sway. The iron heel forced submission, however reluctant.

But now the war hysteria is dying out. Peace prevails between the ruling nations. The various classes are considering war in accordance with their ideals—now mostly blasted because of it. They like it not.

Thus it comes that pacifism tends to put militarism on the defensive, where before it had been in that unenviable position itself. Colleges, church conventions, and other institutions are being torn into disputatious factions, and the despairing wail of the warrior is beginning to be heard throughout the land, as a result.

In view of the modern capitalist necessity for militarism and war, nothing may come of this pacifist outburst. Nevertheless it is a good indication —a promise of more progress rather than more reaction.

## The Farmer-Labor Convention.

Ex-Senator Pettigrew has written a letter to the Industrial Pioneer in order to learn if the Industrial Workers of the World will be represented at the Farmer-Labor Convention to be held in St. Paul on June 17th.

It will not. No provision has been made for such representation either by the last convention or any referendum since then.

Further, it is not likely that either a convention or a referendum would provide for such representation. The Industrial Workers of the World is primarily an economic organization. It believes in working class organization at the point of production and distribution, where labor is robbed through profit, interest and rent; and where all power, including political power, primarily resides.

The Industrial Workers of the World seeks, through industrial union organization, to concentrate working class attention and activity solely on this, the most vital point in the social organism, convinced that the class that rules economically rules politically as well.

## WHAT I REMEMBER OF DOCKLAND

The barefooted children, playing in the alleys, who laughed but were not happy.

The swing bridges at the dock entrances.

The unceasing and deafening noise of the traffic on the granite roads.

The continual rattle of the cranes.

The groups of men at the wharf gates waiting to be taken on.

The rush of these men when a voice boomed from the warehouse.

The fewness of those that were taken on.

The stolid resignation of those that were missed.

The whitewashed doorsteps.

The frequent outbreaks of fire.

The impure atmosphere, scented with the smell of spices, liquors, and rotted fruit. — GORDON HOSKING, in the London Daily Herald.

# A Message to the IWW

By COVINGTON AMI

NEVER before in its history did the IWW ever stand face to face with a greater opportunity than it does today.

Everywhere the masses, sickened and sore with the treasons and inefficiency of politicians, are ready to hear the message of Industrial Democracy if only it is told to them in language they can understand.

Everywhere capitalism is fast rotting into ruin and everywhere the opportunity to overcome it is in Labor's hands if only the teachers of Labor will cease their infantile talk about the "destruction of civilization," and, instead, cry from the housetops: "Workers of the World, Behold, the New Age is at hand! Never before in time was a Grander Day in sight, never was there so much of life, wealth, liberty and pursuit of happiness before you, O Labor, for the simple reaching out and taking!"

Let this be the message from now on, for verily, verily, I say unto YOU, CIVILIZATION is NOT PERISHING! It has hardly yet begun. All that is now happening is that the last great SLAVE SYSTEM is wrecking itself and making the way clear for a mightier civilization, a more splendid freedom than Man has ever known!

Into this New Order it is the IWW's privilege to lead the way if only its young men and women so WILL it, for the field is wide open to them. Everywhere the Elder Statesmen of the Unions have practically ceased all efforts at organizing the workers on the economic field and are all busy wasting their time and the unions' funds playing petty politics, while the workers cry for **leadership.**

Young men and women of the IWW, THIS IS YOUR great opportunity! Seize it! Go to the Lumber, Steel, Automobile and all unorganized, unskilled and semi-skilled workers with the message of THE ONLY UNION that can bring the hope for BREAD and FREEDOM! Center ALL your strength on THESE! Do it NOW, today, crying, "Behold! the boundless wealth, material and spiritual, O Workers, that is yours if ye WILL!" and you will win them and the age-long fight!

# PREAMBLE OF THE INDUSTRIAL WORKERS OF THE WORLD

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

Printed by Printing and Publishing Workers' Industrial Union No. 450, I. W. W.

# The Harvest Drive Is On!

The 1924 drive of the Agricultural Workers' Industrial Union is on!

Initiated at the Omaha, Nebraska, conference on May 28, with 70 delegates present from all sections of the the country, it promises to be a history-making one.

Never before was the Agricultural Workers' Industrial Union a greater necessity to the agricultural industry and its workers than at present.

Agriculture is undergoing a great change. It is becoming industrialized. In the process, the small farmer is being driven from the farm into the city, there to compete with the industrial worker.

In this transition, the Agricultural Workers' Industrial Union can do much to prepare the small farmer for entrance into the industrial unions of the cities on his arrival there.

Further, this transition adds "auto tramps" and "auto families" to the labor market; as does the prevalent unemployment in the other industries. The harvest fields, as a result, are likely to be overrun with an excessive labor supply.

Under the circumstances, the Agricultural Workers' Industrial Union will be an important factor, in remedying adverse conditions, or making the best of them, with better wages and other results.

The Omaha conference took many important steps to this end. It decided to push the IWW press wherever the Agricultural Workers' Industrial Union operates. By means of the IWW press, small farmers, farm hands, "auto tramps" and migratory workers can be reached and converted to organization.

The Omaha conference also took steps to extend its work to Canada, to promote the California boycott, to strengthen Industrial Union finances, to perfect Industrial Union ramifications, discipline its membership, and make the 1924 drive the best one ever.

With such enthusiasm and preparation success is bound to crown the Agricultural Workers' Industrial Union.

On with the drive!

# Smoke Wreaths and Visions

By JAMES LANCE

**The migratory agricultural worker, grown conscious of the dependence of the world's bread basket on his filling, dreams a dream of organization and emancipation 'round the jungle fire that is slowly taking shape in reality—urge of economic necessity, responsible for the migratory urge, becomes, also, the urge for a new society.**

CERTAIN urges and instincts which motivate the inhabitants of this old world, to an interested observer, are an endless source of wonder and speculation. Through them birds, beasts and their prouder biological descendants act in a manner which seems to have been determined by forces above and beyond their control or power of resistance. Our northern songbirds leave us to doleful contemplation of those days rendered more melancholy by the absence of their soul-stirring voices when the first breath of old King Winter paints the leaves bronze and purple and threatens dire things to come. The king salmon feels the urge thousands of miles down the latitudes and returns from his wanderings thru the spaces of the southern ocean to spawn in the river in which he was a fingerling. And every spring when the breezes in the cities begin to give promise of hot stuffy nights and sweltering days between walls of stone and pavements of yielding asphalt the migratory worker thinks of the open spaces lying beyond the confines in which he has been passing his days in irksome monotony and—starts for the harvest.

Migrations all, and of the three perhaps his is the strangest and saddest. Not for him the security which Mother Nature vouchsafes to his feathered brethren. Not even the thrill of satisfaction which must come to the bruised and starving salmon when he fulfills his destiny and insures the coming of more of his kind before he dies in the stream which was his earliest home. Not even the surety of enough work to make his migration a shield against the time when he again will chafe at the bonds imposed by zero weather and despairingly count the days until he can once more migrate to the waving fields of grain.

Yet on him, saddest and strangest of the world's migratories depends whether the bread basket of his more fortunately situated brothers is filled or empty. Without his labor the world which has condemned him to live like a pariah would be slack-bellied. His brawny back and straining arms are the source of food for millions who thoughtlessly shove him aside when the harvest is over and only wish that instead of being a migratory, he was of those breeds which hibernate, so that his woe-begone presence when the harvest is ended would not occasion them displeasure in viewing his misery.

For such a reward this "son of Martha" labors long and suffers much. The harvest fields in which he adds to the store of the world's wealth are not ideal vacation places. Down in the far-famed wheat-fields of Kansas Old Sol pours down his fiercest rays on the sweat-soaked back of the harvest slave; winds like those from Dante's Inferno scorch his fatigued frame and beards from rye, barley and winter wheat penetrate every niche and seam of his

scanty clothing and add further to his agony; and when the parching wind dies for a moment great clouds of flying ants appear and add their torture to his already mountainous burden.

Later in the season he lies in the rattle-trap barns and granaries of North Dakota and shiveringly pulls the shoddy comfort or stinking horse blanket with which the farmer, in his greatness of heart, has supplied the "harvest bum," closer around his freezing body and burrows deeper into the spikes of foxtail hay to escape the biting breath of the northwind.

Aye, a bitter lot is that of the great army of migratory workers who follow the lure of the elusive "winter's stake" through the grain belt from Texas to the Canadian boundary. His life is an anachronism; in a modern world, he lives as the savages of by-gone centuries. His food is often prepared in jungle camps, his bed is Mother Earth with the firmament for a canopy and the dew for covering. In inclement weather his abode is a boxcar, or if he is unusually fortunate, a refrigerator car or deserted building. His camp-fires send smoke wreaths into the upper air across a thousand miles of territory, just as in long-forgotten days those of the Pawnee and Sioux sent their streamers floating skyward before the West was "civilized". That civilization was not intended for him, if we can judge from his experiences.

Behind this migration of human beings which promises so little and which is so laden with hardship lies a force even stronger than the natural urges which send the songbirds and the salmon on their yearly journeys. In a world in which the storehouses are bursting with food and clothing, in which enough is produced to feed, clothe and shelter all, a vicious disregard for equal distribution and an insane desire for possessions, which by no stretch of the imagination could be deemed necessary to those who in their avaricious power have grasped them, forces these slaves of the harvest to return year after year to those fields in which they have never yet received aught but misery. This is the sad and strange feature of the harvest migration, and it is, as yet, beyond the control of its unwilling victims.

"BROTHER TO THE OX"

Countless thousands of them have vowed never to again make this gainless pilgrimage but the forces that spur them on are an empty belly and shoeless feet. Economic necessity, that greatest of human driving powers, is behind them, and year after year, the ripening grain beckons, hunger drives, and their footsteps again point toward their season of slavery.

Strange, too, is the fact that in a world of daily increasing wealth, greater civilization and wider culture the number of these miserable migratories is increasing rather than diminishing. In the last two or three years a new addition to their forces has appeared. Formerly the migratory harvest hand was alone, in the sense that he was a single man, unencumbered by wife or children. Now, however, whole families are to be seen on the rainbow chase. Small automobiles, made famous by a certain genius with a remarkable aptitude for coining millions out of scrap tin, now litter the highway throughout the harvest belt, and if the mode of transportation of this new type of migratory is different, their lives on the whole, are much the same as those who depend on boxcars and "head-ends". And the reward for them is just as scant and the misery to be endured much greater than for those who have no dependents.

But he who imagines that humans will indefinitely endure such hardship, misery and privation is expecting the impossible. The following of this mistaken premise has been responsible for the fall of dynasties and empires. And, as the dropping of water will wear away the hardest stone, so the increasing burdens that have been added to the load of the harvest slave have worn something from him. No longer is he satisfied to accept the dictum of those who have made him brother to the ox. No longer does he stand, stolid and stunned, before the powers arrayed against him and which seem ever bent on reducing him to an even lower place in the scale of life. Too long has he carried the burden of the world in meekness and silence and now his back is straightening, his eyes are regaining their sight and already the "whirlwinds of rebellion" which Edwin Markham so truly foretold in his epic, "The Man With The Hoe" are shaking the world.

Slowly, gropingly, as might be expected after years of submergence and slavery, but steadily, daringly even, as he becomes sure of the justice of his demands and of his ability to enforce them, the slave of the grain fields is making known his decision to no longer be driven blindly by those he so long accepted without question as arbiters of his destiny. A new consciousness has arisen in him, suffering has stricken off the bandages that blinded his vision for so long, and his eyes, now that he has learned to employ them, and his brain, now that he has put it into use have shown him that on himself, the food gatherer, depends the magnificence of

# The Farmers and Industry

By JOHN HAYHAND

**The great change that farming is now undergoing makes it a subject of paramount importance. Especially is this true at the present moment, when the harvest time approaches, and agriculture plays a most prominent part in the prosperity of the entire country.**

**The following article points out the nature of the agricultural revolution and its similarity to the beginnings of trustification in the industrial developments of forty years ago. In connection therewith it discusses farmer-labor politics and dwells on the necessity for industrial union organization.**

**As a contribution to the solution of a many-sided problem it will be found both interesting and valuable.**

AGRICULTURE in this country is undergoing a great change. It is beginning to be more like factory industry, from which it was one time held to be separate and distinct. It is developing co-operative societies, banking, farming, export, and other corporations, involving big capital. It tends to squeeze out the small farm in favor of the company and the larger farm. It is developing scientific cultivation and management, all requiring improved, up-to-date, machinery and larger capital outlays.

The conditions in agriculture at the present time are similar to those in existence at the beginning of the great trust movement in manufacturing industry 40 years ago. Then trade syndicates and combinations were organized to remedy the conditions due to competition and overproduction. Then small business men were crowded to the wall and many new forms of corporations took their place. Then the gap between employer and employee widened, as the armies of workers in the trustified plants grew and labor organization, consequently, developed.

In agriculture, overproduction is giving rise to combinations of all kinds. These combinations include the cultivation, selling, financing and exporting of farm products. They aim to restrict acreage, provide markets, both at home and abroad, abolish the middleman, and regulate the labor supply. As in all combinations, the big farmers reap the most benefits; while the small farmers are neither provided for, nor permitted to survive.

### Some of the Combinations

The names of some of these combinations are given in the following list:

American Farm Economics Association; American Association of Commissioners, State Secretaries and Departments of Agriculture; National Grange, American Farm Bureau Federation; Farmers' Educational and Co-operative Union of America; Farmers' National Grain Dealers' Association; National Co-operative Milk Producers' Federation; National Board of Farm Organizations; National Association of State Marketing Officials; Sun-Maid Raisin Growers; American Committee on the International In-

stitute of Agriculture at Rome and the United States Department of Agriculture.

**The census of 1920 gives the number of persons "gainfully employed" in agriculture as 10,953,158. The department of agriculture estimates that since 1920 from 1,700,000 to 2,000,000 persons have left the farms. Congressman Summers claims that, at the present time, 100,000 persons are being starved off the farms every month. But, as it is claimed that the farmers are 25 per cent too numerous, it would appear as if this tendency will continue somewhat longer before it finally runs its course.**

Competition in factory-industry led to overproduction and combination. It led to the concentration of industry into fewer hands; and the creation of great armies of wage workers, or wage slaves, as some prefer to call them. In agriculture, we see the same thing coming up in the company farm, with its few owners and armies of workers. This is particularly true of such farms as those of the Earl Fruit Co. and its many subsidiary companies on the Pacific Coast and the Borden Farm Products Co. in New York state. On these farms the workers are subject to rules and regulations as in the city shop or factory. They are hired and fired as profits demand.

### Cause of it All

The cause of this condition is the necessity to produce cheaply and then more cheaply still. The country that can, with up-to-date machinery, scientific methods, ample financing, and compact organization, produce most cheaply for the markets of the world, will dominate those markets. The farmer with all of the foregoing elements in his favor will win out there as well as elsewhere.

The small farmer has none of these features. He produces at a value that embodies more labor than is socially necessary. That is, his goods are too dear, because he is not abreast of the methods which social development has evolved and made imperative.

His farm is too small to employ modern machinery; and his capital is not big enough to permit its introduction. His methods are antiquated; they are out of touch with the mass production of large enterprise, and he cannot secure ample financial backing or favorable freight rates on that account.

The company farm and the larger farm command all these things and produce, market and sell cheaper, as a consequence. And so the small farmer goes to the wall in the struggle, as did the small industrialist, similarly situated, before him.

There is no way, apparently, by which the small farmer can increase his capital, extend his holdings, introduce machinery and scientific management, secure better financial backing and more favorable marketing and markets. He has to make way for those who possess all these advantages, and who, possessing them, can combine to more advantage still, and thus survive the struggle. And so combination of all kinds goes on apace; while the small farmer leaves the farm for the city.

It is getting to be so that most of the crops of the country are being raised by wage slaves; that is, by the regular farm hand, who is employed all year around, and the casual migratory worker, who is employed at harvest time mainly. The latter comes from the city, to which oddly enough the farmer is going. He is meeting with considerable competition from "auto tramps"; that is, farmers who are traveling with their families about the farm country in autos seeking employment wherever it can be found and obtaining it, at times, at lowest wages possible.

Conditions on the farms are growing scandalous. The migratory families (make note of that, reader: "migratory families"), earn very little wages. Some earn as much as $5 a day; others earn less than $2 a day. Children of tender years, according to government reports, spend long hours in the fields, not only picking berries and hoeing vegetables but also ploughing, working machine cultivators and transplanting. Many of them are younger than ten years.

It is to such conditions, rivaling the sweat shop in industry, that agriculture has fallen, despite its great advances in a scientific and mechanical direction.

From the facts above cited, it is clear that, since the small farmers' troubles are mainly economic, there is no relief to be had from them in poliitcs. What the small farmers need to realize is the nature of economic tendencies. Since these are forcing him into the ranks of the working class he should study and prepare himself for working class conditions and for organization in working class unions. Whether he goes to the city, to work there in the auto, movie, steel, and other industries; or whether he stays on the farm as a hand or as an auto tramp, he needs to join an industrial union. Otherwise, the revolution on the farm will redound not only to his disadvantage but also to that of the workers everywhere, as well.

### The Workers' Duty

And vice-versa, it becomes the duty of workers everywhere, to get in touch with ex-farmers, farm hands and migratory workers and families, and point out to them the need for industrial unionism, not only among auto and other industrial workers; but also among agricultural industrial workers of all kinds as well.

**That the small farmers cannot expect anything beneficial from politics may be seen in recent federal export legislation. This legislation would enrich the Big Five meat packers to the tune of possibly $200,000,000. It will give more ample returns, in the way of profits, to the big farm cooperatives, backed by big financial interests, and the big farm corporations. Such legislation cannot be utilized by the small farmer as he does not measure up to its requirements. He's like the small industrialist, who, despite protection and subsidies, is not big enough to profit from them and so must go to the wall.**

(Continued from page 4)

modern civilization. With this realization has come the determination to make that civilization recompense him for the hardship he endures that society may continue on its upward march and to see that his lot is made more endurable. The harvest slave is becoming a man, with all the attributes that term implies.

Not this year, perhaps not next, but as surely as the sun rises, this new decision of the harvest slave will bear fruit. He knows now that his yearly migration with its attendant miseries and scant returns is not a natural migration. He is beginning to understand the forces behind it and he can see the remedy by and through which it can be replaced by a more sane method of feeding the world. The new vision, seen faintly outlined in the drifting vapors of his camp-fire, is one that will remove forever the necessity of spending his summer months in the burning heat of the fields and his winters in a fetid lodging house on a back street of some city. He can see the harvest of the future being gathered by an eager, willing army of real men, not semi-slaves, proud in the knowledge that their labor is appreciated and reciprocated by toilers in other industries, and that they have at last risen to the full status of manhood.

Failing to give the credit for his awakening to those to whom it is due, would be doing a grave injustice. The suffering of the harvest slave had long ago made him rebellious, but his ignorance and blindness prevented him from using his inherent strength in righting his wrongs. Blindly, madly at times, he struck out, but his blows lacked direction and judgment. His arm has always been strong enough to feed the world, but in defense of himself and his place in the sun his strength was expended without the intelligence needed for victory. His eyes were always on the ground and the world was satisfied to keep them there; real rebellions are never instituted without visions, and visions do not come to him who never sees the stars.

Toiling, straining, eyes blinded with sweat, fingers bleeding from the spear-like beards, at last to his consciousness come a voice that had a message for him. Long it was unheeded, for he was in the very depths of slavery and voices, unless they were demanding more of his labor meant nothing to his sodden brain. Persistently, appealingly, beseechingly, the voice continued until finally, away back in some corner of his brain, came the realization that at last someone was speaking to him, not shouting at him. The message that the voice finally impressed on his consciousness was the wonder-worker that has caused him to awaken. From a whisper at first, dimly heard through the barriers of fear and superstition built up through years of servitude, it grew and grew until it filled his whole mind as the cadences of a massive organ fill every nook and corner of a cathedral.

"Organize," said the voice, "organization will lead you out of slavery. Lift your eyes and behold the world as it is, see the mighty part which is yours in the drama of life. Awaken! you are bound with chains because you are asleep. Strike off your shackles! Ignorance keeps you where you are. Organize and follow me and the world shall be yours."

Doubtfully, in the beginning, half fearful that this was some new scheme to add to his burdens, the harvest slave looked upward and about him. As the voice continued and pointed out the wealth which he had created he understood at last the reason for his slavery and saw the road to freedom. From that faltering start the migratory worker of the harvest has followed his new friend, the Agricultural Workers' Industrial Union of the Industrial Workers of the World many steps upward from his former status. He has learned that in union there is strength and he has become an ardent advocate of unionism. He has never turned back because he has found that organization is the key to emancipation and he has learned that every one of his brother serfs are needed to make his union complete and his freedom certain. With the Agricultural Workers' Industrial Union as a guide he has mapped out winning campaigns year after year and as his education advanced he has seen that there are many more steps to take and that the way will be long and tedious.

He realizes that rebellions are not accepted meekly by those in power and he has already felt the heavy hand of organized authority but his vision of a future in which camp-fires, boxcars, barns and lodging houses will not be the reward of back-breaking, soul-stunting toil, in which he who feeds the world will not starve, and in which no such unnatural migrations as he has made for years will be necessary, keeps him fighting ever onward.

The smoke wreaths of his camp-fires will be seen across the prairies this summer and his rebellions will make spicy news for space writers but he has seen a vision and he knows at last that his destiny lies in his own hands.

There we will leave him, sure in the knowledge that his future is in the best of care and that no matter what the cost or how difficult the way, his vision of a better world will keep him henceforth in the ranks of those fearless fighters of other industries who are also on the upward road from slavery and in whose eyes a vision of a New Society is also shining. With these men and their vision the future of the race is safe.

# The Boy from Washington

By BOB PEASE

**A lumber jack follows the migratory stream eastward, works in "The Long Straw Country," and has experiences that thrill and astound!**

**One of the most vivid and virile tales of the Knights of the Road since the days of Jack London—read how the struggle with economic reality turned the dreaming idealist into a man of determination.**

IT was in the midst of one of those rare, warm, bright afternoons in late October and the sun seemed to shine with a special warmth and brightness on a certain spiked iron railing around the entrance of a certain basement barber shop in the slave market of Milwaukee.

There, leaning against the railing with due deference to its crown of thorns, a tattered, overalled detachment of the army of the unemployed was drinking in the sunlight in great gulps, as tho instinctively trying to capture and hoard as much of it as possible for the cold, cruel months of hunger lying just ahead of them.

And there on the curbstone, gazing at them with a smile, half quizzical, half pitying, stood the boy from Washington!

He seemed queerly out of place in that squalid setting, so straight, so sturdy looking with his square shoulders and level gaze. In his clear grey eyes seemed to be mirrored something of the grandeur of the great, smiling, clean open spaces of the West now dead; and something of the stolidity of his native hills. Also something lying dormant there, something of the dreamer, of the seeker after truth, and much of the poet who can write, should need arise, in burning deeds, instead of words.

Early in the summer of the same year he had been driven from the lumbering district of Northeastern Washington, where he had been born on a stump ranch, and where he had worked in the logging camps for the two years since the natural growth of younger brothers and sisters had made the tiny cabin called home too crowded for comfort and the oldest had to move to new shelter, by a general shutdown of the camps and sawmills, caused, so the daily papers said, by the overproduction of lumber.

Micawbers, Waiting for Something to Turn Up

Idle and Demoralized

Having a little money, plenty of time and his fair share of the adventurous pioneer spirit, he had followed the crowds of homeless, unemployed loggers and had made his way by easy stages in empty boxcars, towards the land of the great harvest. North Dakota, called by the migratory harvest slaves, "The Long Straw Country," or "Big Dick."

The boy encountered many other slaves of all ages, all traveling towards the same goal, and sensed and caught a sort of infectious eagerness to get there and so, longer and longer stretches he traveled and shorter were his rests. Also he learned that the men and boys with whom he traveled alluded to themselves as "hoboes." He found the term pleasing and it gave him a thrill of wickedness to be classified with them for he had read newspaper accounts of "hoboes." But when a sour-faced "shack" called a group of them "bums," he was insulted and hurt to the depths of his being, for he was not a bum! He bought all his meals and clothes and had nearly a hundred dollars yet in his pockets.

No! Emphatically he was not a "bum" and he would never be one; he would die first, as any good American should. He even went so far as to question, in his mind, the Americanism of the "shack" who had called him such a name.

As they neared the eastern Montana line, the talk of his companions drifted to the IWW, or the "Wobblies," as they called them. They told many tales of violence and personal injury, which, they alleged, was suffered at the hands of "the Wobs" in previous years, and said that when a "hobo" got into the "Big Dick," the best way to keep out of trouble was to "buy a ticket" from the first delegate he met. The "ticket," they said "the crazy Wobs" called "a card" but it was really a little red book, and was, when paid for in advance, good for a ticket on all freight trains in Dakota and also good for a meal ticket in every jungle where "Wobblies" congregated!

One old man with a patriarchal grey beard, even went so far as to declare that "the Wobblies" were not such a bad bunch of boys at that. But he was shouted down by the others who protested loudly that "they are too d—n radical" and the boy decided that the majority must be right. When the boy reached "Big Dick" he met "the Wobblies" 'right enough and when he was told that the "card," which the other "boes" had said was good for a railway ticket all thru the harvest, and for a summer's board in the jungles, only cost three dollars, he considered it a good investment and took one at once.

But otherwise the boy was not so lucky. He found that the army of slaves from the west met a larger army of slaves from the east and there were three slaves competing for every job, so the rest of the summer for the boy was a series of long rides by freight and short jobs where the sun was hot, the hours excruciatingly long and the pay surprisingly short. His hundred dollars dwindled away and soon, when he found that the wheat was all harvested and there were no more jobs on the market, he had very little left and was a long way from home.

From time to time he heard the other "Wobblies" kicking, and saying it was the rotten system which made times so hard and then a lot more about Labor and Capital, master and slaves, and other things that the boy didn't quite understand. But when he remembered that the slaves had been given their freedom in Civil War days and that "the Wobblies are too d—n radical" he didn't try to understand.

With the harvest over and the money nearly gone, the boy found it imperative to go somewhere. With his brain fired by some tales he had heard by the jungle fires about fortunes to be had for the making in the industrial centers of the east; of chances for a bright boy to work up and become a corporation head; and strong in the spirit of adventure the boy turned his face towards the rising sun, towards the new frontier of industry and traveled.

Now we find him standing on the brink of the abyss looking down on the wrecks of humanity who have fallen in the mad race of youth with fortune. Eight silver dollars, each with an eagle and a goddess of Liberty to consecrate it, lay in his pocket and idly his fingers clinked them one by one.

Someone plucks at his sleeve and, turning with a start, he sees besides him an Austrian, squat, dwarfed, stunted and twisted in childhood by poverty, twisted and scarred in manhood by industry, with black pits in his face where chunks of coal have one time been imbedded by a mine explosion or even in the course of his regular duties as a coal miner. But now, as he smiles up at the boy, there is a look of wheedling friendliness in his eyes that is pleasant for the boy, who sees beauty even in most ugly things.

"Boy, you like get it goode job?"

"Why, sure!"

"Boy; you got it money? You get it, we eat. I give it you address goode job!"

"All right; come along!"

They enter a Greek restaurant and for the next fifteen minutes no word is spoken and no sound is heard except the rattle of iron knives and forks on the greasy counter. Then the boy obtains an address in Cleveland, Ohio, and hardly knowing which is the winner in the deal, watches his companion disappear in the crowd.

His money is getting low! He must make all haste to the job. He inquires his way to the yards and boards an east-bound freight. Then ensue days and nights of frantic scurrying about in miles of freight yards and long, jolting rides, no longer in friendly open boxcars, but on tops, in gondolas loaded with coal and on tanker platforms.

At last, a friendly open boxcar door! He climbs in, finds some straw on the floor and falls asleep among other forms slumbering in the darkness. The train pulls out with a roar and rattle and thump and the knights of the road are on their way again.

The train rattles to a stop in the yards of Toledo, and two yard bulls, guardians of the private property and rights of the railroads go down the line "looking her over." They see the slightly open door. They open it wider and climb in!

Suddenly a startling beam of light in the darkness and a voice, "Get up, you bums and put 'em up!"

The boy from Washington, not knowing what is happening, sits up and rubs his eyes. The others, more wise in eastern etiquette of the road, are lined up alongside the walls, reaching for the skies.

A vicious kick in the ribs brings him to his feet, and he is staring into the white muzzle of a flashlight and the black muzzle of an automatic! He puts them up!

"Stand over there!" He stands.

One bull keeps them covered with his flashlight and his "rod of iron."

The other "shakes them down."

When he comes to the boy his hands feel the silver dollars.

"We'll take you along."

Then to the others: "Get to hell out of these yards and make it snappy."

They need no second invitation.

When they are gone he turns to the boy and, with a grin, takes over the remains of his harvest stake.

"Now you get to hell out of here; and if you open your yap, we'll 'vag' you."

The boy stumbled away thru the darkness across the railroad tracks and up a bank into the poorly lighted streets of Toledo's slave quarter. On and on he wandered, taking no notice of time or distance.

His mind was in a daze. His whole theory of society was crumbling about him. He had been robbed of his last hard earned dollars by men who, he had seen, wore gleaming stars on their coats; badges of that authority which, to him, had always seemed to mean the protecting power of the America he loved, guarding her sons.

He had been robbed! Also they kicked him and his ribs ached. They had even threatened to "vag" him if he told anyone about it and he didn't doubt that they would carry out their threat. He was down and out, tired and hungry, thru no fault of his own that he could see, and he didn't understand. A dumb wondering look was on his face as the sun rose that morning, but his spirits rose with the sun and after a while he sat down in a doorway to rest and to see what the yard bulls had left him of his possessions. Not much was left.

He found in his pockets only a few broken matches and the little red card of "the Wobblies." He opened it and started to read it for the first time.

"The working class and the employing class have nothing in common." That couldn't be right. Did not all Americans have everything in common? The same country, the same flag, and all the other things he had read about in the district school at home?

And again: "There can be no peace so long as hunger and want are found among millions of working people." That was too much. "Hunger and want among millions of the working people." He knew better than that. He had learned when very young that hunger and want came only to those who were too lazy to get a job and stick

**Using Family Needs to Force Wage Cut**

SOAP-BOXING SEASON IS HERE

**Proclaim Industrial Unionism Throughout the Land, Unto the Denizens Therein, that Labor May Organize and Flourish**

to it. It was too dismal reading for an empty stomach, anyway!

He closed the book with a snap and his first impulse was to fling it into the gutter, but on second thought that he would pass thru Dakota on his way home and might need it again, he put it back in his pocket.

Toward evening, the boy found his way to the railroad yards again and boarded an east-bound freight! There were no "empties" this time; and he sat on the top of a boxcar clinging to the platform. Night came on! A chill wind blew down from the Great Lakes, and seemed to cut him to the bone. His body ached, his hands were numb. Then an icy rain began to beat on him. Terror gripped him. What if he should fall asleep and roll off the car? He had heard of other "boes" who had "greased a rail."

The train ground and jerked to a halt! The boy climbed stiffly down. He wanted to crawl away somewhere where it was dry and sleep; but he dare not. He was hungry and he must make Cleveland and the job on the morrow. He "went over" the train and the best he could find was a "gondola" loaded with fertilizer going from a Toledo livery barn to a Cleveland hothouse to raise out-of-season vegetables and fruit for some millionaire's table.

As the train pulled out the boy climbed up and stood for the rest of the night half up to his knees in the stinking mess, facing the driving rain. At dawn of a cold, drizzling day, he arrived in Cleveland and started in quest of his job.

He showed the address to a friendly-looking po-

liceman, who said he did not know the street but directed him to the police station. Arrived there the boy showed his address and was informed by a blue-uniformed sergeant that no such address existed in Cleveland.

The boy, head down, hunger gnawing at his vitals, stumbled down the steps and slowly, almost instinctively, turned towards the slave market. There he stood hungry, wet, disheartened, almost beaten, a look of dumb misery on his face, and watched the other slaves, now ownerless, like himself, wandering aimlessly about; thousands of them! "Bums," he muttered. "Why don't they work?" And, after a moment, "I wonder if they are thinking the same of me?"

Something caught at the boy's sleeve, giving a metallic click as it came away, caught again and held. He looked around, straight into the eyes of a child. Large brown eyes they were and in those eyes all the dumb suffering of generations of beaten childhood, all the agony of the ages of slavery, was mirrored.

This the boy saw and it made him creep. Cold sweat broke out on him. He had never seen such horrors in eyes before. He looked at the face. It was white and drawn and pinched. The hair on its head was matted and filthy. One bare arm, with crippled hand upturned, was held out to him. The other arm—the boy shuddered—the other arm was off at the elbow! It had never been doctored. The flesh had withered and drawn back from the wound, exposing about an inch of dead, white bone. Thru this bone was hooked a stiff, rusty wire and the other end of the wire was hooked in the boy's sleeve!

The child was about 10 years of age; whether boy or girl could not be told from its appearance. Its only clothing was a neckless, sleeveless smock of blue denim reaching to the knees. Its feet were bare; and there it stood on the cold stone pavement in the icy fall rain.

It spoke in a pitiful, thin voice: "Please, mister; give me a penny?"

What was the boy to say or do? Had he been fuller of years and piety, he might have loosed himself and passed on, saying: "The child is being punished for the sins of its fathers, even unto the thirty-second generation! God's will be done."

Had he been a young Jesus he undoubtedly would have talked to some of the paving stones and turned them into bread and cheese. Had he been a young Lincoln he might have said, as did Lincoln in the chattel slave market: "If I ever get a chance to hit this thing, I will!"

But being only a young lumberjack, the boy from Washington said nothing. He couldn't. For something was in his throat, strangling him! Something as hard and cold as the soul of capitalism! Something as bitter as the tears of labor's orphans wailing in the gutters of the world!

He only gently loosed his sleeve from the hook on the mangled arm and ran, slowly, heavily, blindly. He knew not where he ran nor why. But at last, nearly exhausted, he came again to railroad tracks and to a west-bound freight.

The boy climbed into a straw-littered boxcar and shut the door. Then, in the semi-darkness, he flung himself down on the filthy straw and wept. Mind and body were numb. He only wept into the straw and cried to himself, Why? Why?? Why???

A long time he lay there in the groaning, swaying, car, and his brain was on fire, burning with a fierce, scorching, searing heat, and a crimson flame, red as the blood of labor's dead. Burning! Burning!! Until at last the brain and the spirit were purged of all false hopes and vain fancies and the boy saw the world as it is. There was born of the spirit, the brain and the flame, red hate and understanding!

The boy struggled to his knees and fumbled in his pocket. He brot out a little red card and clasped it in both hands. Then kneeling there in the swaying car, his face lifted, as tho in prayer. Slowly, distinctly, fervently, the boy was speaking:

"I have been a fool. The country that allows that maimed and innocent child, half-naked and half-fed, to stand in its rags, begging the penniless for pennies, while strong men search in vain for work, is not the America I have been taught to love!"

He clasped the little red card closer. "The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people . . . . . ."

He did not say "Amen!" He put the little red card back in his pocket with one hand and clasped the other over his empty belly. Then, seeing the incongruity of his posture he laughed. But it was not the laugh of a boy. The boy from Washington was dead; and the man who had taken his place will not be so easily reckoned with.

The Wobbly Girl who Unwittingly Fell in Love with a Labor Spy. You'll Hate the Tribe More After Doing it.

# "The Dreaded Yellow Peril"

By SYDNEY WEISE

**Some information regarding Japanese exclusion that is not included in the increasing war propaganda directed against the far easterners—Who brought the Japs here and why?—The empire builders and their cheap labor tactics laid bare.**

**To many people over the greater part of the United States the Japanese is a quiet, tireless bellhop whom the fiction writers have represented as being an admiral of the Japanese navy, intent upon securing information concerning the coast guard defenses at Minot, N. D., and Tulsa, Oklahoma.**

**To the Babbitts regarding the Saturday Evening Post and the Police Gazette as the official expressions of "Our Great Americanism," he is the "Dreaded Yellow Peril which hovers so threateningly over California, and is rapidly getting control of the best land in the state." He is taking away the opportunity to labor from the American laboring man. Is lowering his standard of living. Is creating a little Japan right here, and is not intermarrying with the white race. He does not absorb American Culture and ideals and therefore should be stopped from immigrating.**

THE manner of his first coming is not mentioned, and this circumstance, together with his activities since landing could well furnish material from which a novelist could write a tale that will live, without drawing on the imagination.

Had the Jap arrived on these western shores with a blunderbuss on each hip and a cutlass in his teeth, seeking the extermination of red savages possessing gold ornaments; or to trade rum to them in return for furs, he probably would have had the romantic setting which would have entitled his name to a place among the founders of Great American Fortunes.

However, he awaited the invitation of the Empire Builders and other aggressive spirits who desired laborers that would perform a maximum of labor on a minimum of fodder. No doubt James J. Hill had the picture of thousands of these coolies at work with no "talking back" in mind when he made the famous declaration that he'd "make the stiffs eat their blankets." At any rate the Japs arrived in numbers and for a time the extra gangs were composed of orientals. The sawmills had their share—also for a time.

Existence in a boxcar does not include family life and the oriental had no intention of continuing the life of the homeless migratory worker who has built the canals, roads and highways of the United States and now is denied the privilege of riding on them. In California he saw land that would produce crops in greater abundance than that in his native country. He began to transfer his interests to the soil and to bring over the wife and family. So far he was no menace. Was he not developing wild land and raising valuable crops which were handled by the Chamber of Commerce members, and were hauled on the railroads he had built. He was also raising a family which for size "deelighted" the Rough Riding Teddy. The great lawmakers and perennial saviors of the nation wrote no impassioned speeches about the poor white farmer and laborer being competed out of business—no, not then.

Along with his smiling face and busy hands, the little Jap also possessed a brain that worked. He knew that the railroad magnate did not employ him because of his particular type of beauty or that the commission merchants did not bid for his garden truck because they loved him. So he and his fellows pooled their produce and established their own com-

IF THAT BRANCH EVER BREAKS—
GOOD NIGHT FOR HIM!

mission houses, thus saving the middleman's profit for themselves. He rapidly established stores and restaurants, and went into nearly every commercial enterprise from which the whites took their toll.

At this time the weather changed. Black clouds appeared on the brows of the politicians who drew their campaign funds from the captains of finance. "No single women can come here from Japan!" A sort of long distance marriage is arranged and they continue to come. Next "Drive them off the land—the farmers should back that." So it is made illegal to sell land to a Japanese . He leases it. Next it can only be leased for three years. The Jap works a tract for three years and then moves on to another. He is still in business in town. He must be stopped, but it wouldn't do to suggest that it was for the benefit of the white business man. It must be made to appear for the benefit of the laborer who is carrying his bed on his back from one construction job to another, and so the cry is started. However, the white farmers and resident city workers are not familiar with the plight of the stiff, or much concerned. So a sort of patriotic appeal must be made. Wave the flag and tell them about "the destruction of our beautiful state by the Jap." That takes better. So we see an exclusion law passed for the expressed purpose "of saving our western civilization from being extinguished by Oriental Culture." Immediately invitations are extended by some of the lumber companies to the Jap to work in the sawmills. This shows the depth of the mill owners' concern over the plight of the white workers. The Jap declines without thanks—he has been there before.

He is content to stay on his little ranch which he secured before the land laws were passed and when occasion demands he will hire a white farm hand, paying him usually fifty cents per day more than the white rancher pays. He has him eat at the table with the family and take a daily bath in place of the Saturday night tub, customary with the Nordic American. This smashing of an ancient custom is impossible for our "best citizens" to forgive.

Besides this the Jap spends many hours in the libraries which should be employed around a pool table or crap game. He does not make, sell or drink moonshine, nor use or peddle dope. His children are being educated instead of being put to work in factories at a tender age. His women are not inmates of brothels. His home country has had no Admiral Barrys in their navy and no YMCA incidents such as made Portland famous.

Not wasting his time on political platforms, none of his fellows are even mentioned in the Teapot Dome exposures or the Veteran's Bureau revelations. Likewise he has had no part in the making of the California Criminal Syndicalism Laws, and his brothers in Nippon are boycotting California produets until the victims of that statute are released. He has never lynched a "nigger" or burned one at the stake, and he has no Ku Klux Klan to conduct night shirt court martials. He does not break strikes or guard seabs. There are only seven members of his race in the California penitentiaries—all of these for minor offenses—and he does not furnish his quota of the three hundred and seventy-five murders which has been the state's average for several years past.

Does anyone wonder that he does not intermarry with the Native Sons and Daughters of the Golden West?

His race is increasing so fast that at present one child out of every eleven born in the state is a Japanese. At this rate the oriental will in time dominate the land of orange groves and jails. Then western civilization will indeed be doomed to give way to the culture of the east.

Oh, won't that be terrible?

## THE JAPANESE BUGABOO

While from 1910 to 1920 there was an increase in continental United States of 38,853 Japanese, there was an actual decrease of 22,737. Of the increase of 38,853, 29,672 were women and children, most of whom were born here. During the past three years 4,207 more Japanese have returned to Japan than have arrived in this country.

# Farmers and Industry

(Continued from page 6)

It is certain that politics will not stay the crushing effects of farm development on the small farmer. This development leaves him in the background—broke. Nor will polities for the farmer benefit the industrial workers. Three provinces in Canada have farmers' rule; that is, the farmers dominate three provincial parliaments in the Dominion. They have spent this power in modifying and removing beneficial labor legislation, like the 8-hour day for governmental employees. They have done this on the theory that the farmers wouldn't be able to keep their labor on the concessions if conditions elsewhere are made too attractive.

Thus it becomes evident, from the viewpoint of both the small farmers and the industrial workers that only organization for economic purposes will prove beneficial to both in the long run. The small farmer cannot stand up against modern development. He is starved off the farm into the city, or is forced into the ranks of the migratory workers, together with his family. What is there left for him to do, if not to organize, when in the city, with the workers in the industry in which he works? And when on the farm, with the agricultural workers' industrial union, affiliated with the Industrial Workers of the World?

**The farm revolution is making wage workers, or as some call them, wage slaves, of the farmers. Consequently they should realize the fact and get together with other wage earners in industrial unionism. That is the only way in which they can seek both relief and emancipation. That is the only medium through which they can gain independence and liberation once more.**

# Railroad Work and Railroad Workers

By ALONZO WALTERS

**The writer of this article has worked at railroading during the past eight years, in various capacities. He has worked on the section, tamping ties, driving spikes, and handling steel rails. He has worked in the shops, as a machinists' helper, as a shop laborer, a storekeeper, and finally, on the rails as a brakeman and a fireman.**

**In the course of such varied experience, he has, quite naturally, observed many aspects of railroading, especially the inefficient system of organization that the workers have. Involved in the shopmen's strike, and with its humiliating defeat still fresh in his memory, he is in a position to set down a sensible view of craft unionism vs. industrial unionism. This he does in the article below.**

**RAILROADING has always been generally regarded by people not intimately acquainted with it as an extremely fascinating, thrilling and romantic line of work. Many songs have been sung, many tales and yarns have been told, much talk has been heard, by many people in many walks of life about railroad men and their work. From the pig-faced, pot-bellied, chubby old president, who sits in a swivel-chair, cooled by an electric fan, pondering through his cunning and unscrupulous old cranium the most feasible schemes for pulling the next public swindle, or trying to make up his mind which bunch of his slaves it would be most advisable to slash the wages of next, to the office boy, who recounts in his innocent and childishly credulous but ambitious little brain all the numerous stories he has heard about office boys who became railroad presidents—from the very highest to the lowest, railroad men, as a class, are celebrities.**

The country school boy has a sort of deep, mysterious and inexplainable reverence, an extremely intense admiration for railroad men, accompanied often by a secret longing to some day become one himself—an ardent desire to get into railroading, to have the glowing pleasure of hearing at close range the rattle of the mighty iron wheels of transportation, and the glory and satisfaction of knowing that he is acutally helping to make them rattle. Many a young American has undergone the most brain-racking experience of his life trying to decide whether he ought to go ahead and become president of the United States, or give up that pet ambition and become a locomotive engineer.

Likewise many a shy, modest little country girl, in her sweet innocence and blissful ignorance of this mad, crazy old world, has felt a warm flush creep over her rosy cheeks and a romantic thrill rush through her entire being as she sang,

"I'm not goin' to marry any farmer's boy,
Who drives a four-mule team;
I'm goin' to marry some railroad man,
Who rolls his wheels with steam."

However, to those actually employed in the railroad industry, and therefore in a position to know it for what it actually is, there is very little about the nature of the work that appeals to them as fascinating or romantic. As a rule people find very little romance or fascination in working amid innumerable dangers, among people who are ever "knocking" one another, enduring untold hardships, ruining their health by working irregular hours, eating irregular meals and sleeping irregular "naps," all for wages that are pitifully inadequate to provide them with the means of living a decent and enjoyable life, even had they the time and opportunity of doing so.

The prevailing belief among a large portion of our people is that railroad workers are about the most highly and strongly organized of any of the many classes of wage-earners in this country, that their working conditions are ideal, and that the

wages paid them in return for their services are so great that the average railroad worker barely has time during his off-hours to count his money. As one who has worked in a number of different branches, different positions and different capacities of railroading for several years, it is my purpose in writing this article to explode this misleading and fallacious belief, shared by so many people. Greater stress shall be laid in the following paragraphs on the system of organization that prevails among railroad workers than on any of the other topics, for the simple reason that it is always due to the organization or lack of organization that workers in any industry or any branch of industry are successful or unsuccessful in their struggle for a living against the greed of their employers.

Instead of being one of the most highly organized of American industries, **the railroad industry is and always has been an "open shop" industry.** A man may go to work in any department of railroading, and work there all the rest of his life, if he so wishes without joining any labor organization whatever—with the exception of a few roads which, since the shopmen's strike, now have a requirement that all mechanical workers shall belong to a "company union."

Their organizations, such as they have, are, and have always been, more detrimental than helpful to the advance of the workers' welfare. The railroad industry is a typical and vivid example of craft unionism and its futile methods of functioning—craft unionism, in all its uselessness and rottenness, with all its prejudices, dissensions and "jurisdictional disputes."

It is due to that system of organization—or, more properly speaking, DIS-ORGANIZATION, that the railroad workers have suffered all the set-backs, reverses, miseries and defeats that have been suffered by them; it is due to that system that they are in such a miserable and deplorable plight today.

That system has built sixteen different walls, dividing the workers into sixteen different "craft unions"—sixteen different "crafts" and "trades," each with its own false pride, vain egotism and innumerable little prejudices and jealousies against all the other "crafts"—sixteen little pedestals of caste, upon each of which sit the members of that particular "craft," looking down, with sneering contempt, upon those "crafts" that are less fortunate than themselves, and upward with spiteful envy upon the more fortunate ones. From the section men to the locomotive engineers, each separate class of workers is an egotistic, arrogant and disgusting caste, in every sense of the word, having no co-operation and but very little sympathy for any of the other "crafts."

That system is good for nothing but to keep the workers divided and to foster conceit, arroganee and prejudice between the various classes of workers, and even among workers of a single craft. I have before me a copy of the Machinists' Journal for May, 1924, in which I find an article by J. F. Anderson, vice-president of the International Association of Machinists, in which he attributes many of the reverses recently suffered by that organization to the large numbers of machinists admitted into that organization during the period of Federal control; "war babies" he contemptuously calls them. Thus we see here an endeavor on the part of an organization official to create prejudice and ill feeling even among the members of his own organization.

That system of organization is responsible for the fact that the railroad workers have never won a strike of any importance during their entire history. The heads of the various organizations which make up that system have deliberately and willfully brought about the defeat of every effort that has ever been made by the railroad workers to get together and accomplish anything really worth while. They killed the ARU in 1894; they broke the Switchmen's Strike in 1920, in a manner that will be an indelible blot of shame on the darkest pages of the history of craft unionism as long as time lasts; they kept the various classes of railroad workers from pulling a general strike in the fall of 1921; they caused the shopmen to meet with a humiliating defeat in 1922.

Under this system of organization, when the wage slaves in any particular branch of the railroad industry go on strike their fellow slaves in the other "crafts" are left on the job to render whatever and as much assistance to the bosses as is within their power.

And this is the system of organization that the railroad workers have with which to combat one of the most powerful organizations of plutocracy that ever existed in this or any other country. Pitted against the workers is the entire force and full strength of the railroad management, not only on one particular road where they may happen to be on strike, but on all the roads throughout the country, backed by the bankers, the manufacturers, the Chambers of Commerce, and all the other gigantic aggregations and organizations of wealth and greed; with the strong arm of the state and nation, the militia, the army, the courts, and all the other numerous "officers of the law," and institutions of "government"—always held in reserve, ready to be called into action if and when needed. Of course there can always be but one outcome to such an uneven struggle.

Observe some of the consequences:

The wages of railroad workers are lower than the wages paid to men performing the same class of work in any other industry. Approximately 400,000 of them—the section men and shop laborers—are paid less than $3.00 per day. Approximately another 400,000—the shops crafts—are paid wages ranging from $3.92 to $5.76 per day—the latter figure being the wage paid to the most highly skilled mechanics. Even the mighty locomotive engineer receives less than $8.00 per day, for all his responsibility, all the exposure which he must endure, all the risks he must run and all the dangers he must brave.

(Continued on page 26)

# Readers Boost The Pioneer

LISTEN to what the Marine Worker, of May 15th, has to say about the Industrial Pioneer: "The May issue of the Industrial Pioneer is an unusually good number. **It is chockfull of interesting articles about the labor movement.** An article of exceptional interest to MTW men is 'Oh, For the Life of a Sailor.' Be sure to get a few copies of the Pioneer before going to sea."

*

To this add the praise of E. H. C., Pittsburg, Pa., as follows:

**"The Pioneer is certainly the very magazine that every worker should read. It is getting better every day in every way. May the good work continue upward and onward."**

*

And then listen to this from R. H., Denver, Colo.:

"The Pioneer for June was fine. I have not missed an issue and I would not know what to do if I should miss one."

*

**Card No. 365,393 writes in this strain from Casper, Wyoming:**

**"I wish to congratulate you on the success you have made on the Pioneer. I hear nothing but praise for it and am glad to hear that you are back on the job again."**

*

H. G. W., Oakland, Calif., joins the swelling chorus in this wise:

"I understand just how hard you people work to turn out the Pioneer. I think you always succeed so splendidly. The May Day number was a good one from cover design to the last page. I wish you and every one of the staff continued good health and success."

*

**From the Sacramento, California, county jail, G. H. writes:**

**"Fellow workers here in this can are sure a bunch of boosters for the Pioneer. They say it can't be beat as an industrial magazine. With more power to you, for a bigger and better organization, and more education for the workers."**

*

The Pioneer wants more boosters, not only in the can, but wherever workers are employed, live, congregate, assemble in meetings, and otherwise move and have their being. The Pioneer needs advertising; it needs circulation. It can get both if you pass your copy 'round among your friends and fellow workers. Send for sample copies; we'll help you, too.

**Get your fellow workers interested. Call their attention to the articles on unemployment; on the danger of commercial wars; and on the many other important subjects of working class interest. Tell them of its propaganda for industrial unionism, and its many other organizing features. Tell them of its pictures and its stories from working class life. Get them to know the Pioneer and they will want to read it.**

THANKS BLOCK, I'LL HAVE SOME INVESTIGATORS TO LOOK THEM OVER!
WYO. OIL INTERESTS
MR. DOUGH, I FOUND A COPY OF THE PIONEER THEY ARE TRYING TO GET A LOT OF WOBBLIES INTO OUR OIL FIELDS TO ASK FOR A SHORTER DAY' MR DOUGH I ASK YOU, WHAT ARE WE GOING TO DO IF WE HAVE TO LAY 'ROUND 16 HRS?

## NOSTALGIA

By GENEVIEVE LOUISA LYNCH

[This little poem, descriptive of the homesickness of the farmer driven off the farm into the city of Chicago, is timely. It fits into this special agricultural workers' number very appropriately.]

At Sixty-third and Halsted Streets
All night the noises ebb and flow;
Like a great swinging pendulum
The people come, the people go.

One knows not if the moon is full,
One never sees the evening star;
But all the lurid street-lamps flare,
And trolleys pass with clash and jar.

And in a hoarse and strident voice
The newsboy calls the day's bequest—
A bank's door closed, a girl found dead,
A politician laid to rest.

But through the solemn woods at home
The katydids and crickets shrill,
Persimmons ripen with the frost,
And sumach flames on every hill.

# James P. Thompson

**Famous as an IWW orator and prominent in 1912 Lawrence strike, is now on a speaking tour taking in cities from coast to coast.**

**Thompson is speaking under the auspices of the General Defense Committee. His subject is "The Prison-Shadow on Labor." It discusses the Centralia Armistice tragedy, and the long series of persecutions of IWW members under the Criminal Syndicalism law of California and other states.**

**Thompson will speak in Chicago, Ill., on July 4. From there he will proceed eastward, by way of Detroit, July 6; Cleveland, July 7; Buffalo, July 8; Schenectady, July 13. New York, Philadelphia, Boston and Worcester dates will be announced later.**

**Thompson opened his tour at Spokane, Wash., under most auspicious conditions. Despite the revoking of a permit for the use of the Lewis and Clark high school auditorium, he spoke in the church there before an audience that packed the main floor and balcony. Sentiment was good; collection liberal. He reports good meetings all along the route. Help to make his coming meetings also successful.**

**Other cross-continent tours may also be arranged.**

## "OF COURSE THERE'LL BE ANOTHER WAR"

In the opinion of the Illinois Manufacturers' Association, as voiced by C. A. Livingston, assistant to the president, there will be another war. He spoke in the La Salle Hotel to the National Aeronautic Association. "We have," he added, "some pacifists here in Cook County, but, of course, there will be war."

## OVERHEARD AT THE PICNIC

1st Speaker—Are you a Finnish IWW?

2nd Speaker—No; but I am an IWW to the finish.

# A Jest

By LISA

OLD Lady Life has strange gifts
In her rag-bag carry all.
You can hear her cackle indecently as she hands them around.

There is an Italian man—
His name is Bartolomeo Vanzetti.
He has a round face, and genial drooping mustache,
But his eyes are gaunt with love
For that Old Harridan.
Mostly he is sober, but when he smiles
A thousand sunbeams dance a jig around him.
He is a man who hates all moneyed things.
Joy comes to him through velvet, starless nights
And yellow days;
Through those, his masters first, and now his friends,
He served in solitude—
Karl Marx, and young Rousseau,
And Tolstoy, Dante, and Garibaldi
And many hundred others.
Joy comes to him through teaching brother-love
And freedom to those slaves,
Whose slavery tears his heart.
He has no hate for little things
Like men and gods—
But most, most bitterly he hates
That ceaseless, grinding mill
That some call capital and others greed—
That grinding, grinding, grinding, night and day
Crushes those men he loves to nameless dust.
His life was crowded out of time for love
Of women.
But children used to crawl upon his back
To tweak his hair, and like a bear
He'd growl and shake them off
And they would scream with laughter and climb back.
Sometimes he was a laborer, a cook,
A dish wiper behind a dirty bench.
He fished, he was a porter, kept a store,
And times he roamed about from place to place
Just living.
A dish of raviola and a not too good cigar
Made Plato all the sweeter
To Vanzetti.

Wouldn't you think that shameless Old Spinster
Would be generous to a man like that?
She cackled indecently and pawed through her rag-bag carry-all
Then she handed out a conviction of
Murder in the First Degree
For a particularly bloody business.
The Old Lady has a wry sense of humor.

# The Causes of Unemployment

By JUSTUS EBERT

**An address delivered at a meeting of unemployed, held at Moose Temple, South Bend, Indiana, May 31st, 8 P. M.**

## INTRODUCTORY

**South Bend is the second largest city in Indiana. About 100 miles east of Chicago on the Lake Shore railroad, it is a typical industrial center, with its many problems of unemployment and organization.**

**It is here the Studebaker Bros. began the manufacture of farm wagons at a crossroad some 60 years ago; and, after various expansions and changes finally became the Studebaker Auto Corporation. The latter has its main plant at South Bend and employs approximately from 10,000 to 14,000 workers there, as conditions demand.**

**It has always been the policy of the corporation to employ men who became home owners on the installment plan. This has tended to make South Bend a city of home guards. A home guard is one who guards his little home against anything tending to prevent installment payments or its upkeep in other ways.**

**As a result, home guards are afraid to join a labor union for fear of discharge; and, for the same reason, submit to wage cuts and other indignities without protest.**

Last February the Studebaker corporation inaugurated a series of drastic cuts in piece work rates. Some of these cuts were as high as 70 per cent. The employes, already hard worked, were blandly informed that they could make up the difference by increased output.

Some of them, however, called on Metal Workers' Industrial Union No. 440, to come to South Bend to organize in protest against these extreme reductions. "Four-forty" responded and some Studebaker employees were organized into the South Bend branch, as a result.

Handbills announcing meetings were circulated in the plant. The foremen took notice of the agitation and the superintendent became interested. And on the heels of the activities described, there came a restoration of 30 per cent in some of the highest cuts; this concession is attributed to the work of organization, thus barely begun.

Recently the Studebaker plant has all but completely closed down. Overproduction is said to be the cause. Employes say that even floor space in departments not devoted to the purpose is used to store autos in; such is the surplus production. This has affected organization in the plant adversely.

In addition to the Studebaker plant, the Oliver Plow Works and the Singer Sewing Machine Co. are also located in South Bend. At this writing, the former, with 3,000 employes, is also almost shut down; though conditions in the latter, with 4,500, are somewhat better; though also bad. It is estimated that between 13,000 and 15,000 workers are idle in South Bend.

For a city of about 90,000 population, this is a serious condition. The big stores complain of a drop in business. Small retailers talk of selling out; and the workers who are not tied down are seeking employment elsewhere. Nevertheless, there are many South Benders who believe that this condition will only be of short duration, and that soon the plants will be in operation again.

With the exception of some building trades, South Bend is almost wholly unorganized.

It is amid such conditions that "440" is pushing industrial unionism and holding unemployed meetings. It is amid such conditions that the following address was delivered.

## WHY UNEMPLOYMENT?

THE subject of unemployment is a very important and far-reaching one. It is the symptom of a deep-seated disease, that is attended with many very grave complications.

Unemployment affects not only the wages, hours, conditions and standards of living of the workers in South Bend and elsewhere, but is also reflective of developments that may ultimately affect the peace of the world and end in another world-wide war, worse than the one that has recently afflicted civilization.

It is therefore necessary that we give the subject our serious attention, for not until we realize its profundity will we be able to grasp its significance and act accordingly.

What is unemployment? Every worker knows what unemployment is. It's the loss of a job. It's the lack of work. It's idleness without wages, or the wherewith to pay the taxes, rent, food, clothes, light, medicine and other bills of the family. It means, if long continued, destitution and starvation for multitudes.

Just now many, very many, thousands of workers are unemployed in every industrial center in the land. Steel mills, auto plants, open hearth furnaces, electrical equipment manufacturing works, textile mills, shoe factories, iron foundries, in fact almost every kind of industrial enterprise, is laying off employees. So are the railroads and the mines. The railroads alone have laid off a quarter of a million employees since last August.

During the past week, Chicago newspapers reported that industry had slowed down 16 per cent, as a whole; while some specific industries, like the steel industry, for instance, were operating only 65 per cent of capacity.

It is this wide-spread laying off of employees that gives rise to these large numbers of unemployed and to the unemployment now so general.

But let us ask, why these layoffs? Why this curtailment of industry; this terrific reduction in capacity production Why this abnormal condition of affairs on all sides, regardless of section, or state or city?

In answer we are told many things. For one thing, we are told, that this is a presidential year; that unsettled conditions always prevail during presidential years, and that industry always slows down pending the results of election. Some also contend that unemployment is part of an attempt to influence election results in favor of big business.

If the latter is the case, then it must be confessed that the democracy which is said to rule this land is in a decidedly perilous condition; is, in fact, dead and buried.

But the causes of industrial curtailment are undoubtedly not of a political nature. They surely are not of an anti-Republican nature, or such as would threaten the overthrow of the present national administration. The administration is decidedly conservative and though it is torn by discreditable exposés, it in no way threatens the safety of big business. Thus there is no sound reason for desiring its undoing by upsetting industry and business in general, thus bringing such pressure to bear as will lead to its defeat and overthrow.

Nor is there any danger from the Democrats. They are as much like the Republicans as two peas in a pod. And as for the third party movement, that is not strong enough to unseat the Republican or Democrat parties, nor do harm to both.

For these and other reasons which will develop later on, we may dismiss the argument that unemployment is due to politics. Politics do not cause unemployment, especially the dominant politics. Had there been a different brand of politics likely to gain federal control to the injury of big business, the argument might have been true; but as no such danger threatens we must conclude that there is nothing to this argument; that there is nothing to support or sustain it.

As a consequence, we must look elsewhere than to politics for the cause of curtailment, layoffs and unemployment. We must dig deeper, much deeper, in fact; for politics are only reflections of industrial conditions instead of vice versa.

Some years ago President Harding appointed a commission to find out ways and means to end industrial curtailment and unemployment. It was recognized that business, or industry, is affected by alternating periods of good and bad times. It was the duty of the Harding commission to study these so-called business cycles and to abolish them, if possible.

These facts are recalled in order to make more evident still, if possible, that unemployment is not political but periodical and consequently it makes no difference which party is in power; it is bound to come and come it will, in spite of them all. We had unemployment and hard times in 1913-1914, which were not presidential years, and when President Woodrow Wilson was in office. We had them again in 1921, another non-presidential year when President Harding was in the White House. And now we have them again, in 1924, under President Coolidge. Politicians may come and politicians may go, but unemployment and hard times are still with us.

What, then, is really the cause of curtailment and unemployment?

Overproduction, comes back the answer, just like that! The mills, auto plants, etc., produce too much and, as a result, they must be shut down until their surplus stocks are disposed of.

All this no doubt is partly true. There is no doubt that the industrial equipment of this country can produce more than is required, or than can be bought and paid for, and consumed. But why is this so? Why is this the case?

The Secretary of Labor, James J. Davis, cites some facts tending to show the overdeveloped nature of production in this country; a production whose capacity is simply overwhelming. Says he:

"Some industries were so overdeveloped during the war that nothing can be done to warrant their full-time operation in peace-time production, since such production could not possibly be marketed either at home, or, at present, abroad.

"The bituminous coal industry is both overdeveloped and overmanned. They are capable of producing over a billion tons of coal a year, which is about twice what we consume.

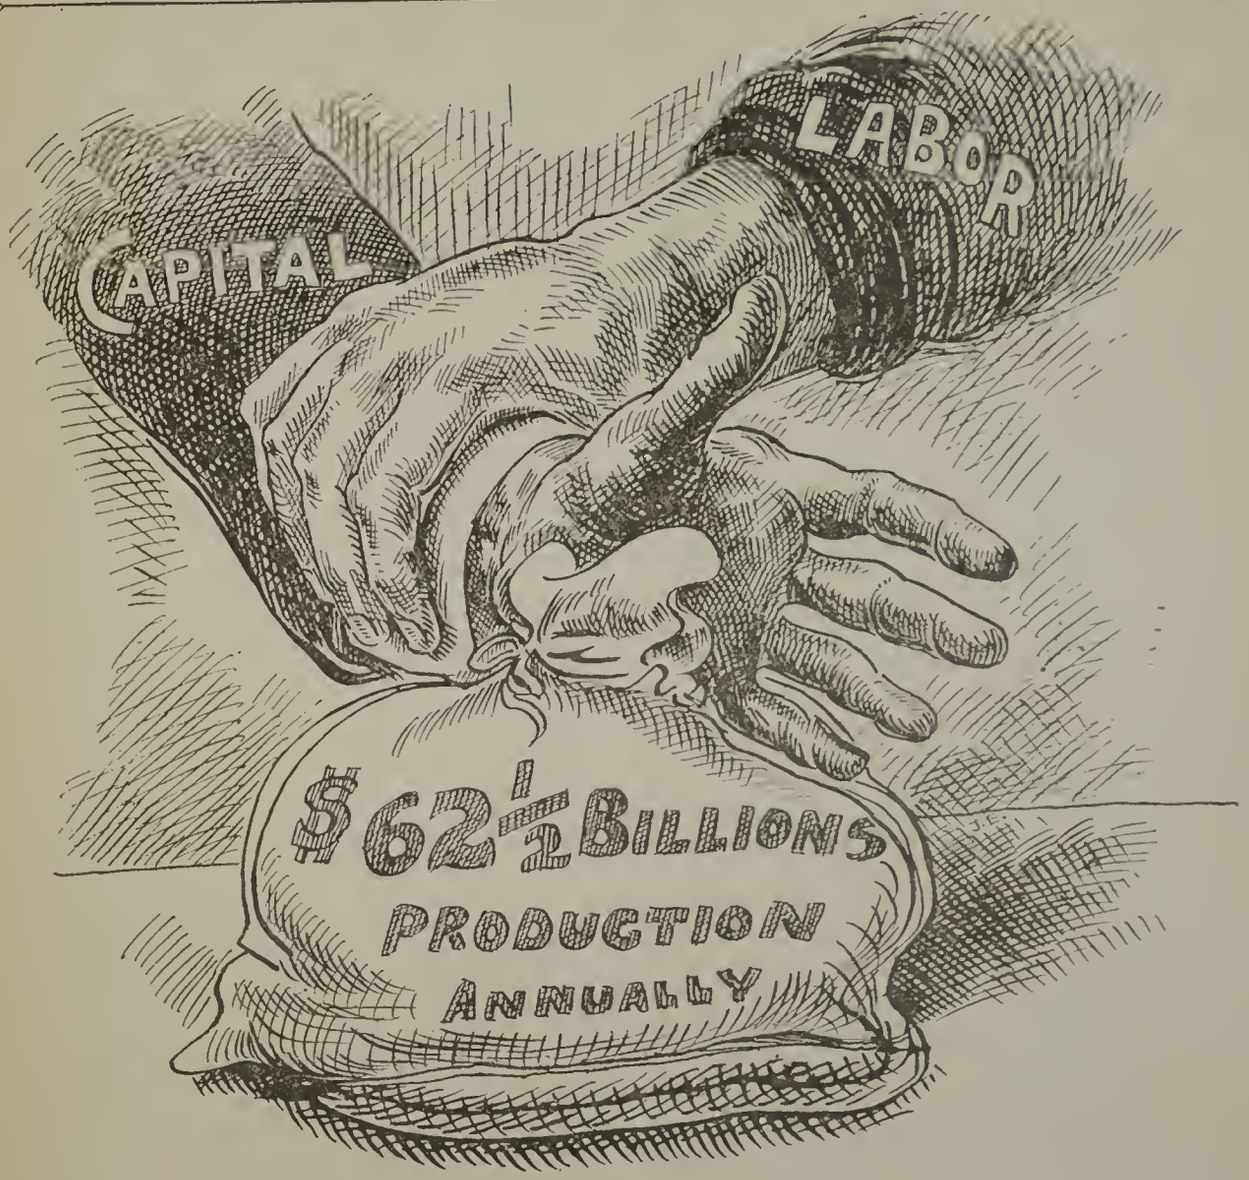
"We can produce in seven months all the iron and steel needed for a year, and if all the plants were made as efficient as our best plants, our steel and iron requirements could be produced with one-third the men now employed.

"In the window glass industry the hand blowing factories seventeen weeks out of the year, can produce all the window glass than can be sold; but if the machine window glass plants were to decide to operate at full capacity 80 per cent of the time there would be no hand blown window glass factories.

"In boots and shoes we have a capacity of 758,000,000 pairs to produce a salable product of 325,000,000. If all shoe factories would do what Endi-

# HANDS OFF!

**WHEN LABOR ORGANIZES TO GIVE THAT COMMAND, UNEMPLOYMENT AND WAR WILL BE NO MORE**



cott-Johnson is doing and get 12 pairs of shoes per employe per day, 25 per cent of the men now employed in the industry could produce all the footwear we need."

We might go on multiplying these quotations from Secretary of Labor Davis. They go to show once more that politics have nothing to do with unemployment. No matter who is president, whether Democrat or Republican, Farmer-Labor or Communist, as long as the industrial equipment of the land is overdeveloped, overmanned, and its products underconsumed, we will have overproduction and unemployment. Under the circumstances, they are inevitable, no matter which party rules.

Despite this, let us go a little deeper into this phase of our discussion. Let us seek to find what is at the bottom of this vast overdevelopment, with its vast overproduction. Why is there underconsumption? Why is there not as much consumed as there is produced?

Has every family in the country got an auto? Has every small storekeeper and business man got a motor truck? Has every farmer got a tractor and up-to-date equipment? Has his wife and all other housewives got an up-to-the-minute sewing machine, wash machine, or any of the other thousand and one electrical equipments needed for household work? Are there no ragged, badly shod men, women and children in need of better clothes, footwear and other wearing apparel, including hats, ties, shirts, underwear, etc.? With so many shacks, slums and furnished room houses to be seen on all sides in the

big cities, has the limit for cottages and apartment houses been reached? Is there no more need for good roads and other internal developments? Are the railroads supplied up to all requirements with rails and equipment? In brief, what's the matter with consumption that it does not keep pace with production? Why is it that for every dollar's worth of value produced there is not another dollar of value in wages wherewith to buy and consume it?

When we answer these questions we will learn why so many are unemployed and why it is that industry is overdeveloped, overmanned and overproductive, regardless of the political party in control, or seeking to secure control. We'll also learn some other things, such as the cause of imperialism, war and so on .

Let's begin with some bank figures. Bank figures, as a rule, are in keeping with the Volstead amendment. That is, they are very dry. Nevertheless, like some of the products of the wets, brewed despite the amendment, they are also very illuminating and instructive, if not destructive of myths and fallacies.

Acording to figures published by the National City Bank of New York, the largest bank in the country, production in this country in 1919, amounted to $62,500,000,000. Of this vast amount, $10,000,000,000 was paid in wages.

Now then, just think that over. Let those figures sink into your head. Here are some 30 or more millions of wage-earners in this country getting only one-sixth of what they produce in wages. Under the circumstances, how can they buy the other five-sixths and consume it? And where do the other five-sixths go to?

They go to the owners of industry, the capitalist and ultra-capitalist class; the men and women who own and control the big corporations—the strategic capital—of the country. They live in wasteful, extravagant luxury, owning many residences, in various parts of the country; sustaining great hotels and pleasure resorts, like Palm Beach; traveling in palatial autos, Pullmans and sumptuous steamships; and dissipating their excessive returns from industry, in a large number of other ways, many of which are lawless and degenerating, a la Harry Thaw.

They also reinvest part of these excessive returns in more enterprises. For, try as they may, they cannot "blow in" all of them. So back into industry they go, in the form of new capital. That is, to the already overdeveloped industrial equipment of the country they add more equipment. And to the overproduction already in existence they add more overproduction. Thus we come to have overdevelopment, overproduction, underconsumption and no work.

Now consider what would happen if those 30 millions or more workers got another ten billions of the returns from industry that now go to the comparativcly few capitalists.

Or consider what would happen to them if their hours were cut in half and 15,000,000 more wage workers were thereby added to the pay roll!

With another ten billions of dollars in their pockets, the 30 millions or more wage workers in this country could double their purchasing power and thereby consume twice as much as they do now.

With their hours cut in half, they could add 15,000,000 more workers to the pay roll and thereby increase purchasing power and consumption in the same proportions. In brief, with increased wages and reduced hours, paid for out of the values expropriated, misused and misinvested by the capitalist class, the 30,000,000 or more wage workers in this country could set industry a-humming, create a demand for labor and bring prosperity back to all of us once more.

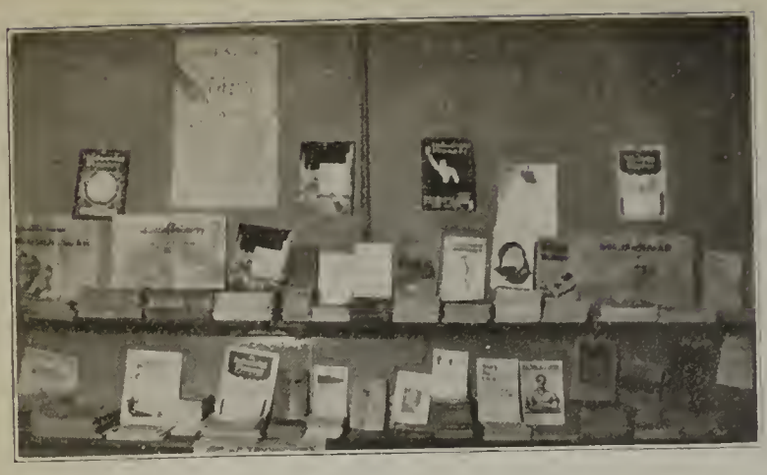
But to increase wages and reduce hours requires intelligent organization on the part of the millions of wage-earners. Employers, as a rule, don't care about the individual worker. The individual worker can be easily replaced. Not so, however, the armies of workers employed in industry according to the requirements of industry. They are a factor that must always be reckoned with. This is shown in the great care taken to maintain and retain their loyalty and devotion. It is shown in every big withdrawal of labor from shop or plant, pending the settlement of grievances. Then heaven and earth are moved to get the workers back on the job, offering every kind of bait, promising concessions and otherwise cajoling or intimidating them.

Intelligent organization of the workers in industry, according to industry, is just what it says. It means the putting aside of trade, color, race, religious or other distinctions in order to create a solid organization. It means organization just as the workers work. All the auto workers in an auto plant organize that plant as auto workers. All in an agricultural machine plant as agricultural machine workers. And all combine together in a metal workers' industrial union, there to unite with the unions of other industrial workers, similarly organized.

This is the day of big scale organization. Wherever you look in industry, you see big corporations, big banking groups,—big enterprises of every kind. These create big production, big underconsumption, big problems. They can only be offset and counteracted in all their evils by a big labor organization, proportionately conceived and carried into practical execution. Such labor organization is industrial unionism. It organizes the workers according to industry instead of trades; and for the emancipation of labor, as well as its improvement under the present system.

Either the workers must exert themselves to get more wages and less hours, by way of industrial unionism, or else they must prepare to meet more serious problems, indeed.

As the first of our quotations from Secretary of Labor Davis shows, peace-time production "could not possibly be marketed either at home, or at pres-



Literature and Newsstand in Hall, New Orleans Branch, Marine Transport Workers' Industrial Union. Increase Them Everywhere!

ent, abroad." That is, conditions are deemed so bad as to make overseas trade impossible of very great expansion.

Nevertheless, despite this contention by the Secretary of Labor, there are men prominent in the world of capital who advocate the seeking of more markets outside of this country; and who, to this end, would lower wages, lengthen hours and reduce the standard of working class living here.

We all know what this means: it means war: war not only on working class conditions at home, but war on other nations abroad.

President Woodrow Wilson in his famous St. Louis speech, said that the cause of modern war is commercial rivalry; and we know that commercial rivalry is born of overproduction and the need for world markets. And so, we appear to be facing another great crisis, not only industrial but international as well.

The markets of Asia, especially those of China, with its half-billion population, are among the biggest possibilities in the world's markets. Already the leading newspapers of this country bristle with intimations of the necessity for a war with Japan, who seems intent on a monopoly of China, if possible. Immigration discrimination is believed by many to be only the beginning leading to this deplorable end, namely, war between Japan and the USA.

Under the circumstances, which is it that labor prefers, greater wages and more markets at home, or war and destruction abroad, with all that that program implies?

**More wages, less hours and peace at home or lower wages, longer hours, commercial rivalry and war abroad, such are the problems that overproduction and its evils create.**

More wages and the increased consumption of US production on the North American continent, have many friends to boost them. Even among conservatives it is realized that the tens of millions of wage workers in this country provide the very best market for its products. They accordingly, favor increased wages and then more wages still.

Mr. George Branting, writing in "Wall Street Magazine," declares: "A liberal economic viewpoint will indicate that the higher the wages, the greater the spending power and the more firmly secured our economic position. The safeguard of this nation does not consist of holding wages down but rather the reverse."

Thus, labor's slogan should be "More wages, ever more wages," until it gets all that it produces; with the result that it will be able to consume it all.

And likewise with hours. The best scientific thought, like that expressed by Steinmetz, the electrical wizard, for instance, sees a four-hour day coming. So does Edison; and more recently so do modern industrial engineers.

The four-hour day in the near future was predicted by Arthur B. Jones at a "Human Engineering" conference in New York City, which was attended by 150 delegates from 13 Eastern colleges. Jones explained that the present output of industrialized concerns, if properly systematized with due regard to the workmen, could be produced in half the time it now takes.

Let us organize industrially then, for more wages and less hours. Only by means of industrial unionism will the workers get these immense advantages and be in tune with modern progressive tendencies. The workers that are unorganized are unheard and unsung. They are oppressed, enslaved and destroyed.

So let us, as industrial workers, organize. Let us go forth from here to proclaim to our fellow workers, the necessity for more wages and less hours, in order that we may be placed in a position to get rid of overproduction and provide ourselves with more employment. Let us impress them with the necessity of getting together in order that we may be factors of importance in modern affairs and not merely dumb-driven cattle.

Above all, let us build and circulate the workers' press. Let us place ourselves in a position to be heard through our own organs in our own way. Let us place our program in print for the consideration of our fellow workers everywhere and to the end that our cause may grow and triumph throughout industry,—all industry.

Rally round the Industrial Union. Organize industrially.

All for one and one for all.

Organize, organize before it is too late.

# Railroad Work and Railroad Workers

(Continued from page 16)

The railroad workers are subjected to a more rigid discipline, more humiliating rules of order, than perhaps any other class of workers in civilian life. Pick up a book of rules and read some of the rules governing the eonduet of railroad employes. They read more like the regulations of some kind of military establishment than the working rules of wage workers in one of the supposedly most highly organized industries. And, to eap it all, they are constantly dogged and spied on by "railroad detectives," finks, stoolpigeons and divers other species of vermin in human shape that ever infest their midst.

In the meantime, while this pitiable state of affairs goes on—while railroad workers who have always been "union men in good standing" are suffering from wage cuts, lay-offs, and other sueh reverses at the hands of the railroad kings—Grand Chief Warren S. Stone, of the Brotherhood of Locomotive Engineers, eontinues to establish banks and operate "yellow dog" coal mines; William H. Johnston, president of the Maehinists, goes ahead with his plan of turning his organization, and the men whom he has the DIS-honor to MIS-represent into an adjunct of "effieiency" and "eo-operation" to the railroad corporations, whenever and wherever he can get the officials of a railroad eompany to listen to him; the infamous and stinking Bill Lee, of the Trainmen, watehes and listens, with both eyes open and both ears stuek up, for an opportunity to break another strike—and all the other officials of all the other "organizations" are doing likewise.

How long—O how long—are the railroad workers going to put up with this rotten, abominable and ineffieient system? As long as it exists—as long as the workers eontinue to separate themselves into organizations of CASTE and PREJUDICE—as long as the members of one "craft" eontinue to bind themselves by "saered agreements" to seab on the members of other crafts—as long as they eontinue to allow themselves to be thus divided and disrupted—just so long will their neeks be held tight and fast in the strangling yoke of industrial bondage to tyrannizing autoerats.

Railroad workers, one and all, whether you are yet beginning to realize it or not, you have only one great common interest, namely, better eonditions and a better living out of life in return for your labor. It matters not what you may be doing —whether you are a section man or an engineer, a coal shoveler or eonductor—you are all equally interested in one eommon cause, involved in a struggle with one common enemy, suffering from one eommon injury and affliction—all of you and all of us. Why not then, be bound together with the bonds of one common sympathy; why not tear down the many walls of craft unionism that have so long divided us, and under the glorious and courageous banner of INDUSTRIAL UNIONISM, press forward, eonquering as we go, into our very own.

Railroad workers, a new world unfolds itself to our view; a world of security, prosperity and peaee; a world where envy, hatred and greed are not; a world of brotherhood, fraternity, fellowship, love and truth; a world belonging to LABOR, and where naught but LABOR counts. Shall we go? Railroad Workers' Industrial Union 520, of the Industrial Workers of the World points to the only safe and sure way for railroad workers to travel, if they wish to get there.

# O Servile Slaves!

MORTON KOMINERS

SERVILE slaves of industry,
Do you not long to be free?

Who is it that the rich soil tills,
Who builds them and who works the mills;
If you had courage and were brave,
Would you still be a servile slave?

You work long hours in the mines,
Meanwhile your boss in plenty dines,
While your wife cleans his tainted clothes,
Against a grindstone is your nose.

Servile slaves of industry,
Do you not long to be free?

You feel the furnaee's hot breath,
Within each steel mill lies your death,
Aside each eauldron you must bake,
Oh, Slave, when will your spirit wake?

Whose brain is it that guides eaeh tool?
It is your brain, submissive fool;
You bear eaeh wrong without appeal,
You kiss the boss' iron heel.

Servile slaves of industry,
Do you not long to be free?

When from eaeh day's hard work you ereep,
Your only solaee lies in sleep,
You work and don't know where you're at,
Just for a dirty autoerat.

Then when you finally sueeumb,
Within your coffin, still you're dumb;
Dumb as you were in toilful life,
Dumb as you were in servile strife.

Servile slaves of industry,
Do you not long to be free?

# Industrial Unionism in Building Industry

By DEL. B4-11

**How it appeals to the various crafts in the East—Workers alive to trade union's weaknesses and corrupt officialdom—Oppose color line also.**

THE question of organization among the industrial workers of the eastern section of the country is often raised. In eastern industries there are millions of exploited slaves in the factories, shops and mills. The greatest part of them are working for starvation wages. Something must be done to get these workers to realize the necessity of organization.

As a building construction worker, employed in the great metropolitan district of New York City, with its ten or more millions of inhabitants, it will be my purpose to say something of this situation and the way to remedy it.

"Yes, it's very good. I feel it is the right kind of a union! But the 'organized' building tradesmen cannot comprehend the necessity for it, because they belong to various trades unions, which unions they believe are upholding their wages as well as reducing the hours of the workday."

This is the consensus of opinion about industrial unionism heard among the workers in the building industry inclined to think some; at least here in New York city and vicinity. And there can be no question but that the above ideas exist among the building workers. Some of them believe that their conditions are so good that they need no betterment. And with others the wages are supposed to be so high and so great that they don't know how and where to spend them. But this is not by any means actually so, as there are thousands of families of building workers that are daily deprived of the most needed necessities of life, because thousands of them are in the army of the unemployed; while the masters' dailies are picturing the wonderful prosperity in existence in the building industry at the present time. (It may be stated that prosperity has run amuck, but it has done so mainly among the contractors, material dealers, jobbers, real-estate speculators and the like grafters, who are always ready and willing to suck the life blood out of the workers by any and all means.)

Still another fallacy is that of union control, so-called. We hear a great deal about it. By union control we understand the control by the union of every man on the job, regardless of occupation. When this matter is analyzed according to the facts we find that on many supposedly union jobs, there are men working in all occupations who never belonged to any union but who, through the boss, hold their jobs by various means, as well as by tipping the union delegate. And, by the way, the delegates seldom speak to any of the union men. They usually visit the boss, who often stands with his back to the delegate and his hands behind!

The master class, of course, with the help of their various kind of union tools, have realized the above facts. They are certainly keeping pace with the situation as well as keeping the slaves thinking on the lines that are of benefit to the master class. There are the theaters, movies, newspapers, magazines, and books of a thousand and one different kinds that keep the workers busy thinking on the lines suggested in and by the masters' organs—when they think at all!

### Craft Unions and Race Lines

Not only are the craft unions helping the employing class to keep the workers in ignorance but they are creating hatred among the workers towards each other, especially so on national and color lines.

It may be interesting to mention an occasion where, on "a union job" a bunch of "union carpenters" threatened to strike when the foreman hired two colored carpenters. And mind you, at least one of these colored carpenters was a "union carpenter," belonging to the same brotherhood of carpenters and joiners as the brothers that they were going to strike against if they were put to work. This was done regardless of the colored men's protests and explanations of being members of the same union.

The colored men had to look for another master.

Perhaps, where the "union carpenters" are not agitated so badly by the color prejudice, or the fear of the boss is not so great in them, they haven't the courage to object against whatever the boss and

the "union" delegate decide is final on color lines.

This is the kind of unionism the "great A. F. of L." is composed of; there is no doubt, however, that the great majority of the workers in the craft unions are honest and well meaning. Yet that does not justify the existence of craft unions for the workers' benefit.

### Contentions of the IWW

We contend that even if the officials and delegates of the craft unions were ever so honest, and even if the jobs were strictly under the craft union control, that such unions are wornout, and grown powerless at the point of production. The points we make against them are as follows:

1st: Wherever the officialdom dictates in union affairs and the job conditions of the workers, there the workers lose out.

2nd: Wherever the workers are divided into 16 or more unions in any one industry, there the bosses win out.

3rd: Wherever time contracts are signed to guarantee the boss a certain amount of labor power for a certain period of time, there is a condition absolutely detrimental to the workers' interest.

In explaining these "wherevers" we will say, that we know from experience that it is as bad as putting the workers on the block to sell, to permit AFL officials to dictate how and under what conditions the workers should work. These officials are practically ignorant of the conditions on the job, on account of having been in office for years. In some cases, they have never been wage workers in the industry in which they presume to act. History amply proves that they, consequently, act against the welfare of the workers for whom their deals are made.

Second, where the workers are divided into many craft unions in one industry, and the conditions become such with a craft that they cannot longer delay bringing their grievances to the masters and are forced to strike in order to gain their demands, the other crafts continue working. The result is that they often do the work of the strikers as well as their own. They are thereby helping the boss in defeating the strikers and, naturally, injuring the cause of their fellow workers, as well as their own.

But where there is only one union, which includes all the workers in that industry the case is different. When any part of them have any grievances, they all have grievances. In the event that they are forced to strike, they all strike, leaving no one behind to help the boss, or scab. This will bring results to the workers.

Third, wherever a time contract is signed with the boss by the union, binding the workers to work for him a certain number of years for the agreed wages and conditions, the workers are sold outright. They are helpless, no matter how fast the cost of living is rising. Nor how unhealthy and injurious the jobs may be. This in itself plainly proves our contentions.

Agreements can be made with the boss, but no time limit must be made. Whenever an opportunity offers itself and the workers feel that they are not getting enough wages, or that they are worked too long hours, the workers should and must use that opportunity to their own advantage and demand and take as much as they possibly can get; particularly, what is necessary for their welfare and comfort.

Of course, at no time will the workers get anything unless they use direct action, that is action by the workers directly, and which does not notify the boss in advance when striking. Always decide it quickly and do it ourselves. Certainly, strike and keep on striking till we have all that belongs to us.

As stated in the first part of this article, even the building workers are sympathetic to the industrial union idea. This, too, though some of them are enjoying somewhat bettter conditions than the average worker in other industries. Why then are not more of them interested in industrial union organization, especially as represented by the IWW?

Let it be realized once more, at the outset, that while many of the building workers, practically in all crafts, are sympathetic to the industrial union idea for various reasons, it is difficult to expound the real importance of the one big union to all of them.

They may realize the weakness of craft unionism, and also the corrupt dictation of trade union officials, but success among them is slow. This is so on account of the tremendous opposition that the masters' lickspittles, including the craft union officialdom, are launching against the idea and the movement in its behalf.

Now there is also the lack of co-operation among the industrial unionists themselves. They need to get together more and give atttention to organization in a more serious and efficient manner.

Propaganda, as distributed at present, is also too general. This propaganda does not appeal to the workers in the lines they are interested in. For instance, if you appeal to carpenters you must talk about their line of work. Same way with a plumber, a bricklayer, a mason, etc. You must talk about bricks to a bricklayer, saws, shingles and lumber to a carpenter; and so on; otherwise they are not interested.

Also, let us realize what we should do if the workers do not want to come to us. Will we not have to go to them? "Yes," we say, "we do go to them." What do we offer to them? The bulk of the workers are not interested in what they will want fifty or hundred years from now. They are interested in what they need today. All workers wish to run their union affairs themselves rather than have someone else run them for them.

Industrial Unionism is a somewhat beautiful dream to the great masses of workers here in the east and lots of them have never heard of it yet. Now let us get busy and see to it that this dream will become a reality to them within the near future.

Suffer Little Children to Come Unto the Profits of Capitalists

# Childhood and the Evil Influence of Capitalism

By J. D. CARLIPH

**In this our twentieth century, in the year of super-affluence, when "our coffers" are fairly bursting with gold and "our storehouses" with provisions, a mother of thirtcen children—a prize winner in child bearing—was evicted, together with her brood of thirteen American citizens, good and true, because, for sooth, "her husband was unable to pay the rent for the small flat in a rear dwelling" in Chicago, USA.**

**Eight of the children and mother availed themselves of the generosity (?) of the police station in the neighborhood of their former home, while the rest found shelter with their poor neighbors. The father stood watch through the night over his earthly belongings, dumped on the street by a "landlord," the owner of the property where the home was located.**

**History repeats itself. The family lived on Dickens Street; the police station is on Shakepeare Ave. and landlordism is as vicious today as it was in the days of Dickens, when he wrote Little Dorritt or Dorothy—the name of one of the children evicted,—and in the days of Shakespeare, too.**

CAPITALISM need not respeet a mother; it need not have eompassion toward ehildren; it is not here for that. It is here for profit, nothing more nor less, and all the cruelty, perversion and other attendant evils that go with it, as a matter of eourse. When a mother and her little ones interfere with profit, OUT THEY GO!

Eaeh room in a building, dwelling, or so-called home, must earn a eertain ineome—even if the world comes to an end.

The wonder is, how could the poor parents manage to keep their brood under roof and shelter that long? A father of thirteen ehildren is not paid in wages any more than a father of none. Capitalism does not pay wages aeeording to needs; it pays what the labor market dietates. And how will this poor father keep a roof over the heads of his thirteen and put food into their mouths until such a time as the elder children are able to work and "earn" and help keep the family? Miraeles, it seems, do happen even in this day and age.

Our "small family" advoeates might gloat over the ineident and say "I told you so. Raise a small family and the dear tenement boss will not evict you." To paraphrase this, it means simply this: "Raise a family as large as your wages will stand and no more. Have a small family and you ean work for small wages." O, there are many sides to the story. But does anyone visualize a family of thirteen, all grown up, where the father had a suffieient income to feed, elothe and shelter all? Why it is a small dominion by itself. And when these, too, have families of their own and all honor and love the "old man" and the "old lady" and bring ease and eomfort to their declining years—are many ehildren a curse and a plague, then? Indeed they are not. And there is lots of room in this little world of ours.

We know such families. We know of a family of eight children where the "old man" is now dead, but the ehildren are still keeping the flat of seven rooms where they were raised, and a servant to boot, in New York City, for the old lady.

Of course, they are seissorbills, but they are mostly wage slaves and their families are, too, just the same. Between the eight of them, they manage to furnish a fine old age insurance poliey for the "old woman."

The problem, then, is not so mueh a large or small family as it is, after all, a question of being able

to maintain any size family at all.

The solution is evident. Organize with your elass, abolish eapitalism and then regulate the number of your offspring to suit your own partieular inelinations or opinions. Were the workers able to dietate as to what an income should be, the question of a ehild more or less would be of no eonsequenee. A new child born would mean an increased ineome. But under the present system—where the worker permits his wages to be dictated by the owner of his job and the paee set by his neighbor worker whose aim eonstantly is to outdo him in output and reduce thereby the wages of all the workers—both father and mother are foreed to work in order to support even one or two ehildren.

Under capitalism, childhood is an investment in time and money expended that is highly unprofitable. Children should not be born at all. Men and women—vigorous and enduring should, like Topsy, be "just growed" full size, ready to work and produce profits and not be small and helpless and an imposition on our profit mongers—our masters—like ehildren.

And in the meantime thirteen little pairs of feet were driven out of a house and home; thirteen little heads were obliged to rest at night, on the hard benches of a police station and thirteen prospective eitizens of this great and glorious nation, have been subjeeted to the indignities and disgrace of eviction. We hope this experienee will not mark the beginning of an evil influence on those poor, young minds.

And unless present tendeneies take a turn for the better, many more evietions are soon to follow.

We say again, ye workers, organize in your might and make eviction, starvation, unemployment and misery an impossibility, so long as the sun shines on this, our mother earth.

# For a Northwest Workers' College

THE members of General Construetion Workers' Industrial Union No. 310, Industrial Workers of the World, employed at Kelly & Sullivan camp No. 2, Natron Cutoff, Oak Ridge, Ore., in meeting assembled, adopted a series of resolutions pointing out "that the greatest handicap in effeetive organization work is a lack of educated members at the point of produetion." Also asserting that "it often happens that a few fellow workers get organization work going on the job, only to find that organization work is not carried on after they leave the job." Concluding: "We realize that we have the largest membership and aetivities in the Northwest; therefore be it resolved, that action be taken to establish a eollege on the Pacific Coast where economics and other subjeets of interest to the working elass will be taught; and be it further resolved that we go on record in favor of a Northwest College stamp, to be issued to build the same."

Accompanying the above resolution is a lettter addressed to the editor of The Industrial Pioneer, requesting the latter to write an artiele on its significanee.

This the editor gladly does. There is nothing that appeals to him so much as a program of education, especially working elass education, otherwise he would not be an editor, as that funetion is primarily one of education, in its best sense.

But there's education and education! In all education, one thing is essential, and that is comprehensiveness,—a program that will inelude not only one but every phase of working class neeessity. Is it not possible that the working class may need not only educated workers at the point of produetion, but also many other things that are eomplementary to job organization? May they not need well developed branches and industrial unions with trained and experienced officers at their head, as well? Is it not possible that, with a comprehensive, well-built organization, properly officered, that the problem of job organization will be reduced to simple terms? Is it not possible that the frequent election of men to office may undo the work of educated members on the job, destroy braneh and industrial union formations; and create eonfusion and disgust generally, together with all of their reactions?

These questions are asked, not to eonfuse the issue of education raised by the 310 resolutions, but to emphasize it.

Undoubtedly, capable, edueated workers to funetion on the job, is a prime essential to good organization work there. Undoubtedly, also, the need of more workers' colleges to this end, is desirable, not only in the Northwest, but everywhere, if possible. The labor movement is not seetional; nor are its general requirements peeuliar to any one loeality.

The Work People's College at Duluth, Minn., is an example of good that workers' eolleges do. Some favor concentration on its upbuilding before others are attempted; but that there's room for more there cannot be any doubt; and, if at all possible without serious damage to existing institutions, should be undertaken in localities where most needed.

By all means, give us edueated workers on the job. By all means, give us workers' eolleges. Both are essential; both are basie and fundamental. But don't stop with them! Consider other, related factors, also. Develop them, too!

In eonclusion, we suggest a consideration of the question of education, not only as raised in the 310 resolutions, but also as raised in the article on "Science and Labor Organization." This article was in type when the 310 resolutions were reeeived. Read them both over; ponder on them; and give them both the eareful consideration that they deserve.

**Editor INDUSTRIAL PIONEER.**

# The New Labor Displacers

## MECHANICAL HANDLERS DO AWAY WITH UNSKILLED WORKERS, OR MAKE EVEN SKILLED WORK A CHILD-LIKE FUNCTION, EASY TO PERFORM.

By JOSEPH OSTRANDER

**The many problems of overproduction and unemployment are being accentuated and made more complicated by the continued introduction of new machinery that displaces workers and saves wages—for the employers, of course.**

**This tends to reduce purchasing power and makes it more impossible for consumption to keep pace with output. Thus, the need for reduced hours and greater wages, through industrial union organization, becomes ever more imperative. It's either this evolutionary development, or a social breakdown, ending in chaos and disaster.**

**All of which is duly set forth in more detail in the following article.**

**A new species of labor displacing machinery has arisen, one that aims, not to displace skilled, but unskilled labor. That is, this species of machinery, though not entirely new, is being introduced at such a rate of speed, and is being pushed with such intensity at present, as to attract wide-spread attention. Its effects will be very extensive and revolutionary, if continued in the future as in the past.**

**Reference is here made to materials handling equipment. By means of such machinery, materials are routed directly through various operations in a plant. They go in, practically, at one end of the plant, and come out as finished products at the other, with little or no handling by labor en route. The result is a displacement of old style equipment and the men who operated it; with a consequent reduction in cost and increased output, to boot.**

MATERIALS handling machines are of various types. They are known as tructractors, large conveyors, portable conveyors, locomotive cranes; electric cranes and hoists; loading machines for mine cars; cupola charging machines; automatic stackers or pilers, spiral chutes, etc.

The greatest user of materials handling machinery is automobile manufacturing. Though known as the baby industry, in 20 years it has made more progress in mechanical handling than has textile manufacturing, one of the oldest industries, in a century. In this respect, auto manufacturing has profited from the steady advance in mechanical handling made in the metals industries in general. Iron ore digging, loading and unloading, shipping and storing have been done largely by this method; and so have puddling, rolling and other successive mill operations. But now the principle is being applied to mostly all industries in which much handling by labor is, or was, required. In the wholesale drug trade, for instance; materials handling equipment is being introduced; in the mail order houses, also. Thus, its use is becoming extensive.

The present big boom in favor of mechanical handling of materials is alleged to be due to the shortage of labor occasioned by restrictive immigration. By cutting off cheap labor supplies, so it is claimed, this measure has made the introduction of mechanical substitutes imperative. This, however, is essentially untrue; as the beginning of the use of this type of labor-saving machinery, as already indicated in previous paragraphs, antedates restrictive immigration by many years. It would be nearer the truth to say that the present large-scale introduction marks a climax in its evolutionary development.

**1,200 Lose Jobs when this Automatic Money Changer is Installed on New York Subways**

Materials handling machinery displaces unskilled labor and reduces skilled labor to a degree of unskill such as was never thought possible before. The simplicity of motion, or function, which it requires, as in auto plants, for instance, is hardly believeable. It does away even with "knacks" or the peculiar quirks in manipulation characteristic of unskilled labor even; and could be operated by a child, had the latter the alertness and endurance necessary to prevent accident and physical collapse.

Longshoremen, coal shovelers, freight handlers, car loaders, sack stackers, operators of wheel barrows, truck-shovers, etc., etc.,—all are affected. They are being displaced, with nowheres to go—except it be to hell or the abyss below them. (As yet, they do not show enough intelligence to demand a better social system than the one that makes outcasts of them. But more of that later on).

Some figures used by Secretary of Labor (?), James T. Davis, in his campaign in favor of selective immigration, give an idea of the nature and extent of this labor displaced by mechanical handlers. Here are some:

"In one of our southern ports we have a ship-loading conveyor and a spiral chute. The material handled is crated oil. FOUR MEN now do what ONE HUNDRED MEN before laboriously accomplished.

"The Taylor plant at Bridgeport, Conn., now handles hot iron cauldrons by a mechanical conveyor and shifting system with ONE MAN where they formerly had twenty-five.

"The automatic stacker or piler, which is practically a traveling ladder on wheels with a jack lift, is rapidly making unnecessary the class of labor that only the immigrant or negro would perform."

To these may be added other quotations from articles in technical journals descriptive of materials handling equipment, as follows:

"The Atlantic Coast Electric Railway Company operates three portable conveyors . . . to handle coal. Formerly the work was performed by shovel and wheelbarrow. About seventy days' work per year is required to handle the total 24,000 tons of incoming fuel under either method, but FOUR MEN with the conveyors now do the work of THE PREVIOUS THIRTY, saving 260 man hours per day."

"At the Warren Foundry and Pipe Company three methods of handling are used—electric traveling cranes on yard runways, locomotive cranes, and hand work. One operator runs an electric crane, three men operate each locomotive crane, and from 8 to 12 men are required on corresponding work by hand labor."

"At the American Splint Corporation, a 15-ton crane handles 50,000 ft. of logs in a 9-hour day, piling 30 to 40 ft. high and back piling to the same height, doubling yard storage. The crane and THREE MEN do the work formerly requiring TWELVE MEN, or at a cost of $19.17 per day against $75.60 formerly, saving $55.43 per day or $16,629.00 in 300 working days."

"On the Boston Elevated Railway a 10-ton crane with a crew of operator and two men carries out the following:

"Unloads from flat cars 540 ties per hour. Formerly took twelve men 2½ hours. Crane piles 18 ft. high. Men could pile only 12 ft. high.

"Handling cages of treated wood block paving. Crane will dump 12 cages or about 18,000 blocks per hour. Same work formerly took 12 men about 4 hours.

"Crane and crew handle about 75,000 ties and 1,500,000 bd. ft. of lumber per year."

"A 20-ton Link-Belt crane and six men load on freight cars an average of 25 crated Hupmobiles daily for export shipment. Each crate weighs 4,000 pounds. Recently this crane loaded 28 crated automobiles on freight cars in 1½ hours. This work alone formerly required the full time of 30 men.

"The crane is also used for unloading coal and building material from freight cars. At top speed it unloads a 70-ton car of coal in 40 minutes—while with hand shoveling it would take four men practically the entire day to unload one.

"On the basis of 6 months' actual service the crane has saved the entire time of 35 laborers—something over $40,000 yearly in wages—and pays for itself every 4 1-2 months from the standpoint of labor economy alone."

These quotations may be continued to a much greater extent. Soap-works, granite works, foundries, lumber and dairy companies, paper box concerns, sugar corporations, architectural tile companies, and many others, too numerous to specify, tell the same tale. They all employ mechanical handling with the great displacement of labor and saving in wages already hinted at above.

Where will it all end? With labor being displaced, unemployment will increase and become more continuous, without any breaks of "prosperity" to relieve it.

With labor being deprived of wages, purchasing and consuming power will be greatly curtailed; thus also adding to the unemployed. It is time labor, both employed and unemployed, woke up to the gravity of these conditions and did something to end them.

Labor can only remedy these conditions through extensive industrial union organization. Such organization can reduce hours and increase wages in accordance with the introduction of machinery and its output. It can secure a share for labor in the benefits of invention and machinery, such as is necessary, if the breakdown of the entire present system is to be averted in favor of peaceful evolution.

Such organization involves much agitation, much discussion—distribution of leaflets, circulation of labor press, soap-boxing, shop talks, speaking tours—in fact, a campaign of education, in which, em-

# WOBBLES

## PUTTING IT BLUNTLY

The national wealth is now $320,863,862,000. The last three circular formations, figuratively speaking, seem to indicate that the workers' share has been discovered and included.

## THE PERFECT HYPOCRITE

Teacher—"Johnny, can you tell me what a hypocrite is?"

Johnny—"Yes, ma'am. It's a boy what comes to school with a smile on his face."

## WOODROW CALLS MOSES!

MOSES (to new heavenly arrival): "Well, Woodrow, they didn't do a thing to your fourteen points points down below, did they?"

WOODROW: "That's nothing. You ought to see what they did to your ten commandments."

## FULL SPEED TO THE REAR

The difference between a motorman
And a conductor is quite strange
The motorman changes the handle—
The conductor handles the change.

## DON'T DISTURB THE HANDS

A manufacturer of motor-car accessories was engaging a factory superintendent.

"There's just one thing more," he said to the applicant, who appeared to be satisfactory. "Could you run a house organ in connection with your other work?"

"House organ?" said the man, with a puzzled expression. "What's the need of music in a factory?"

## PREPAREDNESS

Murphy, the fireman, died at sea, so they got his body ready for burial.

It was discovered that there were no irons to sink the body, so the chief engineer gave orders to the black gang to get some big chunks of coal to lash to the body, which was done.

As the captain was reading the burial service, Sullivan, the fireman, roared laughing.

The captain looked sternly at Sullivan and said, "Now, Sullivan, have you no respect for the word of God or for the dead?"

"Sure, captain," Sullivan said, "I have. But, I have seen many a fireman die and go to hell, but Murphy is the first one I have seen take his own coal with him."

## PUTTING IT BLUNTLY

Parson—You should be a good christian; and go to church in order to provide for your hereafter.

Unemployed—If it's the same to your reverence, I'd sooner go to work and provide for the present. The hereafter can take care of itself.

## A WOODS CONUNDRUM

IWW Lumberjack—Why is an unorganized lumberjack like a snail?

Scissorbill—Dunno, I'll bite!

IWW Lumberjack—Both carry their homes on their backs; and are slow at getting good things.

## PILING IT ON

Inquirer—"Well, Ephraim, what are you going to preach to your flock these days? I hear you are making a mighty stir."

Ephraim—"Well, sur, yassir, I is. I gives it to 'um dis way: Fustly, I tells um what I'm gwine to tell 'um, den I tell 'um what I said I wuz gwine to tell 'um, and den I tells 'um what I done tole 'um."

## AND THEN IT HAPPENED

One hundred per centers, law abiding every one of them, had a meeting in Frisco. One of them pulled this one on his friend: knowing his friend carried a flask on his hip, he disguised himself with false beard and badge and walked into the hall in a boisterous manner.

Flashing his badge, he cried, "I arrest you on complaint of violating the prohibition law."

Forty flasks hit the floor.

# "Sedition"

By EDMUND VANCE COOK

You cannot salt the eagle's tail,
  Nor limit thought's dominion.
You cannot put ideas in jail;
  You can't deport opinion.

If any cause be dross and lies,
  Then drag it to the light;
Out in the sunshine Evil dies,
  But fattens on the Night.

You cannot make a Truth untrue
  By dint of legal fiction.
You cannot prison human view
  You can't convict conviction.

For tho' by thumbscrew and by rack,
  By exile and by prison,
Truth has been crushed and palled in black,
  Yet Truth has always risen.

Truth asks no favor for her blade
  Upon the field with Error,
Nor are her converts ever made
  By threat of force and terror.

You cannot salt the eagle's tail,
  Nor limit thought's dominion
You cannot put ideas in jail;
  You can't deport opinion.

# You, the Producers

HAL BROMMELS

FOR ages now you've had to bow
  To kings and lords and parasites;
You've never known a day your own,
You've never had the thing called "rights."
You groaned as masters crushed you down--
And yet you cowered 'neath the crown.

The masters slew your brothers true,
  And nailed your champions to the cross;
You trembled then like weakened men
  And only mourned your fearful loss.
Though you were great and they were few
You feared the righteous thing to do.

You still are slaves to idle knaves,
  And thousands in their prisons lie —
Their deeds for you proclaim them true—
  They wait and hope to hear this cry:
"The earth is free for Toil is free!
We won through Solidarity!"

It's up to you, Producing Men,
  Your word will set your comrades free—
When you DEMAND, but not till then,
  Can you control all industry.
Remember this: No Christ shall rise—
All earthly power in YOU lies!

# The Wobbly

By 4S-602

WHEN my upper lip is trembly, and a lump gets in my throat,
  And the fellows that I'm scared of have tried to get my goat;
And I'm feeling kind o' lonesome, and I'm losing all my sand,
It's great to have a Wobbly just grip you by the hand.

With a Wobbly for a "buddie" I'm as happy as can be,
For I know whatever happens, he'll always stand by me,
For he knows me, and I know him, and tho other friends may fail
I always feel contented when with him I hit the trail.

You cannot keep discouraged—you cannot long be blue,
When your "partner" is a Wobbly, and you **know** that he's true blue,
He's always there to help you, when the "goings" rather hard,
And he plants himself beside you, 'cause you pack the old red card.

## NEW LABOR DISPLACERS (Continued from page 32)

ployed, as well as unemployed, can take and should take an active part. The unemployed, as well as the employed can, and should, help it along, or else be classed as helpless morons and willing slaves.

If the persistent, continued introduction of mechanical methods continues, overproduction will swamp us all in a sea of unemployment and misery, which can be avoided, if we workers hasten to take time by the forelock, and act before it is too late.

More industrial union organization and industrial union remedies alone can meet the situation. We should make every effort to make them possible now, while conditions permit it.

Let's get busy, without delay!

# How It's Done in California

By CALIFORNIAN

**Reciting the questionable methods by which workingmen are sent to jail for organizing labor unions—the whole campaign of misrepresentation, frame-ups and professional witnesses laid bare, so that all may become familiar with it.**

WHY are so many men convicted under the Criminal Syndicalism law in California, if they have committed no crime? This is a question often asked of members of the IWW.

To answer that question as briefly as possible is the purpose of this article. But, first it is necessary to make one comment. It is the custom brought down through the ages, to consider a man innocent in the eyes of the law, until he is proven guilty. Just the reverse is true in California. The mere fact that one belongs to a labor union is sufficient for conviction of almost any crime on the statute books, that is, in the mind of the average juror.

But the people of California are no different than the people elsewhere. As a matter of fact a large percentage of the population is made up of people attracted to the state by the glowing promises held forth in all the advertising campaigns of the various commercial clubs. Their state of mind is due, however, to the vicious propaganda put forth by those who control the resources of California.

To begin with, California's eastern and western boundaries are natural physical barriers that serve to keep within its own confines the lust for the blood of workingmen. On the north, however, lies the domain of the Hammond Lumber Co., who, together with a few minor companies, own and control several counties rich in standing timber; while throughout the rich valleys, the California Fruit Growers' Association holds full sway and on the south the state is dominated by the oil companies and real estate operators. All of them large employers of labor.

Down through the center of the state, running from north to south is the Southern Pacific Railway, like a giant octopus, its tentacles reaching in all directions and devouring all within its reach. In former years the S. P. controlled the government of California completely, but of late it has yielded some of its power to the lumber, oil and power companies.

It is the representatives of the above mentioned groups, that meet in the capital and discuss ways and means of further exploitation of the workers and how to get rid of the hated IWW. For it is these class conscious workers who are the only ones effectively challenging the self assumed rights of the industrial lords.

Imagine yourself at one of their private meetings. Probably you would see about you a half dozen representatives of some of the largest corporations in the United States, all sleek, well fed and showing signs of a life of luxurious ease. Mr. Wood of the lumber trust is speaking. He is raving over the fact that the IWW are active in the logging camps and "something must be done." "Humph," says Mr. Blank of the power trust, "Doesn't your prosecuting attorney know what to do?"

"Oh, yes." The prosecuting attorney knows what to do alright but, there may be some farmers called for jury duty, who may have their own ideas of justice. Then again, there seems to be some complaint about high taxes, due to the high cost of railroading workingmen. Wouldn't some funds judiciously placed be useful at present?

Certainly. The funds are forthcoming and the drama begins up in the lumber country. First comes the plot. All regular Criminal Syndicalism trials begin with a plot. To be sure the plot exists in the minds of the locally subsidized paper, but nevertheless, furnishes an excellent groundwork for sentiment. The following is a fair sample of the beginning of an IWW case.

IWW PLOT NIPPED IN BUD

....., California. Date. ..... Two alleged IWWs were arrested today at the camp of the Northern Lumber Company while distributing inflammatory literature, and brought to the city to be lodged in the Hokum County jail.

Deputy Sheriff Hurpock Sholmes who made the arrests states "that he believes the men are forerunners of a gigantic conspiracy to destroy the redwood forests of this state, etc. . . . ."

This, together with a few more articles of a similar nature, is broadcast throughout the county, and for the next few weeks furnishes the only topic for conversation. True, nothing definite has been stated, but the mind of the public has been aroused and the prosecution is prepared to go ahead.

In the meantime, Johnny Lumberjack and Fellow worker Delegate have been safely lodged in the Hokum County jail and are awaiting the outcome. While, on the outside, continue the ravings of the newspapers and the rantings of the local politicians about 100 per cent "Americanism," until the local citizenry are ready to go to any lengths for the lumber trust.

After a few weeks a sort of hearing is held and the trial date is set. A hearing in these cases doesn't mean anything, it being a mere formula handed down by tradition. The indictments are filed and everything is ready to proceed according to Hoyle.

We will spare the reader the unessential details of the opening of the trial, but, merely mention that it consists of the selection of a jury, the reading of the indictment and the entering of the plea of "Not guilty." The first named process is for the purpose of finding out whether or not some workingman has been accidentally called for jury duty. We are now ready for the first witness.

The first witness in this case will be Deputy Sholmes, the arresting officer. Deputy Sholmes has covered himself with glory in making the arrests, but his testimony is not interesting. He is there merely to identify the defendants and their cards. However, if you are witnessing a trial of this sort for the first time, you would do well to notice them carefully, for this is the last you will hear of the defendants or cards until the judge is ready to pass sentence.

The identifications over, the trial is ready to proceed in earnest and Mr. Coutts is called to the stand. Whereupon a slinking individual with a degenerate countenance will mount the stand and swear to tell "the truth, the whole truth so help, etc." After a few preliminary questions by the suave attorney for the state, the moron will begin to unfold a tale designed to make the jurors hold their breath. Here is where the preliminary work is intended to count, for all of the stories published by the local papers, concerning the IWW are at once recalled and the jurors listen with intense interest.

Boiled down, Coutts testifies that the purpose of the IWW, when he was a member, was to burn farmers' barns and commit other such outrages. However, upon cross-examination we learn by his own admission, that he has served time for burglary and that his chief means of livelihood, before he became a professional witness, was by "begging and stealing." He even admits he never told the truth before in his life.

After a few hours of Coutts' testimony, the jury has heard enough blood curdling tales to last them some time. But wait! . . .there is more to come. Another professional witness is called to the stand. This "Thing" is called Townsend. His testimony is on much the same order as that of the previous witness, differing only in its locale. Upon cross-examination of Townsend, facts are brought out, showing him to be a degenerate of the lowest order. One would have to be charitable indeed, to raise him to the rank of a common fink or stoolpigeon.

A few more witnesses of the same type, and the prosecution is ready to rest and they surely need one; in fact, the whole courtroom needs a rest. The jurors' minds have become so inflamed, listening to the weird tales emanating from the diseased brains of the state's witnesses, that they have as much use for the IWW as they have for a dose of potassium cyanide. Of course, the defendants have not once been mentioned. No one has ever seen them before or even heard of them.

Th defense is now ready to go on and starts out at once with an argument over the first witness. It seems, that the witness must prove that he is at present a member of the IWW. Must even show his card or his testimony is not acceptable. But this does not feaze the defense and the card will be shown and the witness will proceed. But the moment he steps from the witness stand, an officer at once places him under arrest for Criminal Syndicalism.

Even this does not stop them and witnesses continue to testify to the character of the organization. Men from all industries show that the IWW is a revolutionary labor union, organized for the purpose of bettering the condition of the wage-worker. None have heard of violence being preached; on the contrary, they all have heard the organization teach that violence is a sign of weakness and always reacts against the user. They have been taught that the organization depends upon its economic power and that violence is detrimental to that power.

But the jury is not interested, they are speculating within their minds how soon they can get home to their families. Their minds have already been made up. But the judge sits in his chair ever on the alert. The judge, by the way, is an individual hired by the state to sit through the trial and overrule any objection made by the defense and sustain those made by the prosecution.

And so it goes to the end until the attorneys are ready to make their pleas to the jury. Sometimes it may be necessary for the attorney for the state to point out the defendants during the course of his address, in order that the jury will remember who is being tried. The speeches over, the jury retires to the anteroom, plays a few games of pinochle and brings in a verdict of "Guilty."

We have not exaggerated. The above performance has been repeated over and over again. Occasionally there may be some change in some of the minor details but the essential facts are the same. It is only in such places where the defense has been able to counteract the influence of the local press, that any measure of success or any semblance of a fair trial has been secured.

But the silver lining is already beginning to show. The effect of the intensive educational campaign carried on by the California Branch of the General Defense is being felt. For the people of California are just as susceptible to educational propaganda as anyone else. What is needed now is a campaign of activity by the members of the organization, to the end that the persecution in California will be a matter of a dark spot on its history.

## HE TOLD HER

Short-sighted Lady (in grocery)—"Is that the head cheese over there?"

Salesman—"No, ma'am; that's one of his assistants."

# Alex Dowell's Home

By R. J. W., 721016

**The realization of wedded bliss, bought on the installment plan, it proved a test of character, only to be taken from him and his beloved wife, by the mortgage holder and wage cuts in the long run—A little tale, with a moral, that is all too common.**

WHEN Alex Dowell married Nellie Poore, it was rumored about the community that the matrimonial ties of this couple were of an ideal nature. Alex had advanced himself to the position of timekeeper with a local steel corporation with whom he had been employed for a number of years. Beginning at a very young age, in a humble capacity, he had worked faithfully and rendered efficient service, which was responsible for his numerous advancements. Nellie was one of the happy go lucky kind—good natured, jolly and always ready to have a little fun when the opportunities permitted it. She was fairly well educated, and a lover of discussion on numerous subjects which she was not well versed on.

Many an evening she and Alex sat in the parlor and discussed different things; that is, they discussed the making of steel. He would explain to her how it was melted in the open hearth; how they poured it into molds; how the molds were stripped, leaving the ingot stand erect on a flat car to be transferred to the blooming mills to be rolled into billets; and how they were again transferred to other mills for the final process that made them finished products.

This was one advantage Alex had over Nellie: he knew the difference between an open hearth and a rolling mill.

Alex, at the time of his marriage, had saved about five hundred dollars. This he intended to use as a down payment on a little five-room bungalow that was for sale on one of the best streets of the community. This little love-nest had a value of approximately six thousand dollars. But this mattered not at all to Alex—nothing was too good for Nellie.

It was one of those bright spring days when the trees were beginning to bring forth their blossoms of fruit and all the grandeur of nature was evident.

To Alex, this was a happy day. It marked the beginning of his prosperity. This he felt as he whistled modern refrains as he proceeded down the street to the real estate agent to deposit his five hundred dollars and close the deal on his little bungalow.

Upon reaching the office he informed the agent of his intentions. The agent at once ushered Alex into his little private office and explained the details and red tape that is usually connected with the installment plan homes. The agent said, it would be necessary to make a down payment of five hundred dollars to close the deal. This, of course, Alex was aware of. Arrangements were made to have the remaining fifty-five hundred paid off at the rate of sixty dollars per month, plus six per cent interest. This was agreed to by Alex and the deal was closed.

The newlywed at once hurried home to the temporary light housekeeping rooms to tell Nellie of his wonderful buy; and how it would be possible for them to reside on one of the finest streets in the community.

This news overjoyed Nellie. She threw her arms about Alex. She couldn't help it. She really loved her husband; and for two solid hours they sat and talked about the kind of furniture they would buy for each room. They considered that the best of furniture would be necessary to make the inside appearance as nice as the outside.

The Dowells were now ready to purchase the household furnishings to complete the little bungalow on Fine Street; that they might enter and enjoy the comforts of their own home.

To Nellie and Alex, all this seemed to be a dream. They wondered if these wonderful things weren't too good to be true. They even pinched one another to be sure they were not asleep. And finally they were satisfied that all this was to be a reality.

As Alex leaned back in his chair and began to yawn he pulled his watch from his pocket and discovered it was past midnight. So the Dowells decided to retire for the day—for Alex had to report to the mill at seven a. m.; seven days per week.

Arising at an early hour the following morning, Nellie prepared the breakfast and saw her husband off to the mill; and, as some women usually do, Nellie returned to bed to sleep a part of the forenoon. When she awoke, she just lay there to daydream of her future home on Fine Street, as it was only two days off from pay-day at the mill; which would allow them the down payment on their furniture;—then the little love-nest would be completed and ready to be occupied.

Then the mill pay-day came and this again was a big day for the Dowells. As soon as Alex had finished his supper, he and Nellie started for the easy payment furniture company and in less time than an hour they had picked the necessary furnishings to make their home one of the most attractive

on their street. The furniture company called up the steel mill officials for recommendation. The official did as asked knowing that Alex was a faithful employe and naturally he was recommended very highly.

The next day while Alex was at work the furniture was delivered. Nellie, aware of this, did not go back to bed that morning but went to sweep and dust and do the little things that are usually done before moving into a new home.

That evening when Alex returned from the mill he ate his supper and proceeded to join Nellie in her labors,—that of getting every thing ready—that they might enjoy its comforts as soon as possible.

At last everything was ready; the gas and electric light was to be turned on the following day and nothing more remained to do except invite a few friends to be present the next evening, as this would be the first night in their own home.

When the following night came the Dowells were seated on the front porch of their little bungalow, awaiting the arrival of the friends who were to take part in the house-warming.

The party enjoyed the evening very much and when the guests began to depart they bestowed on the Dowells many compliments, which were all accepted and thankfully acknowledged. And now Mr. and Mrs. Dowell were located in their permanent residence.

All through the summer months the Dowells prospered. They never missed a circus and usually went to see a show of an evening and on Sundays they went to the amusement parks. Ofttimes they held little card parties at their home and thus the Mr. and Mrs. Alex Dowell were really enjoying life. Now that summer was passing, life was beginning to look still brighter to Alex Dowell, because he was one of those fellows that liked to stay by the fireside during the winter months, and Nellie also was looking forward to the time when just she and Alex could sit in the parlor and talk of their future plans—and this they did.

It was during the winter that the Street Railways Co. employees were forced to go on strike for better wages. The striking street car men were so poorly paid and the cost of living kept going up. This made it impossible for them to support their wives and families. As usual with workmen, they had done everything to avert a strike. They offered to arbitrate with the company. But the company only turned a deaf ear. From all appearances the company wanted the men to strike. They wanted to break the union. They knew it could be done, because the strike would occur at a time when all the other big industries were reducing their forces.

Under the circumstances the railways company knew it would be an easy matter to recruit the necessary strikebreakers to keep the cars in operation. This was just what they did; for as soon as the men went on strike, scabs were put on the cars and the strike was practically lost on the first day. The strikers stayed out one week. They couldn't stay out any longer, as they were in the grip of winter and the low wages they had received made it impossible for them to save enough for these emergencies.

Thus, the street carmen's strike was lost. They sacrificed all their demands and returned to work under the old conditions.

During the strike period, the Mr. and Mrs. Dowells would set in their comfy little parlor by the fireside and discuss the horrible attitude the street car company assumed towards its employes. You can imagine how Alex would cuss the scabs for taking the strikers' jobs. Alex was by nature a real he-man. He wouldn't scab on any man. This his wife agreed with: she didn't want her Alex to be a scab. And that night before the young couple retired for the evening they had resolved that the name of Dowell would never be tainted with the crime of strikebreaking.

Little did they know that their resolution was soon to be an issue with them—a test of character, as it were.

Alex couldn't understand the forces that were at work around the steel mills. He knew the company was cutting production and this of course would force them to lay off the workers.

Thousands of steel workers were laid off; the furnaces in the mills were banked, and only the necessary help was retained to keep the mills in condition. Alex Dowell was a timekeeper. It was necessary to retain him, to look after the few workers that were not laid off.

For several weeks the mills were idle. The little town's people that were dependent upon them, were beginning to face starvation. The charity organizations began to dole out baskets of food. The steel corporation contributed thousands of dollars to these organizations; and the workers existed for another month on nothing but their alms.

Then the news was let out that the mills were to resume operations. **But due to a fall in the price of steel they would be forced to cut the wages thirty per cent.** When Alex Dowell discovered this order was to affect him also, he began to weaken. After carefully figuring what his earnings would be he couldn't see how he was to keep up his payments on his home and his furniture and keep food in the house at the same time. The gloomiest feature of all, however, was to arrive in the near future: there was an increase coming in Alex's family and this he had been looking to with the happy thought of being a father. But now everything seemed to turn against him. His wages were to be cut thirty per cent. The enormous fees charged by doctors on these kind of cases, were altogether out of Alex's reckoning. He just couldn't meet them under the new wage scale, as under his previous obligations, all his savings had been pre-empted.

Then around comes the first of month, when all Alex's payments come due. He was in a position to make the usual payment this time; but the next one he couldn't.

Upon arrival at the real estate man's office, he

took up the matter of reducing his monthly payments on the home. This was refused and Alex was informed that his original payment, as contracted, would fall due on the first of every month. He met with the same results at the furniture company also.

This made Alex a little hysterical. He began to cuss the steel corporation for cutting his wages and the real estate man for not reducing monthly payments—the furniture company likewise. But what could he do?—only try to do his best to make ends meet.

As the days passed by, the increase came in the Dowell family. It was necessary for the doctor to use instruments to bring the little one into the world, and this made the cost burden on Alex greater.

Mrs. Dowell was to be confined to her bed for several weeks. It was impossible for them to employ a nurse, and Alex couldn't afford to lay off from work; so this put more worries on Alex's mind. It was only a short time, however, until a widow woman whom Alex had assisted during the depression, while her son was out of work, volunteered to look after the Dowell household while Alex was at work. To the young husband this was a lifesaver.

And so the days and the weeks went by with Alex trying to keep up the former standards of living. But his struggles were in vain. He was forced to ask credit from his grocer; also from the butcher. The faithful young worker and husband now found that he was going so far in debt that it would take him some time to get out.

**Then along came the steel corporation with another ten per cent reduction.**

This, to Alex, was a complete knock-out; and the beginning of his downfall.

The second wage-cut became effective. The mills were working full capacity and the multitude of workers were discontented. This discontent went on until it began to breed hatred; and, finally, little groups of workers began to congregate and discuss the wage cuts; and then the question of a strike for more wages got passed throughout the mills—and later again, the day of the strike was passed around.

While all these rumors were going about, the steel company placed its stool pigeons throughout the mills to find out who the agitators were—that they might be fired in an effort to avert the strike. But the stool pigeons were helpless: it seemed as though all the workers were agitators.

The steel company realized it was confronted with a big issue. At once it began to send its representatives to all the big cities in the surrounding states to recruit strikebreakers. The steel company was determined to whip the strikers at any cost.

The hour of strike approached and when it finally came the workers almost to a man laid down their tools and walked out, only a very few remaining. As the strikers marched out, they discovered that the town was being patrolled by the state police and the state militia. Their ranks were subsequently invaded by the state police and the workers were forced to segregate and get off the streets.

Among the thousands of workers that had the courage to strike that day against one of the largest combines in the world, was Alex Dowell.

The strikers were not allowed to congregate anywhere. If they did they were subject to brutal punishment at the hands of the state police. If the strikers attempted to hold a meeting the state police would throw tear gas bombs amongst the crowds, which forced them to disperse.

The strikers never gave up hopes, until they saw the trainloads of scabs being taken into the mills and only then did they began to weaken. A number of them broke the ranks and returned to work. But the strike was not called off; and those who still had courage to hold out did so.

It was only a matter of short time when the ranks of the remaining strikers were easily counted.

The mills were now working full capacity again, manned by those that had returned, together with the imported scabs. The few strikers that stayed out until the last minute went back to get their jobs again. Alex was one of them—and when he approached the employment agent he and the rest of his followers were informed that they had committed the unpardonable sin against the steel corporation and would never again be employed in its services.

Thus does the story of Alex Dowell approach its end. He secured outside work but could not make the necessary payments on his home. He fell down on his payments to the furniture company. The real estate man foreclosed the mortgage on the home and the furniture company came and took back the furniture.

Mr. and Mrs. Dowell and their little baby are now living in two light housekeeping rooms, which are situated in the working-class district of the town. Nevertheless, after all their setbacks they are happy—knowing that the name of Dowell has not been tainted with the stigma of strikebreaking.

Just here, let us pause to moralize some. Alex Dowell, the character about whom the foregoing story is woven, was not an agitator. He was a faithful husband and a lover of home life. He wanted life as it should be. He didn't believe in living in tenement houses or being crowded into the dirty houses which are occupied by the wealth producers of the world, while those who do no usefulness to society live in the finest of mansions and enjoy all the luxuries that money can buy. He took a chance that many other wage workers had taken and lost.

Alex Dowell did not lose his home because he went on strike. The wage cuts, in themselves, would have brought about that loss. The real reason he lost his home was because he was a wage worker. The employing class does not want the workers to own their homes or to acquire wealth. This may cause independence.

**The industrial despots that control our present system of wage slavery allow the working class very little prosperity and those married people who have saved a few hundred dollars with the objective of buying a home, are usually robbed of it by the depressions that follow the short periods of prosperity.**

**Strange to relate, however, instead of the workers fighting the system that prevents them from owning a home and enjoying the real comforts of life, they are supporting it.**

**If the working-class are to enjoy life, they must be organized—not only for the everyday struggle for hours, wages and conditions; but to a point that they will understand their true position in life. And when this is accomplished it will be possible for the persecuted working-class to take over industry and operate it for the benefit of all. To have this objective come about in reality it must be done through an economic organization formed on and following the lines of industry.**

# A Protest

OUR Dumb Animals for June eontains the following anti-war protest:

"Encouraging War."

"This magazine has always been for peace. So we express now our protest against the war department's plan for a great national 'Mobilization' Day, September 12. Citizens in every city and hamlet will be asked to offer their serviees to the country as if in aetual war. Boy Seouts and Camp Fire girls will be asked to turn out; even faetories and other organizations will be mobilized to do their part in the imaginary war work. Millions all over the country will be aroused to bitterness and hostility against the War Department if this thing is pushed to extremes. No folly h s been more often exploded in the history of nations than that to be prepared for war means peace. It means war. It always has. It always will."

---

## GIANT POWER SURVEY

Morris L. Cook, representing Governor Pinchot's giant power survey eommission for Pennsylvania, told the senate eommittee on agriculture that there are 1,000,000 farms within transmission range of Muscle Shoals, and that within five to ten years electric power can be eeonomically applied on all of these farms. The range of transmission is 300 miles. About 100 uses for electrie power are now reeognized in farming. Ordinary waterpowers, far less efficient than Musele Shoals, will soon be doing the work of cheap man-power. And giant power stations, burning coal at the mine-mouth, give eurrent at 4c per kilowatt more than ordinary waterpower. Linked together in one great pool of power, they make possible the use of small local waterpowers that hitherto have been inefficient.

# Unemployed Intellectuals

IN New York City there are scores of newspaper writers out of work. In addition there are seores more of them wondering when they will be in like condition.

This lack of employment by men of ability—this fear of displacement by men who have spent deeades in journalistie pursuits of the highest intellectual nature—is due to the merging of metropolitan newspapers.

Under the direction of Frank A. Munsey, many of the latter have been bought up and put out of existenee. It is believed that Munsey will continue his performances in this direction, with the result that more of the penmen of the press will be unemployed.

It is alleged that Munsey is acting in the interests of big department store advertisers. They will have fewer newspapers to pay bills to as a result; hence their backing, so goes the theory.

On the bulletin board of the New York Newspaper Club is pasted a bit of verse. Some of the members laugh as they pause and sean the doggerel.

THE ITINERANT REPORTER

Say boss, can you give me a job?
I'm fairly good, I guess.
One time I worked with Munsey
On the New York Press.

Oh yes, I've had experience,
And many's the yarn I've spun.
I also worked with Munsey
On the New York Sun.

I won't say that I was a star
Nor wore any royal robe;
But I did have a job with Munsey
On the New York Globe.

You say the staff is full up—
Well, I'll be hittin' the trail.
But remember, I worked with Munsey
On the New York Mail.

I then joined up with the Herald
And that was a terrible jam,
And, let's see—I worked with Munsey
On the New York Telegram.

This doggerel tells the tale of what has befallen the unemployed intellectual.

O, Skill! Where is thy victory?
O, Ability, Where are thy palms?

# New Process Makes Rustless Steel

**A PROCESS for the manufacture of rust-proof iron and steel which will make possible an annual world saving of approximately $3,000,000,000 has been perfected by Dr. Beram D. Saklatwalla, inventor of the basic process for the manufacture of vanadium steel.**

**The process makes possible the production of rustless steel and iron with inexpensive ferro-chromium (raw) alloy previously used, thus bringing the discovery to the stage of immediate commercial use.**

**Dr. Saklatwalla, who is internationally known as an authority on metal products and who holds the Carnegie medal for scientific research, explains the details of his process and comments on its economic significance.**

### Will Bring a New Industrial Era

He says that the full utilization of rustless steel will bring a new industrial era. "We are entering another industrial age—the age of steel alloys. It is comparable in importance to the new industrial epoch which began with the perfection of the steam engine."

It is necessary only to visualize the intricate maze of steel which constitutes the skeleton of modern industrial civilization—ceaselessly preyed upon by rust—to realize the sweeping economic significance of this new discovery.

The deep underpinnings and the tall superstructures of skyscrapers, the great spans and cables of bridges, ship plates and hulls, smoke stacks, metal roofing, steel rails and transportation equipment, mining and agricultural machinery, automotive machinery—all form the basic physical structure of economic life today, and all are ceaselessly, relentlessly attacked by the gnawing cancer of corrosion.

By surface coatings of rust-resisting material, by constant painting, by all sorts of experimental processes, engineers and chemists have fought the foe—but they fought a losing game.

### Losses from Rust Billions

The best scientific estimates place the annual corrosion loss at from 62 to 64 per cent of the total quantity of steel displaced. During a period of thirty-four years the output of iron and steel was approximately 1,760,000,000 tons. Of this amount 400,000,000 tons were discarded as worn out or useless, and 718,000,000 tons were eaten by rust. Sir Robert Hadfield, in a report to the British Institute of Engineers, estimated this annual corrosion loss at 700,000,000 pounds.

In 1922 there were 51,750 buildings erected in New York at a cost of $587,690,925. Thus the annual world waste due to the rusting of iron and steel would take care of New York's building operations for about six years. There are 1312 office buildings in New York including all the great skyscrapers. Allowing an average cost of $3,000,000 for these buildings, one could rebuild this vast maze of stone and steel every year with the possible economies of rustless steel.

### Finds Cheaper Chromium Ore

Dr. Saklatwalla, filed his basic patents in 1914. His problem was to find a means of using the raw chromium ore, which is inexpensive, in the manufacture of steel, instead of the expensive ferro-chromium. He now announces that he has succeeded in this and he has filed his patents in twenty-six countries.

His solution, when he finally reached it, was simple. It consisted in using silicon as a reducing agent, by which, using raw chromium ore, he was able to fuse the chromium into the structure of the steel and draw off the residue without using the expensive chromium alloy. The tests upon which he now bases his assertion that he has brought rustless steel to the large-scale commercial stage extend over several years.

In addition to corrosion experiments they include tests of ductility, tensile strength and resistance to electrolytic action. His reports show greater tensile strength and ductility. He says the tests involving electrolytic action are incomplete, but that he believes his product has an increased resistance to electrolysis.

### New Process Gives Steel Greater Strength

He is definite and emphatic in his assertion that the use of chromium not only prevents corrosion but that it produces a metal of greater physical strength than ordinary carbon steel. He claims that the economic changes which will result from the use of rustless steel and iron will be overwhelming. The replacement of rusted iron and steel represents not only the actual value of the steel but also the loss caused by the slowing down of industry, the cost of labor and the time spent in replacement.

It often happens that the rusted member is a key part in a complex system in continuous operation, and its replacement means the disruption of the entire system. For instance, the rusting of the great iron towers which carry high voltage power wires is a constant source of waste and inconvenience. It should be understood that the use of chromium for rustless steel and iron is not a new

(Continued on page 46)

# The IWW at Home and Abroad

Chilean IWW Building Strikers

The Industrial Workers of the World is more than a mere propaganda circle. It is an influence in domestic labor affairs.

Note how "Paddy" Morrin, Czar of the Structural Iron Workers' Union, AFL, denounces it, because its press gives "Paddy's" downtrodden members a right to be heard in their own affairs. This gets Paddy's goat; hence his peculiar bleatings. And Paddy is only one of many "labor leaders" that are howling against the IWW.

*

The Metal and Coal Miners' Industrial Unions Nos. 210-220 held a convention at Butte, Mont. Steps were taken to expand the organizations. The Metal miners are supporting the miners' strike at Santa Eulalia, Mexico. John Martin is now Secretary-Treasurer of 210-220.

*

Despite the industrial depression the miners in the Comstock mine at Gold Hill, Nevada, are on strike for release of all class war prisoners, abolition of bonus and contract system, $6 flat scale for all underground workers, six-hour day, and withdrawal of support from all Gold Hill merchants selling California products.

*

Railroad Workers' Industrial Union No. 520, John Grady, Secretary-Treasurer, has resumed publication of the Railroad Workers' Bulletin. Art Young has contributed a striking cartoon on unemployment. A conference of 520 members was held at Great Falls, Montana, on June 15.

*

The IWW lumberjacks won a river drive strike at Wenatchee, Wash. This is the third largest lumber drive in the United States. The following demands were granted: Better food, clean sheets and pillows, $7.00 a day for eight hours' work. The company tried to run the drive at first with scabs, but they changed their mind when they found out that it could not be done.

*

The small industrial unions of Seattle have opened a membership drive among the city workers.

Two chartered branches of city workers, the Foodstuff Workers' Industrial Union No. 460, and Building Construction Workers' Industrial Union No. 330, are located in Seattle, besides other small industrial unions.

The building workers have an organization drive on and have lined up a good many members. They have succeeded in getting a good competent speaker and organizer to operate in Seattle; Arthur Boose being the man.

The call of the small industrial unions lays stress on the co-operation of all the members of the small industrial unions to the end that the workers of Seattle may be educated and organized in industrial unionism.

*

From another city, Cleveland, comes reports of open air meetings in the City Square, with Fellow

Organize, City Workers!

Workers Bowerman and Turner as the speakers. The results were an interested crowd and good literature sales and distribution.

*

Some years ago, in a moment of well-administered defeat in an attempt to secure control of the IWW, the Socialist Labor party formed an opposition organization, first known as the Detroit IWW and latterly as the Workers' International Industrial Union. The last named has just decided to disband. The SLP, reduced to a handful, finds itself too weak to sustain its offspring and so has done away with it—but not without a struggle. In order to do so, the SLP completely reverses itself—repudiating its "two wing" philosophy, i. e., of the need for political action based on economic organization, and vice-versa, and now says the political alone, as organized in the SLP, will suffice. Of course, this is a form of senile dementia with the SLP, but such is the mental status of all "liquidators" of the IWW. They all attempt and believe in the impossible!

*

The IWW is also an international influence.

The Stettin, Germany, branch of the Marine Transport Workers' Industrial Union out on strike are assisted financially by the Marine Transport Workers' Industrial Union branches here.

*

The MTW has succeeded in getting all Scandinavian ships sailing out of the port of New York under IWW job control. This was done through intensive job action and a boycott of Scandinavian scab shipping agencies. The highest wages and best conditions are the results.

A branch at Yokohama, Japan, is being agitated also.

*

In Santa Eulalia, Mexico, 3,000 miners, members, some of them, of the Metal Miners' Industrial Union, are striking against intolerable conditions under the auspices of the Mexican administration of the IWW. They also have the support and backing of the IWW general administration.

*

Santiago, Chile, is also a battleground for better conditions. The Chilean administration of the IWW is leading a successful struggle there for the 44-hour week in the building industry. 4,000 workers are involved.

# "The Mill Has Shut Down"

By BOOMER

"THE mills have shut down," was the remark that greeted the ear of the newcomers in the little sawmill town in Oregon. To many who heard the remark it did not have much significance; but to those of the workers who labored in the mills it meant much.

To have steady work for the heads of the families it meant regular food, a place to sleep and clothing of a kind for those dependent. With the closing down of the mills of course the income would cease, and that meant . . . . .? Such random answers to the imploring of children for a nickel to get an ice cream cone, were usually, "Now, you can't have a nickel; the mill has shut down." To the child who received the answer it raised another question, what did the mill shutting down have to do with whether it could have an ice cream cone or not. Poor kids, they did not know that their living depended on the operation of the mills and the ability of their fathers in being able to satisfy the bosses so as to have steady work when the mills did run. The question of why the mills should shut down never entered their heads, in fact it never entered the heads of their parents. All that they knew was, "that the mills had shut down."

But as the children of the mill town grow older they learn to dread the sentence, "The mills have shut down," because they recall that every time the mills have shut down it means a time of hunger and suffering for them. But it is not until they learn by a great deal of suffering that as long as the mills are operated for profits to a few that the mills will continue to shut down with recurring frequency and the spells of hunger and want will soon come to be the accepted order for those who labor.

"The mills have shut down" affects not only those who work in and around the mills but also thousands of others who sell their labor power for a living. The purchasing power of the community is lessened, clerks are laid off in the stores. Workers in the laundries are laid off; in fact, with the stopping of the income of the laboring people, the whole industrial life of the community slows down.

There is a way to prevent the shutting down of the mills meaning hunger and want; there is a way by which the mills shutting down will mean a period of vacation and gladness for those who toil; there is a way by which the closing of the mills for a brief period will be hailed with delight by the workers. To bring this change about depends upon the workers, but at present the workers don't realize it. When the workers own all industries, then the shutting down of the mills will mean that there is enough lumber produced to build homes for all, it will mean that none are shelterless, and for a while they who have labored can enjoy a little leisure until they are called upon to produce more lumber to be used for the good of society, and not to be sold for the profits of just a few.

But until that time comes when the workers realize their economic position clearly and thoroughly, then we can expect the cry of "The mills have shut down," to bring dread to the workers.

# Science and Labor Organization

By INDUSTRIALIST

TECHNICAL journals convey the impression of a vast improvement in industrial management. No longer are thumb-nail methods in use in operating industry. Instead industrial management tends to become a science. Science attempts to systematize knowledge in any one department of human thought or activity; and to apply the knowledge thus systematized in a manner conducive of the best results.

In industrial management, science may be summarized as systematized knowledge of the best way of doing work, not only for the industry as a whole, but for each industrial operation in the industry.

Scientific management tends to the creation of scientific managers; that is, men who have been trained in a scientific manner in the various phases of management; and who, individually and collectively, make up the managerial staffs in all great industrial enterprises.

These men take engineering courses in universities and otherwise study intensively management theories for years. To this they add also years of good practical knowledge; so that they are not only trained but experienced men as well.

So great is the increase in scientific management that in the cotton mills of the South, the old style managers and superintendents are being "retired;" technically trained executives are taking their places. This holds true also of industry in general; the old type of business head is being rapidly displaced by the newer one. The extensive comprehensive character of modern industry demands it!

This improvement in industrial management has brought about an improved industrial manager. An improved industrial manager is one who employs science in the handling of all industrial problems; all, of course, for the profit of his employers, the corporations and trusts.

### Facts Main Thing

He employs science in the selection of workmen, that is, he finds out all the facts about workers in his industry. He employs science in the formulation of wage rates and adjusts labor difficulties according to it. He gets his facts first and then uses his training and experience to the best of advantage, from his own viewpoint.

The modern industrial executive is usually up-to-date in all labor theories and practices; and what he doesn't know about them, he can learn from his own staff, or associated managers operating together with him in the same industry.

With and through them he solves problems involving engineering, economics, psychology, health, accountancy, publicity methods, employment, etc. Together with them, the modern industrial executive presents an entirely different proposition than did his predecessor of old; especially in the handling of labor problems and labor organizations.

Corresponding with this, going hand-in-hand with it, and as a result of it, there is a desire for more scientific management in labor unions. It is beginning to be realized that the old style thumb-and-nail labor union executive is not sufficiently well equipped to meet his scientifically trained and experienced opponent.

Further, it is also beginning to be realized that such an executive needs the backing of a staff approximating that of the managerial staff, or the staff of his opponent on the other side.

### Scientific Union Tendencies

Accordingly, in recent years, the modern labor union tends to employ scientific experts in the preparation and defense of its wage movements. This is the case particularly with the railroad labor organizations, who employ economists, accountants, and other scientists and technical men in wage disputes, and in the promotion of their various schemes.

The labor press also reflects this tendency, in that it prints wage reviews, forecasts, and other economic and technical information of value to the labor unions. These reviews, forecasts, etc., are prepared and furnished by labor research bureaus and industrial editors in the employ of labor news agencies.

Labor education also reflects the influence of this new managerial phenomenon. The schools maintained by the trades unions, among other things, aim to train officers as well as members. They aim to make the former as well as the latter, more scientific and efficient in every respect, both in the managerial and other phases of modern industrialism.

They realize that the modern labor struggle is getting to be more and more a matter of scientific ability and technique; and is no longer a haphazard guess or development dependent on intuition and so-called luck. They realize that a great number of facts, or phenomena, must be considered and coordinated in every labor struggle; hence their new tendencies, as described above.

They further realize the tendency toward workers' control of industry and are likewise teaching the rank and file the facts of modern industrialism in furtherance of this latter development.

**Of course, the fact that trades unions persist as trades unions, the fact that they are essentially auxiliaries of capitalism, engaging in many capitalist undertakings, like banks and the B & O "co-operation" scheme, militates against them. They are unscientific in their divisions according to trades. They are unscientific in attempting to get out of capitalism by becoming more deeply immersed in it. Modern industry obliterates trade demarcations where it does not entirely eliminate them. It makes the conflicting interests of capitalists and laborers more**

obvious the larger it grows. To organize contrariwise is to show, not the scientific, but the unscientific, spirit.

But despite all that, the trades unions show themselves, in their educational program, alive to the times. In training and developing their officers and members in the new management, they show themselves alive to the dependence of modern industrialism on scientific training and efficiency. And, in so doing, they point out the dependence of all modern labor organizations on those same qualities.

Industrial unionism proclaims itself scientific. This proclamation is true, in that industrial unionism is a development thoroughly in accord with modern industrial growth. But is industrial unionism scientific in every other respect? Are its executives trained and experienced men? Is its rank and file grounded in the facts of modern capitalism? Is it alive to the intensive as well as the extensive character of modern industrialism? What does it know about the fluctuations of production and their effects on labor organizations? Or of the new industrial psychology, as exploited by capitalist agencies? Is it only theoretically, ideally, revolutionary, and logically sound, without being practically so?

These are some of the questions that confront not only the student of, but the actual participant in, industrial unionism. Industrial unionism, despite its theoretical soundness, its ideal revolutionary spirit, its irrevocable, logical position, nevertheless seems woefully lacking in practical application and results. Why?

On the answer to this question and the questions above, depends the fate of this new form of labor organization!

# New Steel Process

(Continued from page 42)

discovery. The chemistry of the process has for a considerable time been clearly understood.

The importance of the new process lies in the fact that it obviates the problem of prohibitive cost. Non-rusting steels were sold at from 50 to 75 cents per pound, compared with a price of 1½ to 3 cents per pound for common steels and 4 to 6 cents per pound for high grade alloy steels, 12 to 15 cents for copper and 18 to 20 cents for aluminum. This prevented any general use of rustless steel. A suitable grade of rustless steel or iron can be substituted for almost any material that is now manufactured of ordinary steel, iron, brass or aluminum, whether in the engineering industry or in the domestic arts. As compared with brass, it should be noted that the rustless metals do not require any protective coatings, such as lacquer, and it is also important that a greater economy is attained in tensile strength, thus reducing the amounts of material to be specified to attain the safety factor in construction.

There is no field of industry, whether it be domestic, such as for cooking ranges, utensils and hardware, or in the industrial arts, for mine machinery, pumps, turbines, wire rope, roofing materials and structural members exposed to the elements, or in marine work for ship plates, refrigerator pipes, etc., or railroad engineering, or in the automotive industry, including aeronautics, that rustless steel and iron cannot be used to great economic advantage on a large scale at a low cost. With the production of these metals there is no doubt that rustless steel makes possible industrial development previously impossible.

### Thousands of Workers Will Be Forced Out of the Industry

Whether the present slump in the steel industry is a result of this invented process is not known. But one thing is certain as soon as this new process will start to develop: thousands of steel workers will be forced out of the steel industry. The steel workers today have no organization to speak of. The other industries are developing new labor saving devices and machinery as well as the steel industry. What is going to become of all these workers that are thrown out of work? The struggle for a job is becoming a real issue. Not only are we interested in getting better conditions, but we must first have the job to better our conditions. The steel workers have a problem to solve, not tomorrow, but today, right now. Today it is a rustless steel process, tomorrow, new labor-saving devices, and in the meantime thousands of workers are added to the army of unemployed.

In order for the steel workers to combat for a job, they must have an organization that will take up their fight.

# Fields Plowed as You Sleep

WHETHER electric service can be employed to reduce the cost of farming, increase production and lighten the burden of the farm wife, is the primary purpose of a nation-wide survey which has been undertaken by the rural electric service committee of the National Electric Light Association, G. C. Neff, Madison, Wisconsin, chairman of the committee, declared before the recent convention of the association held at Atlantic City.

"Investigating committees, including agricultural engineers, university professors, government officials, farm organizations and public utility men, have been organized in seven states," Mr. Neff stated. "They include Minnesota, South Dakota, Kansas, Iowa, Wisconsin, New Hampshire and Virginia. Fourteen other states are now planning to organize similar committees in each of these states.

"A locality will be set aside in each state as a sort of farm laboratory in which each type of appliance or machinery that can be used on the farm will be employed. These experimental farms are expected to produce facts on which sound progress can be made in electrifying the farms of the nation. Publicity utility men believe that electric service can be made profitable to the farmer as well as to the electric service company.

"Approximately 2½ per cent, or 164,347 of the six and one-half million farmers in the United States are receiving service from electric light and power companies and about 200,000 farmers are procuring limited electric service and individual farm lighting plants. This shows conclusively that the development of rural electric service from central stations has just started and that this is the opportune time to give intensive thought to this subject in order to avoid costly mistakes which may occur out of haphazard development.

"At the present time experiments are being carried on with electric plows which can be started in the evening and the farmer can go to bed and the plow will work all night. Electricity lends itself very readily to automatic control, which makes it possible for the farmer to accomplish much work with very little effort."

# Never Too Late To Mend

By JIM SEYMOUR

"OH, Sir, please don't arrest me!" pleaded the aged quilt to the policeman who had discovered it resting behind a garbage barrel in the alley. "It is true that I am homeless and unemployed, but I came of good stock—I was made of the very best grades of shoddy and cheesecloth."

"Tell it to the judge," advised the cop; "he's an authority on quilts."

"Oh, I was, I was!" wailed the quilt; "I was made in New England. Please don't take me to the horrid jail to associate with criminals and politicians. I'm old, hut I'd still be useful if I could find a job."

"I don't believe you ever worked in your life," said the cop. "You don't look it."

"Oh, sir, I did," replied the quilt in a worn voice. "I was sixteen years in the chambermaids' quarters of a big hotel. Then I performed casual labor years and years, until finally I secured a berth on a lumber schooner. I had been there nearly three years when a sailor traded me for a plug of tobacco to a wandering California prospector who knew right where he could find a fortune if someone would only grubstake him. For seven years he looked for the grubstake, he and I and the two dogs sleeping together."

"Then what?" asked the cop, getting interested.

"He died," said the quilt softly, trembling like a bunch of cotton in the breeze. "He left me at a hobo camp along the railroad track. For years I tried to induce one of the hoboes to employ me, but they all sat down on me.

"Finally a tramp took me to the city and traded me to a furniture mover for a can of canned heat. I worked for my new boss faithfully for a long time, bumping up against the hard corners uncomplainingly, until my constitution weakened and I could no longer keep things from bumping each other. I hope you understand me."

"Sure," said the cop sympathetically; "I used to be on traffic."

"So," continued the quilt tearfully, "my employer abandoned me—cast me out to die by the roadside. Then a junkman picked me up, put me in a sack and sold me to the big junkhouse. But the sorter discovered that I was shoddy and threw me into the alley. And yesterday—boo-hoo—a man got me to clean the axles of his flivver and didn't even thank me. What is an honest old quilt to do? I can't get a job with a front like this."

"Cheer up," said the cop as he pinched a bit of shoddy from the quilt's innards and mopped his eyes with it. "I ought to pinch you, but tonight's pay-day and I feel soft. Come on, I'll get you a job."

Ten minutes later, in consideration of receiving a sample of whichever brand of cigar that happens to be advertised in this issue, the kindhearted cop got the poor old vag a steady job in a workingmen's rooming house that was operated on the uplift plan.

# Time For Action!

Don't let any adverse incident in the struggle between employer and employe dampen your ardor in the cause of labor.

Labor is not easily beaten; nor is it ever completely destroyed.

It has a history not only of reverses but victories as well.

Labor is most encouraging when active and alive to every phase of development.

Are you unemployed, and, therefore, unable to render financial assistance to the working class movement, then turn that item to the undoing of the system that places you in such a humiliating position.

Point out incessantly to your uninformed fellow workers the wrongfulness of a system that cannot provide the industrious with an opportunity to labor and subsist as becomes willing and intelligent producers.

Point out to them the wrongfulness of a system whose only remedy for overproduction is civil war and international war, or war on the working class to reduce wages and increase hours, and war against foreign nations to secure more markets.

Such a system is the height of economic absurdity! It is bloody, murderous, uncivilized, inhuman, and wasteful of life and wealth. It is a blot on the escutcheon of mankind; and should be abolished.

Agitate among your fellow workers against its continuance, as at present constituted. Urge them to join with you in protest against it. And to organize together with you on the job when you return to work, in order to combat its downward tendencies there.

Above all spread the workers' press, that the truth about the workers' organizations may be known. Organize to promote its circulation and sale wherever possible.

Don't succumb to indifference and apathy. Nothing would please the oppressors of labor more!

Arouse then! Agitate, Educate, Organize!

# PREAMBLE OF THE INDUSTRIAL WORKERS OF THE WORLD

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Labor Banks Fail Labor

The labor bank as an aid to the working class in its struggles with the capitalist class is receiving a practical try-out in New York City.

In the great metropolis, during the past two years, the Amalgamated Clothing Workers have operated one of the most successful of these institutions.

In the great metropolis, also, 40,000 Amalgamated members struck recently to wipe out the near-sweatshop conditions that have risen during the past two years.

Apparently, together with the growth of the Amalgamated Bank in New York City, there has also gone a return to previously bad industrial conditions—a retrogression in fact.

This could not very well be otherwise. Labor banks cannot change industrial conditions. That is not their function. Their function is that of all banks, namely, to hoard and to lend middle class funds mainly, at higher rates of interest than are paid for their use.

In brief, they are profit-making, capitalist institutions; and, as such, act in an anti-labor manner. Witness the Warren S. Stone company, backed by the Brotherhood of Locomotive Engineers' bank at Cleveland, O. The Stone coal company fought the miners' union and the latter had to strike against it.

What is needed to change industrial conditions is industrial unionism. Labor banks prevent this. They make for craft division. They develop special craft interests and entrench craft officialdom more firmly. They are obviously failures in the class struggle; and stand in the way of progress, instead of making for it.

However, the workers will be forced to leave the labor unions of which the labor banks are born if the former do not function as they should. In this lies the hope of working class progress.

# Scenes from Battlefields of Class War

Exterior San Pedro Hall

(See Opposite Page)

Decorating Graves of Speakers Killed in 1920 Revolution, Stettin, Germany. Branch MTW is located here.

# Over Eight Hundred Hear Geo. Speed

## EXPOSE THE TRUTH ABOUT THE SAN PEDRO RAID

By HARRY FISHER

**The Damnable Fiendishness of the Brutal Outrage of June 14, Described in Masterly Address That Did Not Mince Words. Shipping Interests Shown to Have Engineered Diabolical Affair in Which Death of Navy Sailors Was Utilized Unsuccessfully in Their Protection.**

**IN an address on Beacon Street, San Pedro, Calif., at the foot of what was Liberty Hill, before the steam-shovel razed the historic promontory overlooking the harbor, Fellow Worker George Speed held spell-bound for nearly three hours one of the largest crowds ever assembled in this city to imbibe the story of Industrial Unionism. The possible exception was one or two meetings during the memorable scenes of the harbor strike of a year ago.**

**In his discourse, the speaker did not mince words in describing the damnable fiendishness of the brutal outrage of Saturday night, June 14, just twenty-four hours before.**

**This was the first address on the street, since the riot took place and it is quite probable that at this meeting attended by the Captain of Police and a score of reserves from the Los Angeles police, the IWW conduct turned sentiment to allow meetings on the street and it may be the first rift of the silver lining in the o'er-shadowing cloud.**

**To get an idea of the meeting's significance, it is necessary to draw a mental picture of the environment and preceding episodes, to properly form any conception.**

The battleships of the Pacific squadron lie at anchor inside the break-water. An entertainment at the IWW hall, given to raise funds to defray the burial expense of two fellow members, sacrificed to the avarice of capitalistic retrenchment, is in progress. Not all of the audience are IWW. Many little kiddies with their parents are present. Suddenly the hall is stormed by an infuriated mob, with some wearing white bands around their arms, while quite a number appeared in the uniform of the navy. (The bands were evidently a shield to keep them from murdering each other).

Hear the yell of wild Comanches; see piano and other furniture strewn on street and set ablaze; hear the clang of the fire-engine and see the ambulance drawing up before the hall as the wounded are being carried from the field! Find all the telephone wires in a radius of two blocks cut; see the hall, with not one door or window intact; see tender hands carrying little cherubs to their homes; see the blood-stained parlor across the street, where the mob got its baptism in gore; see a truck, loaded with fellow workers at the points of guns, and on every corner, outposts to cover the retreat of the automobiles with the mob and to prevent relief being summoned; find no policemen in town, though at other meetings there were always several present; then realize that on the next day a report is current that the IWW have made derisive remarks in connection with the death of the sailors and, on Sunday night, while this meeting was going on, newsboys shouting, "All about the IWW plot to blow up the morgue!"

Visualize, if you can, the scene of carnage, realize that on Tuesday the sailors will pay the last, sad homage to their departed comrades! Then you may appreciate the gravity of the tension in the atmosphere pervading this street meeting on the night following the raid, a tension so grave that the police department counselled against meetings and the Admiral of the navy rescinded shore-leave of the sailors.

Then picture a Captain of Police saying, when asked for permission, two nights later, to hold a meeting—"Go to it boys, I will try and calm the public!" If you can draw this picture, then and then only, can you appreciate the enormity of its portent.

### Truth Coming To Life

Truth, so long crushed by the iron heel, is apparently coming to life and it is beginning to dawn on the people that the Industrial Workers' Union is not a lawless element in society—that there are other elements that are really lawless indeed.

See, later, the provost guards around and inside the Wobbly hall, reading during the day, what could be salvaged from the IWW literature and in particular the latest "Solidarity"! Then turn your gaze to the mammoth crowds at night street meetings and if you do not get a thrill, you must be callous to all sensation! For there you will find navy guards and more than a dozen uniformed police, to say nothing of the Captain of the district and the unknown number of picked plain-clothes detectives. ever alert for the slightest sign of any outbreak.

When you see this, then you must feel that some-

how, perhaps these may be the rays of a fairer dawn; a harbinger of truth, ushering in the light of tolerance.

And on a soap-box, if you please, stands the central figure, the cynosure of all eyes, gloriously majestic in the resurrection of the constitution, which he himself so graphically epitomized to the Captain when asked why the IWW persisted in its position, when they were as one against a thousand, by the terse reply that—"I would rather be in the right with two or three, than in the wrong with a thousand." He realized that it was easier to drift with the current and that he is only going through the same experience that has marked the beginning of every advance in progress throughout the ages and that he was so wedded to the cause of his class, that he is, in his humble way, trying to represent, that he could not turn back if he wanted to.

The writer had gone to the post-office to mail leaflets to our publications and stopped to write a few letters, so he did not hear the first part of the address, but the interest of the audience had not abated, if we are to judge from the frequent applause, that some telling point elicited. (The best evidence that from his storehouse of knowledge, he has made an impression, may be gleaned from the statement that at last night's street meeting exactly one week later, many women were in the crowd and one gave a ten dollar contribution toward the care of those in the hospital.)

But this is getting ahead of the story of the first public street meeting on the night following the raid.

### Diabolical Fiendishness

There the speaker had waxed emotionally eloquent, when, with a dramatic intonation, he made reference to the raid and said "he did not think that words could ever adequately describe the diabolical fiendishness and satanic cunning which characterized this as the blackest crime ever perpetrated in the annals of modern society.

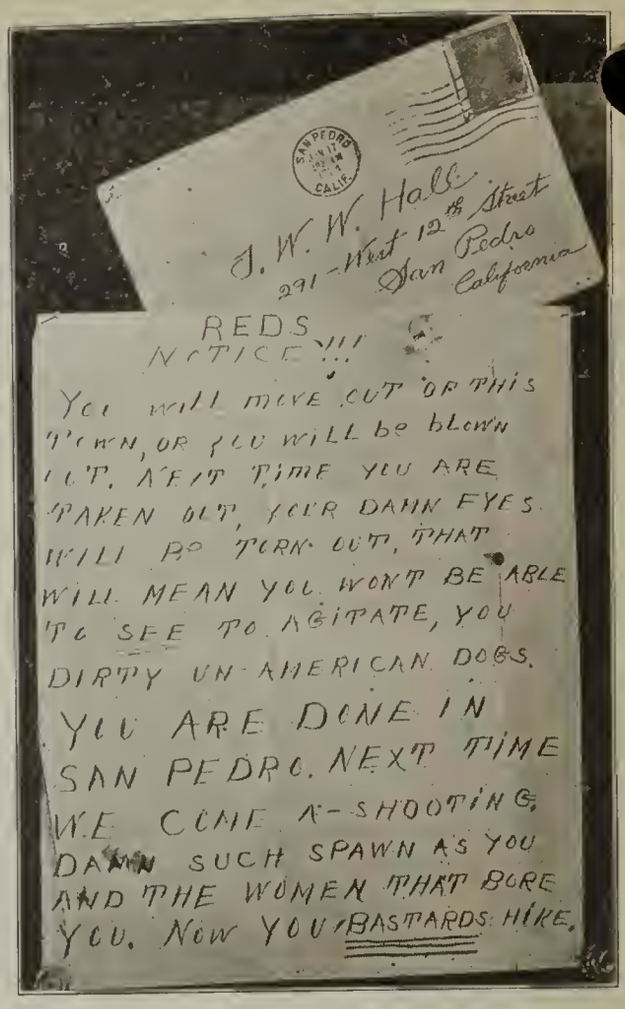
"It was the culmination of the nefarious plot that was hatched by the powerful interests that are yet chafing at their own impotency, when ships lay idle and cargoes did not move because labor, the main-spring of all activity, had demonstrated last year, that, without its guiding hand, not a wheel could turn.

"So among all the schemes, that greed could devise, to make labor more docile, the outrage of Saturday night will go down in history as the outstanding disgrace that ever cast its blighting shame on any community.

"In all the travail and persecution that marks the mile-stones in the economic struggle, history's pages have never recorded a crime so monstrous and at the same time so low.

"Shame on a society that prates of its culture and yet will not rise in indignation at such an exhibition of savagery.

"Shame on those who sought to use the uniform of the sailors as a cloak to screen their cowardice.



SAMPLE, SAN PEDRO SAVAGERY

"Shame on those who perhaps were led, unwittingly, into lending themselves to take part in the attack!

"Shame on the press, the venal press, that seeks to capitalize the tragedy that befell the comrades of the sailors, by seeking to arouse their feelings in their great sorrow!

### Patriotism A Cloak

"But no shame for those who are behind the curtain and who, in the hour of the nation's mourning, would in the name of patriotism, attack not only men, but women and children, yes, innocent little tots, babes forsooth, of whom the greatest servant of all time hath said, 'Let them come unto me and prevent them not'!

"No; we do not invoke shame on those who plotted and engineered this act of terrorism to cow us into submission as a punishment for daring to assert our right.

"We could not hope that shame would ever move them. For such an element there is no shame.

"As we look back on that scene, we stand aghast in the sight of little children in all their immaculate innocence. literally cooked, as the most expressive

term, to satiate a vengeance that has no parallel. In the days of Herod, we are told that the babes were drowned on the banks of Jordan and that in the heathen land they were thrown in the Ganges, but these were more merciful acts than the scalding that was done here in this city, on Twelfth and Center Streets last night.

"We are not exaggerating, for you do not have to take our word. Go to the homes and the hospitals and see for yourself!

"See if you can look upon their limp, little bodies, in torment and pain! See a nine year old boy in a state of continual delirium. See if you won't recoil when the mother's tender hands lift the cover from his five year old sister! See the agony that even her fortitude cannot conceal-"

### Lena Milos' Testimony

Lena Milos, nine years of age, a most winsome, lovable, bright and talented child, who only a few days ago was as pretty as a flower, is now a mass of ugly wounds and blisters. When asked if they deliberately scalded her, this is the childish answer she gave between sobs, "Yes Mamma, I told him he was pushing me into the coffee and he said, 'That's alright, you won't sing at any more Wobbly entertainments,' and he set me right into the coffee boiler,"

"No, we do not hope that there is any shame for the monster Molochs, who were the master minds that influenced those who enacted and carried to fruition, the most heinous carnival of despotism that put its foulest spot on the sovereign state and sought to besmirch with its blemish, the unsullied escutcheon of the navy, during its stay in this port.

"No, those who are behind the scene cannot be touched by shame. Their life is centered on profits and, to attain their goal by fair means or foul, is their sole life's pursuit.

"They are ever flaunting patriotism as their aegis. They charged us with treason because we asked for an eight-hour day, the while they, patriotically or otherwise, took advantage of the nation's needs by boosting the pre-war price of lumber from eighteen and twenty-two dollars a thousand to one hundred and thirty dollars a thousand.

"They fear no law and we know of no instance on record, where one of the whole piratical crew ever went to jail.

### Patriotism Scoundrel's Refuge

"It was Doctor Johnson who said. 'Patriotism is the last refuge of a scoundrel'!

"They clutter up the press and the records, even to the national congress, with subtle testimonials of patriotism, yet their greatest loyalty is to the flag that bears the dollar sign.

"See the ships, owned by American capital, floating the foreign flags right here in the harbor at this very time!

"Why don't they float the stars and stripes do you ask? It is because there is a law that all vessels under American registry, must carry a certain percentage of Americans in their crew.

—St. Louis Post-Despatch

**"OH, SAY, CAN YOU SEE—"**

**Flies at San Pedro as well as in Washington, D. C., oil scandal.**

"By changing the flag, they can man their vessels with the cheap labor of the country that pays the lowest wages. To them it makes not a particle of difference whether this labor be white, yellow, black or green, so long as a flag flies at the masthead in mockery of all our traditional standards.

"We charge such unconscionable hypocrites, as primarily accountable for the saturnalia that transformed a quiet entertainment into a pandemonium of savagery.

"Every effort has been made to heap opprobrium on our organization by this gentry and its minions. When other means failed to subdue us, they had their friends enact, what is known as the criminal syndicalism law and for a while, they were successful in sending members of our organization to prison for from one to twenty-eight years in this state, but when the trials became too expensive on account of reluctance of juries to convict, they tried other means. They arrested newsboys for selling our papers, papers that are granted mailing privileges by the United States government and are on sale in many news stores, even in this state. In not a few instances, the higher courts have reversed decisions which the lower courts had reached on the paid testimony of unscrupulous hirelings. So they resorted to other means of intimidation, through what is known as the Busick injunction. When they found that this instrument did not

come up to their expectations, they put all their hope in a campaign of terrorism, in the lawless plots, such as marked the occurence of last night, with all its sordid horror.

"No, for them we waste no tears, for they have no compassion and are immune from shame. They are incapable of a feeling of any commiseration for the working class.

"Their power lies in the extent of the subjugation of those who are compelled to labor, with no assurance against the fear of want, after they have produced a surfeit of wealth in commodities when mills are closed down and 'business is slack', until this surplus can be disposed of.

### Attempted Desecration a Myth

"With this digression, we will turn to that other phase of this most unfortunate affair. It has been circulated through the devious channels of rumor, that the IWW, or a member of the IWW, threatened to desecrate the dead, by someone who heard someone say, that someone told a policeman that he saw an automobile and heard two men plotting to dynamite the morgue where the forty-eight bodies of the dead sailors lay in state, in reprisal for the attack on the meeting hall, last night—Just as if we were ghouls.

"This report is so infamous in its character that it is unworthy of consideration on the part of any rational, thinking mind; it is nevertheless published in the large headlines you see in the paper tonight.

"Let me say right here and now, and I think I voice the sentiment of every member of our organization, that the Industrial Workers of the World who were in the hall at the time of the attack, do not believe all those in the uniform of the navy, who took part in that outrage, were part of the navy personnel. Their untidy appearance convinces us in this respect.

"But they were nearly all young men, boys, who as yet do not understand the philosophy of life. And to such, if there may be any present, let me beseech you to a realization of what you have done!

"I am sure there are some who took part in that unmanly and inhuman spectacle, who are ashamed of it tonight.

"It is to you or such of you, whoever you may be, that I want to say that, if ever again the occasion arises, when you may be prevailed upon to take part in such or a similar crusade, think well before you act! Do not allow yourselves to be swept by the hysteria of the moment!

### A Democratic Organization

"We feel that there is good in some of you and that you are misled, misled by forces that were too craven and too cowardly to risk their identity and used you in their effort to put the stain upon the sailors.

"And, in conclusion, if there are among the hearers any who do not understand our organization and its aims, I will say, and say it advisedly, that the Industrial Workers of the World is the most democratic organization, without exception in existence today. It comes nearer to the ideal and ideals upon which this nation was founded than any organization that I know of.

"We have no masks or rituals. We have no password or 'Inner Circle'. We have no political aspirations. We have no quarrel with the government. We leave that to the politicians, while we stand aloof. Our fight is with the boss.

"Our aim and the sole reason for our existence, is the betterment of the conditions of the working class. Ours is the living expression of protest against the cause of the discontent extant today, and so long as the cause remains, so long will there be discontent.

"You may wipe out the IWW entirely, that is to say, if every one in any way connected with the IWW should die tomorrow, it would not be long before its astral ghost would rise again and, phoenix-like, become the nucleus of the same organization or its counterpart.

"I have been connected with the labor movement since 1872 and saw the futility of efforts toward any appreciable progress along craft lines and seeing in the IWW the only logical, practical and effective means of coping with the ever growing problem of labor in its struggle, I became a charter member and have been a member since and hope to remain, come what may, a member to the end."

### A Masterful Address

As this speech is written from memory it cannot do full justice to the masterful address, delivered on the street corner on the night following the raid of the San Pedro hall, for, without notes, it is not possible to record it in its entirety.

Though the speaker spoke almost three hours, his hearers did not appear to lose interest. In this connection there is no doubt some credit is due to Fellow Workers Lorier and Fry. Fellow Worker Lorier is a diplomat, worthy to preside at any meeting, while Fellow Worker Fry dispelled monotony with an interesting account of his experience in newspaper work, pending the announcement of the main speaker.

Complimentary comment, on the part of local business men and others, impressed the writer as a good omen, in spite of the fact that an itinerant street orator is here for apparently no other reason than to fan the hostility of certain elements into another and perhaps greater conflagration.

Somewhere, in the forepart of this contribution, the writer states that he missed the first part of the address, so it is quite possible that the kidnaping episode was described to the assembled concourse.

Realizing that this story would not be complete without a reference to the incidents attending the

# Robert M. LaFollette

By POLITICUS

**The Senator from Wisconsin Analyzed—Praised for Courage, Ability and Grasp, He Is Nevertheless Declared Retrogressive Instead of Progressive —Looks Backward to Pre-Trust Days Instead of Forward to Industrial Democracy—His 26 Planks Enacted into Law of Land Since 1908 No Brake on Development of Capitalism—Latter Bigger in Every Way, Though Badly Scared by "Fighting Bob."**

**THE candidacy of Robert La Follette for president is the subject of much discussion, principally in the capitalist press. The dominant class seems very much concerned about it. It is feared that conditions may throw the presidential election into Congress, where La Follette and his followers hold the balance of power. This will create an unusual situation in politics, namely rule by a minority bloc rather than by a majority party.**

**In view of all this it might be well to examine what it is that La Follette represents. Is he a revolutionist? Will his measures, if enacted into law, change the fundamental relations of property and man, or capitalist and laborer? Or is he another Wm. Jennings Bryan, threatening, but essentially safe and same?**

In answer, let us consider the proposals made by the Wisconsin La Follette delegates to the Republican convention. They are summarized as follows:

"Housecleaning in government; elimination of private monopoly control over government and industry; congress, courts and administration to be rescued from agents of monopoly that dispose of natural resources, nullify will of people and make lawless raids and seizures; foreign policy to be altered from imperialist warmongering that conscripts sons of the people; genuine farm-relief; recovery of naval oil; repeal of Esch-Cummins transportation bill; ultimate public ownership of railroads and reduction of taxes on producers; reduction of tariff and military expenditures; direct election of president and federal judges; abolition of injunctions against labor; tax on war profits to pay adequate bonus; great lakes waterway; revision of Versailles treaty to accord with armistice terms given to Germany; treaties to outlaw war, abolish conscription and reduce armaments; national referendum on peace and war; nomination of party candidates whose public record is known to match the above platform."

"BOB" LA FOLLETTE
**Under Whose 26 Progressive Planks, Embodied In the Law of the Land, Big Capital Has Grown Bigger Still.**

### Public Ownership Not Revolutionary

As will be seen, La Follette is not a revolutionist; unless his demand for "the ultimate public ownership of railroads" may be called revolutionary. In other countries, like Germany, for instance, "public ownership of railroads" has long been a beneficial factor in the development of big capitalism. What would make La Follette's public ownership proposals revolutionary is the opposing tendency to give over public works to private exploitation. In that respect, La Follette is a revolutionist, indeed. But not wholly so, as the idea of government ownership of railroads is growing in this country and is coming to be regarded as inevitable, if not desirable, by even some capitalist elements.

As far as the working class is concerned, public ownership of railroads will mean the exploitation of labor by the state instead of by corporations composed of private individuals. It may admit of working class participation in management and control and prove more beneficial to labor on that account than private ownership. However, that remains to be seen; the past history of public ownership is not impressive from a working class standpoint. It is therein shown to be more of a saving to the taxpayer than an elevator of the working

class. This is made obvious by the additional clause in the La Follette public ownership plank, viz: "and reduction of taxes on producers." By this La Follette means the farmers and small manufacturers, who see in public ownership cheaper rates and less taxation.

### Reform In a Big Way

Aside from his public ownership of railroads plank, the Senator from Wisconsin is a reformer in a big way. He wants to "house-clean government." It needs it; very badly, too. Also eliminate "private monopoly control over government and industry". Can that be done? We doubt it. The very essence of private monopoly is control of government and industry and unless private monopoly is done away with that control will continue. And so with the proposed rescue of congress, courts and administration from "agents of monopoly that dispose of natural resources, nullify will of people and make lawless raids and seizures." Now that is a very laudable object. Every man of decency will applaud it. But it is open to the same objection as the previous plank. It is putting the cart before the horse. Given a people without economic wealth and power, how can they proceed politically? How can those who possess economic wealth and power be undone, except by the economic organization of those employed in private monopoly and natural resources?

So with the next plank: "foreign policy to be altered from imperialist warmongering that conscripts sons of the people." This plank, like all the others, is a stinging indictment of capitalism. It's great on that account. But otherwise, who believes it possible? Capitalism must expand abroad or swelter in its own overproduction at home. As long as this condition prevails conscription will be as inevitable as capitalism itself.

"Genuine farm relief"—from what? Concentration in farming due to big capital and machine power? High costs of producing products produced more cheaply by others? Farm combinations and corporations that secure credits and rates, to the disadvantage of the small farmers? Bankers, railroads, middlemen via government credit and finance?

"Recovery of Naval oil." Why not all oil?

"Repeal of Esch-Cummins transportation bill." O. K.

"Reduction of tariff and military expenditures, etc., etc."—All of these planks are what Daniel De Leon used to call "trimming the whiskers and manicuring the toe nails of the beast of capitalism," while leaving him intact. They are very desirable from the standpoint of liberal democratic politics but they are not revolutionary. They do not touch the most vital issue of the age and that is the fundamental transformation of capitalism from a plutocratic feudalism into an industrial democracy. La Follette has no such aim nor desire.

La Follette is a bold and unsparing critic of capitalism. His pre-war and post-war exposes show him to be a man of unusual courage and ability. His statistical method is worthy of extensive copying. His "come-back" since the war is a marvel of American political history. His astuteness as a political leader is without a parallel in American history; for though in the minority he holds the political keys of the nation in his hands. As a friend of labor, fighting the injunction and for the railroad workers, he has proven sincere and reliable. An exceptional man in many exceptional ways, Robert La Follette is worthy of admiration and esteem; but after all, he appears to be looking backwards to the pre-trust days instead of forward to the days of industrial democracy, of, by and for the industrial workers, who, together with their dependents, constitute the vast majority. He is a middle-class liberal, but really retrogressive rather than progressive. He is the Granger anti-monopolist slightly modernized and possessing essentially the same principles, which are state regulative instead of social ownership.

Consider the boasts of his spokesman at the Republican Convention, Congressman Henry Allen Cooper. Bold, courageous, able like his leader, he declared, with well-deserved pride, that since 1908 26 out of the 31 planks submitted by Wisconsin La Folletteites, have been enacted into the law of the land. Has not capitalism prospered despite them? Is it not now bigger than it was back in 1908?

It sure is!

No greater criticism of La Folletteism could ever be uttered.

## Welcome!

Beginning August 1st, the Building Construction Worker, now issued quarterly, will appear monthly. The Building Construction Worker is the official organ of the Building Construction Worker's Industrial Union No. 330, Industrial Workers of the World. Its last quarterly issue contains articles of interest to every worker in the building industry and should be given extensive circulation amongst them. With a monthly issue in the future, the propaganda for industrial unionism can be multiplied many fold. For copies address, The Building Construction Worker, 1001 W. Madison St., Chicago, Ill.

The Industrial Pioneer welcomes the Building Construction Worker to the circle of industrial Union publications.

## ONE ON US

(From Seattle Star)

Down in California they are blaming the hoof and mouth disease on the IWWs. Probably on the theory that the Wobblies hoof it about the country and get mouthy on the soap-box.

# The Harvest Message

By BARAJEMES

**Deceptive Methods For Overflooding Labor Market In Wheat Fields Laid Bare—Desperate Need For Hands Greatly Exaggerated—Resulting Conditions, Poor Wages, Long Hours, Cause Organization—Improvement Now Noticeable All Along Line—Agricultural Workers' Industrial Union's Influence Wide-Spread.**

**EVERY year, about the middle of June, a great cry goes up for harvest hands. Newspapers carry stories of bumper crops and great prosperity for the farmer and the people in general, if only enough men can be found to garner the grain and thus turn it into dollars. State and federal employment agencies hang out placards declaring that "Kansas needs 20,000 men," and a little later in the season, "North Dakota demands 50,000 harvesters." Local papers, chambers of commerce, farmers' associations and similar organizations swell the cry for help until it seems that every citizen in the nation would have the desperate plight of the farmers brought home to him with emphasis.**

That much of the noise about lack of men for harvesting has no basis in fact does not deter the different organizations from press-agenting the situation. Usually the demand for men is like the report of Mark Twain's death, "very much exaggerated," but the overstatement is intended; indeed, it is as a lawyer would say, done with malicious forethought.

Behind this exaggeration is an economic reason which is beginning to be better understood by harvest hands than a few years ago. More men than are needed are coaxed, or if need be, coerced, into certain sections of the wheat belt by the wily bankers and farmers, who have known for years what the harvest hands are only beginning to understand, namely, that if there are one hundred prospective harvesters in a wheat town which only requires twenty-five, the remaining seventy-five can be, and are, used as a club with which to lower the wages of those actually needed.

### Harvesting the Harvesters

Harvest hands by the thousands answer this cry. From every state and nearly every city in the land come recruits for the grain-gathering army. Boxcars, passenger trains, automobiles, all add their quota of those who have heard of the great demand for men and the resultant high wages to be had. The harvest territory is soon flooded with a hungry, penniless horde of men who are, many of them, hundreds of miles from home, and to whom the only way of escaping starvation seems to be the acceptance of the "going wages," even though it be much under that heralded in the columns of their home town papers.

For many years the farmers took advantage of this feeling and set the wages as low as possible and worked the men from as early in the morning as practicable until sundown and often later. Occasionally men would be found who did not even inquire the wages paid and these men were paid whatever the farmer felt like paying. Storekeepers and restaurant owners reaped a harvest of profit from the men who came to harvest the grain and when the season's work was finished the harvester left the fields with nothing more than a large fund of experience and a determination never to repeat the process.

### Organizing the Harvesters

Among the harvest hands there were, naturally, some men who resented such treatment; men who could see the worth of their services and who were not satisfied to leave the fields in a worse condition than when they arrived. These men, in 1915, organized the Agricultural Workers' Organization of the IWW and started in to make the harvest fields a safe and decent place for labor. Year after year

these men have struggled against all the forces brought against them by the organized farmers, bankers and merchants of the wheat belt. Against laws prohibiting their activity, against countless forms of petty tyranny by police and railroad officials and even against an injunction which was of such sweeping nature as practically to forbid the presence of members of the organization in one state, Kansas.

That the organization has managed to survive the bitter hardships imposed upon it shows its inherent character of right. That it appeals to the best interests of the harvest hands is shown by the undeviating fidelity with which its members have met every assault upon it. Were it not fundamentally correct it would have disappeared long ago; no one will champion a cause through untold suffering unless the abandonment of it will work even more hardship upon them. And if this cannot be shown by concrete facts members will not be attracted to such an organization. These facts have been proven time and again; more wages, shorter hours and better conditions have been gained in every state in the wheat belt through this organization and as a result, in spite of the persecution visited on its members, it has steadily grown until it is now a force which has to be reckoned seriously with in the harvest fields.

From a handful of men in 1915 it has grown until it now numbers over 10,000 members and every season sees further addition to its forces. Today it has a well organized army of delegates scattered in every corner of the wheat belt, stationary offices in the important centers, an efficient system of relief and defense for members who fall victims to organized authority and a propaganda system which floods the harvest country with literature every season.

**Organization Alters Matters**

Since its advent in the harvest it is no longer possible to lower wages because the supply of men in certain section happens to exceed the demand. When its members are confronted with such a state of affairs, meetings are held, the wages at which the grain shall be harvested are set by a majority vote and no one cuts the wages. "An injury to one is an injury to all," is the motto and this motto is lived up to in all dealings with the farmers.

This is perhaps the point which causes the farmers the greatest worry; they never seem to understand that there is a great difference between unorganized men and those who have decided to stay together. Formerly the only reason for raising wages was the scarcity of men, and likewise the best reason for cutting them was a surplus. It is entirely different now; whether fifty men or two hundred are needed, whether there are seventy-five or five hundred available, once the members of the Agricultural Workers' Industrial Union (name was changed in 1916) decide on what the wages shall be, the farmer pays them, with as much grace as possible.

Shortening the working day and bettering the conditions under which the crop is gathered is accomplished through organized job action. The ten-hour day has been established in many parts of the wheat belt and the practice of buying blankets has been almost entirely discontinued. Better food has been obtained in many places and the old practice of "docking" the men for breakdowns of machinery is also a thing of the past. The AWIU year after year has left its mark in the harvest fields and each succeeding year has seen higher standards of life for those who have joined its ranks. Yes, even more than they have benefited; in the harvest fields, as otherwheres, there are cravens, men who reach out and grasp the fruit of others' efforts without having the manhood to aid in bringing about improvements. Thousands of the worst "scissors," every year find the harvest fields better places in which to work because of the activity of the members of the AWIU.

This year, the AWIU is again on the ground in the harvest fields; before this appears in print their drive will have progressed from Oklahoma to the South Dakota line, hundreds of new members will have been initiated, thousands more will have been reached with propaganda explaining the need of organization, and still more thousands will have seen the members in action, gaining for themselves better conditions, more wages and fewer working hours than the banker and the farmer intended them to have.

The Jungle Dreamer.

But this is not the only function of the AWIU; while primarily concerned with immediate betterments, it has another and more revolutionary purpose. In the harvest fields the AWIU is a great educational influence, its members know that the agricultural industry is only one of

# Fascism at the Crossroad

By M. DeCIAMPIS

**Mussolini's Government By Rape, Arson And Murder, Reaches Climax In Assasination Of Socialist Deputy Matteotti—Expose Of Dastardly Deed Reveals Full Extent Of Reversion To 15th Century Methods Indulged In By Italy's Imperialistic Bourgeoisie And Rulers—Incident Also Serves To Stimulate The Undying Revolutionary Spirit Of Italian Working Class. —A Lesson For The U. S. A.**

THE cold-blooded, deliberate, shocking murder of the socialist deputy Matteotti of the Turati group of reform socialists, which a few weeks ago so thoroughly stirred the world with its sinister meaning, was nothing else but a clamorous culmination of untold numbers of crimes and beastly deeds that the Fascist party, since its inception, and more frequently and systematically since its assumption to power, has been guilty of planning and carrying through, with the view to solidify and strengthen its political hold on the unhappy Italian people.

It will not do for the capitalist press to make apologies, to minimize the whole dastardly mess, to sing the silly song of social peace and harmony. We think that Fascism has dangerously been playing with fire and that it has gone too far. Too much working class blood has already flown on the altar of bourgeois interests, and the hatred infused into the hearts of workers everywhere, is too deeply rooted to be easily dismissed. Mussolini and his wily band of ruffians, assassins and turncoats, stand convicted before the conscience of honest and forward looking people of wholesale murder of the revolutionary workers of Italy.

The reaction of the aroused world at the news of the Matteotti tragedy has demonstrated that Fascism can count on very little foreign sympathy. At home the people's indignation has conclusively shown how superficial and shaky its power is. Fascism has never ruled Italy with the free will of the people. With the chorographic march on Rome in the fall of 1922, it merely superimposed itself on the nation by the command of brute force and violence as characterized by the murderous tasks of the pretorian Fascist militia. Even the election of April last, called in an eleventh hour effort to legalize through a parliamentary majority the government, as was to be expected, was a ludicrous farce. And such a farcical affair, made **ad usum delphini** by the powers that be, was heralded by the lying capitalistic press as a true victory for Fascism! It seems then, that both the Black-shirt party and bourgeois kept press, have sunk so low that they do not know what decency and fair play is in dealing with the truth.

Regardless of the tight censorship that has strangled the truth, we know that the white guards of Italian reaction on many an occasion have made short work of their political enemies and opponents,

GIACOMO MATTEOTTI

**Lawyer, Economist, Champion of Labor, Kidnaped and Assassinated By Fascisti Terrorists Who Feared His Exposes.**

just in the same manner as they recently have done with Matteotti. Why then, has Matteotti's sad end attracted world-wide attention while hundreds of similar cases have passed almost unnoticed? The answer may be found in the well grounded fact that connected with the latest kidnaping and murder a grave, far reaching, colossal scandal was uncovered and laid into the very abode of Mussolini's entourage. In other words, the ridiculous Duke's close associates were in many ways discovered to be rotten and corrupt to the core. Millions of graft had been pocketed by them, while hypocritically pretending to pose as the virtuous saviors of the country. Most of this gentry, who not so many

years ago we could recall as running around with wide open shoes and dying from hunger and want, agitating the oppressed to break the chains of wage slavery, all at once, by treachery and faithlessness to working class ideals, have become well to do and secured a place among the great of capitalistic society.

In the daily kept press these days we see a desperate attempt to shield Mussolini from blame for the cowardly crimes of his henchmen. Those that thoughtlessly have done so have classified themselves in the same category where the Fascists belong. We all know that the chief inspirer of the Black-shirt pretorians bears direct responsibility for every deed of his mad followers. It is he who is to blame; he has spoken and led; he has been the cunning, savage inciter to rape, murder and arson. The organized workers of the world should see to it that Mussolini be called to account for his criminal shortcomings before the bar of proletarian justice. The working class should remember the countless obscure workers, martyrs to the cause, that lost their lives because they would not betray the pure light of revolutionary idealism that kindles the deepest, innermost corner of their bosoms. The freeing and the economic emancipation of the working class was, to these richly endowed idealistic souls, a concrete, happy, cherished, big idea. Contrary to the ruthless, petty, domineering, narrow, oligarchic Fascist's credo—which, by the way, is the credo of the not less Philistine exploiting bourgeoisie itself—the ideas of these fallen comrades were full of promise, of meaning, of hope, cheer and faith, that bids fair to make the working class movement an epochal achievement, with a supreme and ultimate goal of righteousness for all freedom loving human beings.

The astonishing wave of revolt against Fascism caused by the tragic fate of Matteotti is a very encouraging sign of a sharp turn for good in Italian public life. The whitewashing of Mussolini will [illegible] of no avail. Fascism has given itself a deadly bl[illegible] which cannot fail to give stimulation to the unbro[illegible]en spirit of rebellion that permeates the working class of Italy. It has been our contention that Fascism as a party was not fit to rule; we might add that it has been dishonorable and piratical; that it has governed the country with 15th century methods of government; suppressed all kinds of freedom for the workers, planned and furthered scores of mass butcheries, filled the jails with radicals, encouraged the wanton destruction of proletarian institutions. Italy, under two years of Fascist rule, has gone back to an arbitrary condition of affairs, even worse than that enjoyed before its unification.

The Fascist dictatorship has been a regime of direct-super-government of the newly rich, young, acquisitive, imperialistic bourgeoisie that saw the light with the World War and that nursed itself freely on the blood shed by the fallen war-hating conscript soldiers. That such murderous regime would sooner or later break down under the strain of its inconsistency and absurdity, we have already predicted. Besmirched with war profiteering, bank failures and oil (yes, oil, too), scandals, unfortunately Fascism is still the scourge, the black spot, the very disgrace of Italy. But the avenging harbinger of an aroused working class is on its way. Woe to the traitors when its mighty fist will justly fall crashing on their guilty heads. Italian capitalism then surely will crumble unto dust.

The dawn of a new day full of significance for the workers is not far off. Toilers everywhere should organize on the economic field and prepare themselves for the coming new struggle. Shall the working class of Italy succeed in throwing off the heavy yoke of capitalistic slavery this time? The answer is up to you, workers of the world.

V

# The Waning Night

By A FACTORY GIRL

I Woke up and greeted the Waning Night.
The moon was shining Silver like.
The ocean, a vast mirror,
The sky, cool-blue, with stars sparkling.
All this mighty atmosphere grew paler and paler.
The cool breeze mingled with the rays of the rising
Sun and I was glad to be awake!
To see all this.

Thoughts of humanity still a-slumber dispelled my mood.
When will the Night of the human race grow paler and paler?
And the rays of the rising R-E-D S-U-N
Mingle with the cold, bleak wind
That rages in the night of Mankind, The Class Struggle?

A factory whistle blows, how shrill
The birds seem affright in their thrilling tunes
But they sing on their carefree natural songs.
The human race too seems affright,
And, wake to their slavish daily task.
They heed the call of the factory whistle, the Master's Voice.
The Master, whose greed for profit enslaved the human race.
When the enslaved race shall see this fact, of their enslavement
They will wake with a thrilling freedom song,
To greet the Red Dawn.
And for the daily task instead the Master's voice,
Heed the call of human Solidarity.
How good it to be awake!
To visualize that day.

Baling Crew at Work. Thirteen-Year-Old Boy Runs Tractor.

# Following the Trail of Industry

By JOHN HAYHAND

**Agriculture Now Resorts to Group Production, Group Capital And Group Distribution As In Other Lines Of Capitalism—Larger Farms, Corporation Farming And Combinations Now The Rule—When Will Farm Labor Of All Kinds Combine Too?—Interesting Facts And Figures From Many Sources Show Trend Of Times.**

**"GROUP production, group capital, and group distribution are normal lines of endeavor in commerce and industry. Farming has been the last to recognize their value, but it is now thoroughly alive to it"—O. E. Bradfute, president of the American Farm Bureau federation.**

**The president of the American Farm Bureau federation is discussing the proposed consolidation of the "big five" grain companies with the farmers' 5,000 co-operative elevators, in the Chicago Sunday Tribune of June 22nd. As he puts it, "The farmers are merely following the trail of industry."**

If they are, and the writer believes they are, we may expect to see the "big five" companies—Armour, Bartlett-Frazier, Rosenbaum Grain Co., Rosenbaum Bros. and J. C. Shaffer Co.—swallow up the farmers' 5,000 co-operative societies. That's usually what happens: the big fish swallow the little ones in commerce and industry, though, in this instance, the belief is being propagated that the wheat growers will control the big companies through the farmers' co-operatives. None but the veriest tyro in modern economic evolution will believe that possible, however.

This latest merger proceeds as does all others, viz., with the idea of centralizing in order to save. It is believed that from $1,500,000 to $8,000,000 will be realized in economies growing out of the merger. The latter is expected to become of international importance, if consummated. As one of its promoters expresses it, the merger "will go a long way in the merchandising of the products from agriculture's $80,000,000,000 investment."

This grain merger will follow the lines of the California fruit growers' associations. It will regulate output and markets and seek to enable its controlling interests to market grain to the best advantage. Thus will agriculture follow the industrial trend, by adding combination to combination, and by increasing the size of the farms as formerly industry before it, increased the size of the factory and corporation.

Just recently, a Fordson booklet has come to hand, with some indirect information on the corporate development of farming and the use of farm machinery, which contributes to this development. By-the-way, recall ex-Governor Frank M. Lowden's reason for declining the vice-presidential nomination on the Republican ticket. He considered farm organization work of more benefit and more worthy. Considering his connections with big farm implement corporations his stand is noteworthy. Something big is going to happen soon in farm industrialization and combination.

But to get back to the Fordson booklet. Here's P. G. Blakeley, manager, Carol Plantation, Theodore, Alabama, praising the tractor. Alex Lion of Fresno, Calif., finds the tractor does the work of eight head of horses; and is going to get another for another ranch that he purchased recently. Frederick Gilbert, manager, The Canyon Springs Ranch Company, Rialto, California, finds the tractor a displacer of teams (and also, no doubt, the men that drive them). L. S. White, manager of the Black and White Company, Lindsay, Tulare County, California, finds the tractor "so satisfactory in every way on this ranch" that he purchased one for his own ranch. G. M. Allread of the Allread Contract

Company, Fresno, Calif., owns a whole fleet of tractors, no less than five, and finds them great savers in prune work. The J. C. Forkner Fig Gardens, **with offices in Fresno,** run 50 and 60 different tractors on their **10,000 acres of figs.**

So it goes; the farm corporation, with its manager, machinery, absorption of other farms, and interlocking interests, is growing, principally in California. Other states, however, show similar tendencies. Here's Mr. George Kuhns, president of the Bankers Life Company, Des Moines, Iowa: "I am now using nine tractors of seven different makes on **my various farms.**" (Bold face ours.) On one farm I have a twelve-year-old boy who runs the Fordson." Thus, this banker and multi-farm owner is an employer of child labor, as well.

Farm Manager H. Coffin of the Bingham Farm, near Paxton, Mass., writes, "Mr. Brigham considers the tractor will do the work of four teams of horses and four men."

Here's a letter from Willard Smith, a 13-year-old Fordson operator of Powers, Mich., "Dad has never taken the time to operate the tractor. He thinks I can handle it as good as any man. I have plowed swamp land where we could not use horses. It will plow such land one acre per hour. **We have bought 80 acres more to keep the Fordson busy.**" (Bold face ours.)

On the farm of W. H. Parkhurst, Incorporated, Hammonton, N. J., 2,500 peach trees were sprayed in a single day, with the aid of the tractor.

Its the same story from other states, north, south, east and west. Farms are growing from small to larger sizes; and from private to corporate ownership; and from such ownership into combinations of owners. As will be observed from the testimonials given above, the use of machinery in a profitable manner necessitates the growth of the farm. Machinery does not pay on a small farm. So the small farm must go; and with it the small farmer. And as machinery increases output, combinations to regulate and market output become necessary, and so do other combinations to finance them. Thus, "the farmers," in the language of President Bradfute, "are merely following the trail of industry."

Why shouldn't the workers employed by the farmers do the same thing? Why shouldn't they all, whether migratory, farm hand, or what not, do as the industrial workers did in a similar period, and organize into labor unions, too? It's going to be a difficult undertaking at first; but all beginnings are hard; and farm labor will learn as it goes; the capitalists and farmers learn in the same way. So, You farm laborers of all kinds, climb aboard the union wagon; join Agricultural Workers' Industrial Union, No. 110, Industrial Workers of the World; and you'll be following the trial of industry, too.

# The Farmer and High Price

By EDWARD NORWELD

WE still have the financial writers with us. Now we hear the same old song again. They are attempting to blame the farmer's distress on the high wages that labor receives. "Big business has to pay such high wages that it is necessary to charge the farmer an exorbitant price for all the products that he buys." It seems impossible that a man exists who can reason in that channel at this day and age.

The farmer's distress is due to exactly the same causes as the ones that oppress the rest of the community

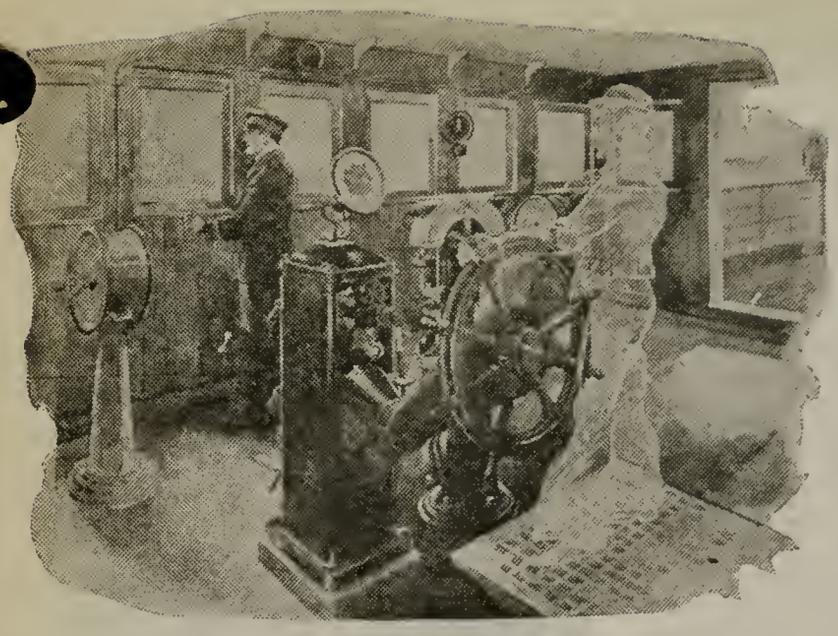
All this can best be explained by taking quotations from Veblen's book "The Engineers and the Price System." "Business men manage the country's industry, of course, and therefore regulate the rate and volume of output and any regulation of the output by them will be made with a view to the needs of business—with a view to the largest obtainable net profit, not with a view to the physical needs of these peoples who have come thru the war and made the world safe for the business of the vested interests.

"It is the working of the price system, whose creatures and agents these business men are. They are not in a position to manage with a free hand, the reason being that they have in the past, under the routine requirements of the price system as it takes effect in corporation finance, taken on so large an overhead burden of fixed charges that any appreciable decrease in the net earnings of the business will bring any well-managed concern of this class face to face with bankruptcy.

"In the recent past earnings have been large; these large earnings (free income) have been capitalized; then capitalized value has been added to the corporate capital and covered with securities bearing a fixed income-charge, representing free income, which has thereby become a liability on the earnings of the corporation; this liability cannot be met in case the concern's net aggregate earnings fall off in any degree; therefore prices must be kept up to such a figure as will bring the largest net aggregate return.

"The protective tariff protects certain special interests by obstructing competition from beyond the frontier. This is the main use of a national boundary. The effect of the tariff is to keep the supply of goods down and thereby keep the price up, and so to bring dividends to those special interests which deal in the protected articles of trade, at the cost of the underlying community."

That is something for every farmer and laborer to think over; facts that cannot be repeated too often. Another thing to remember is: that an increase in wages does not mean anything to labor when prices have been skyrocketed and the dollar deflated.



# Out Goes the Quartermaster

## GYRO-PILOT TAKES HIS PLACE

By CIVIL ENGINEER

A FEW years back, when a ship started out at sea for a trip, every sailor took a trick at the wheel. The officers watched them and picked out the best steersmen. They were the quartermasters for the balance of the trip. This rule is still in operation on cargo boats. On passenger boats, however, another rule has long prevailed. Men shipped as quartermasters and nobody knew exactly about their fitness for the job. There was a great deal of pull or underhand work connected with this hiring. Some fellows were made quartermasters who had never been to sea before. On the Great Lakes, mates used to board at nominal rates with some families during the winter and, in the spring, the son of the family shipped with them as a wheelsman, which is the equivalent of a quartermaster on the lakes.

As a social type, the quartermaster was worth studying. He exemplified several truths of social psychology which deserve to be briefly stated.

### Aping Superiority

First, the quartermaster was in line for promotion to officer's rank. When a man of individualistic temperament fancies that he can rise above his class and in opposition to it, he begins by assuming immediately the clothes, the thoughts and the mental habits of the class to which he wishes to gain access. Most of the time he gets no further. Most quartermasters I have known on passenger boats—and I had a chance to get acquainted with quite a few—considered themselves better than the average sailor. Their pay was only slightly above that of the man on deck, the difference on English ships being as low as one dollar. But the company saw to it that they had special quarters, a little better food and a special uniform and those empty and hollow honors, if honors they were, were sufficient to develop in them an artificial individuality which was skillfully brought into play when labor conflicts arose on board the ship.

In many instances, in case of strike, the quartermasters scabbed. Promotion seemed to go hand in hand with flunkeyism. When two quartermasters had to stand watch together, it was customary for each one of them to take a two hours' trick at the wheel and for the other two hours of the watch he remained on call, most of his time being spent in personal service towards the officer on watch. Many a mate strutting about the decks of a ship with stripes on his sleeves and contempt for the crew in his mind won his promotion by that kind of personal service, which is tantamount to saying that he got it at the cost of his own manhood and dignity.

The whole situation was rather disappointing from the point of view of opportunity for the men of the deck as well as from that of efficiency. The importance of the latter factor is of the uttermost since the safety of the lives of passengers and crew depends upon it.

I never was able to understand why the old style leaders of the sailors imbued with the favorite notions of the American Separation of Labor did not organize a quartermasters' union. They certainly missed a great opportunity when they overlooked

Now Steered by Machine.

that possibility. The often acute disagreements between the deck crew and the "bantams of the bridge," as the quartermasters used to be called, with their bearing upon the necessary solidarity of the crew would have turned out to be quite a boon for the shipowners, those kind gentlemen whose private ownership of marine transportation Mr. Andrew Furuseth and his lieutenants are so anxious to protect against the collectivistic designs of the Marine Transport Workers.

**Quartermaster Ousted by Machine**

But now the problem of the quartermaster is solved once and for all and the machine process has turned the trick. For a leveler of human beings and a destroyer of fancied superiorities the machine process is hard to beat.

The Sperry gyro-pilot was invented as a supplement to the gyroscope. The last-named device was a long step along the road to economy, owing to its indicating instantly to the helmsman the ship's yaw or her periodical departure from her course. While it enabled the helmsman to improve his steering in a marked degree, an appreciable time was required for the human eye and brain to note the yaw and another instant for the hand to apply the corrective helm. In other words, the compass indication was more perfect and instantaneous in its action than the human ability to follow it.

A remedy for this condition suggested itself in the form of a contact maker actuated by the gyroscope which would cause the rudder to respond instantly to slight variations of the ship from its course with the resultant elimination of the human link in the chain. The development of this idea was attempted by Mr. Sperry as far back as 1912. This basic idea for ship control was sidetracked during the war, due to pressure of supplying equipment already developed. The actual work on the gyro-pilot has been in process for the last three years and, in the last two years trial machines on several ships have efficiently steered them for hundreds of thousands of miles.

The Sperry gyro-pilot was on display at the London Marine Exhibition in 1923 and also at the Marine Show in New York last year, while many companies are installing or have already installed the new machines and are advertising their use as an index of the up-to-date character of their equipment.

So, it's goodby quartermaster. There will be no more strutting about the decks and starting up flirtations with fair lady passengers. It's back to the foc'sle, to the common crew mulligan, instead of growing indifferent to the horrible concoctions fed to the crew because one is allowed to feed on the leavings of the officers' mess.

The downfall of the quartermaster by the suppression of his job ought to be an object lesson for those who still have individualistic illusions in the presence of the evident trend of all forms of technical progress. When he comes to realize his real condition as an industrial proletarian, the former quartermaster displaced by the gyro-compass will understand that there is only one avenue of escape from present day economic conditions and that it resides in the improvement of the living conditions of all the workers as a whole on a horizontal level. His next step will be to comprehend that the method to bring about that progress of the men of the sea along class lines is not provided by the old Seamen's Union with its Jeffersonian Democratic pope, old Andy Furuseth, but by the scientific and adequate methods embodied in the organization of the Marine Transport Workers of the IWW.

## AN IMPROVED "HELL SHIP"

**This 'Frisco sailing ship made a trip to the Philippines and back to USA in six months, with a full crew of IWWs, who, through job action, got better food and working conditions for themselves.**

**This kind of ship used to be called "hell ship." But solidarity amongst the workers has improved conditions aboard them.**

**Solidarity will improve the workers' conditions wherever used.**

# Revolutionizing Concrete Plugged Ivory Domes

THE Industrial Pioneer is growing again. Thanks to the effective co-operation of Agricultural Workers' Industrial Union No. 110, our July number showed a big advance in circulation over the June number. We intend to keep it up, until we have even our present circulation surpassed again. It can be done and is going to be done, reader and fellow worker, with your help. Get behind the circulation campaign of the Industrial Pioneer and roll up its circulation!

* * *

The Industrial Pioneer is meeting with a hearty reception everywhere. Here's what L. L. M. writes from Franklin, Pa.:

"I am certainly sorry that I can't send subscriptions for a million copies of the best labor magazine published; but considering circumstances I am most damn glad to be able to get one copy per month.

"Have tried to get subscribers around here; but these boobs have had a hole bored in their ivory domes when young and in the hole is poured 'Marry young; get a home. A long job at small wages is the best job'; then the hole is plugged with concrete.

"However, am in hopes of my health improving so as to get back on the firing line again."

* * *

That's the spirit: get back on the firing line, among the "boobs" with the concrete plugged ivory domes. If we can effect a revolution in their idealism and ways of thinking, we are revolutionary, indeed. And that's what the Industrial Pioneer is here for: namely, to revolutionize working class thought.

Help it along! Push its circulation everywhere!

* * *

## Above the Ordinary Standards!

INDUSTRIAL PIONEER:

Financial stringency prohibited a peep at the June number until this afternoon. But when I did manage to grab one I sat down and read it "from kiver to kiver"—and including the "kivers"—without even stopping to "roll a pill." Convinced that you already know the June Pioneer—and each article, story, poem, and "Wobble" it contains—to be far above the ordinary standard of perfection, I shall not trouble you with unnecessary comment. However, I must say that "Yes, We Have No Bananas, But We Have Opportunities Galore," by A. Rail Fillosofer, carries a punch that is irresistible. Let us hope he may feel inclined to come again.

Seattle, Wash —**Card 473009.**

**GET BEHIND THE IWW PRESS. PUSH IT EVERYWHERE.**

## A Testimonial

INDUSTRIAL PIONEER.

It has been my pleasure for the past 7 months to read The Industrial Pioneer. In return for my pleasure, as well as the undoubted educational benefits I have received, I wish to send you this brief testimonial:

I have in the last two years read all sorts of working class literature, but in none of it have I seen the facts of existence explained more plausibly, plainly, or more readably expressed.

Your articles on the outstanding capitalists of the world, especially bring out Marx's theory that industry is centering into fewer and fewer hands as the years go by.

They make the truth of that theory more understandable.

Hoping you will continue to be the same high class publication that you are until the worker's yoke is lifted, I remain—**Card X-123895, I. U. 310.**

Karlsruhe, N. D.

* * *

## Some More Boosts!

THE Pioneer is great. I am lending my copies over and over again! **E. V. P.**, Portland, Oregon.

***

The Pioneer gives the slaves' side. All hard pan; no politics. Keep her up! **F. W.**, Milwaukee. Wls.

***

The June issue is great. Keep it up! We'll do all we can to help it. **J. J.**, New York, N. Y.

***

I must say that the workers all like to read the Pioneer, as it educates and makes men out of slaves. **V. N.**, Morgan, Pa.

* * *

I have been a reader of your magazine (The Industrial Pioneer) for the past nine months, and like it fine. I am sure that it is the best work out for the common people. **R. L. G.**, So. Pekin, Ill.

***

Enclosed find two dollars for one year's subscription to the Pioneer. It's getting better right along. **J. Y.**, Tuolumne, Calif.

* * *

We are for the Pioneer! "What's Behind Teapot Dome?" is fine! "The IWW Comes Back In New England" is good! We like "The Diary of a Migratory Worker;" Poem by Dublin Dan is correct. He tells the harp where to head in! As a whole the June number is the best number yet! **F. B.**, Winnemucca, Nevada.

***

I also congratulate you on the wonderful June number. Hoping the July number will be a greater success still. **W. G.**, Klamath Falls, Oregon.

# The Big Gray Castle

By LUCY EMBREE

I AM going to tell you a story
It must be told today,
You'll never guess! It sounds so queer
And seems so far away.

Out there against those hills
Where the sunflowers grow so high,
There stands a big gray castle
With towers that reach to the sky.

It's just like a bedtime story
Of fairies and goblins, too,
Toads that talk in the moonlight,
And spiders that nest in the dew.

Oh: It looks as if a princess
Would climb the iron stair
And sit in the queer little window
And comb her golden hair.

I know you'll never guess
This is the queerest part of all
My only and dearest Daddy
Lives, always, behind that wall.

There isn't any princess
Combing her yellow hair
But a long, long row of prison cells
Behind that iron stair.

I told this little story
To the Governor one day,
I think he's hard of hearing
For he turned his head away.

**Una Embree, Age 5½ Years, on the Capitol Steps, Boise, Idaho.**

I am only a tiny little girl
But there's one truth I understand
The Governor's only a governor
While the workers cover the land.

Some day they'll all come together
And then! What a sight you'll see
Why! They'll climb that big gray tower
And bring my Daddy home to me.

# The Captive Wob

(After Hemans)

By VERA MÖLLER

"Your hour is come, the stage is set!"
The master cried to the captive wob,
"The judge is bribed, and the jury fixed,
And they'll make your sentence a thorough job.
But renounce the convictions that brought you here,
Say a humble slave you'll be,
Give up your button, and your red card,
And you may yet be free."
There was a silence in the cell,
And then the wobbly spoke,
"For years I've called on slaves to rise,
And cast off the boss' yoke.
And I never have known when a prison door
Would swing open for me on its hinge,
I have boldly defied this fate outside,
So why should I shrink, or cringe?

If there must be martyrs in Freedom's name,
If men must be jailed, that the truth be free,
Ere the tyrant's day is done,
Then why should not I be one?"
And when the wobbly's voice had ceased,
Its echo seemed to swell,
Into a clarion note that brought,
Strange shapes to fill the cell.
The spirits of the men who fought,
In Freedom's name before;
For man's right to proclaim the truth,
And still came more and more,
With something that no power could dim,
Exultantly they gazed,
Toward the eastward where the light,
Of Freedom's morning blazed.

# Unemployment Grows

**US Senator Thomas Walsh estimates that there are 2,000,000 unemployed workers in this country. He bases his figures on statistics furnished by officials of labor unions. The Illinois State Labor Statistician declares unemployment is continuing to grow. The above picture shows some of the out-of-works waiting for jobs in a Chicago employment agency.**

## UNEMPLOYMENT AND RECORD DIVIDENDS

**"SIX months' dividend record best in history"—so says a double column headline on the financial page of a leading morning newspaper.**

**"No fewer than 300 industrials and twenty-five railroad companies have improved their dividend payments to stockholders during the six months just ended.**

**"No other half-year in America's history ever matched this."**

There's something for workmen to reflect on.

Farmers may go bankrupt, 1924 business failures may exceed those of 1923, both in number and liabilities, and two or more millions of workingmen may be unemployed; yet, despite it all, the six months' dividend record is the best "in America's history."

With so much bankruptcy, failures, and unemployment, how is that possible? How is it that stockholders do not share in the hard times; but, on the contrary, are richer than ever before?

The answer is simple. They thrive because they own the means whereby all of us live. Through this ownership they can exploit us more abundantly in hard times than in good. First, they can, by means of them, force down wages, or utilize them to install wage-saving machinery. Second, they can also buy out bankrupt competitors for a song; that is, practically confiscate them.

Look at Germany, where the Stinnes and other industrialists grow ever more bloated, though the workers are starved and the middle class is impoverished and exterminated. History repeats itself wherever capitalism flourishes.

But let us take a concrete case to illustrate how big corporations thrive on labor during hard times, especially unorganized labor. There's the Republic Iron and Steel Company, one of the largest "independent" steel manufacturers. According to The Labor Bureau, Inc., this company made in the first three months of 1924 a net income of $2,080,809, **after setting aside a generous provision for maintenance and repair of plants and for taxes.** Further ample charges made against this sum for depreciation, exhaustion of minerals, and interest on bonds left a clear surplus of $1,356,157. **"Earnings for the year to date,"** said John A Topping, the chairman of the Board, **"closely approximate the total preferred dividend requirements for the year 1924."** In addition, the company looks for such prosperous times ahead and is so well financed that it is undertaking additions which will cost about $4,500,000.

Bear in mind, all these reserve and improvement funds are made possible by labor, mental and manual, co-operatively employed.

But what does labor get in return for all this? How are the workers sharing in this prosperity? **By being forced to accept a reduction of 10 to 15 per cent in wages, announced in the early part of May.** Obviously this reduetion was not neeessitated by the financial position of the eompany, which is about as good as ever in its history. **The cut was merely made possible by the fact that recently the temporary slump in production has reduced operations to between 50 and 70 per cent of capacity, thus creating unemployment.** This giant employer has taken advantage of the helpless and unorganized workers further to reduce their share in the joint undertaking.

Clearly, the remedy for reeord-breaking dividends is more organization for more wages and less hours.

# Two Idol Smashers

Review by EDWARD LA RUCRYTH

WHO feels the pulse of the almost mythieal publie at this late age, under the gauntlet of dissimulation, prejudiee, delusion and a million and one ageneies used to eolor their deeds, is justified in his actions whether they be insane, eynical or pessimistieally ieonoelastie; they are but the expression of his eharacter, a test of his toleranee or foresight.

Young men in sueh a position with a resistanee that rebounds are a barometer that may give the old revolutionist heart. In sueh a position will be found groups of young newspapermen, eynieal, though unsullied by the eapitalist contradietions they are forced to feed their "publie." Here and there these young reporters who see the raw ineidents in the lives of both elasses polished into nuggets, with the emery of phrase, word, truth and "two-sides" taboos, for the moulding of that gigantie living fetish, publie opinion, have established forums for their own expression.

What these people think of the mad panorama is worth knowing. Two magazines published by this preeoeious and rapidly growing elass of young writers, mostly in their twenties, are printed in California, the hate state. "Tomorrow," published on the frontier of the elass war, Los Angeles, is, like "Gently Brother," of San Franciseo, pulsing with life and a wholesome irreverence for all the pompous best people, not excluding the Rotary Club, Kiwanis, Lions, Round Table or the 100 per eent Clubs. These two publications are idol smashers of enlightened youth; they do not attempt to reeonstruet, their precoeiousness does not extend to that—that is left for us.

Some may condemn the new arrivals ("Tomorrow" is in its seeond volume and "Gently Brother" in its seeond issue), with the phrase "mud slinger," but this is not applieable as its evidence cannot be contradieted. With Ingersoll they believe that who destroys a weed does the world a favor whether he sows well in its place or not. For this the IWW, whose mission is to tear the false masks and seientifically reeonstruct edueation and the institutions of the people, must welcome the newborn fearlessness embodied in "Gently Brother" and its brother.

# Through a Doctor's Eyes

DOCTORS are of many sehools. Most of them ignore the eeonomie eause of disease. The author of "As a Doetor Sees It" is an exeeption. He finds many human ailments direetly traeeable to the present system and advoeates its transformation aeeordingly. In this volume, his eeonomie bias is evident.

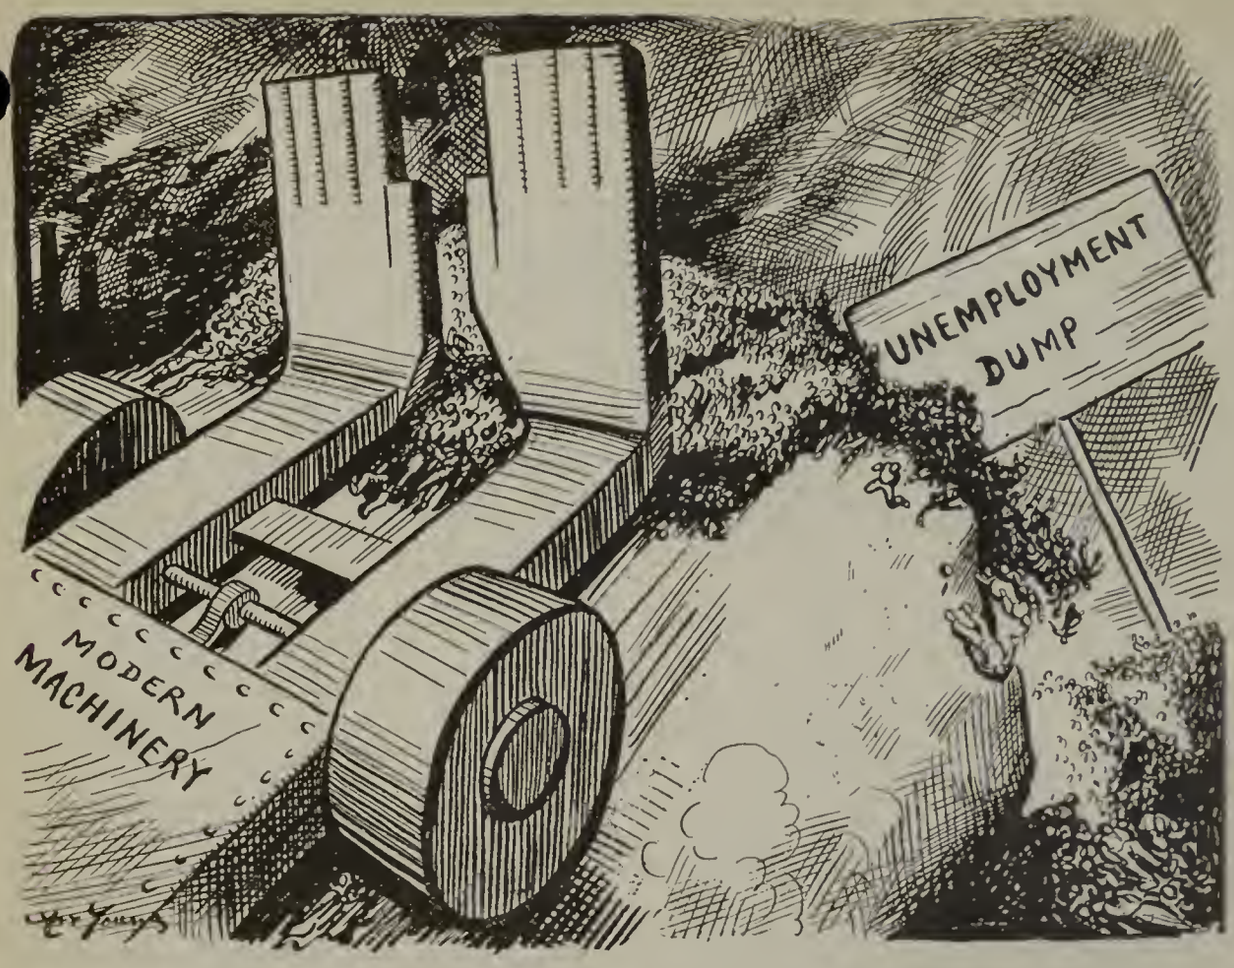
In ehapter one, entitled, "In the Sweat of Thy Faeé," for instanee, one finds this little sketch:—

"A ease of lung tubereulosis. A young man. When I ask him about his past, he lifts his head and his eloudy eyes glimmer. After a while he begins to smile and tells me the story of his adventurous life. Then he concludes with these words—'Yes it is diffieult to stay in the shop, together with so many people, espeeially for a man like me. I was born on the water, in Europe, on a river boat, of whieh my father was eaptain, and I was always out of doors, under the broad blue sky, until a few years ago. Here in the shop I am suffoeating. I eannot breathe. No, I cannot breathe'—And he has a fit of eoughing."

This erisp, sententious style is characteristic of the entire work. There are 200 pages of these briefly told stories. They impress the reviewer as the literary eondensation of a doetor's ease histories. Some are sordid, others tragic; some gay; all real and impressive. They are "dedicated to writers in seareh of subjeets." They eontain the germs of more ample tales.

Sixty-four pencil sketches by the author adorn the book.

**Published by the Critic and Guide Co., New York City. Benzion Liber, author.**



# A Cartoon with a Thought

Arthur Brisbane once proclaimed Art Young the greatest of cartoonists. He called him "the thinker in cartoons" and said, "Every one of his cartoons has a thought in it."

This was never better illustrated than in the above cartoon, donated by the famous cartoonist—thinker, to the IWW press in general and The Railroad Workers' Bulletin in particular. Therein we see the modern machine process pushing the workers off the earth onto the out-of-work scrap-heap.

It is a striking conception, that of two big mechanical hands irresistibly forcing the employed off the planet of work and usefulness into the discard. One has only to walk about the slave markets of the big cities, with their masses of unemployed and unemployable, to realize the profundity of the thought contained in this cartoon. This condition, moreover, is not only national, but international as well; and is increasing instead of diminishing.

It should serve to awaken the workers to the need of organization, to the end that the machine may be made to serve society instead of enriching only the few who own it. Let it be soon.

## The Harvest Message

(Continued from page 10.)

the many needed in the present stage of civilization and that the same problems are to be met in all of them, and will remain a class issue as long as the profit system remains. Every year thousands of men who have heard the message of industrial freedom thru industrial unionism for the first time in some jungle-camp, on the curbstone of some small town in the harvest country or in some farmer's wheat field, take that message back to the cities with them as well as a remembrance of the practicability of industrial unionism as they have seen it used in the harvest. And they have the assurance of the members of the AWIU that industrial unionism will solve the problems of labor equally well in shop, factory, mine, mill, railroad, or any other working-place, as it does in the harvest fields.

**The Message of the AWIU**

This year in particular it will be well for the many city workers who will make the harvest because of the shutting down of industry in the cities, to lend an attentive ear to the teaching of the many Wobblies they will meet between Oklahoma and the Canadian line. As an integral part of the IWW, the AWIU is preaching the doctrine of industrial democracy and pointing the way to end the system which is responsible for the many panics and times of unemployment the workers of the world are forced to endure under the capitalist system and on the attention paid to these teachings will depend whether the immediate future will be made more livable than the past has been. To these city workers, and there will be thousands of them this season, we have this to say:

Read our literature, look back at your own lives, see how closely our ideas coincide with the experiences you have undergone, weigh and consider the remedy we offer, observe its workings in the harvest fields this summer and then use your best judgment: we are not afraid of your decision.

To every man in the harvest, city worker or migratory, our message is: No one will ever give you anything you are not able to take, and no one will ever allow you to retain anything you are not able to fight for. Individually you are helpless; organized with your fellow workers you are invincible. Industrial unionism is the best form of organization, and the IWW, of which the AWIU is part, is the only real industrial union in the world. We and you are of the same class, the producing class; together we are exploited by the masters of industry, robbed of the wealth we produce, made to suffer, fight and die for those who keep us in wage slavery, and finally turned out to starve when we are no longer profitable to the owners of the industries. Your interests and ours are inseparable, together we win or lose, survive or perish. We could have no motive in asking you to do anything against your interests, because as you suffer so do we. United we can go forward to victory; separately we are doomed to the deepest depths of wage slavery. Let us get together under the banner of the Agricultural Workers' Industrial Union of the IWW and raise our wages, shorten our working hours, better our conditions, and at the same time take the first steps toward ultimate freedom from wage slavery this summer.

# How it Strikes the Farmer

Taft, Ore., June 14, 1924.

Editor, Industrial Pioneer.

Fellow Worker:

It is rather out of my line to "throw bouquets," as a rule I "throw bricks" instead. But the following is too good to keep. Coming up the beach from Reedsport recently, I "ran out" of chuck. Accordingly I stopped at a farm house and secured a dozen eggs, a loaf of bread, and some butter. I offered to pay the man for the food, but he wouldn't take my money.

Then I gave him the June issue of the Pioneer. I explained to him that I would perhaps go to work at Taft. Also gave him one of my calling cards; which of course bear my name.

This evening I received a letter from him which reads in part.

"You paid for the food a dozen times over with the magazine. Although I am 'well read' it is the best I have got my hands on yet. The poem about the foreigner is a classic; and the article by Mr. MacDonald certainly opened my eyes. I think that I will subscribe for it.

With best wishes, I am,

[Signed] **Joe Black.**

P. S.—"The Missus says if you come this way again stop and spend a week with us and the kids.

**J. B."**

And believe me, Editor, I will go that way again, because I sold literature all along the forty-five miles.

Hope Jim MacDonald don't get offended because of the prefix Mr.; it is Black's not mine.

I remain as ever. Yours for increased education, academic as well as economic,

**"Boomer".**

# *The Wonderful Age*

By JUSTUS EBERT

**Greater than that sung by either Homer or Goethe, praised and exalted by Steinmetz, is the present age an age of great abnormality as well as great achievement?—With waste of natural and human resources, with war, revolution, counter-revolution and unemployment its leading features, is it a menacing age, as well as an age of mechanical triumph?—With Labor stirring everywhere, will the greatest wonder of the wonderful age be the industrial unity and victory of Labor, the beginning of the Era of Labor?**

[SEE NEXT PAGE]

## On June 15, the Metal, Building Construction and Foodstuff Workers' Branches of The Industrial Workers of the World, of Detroit, Mich., Held a Joint Picnic. On This Occasion the Following Address was Delivered by the Editor of The Industrial Pioneer.

**YOU, no doubt, will all recall Chas. Steinmetz, "the electrical wizard," "the hunchback who played with lightning," who died only a short time ago. A man of great genius and social aims—a socialist, in fact—Steinmetz admired the present age, which his extensive scientific contributions helped to make famous. Steinmetz was indignant to think that the present age should be regarded as an age without either romance, poetry or art. To him it was a wonderful age, greater than that ever sung by Homer or dreamt of by Goethe. An age too great in its manifestations for the average literary man, immersed in sex or erotics or small town characteristics to grasp and depict. An age vibrant with poetry and romance, in which "we fling the human voice over thousands of miles across continents and oceans by telephone." The age of the submarine, airplane, phonograph, cinematoscope, wireless telegraphy, the steam turbine, "the mighty spinning top . . . . fed by the stored sunlight of prehistoric ages. Turning at a speed that would carry them across the continent in a few hours were they not imprisoned in a power plant, some single turbines furnish mankind with electricity equalling the power of sixty thousand horses. They turn night into day and propel the electric fan with the speed of a gale. They actuate mines and factories and make possible wonderful materials, now unknown, to future generations."**

**The age of the steamship and the railway train, the factory and mill, the electric light, telegraph and motor, the radio, the telephotoscope—a wonderful age, worthy of the wonderful man who sings its wonders while helping immensely to make them possible by his original contributions and to turn them to the benefit of mankind instead of a hated predatory few.**

The wooden horses of Troy never had anything on those sixty thousand real horses displaced by the steam turbine; and absorbed into and symbolized by its achievements, whether in the power house ashore, or in the motor departments aboard the big ships on the ocean waves.

Prometheus bound to the rocks was a childish figment of the imagination compared with electricity bound to the services of man, in its wide multiplicity of forms. The navigators, sung by Homer, "who wandered through the terrors of the ocean's surface at the dawn of history" were pikers compared with the navigators who wander through the terrors of the ocean depths in the submarine, thus surpassing them in daring achievement and giving actuality to the romances of Jules Verne.

And Wilhelm Meister, with all of his fornication, so despised by Wordsworth, was nothing compared to his real industrial successors, the Rathenaus, Stinnes and John Proletarians. They dreamt, aspired and achieved, while the puppets of Goethe got nowhere, except into the ravings of shallow-pated literary dilettantes!

### Detroit, Apex of Machine Age

Truly, we live in a wonderful age—an age of great scientific and mechanical achievement—an age of great organization and production. Who should know this better than you, the workers of Detroit here assembled? You live in a new city that owes its tall skyscrapers and its extensive plants to the automotive industry and to machine power as applied to the farm, both modern wonders. You live amid machines that turn out autos, tractors, and other forms of modern wealth in such vast quantities in such brief time as to fill the world with breathless wonder and many new problems. You live, in brief, at the apex of the machine age, with its billions of capital, its extensive industrial organization, its mass production, its armies of workers, its individual automatism, its autocratic and corporate ownership and rule and its world-wide exports, ramifications and effects.

Talk of the glory that was Greece and Rome! Talk of the battalions and triumphs that were Caesar's! What are they to the far-flung glories of Detroit? Or to the battalions, the victories and the domination of a Ford, with his 158,000 employees and corporations in 8 countries; or the General Motors, with its 135,000 employees and sales in 144 countries?

And yet this wonderful age, like a wonderful jag, leaves a dark-brown taste in the mouth, as it were. Despite its romance, poetry and art—its song and story, over-shadowing the song and story of Homer and Goethe, sung and told by a Steinmetz—despite it all, you, workers of Detroit, appear to like it not!

And you, fellow workers of Detroit, are not alone in this. For everywhere, your fellow workers in cities remote from Detroit, and in other countries, too, share your deep-seated unrest and discontent. Everywhere there exists a straining for release from something—man knows not; and for something towards which he yearns and aspires too vaguely and indefinitely.

### What Ails This Age?

What ails this wonderful age? Can it be that in addition to being an age of great achievement it is also an age of great abnormality? One that has the outward brilliance of the mentally diseased genius, together with his ultimate internal decay

and collapse? What's the matter with the wonderful age, anyway? Is it basically unsound? Inherently corrupt and impossible?

For one thing, the wonderful age is an age of waste, uncertainty, destructiveness and war. It's a threatening, menacing age—threatening and menacing the destruction of natural resources and civilization in its competitive struggles, both at home and abroad.

To those who deny the truth of the Marxian doctrine of the increasing misery of the working class under this wonderful age, this wonderful capitalism, the ten millions killed directly in the late war, died in vain! The many tens of millions more who died indirectly, the victims of blockade, starvation, famine, reparations jugglery, may as well have never breathed at one time, as far as this gentry is concerned! And the many revolutions, with their pogroms, fascismo, "reds hunts," and a thousand and one other destructive aberrations—what of their multitudes of victims? Are they not chargeable to capitalism, whose own President, Woodrow Wilson, condemned it, when he said the late world-war was an economic war, originating in the commercial rivalry, born of the present capitalist system—the present wonderful age?

However, the past is past; let the past bury the past. But what of the future? Are the war maniacs appeased? With war clouds hovering all about us, with the officials of the Illinois Employers' Association saying, "Of course, another war will come," where is that uplift from misery, that surcease from sorrow, which this wonderful age, this glorious capitalism, is supposed to confer on mankind; especially the most numerous part of it, the working class?

With worse cataclysms than the late world-war confronting us, because more scientifically deadly and inclusive of the non-combatants, who wonders that we are straining at the leash that holds us bound to a fate that we deem accursed and of no intrinsic value to any set of men except the giant bloated capitalists who profit most exclusively therefrom?

### Where Is Race Idealism?

Where is the race idealism of such a preposterous condition? Do we live and die simply to make others who exploit and despise us, rich and powerful? Is this the acme of the wonderful age?

Next to war, we have another abnormality, namely, unemployment. At present, there are a quarter of a million railroad workers unemployed. In the state of Massachusetts, 114,000 workers are unemployed, at a loss of $10,000,000 in wages every month. In Detroit, it is said that 50 per cent of the auto workers are out of work. The same story comes from all over the land. And from abroad, too. From England, Germany, Russia—everywhere the cry for work and bread is heard. Surely, a wonderful condition for a wonderful age.

It is not an unusual, or extraordinary condition by any means, either. Every few years, growing more and ever more frequent, we have unemployment and the "business recessions," slack times, panics, crises, and so forth, of which they are born. We had such conditions in 1913-1914, 1921, and now again in 1924. During such times, farmers go bankrupt, business men become workmen, workmen lose their small homes and savings, and destitution becomes more wide-spread and general; while giant capitalism grows ever more bloated.

War and unemployment come from the same cause. We workers, the world over, produce more than we get wages for and can buy back and consume. As a result, fields of investments and markets to absorb the surplus capital and products, must be secured abroad.

But other nationals are also in the same fix. They meet in competitive struggle; war results. Pending such developments, we workers must remain idle. Economic hardships fill the land, and the wonderful age becomes the age of disillusionment, followed by discontent and revolt!

The same thing happens after war, when, following an immense destruction of wealth which gives us "prosperity" of a temporary character, "deflation" ensues: that is, "the wind and the water" are squeezed out of us, and we are left broke, out of work, and presumably ready for another war, worse than before. Truly a wonderful achievement for a wonderful age?

### Causes of War and Unemployment

A few facts and figures will show the common origin of both war and unemployment!

In 1919, for instance, according to the biggest bank in the country, the National City Bank of New York, we produced $62½ billions in new values for which we received only $10 billions in wages in return. Though the workers constitute the vast majority of the population it is mathematically impossible for them to buy back $62½ billions with only $10 billions.

On the other hand, do what they may, the remaining few, the capitalists, who get the difference, cannot spend it, nor can they invest it at home! On the contrary, every investment at home, because of its additions to an industrial equipment already too great, only increases overproduction, and only makes more markets in other countries, more fields of investment there, more imperative.

Since the worker cannot buy back all that he produces, nor the capitalist waste or reinvest it, and more markets and fields of investment are therefore imperative, war or unemployment, or both in turn, take place, with the horrible holocaust of humanity already described.

It is thus that the wonderful age is converted into the abnormal age. Starting originally with the robbery of labor in industry, the wonderful age becomes the age of exploitation, oppression, overproduction, unemployment, war, revolution and counter-revolution, with all of their attendant horrors.

### Age of New Ideas, New Visions

Hence arise new ideas, new visions! These great achievements of the wonderful age, these great industrial establishments on all sides, together with their extensive effects, appear at odds with man's

social and democratic aspirations. They appear to be only possible by the autocratic, despotic rule of the few capitalist owners; and by the complete destruction of individuality, combined with the complete dehumanizing of labor and mankind in general.

That is, in this wonderful age, with its modern industrialism, Labor is not regarded as a quality forming a part of man, but a something that must be made to fit into the machine process and the requirements of capitalism like a cog. Labor, in other words, is regarded as a Robot, a mechanically adjusted creature, devoid of understanding and emotion, whose only mission in life is to produce wealth and die in warfare when necessary, for those whose profit it is waged, namely, the capitalist class.

In brief, the trouble with this wonderful age is that it is too mechanical, too impersonal, and too inhuman. It reduces Labor to an automaton. It exalts capitalist profit above humanity. It opposes both individual and combined action not in accord with its plant and imperialist policies. And, like another Moloch, it cries out for deification and worship even though the race be sacrificed.

To sum it all up, in still another way, despite its brilliant achievements, the wonderful age is a brutal, monstrous age, menacing and threatening the entire human race with its inherent defects and its outward excrescences. It is not likely to long endure. For, say what you will about the inherent depravity of human nature, Man aspires towards something better than being a mere wealth maker and protector for an abnormal class. He has well defined social tendencies that will ultimately sweep this class monstrosity into the scrap heap.

### Workers World's Modern Atlas

Let us turn, then, from pessimism and criticism to optimism and construction. Let's get back to the wonderful age and seek the elements that will save it from the cataclysms that await it, if its present tendencies continue unrestrained. These elements, my fellow workers, reside in you! They reside in workers like you everywhere! It is on your, the workers' labor power and adaptability, that the wonderful age depends for its operation and success.

The workers are the modern Atlas on whose shoulders the modern world rests. Stand from under, refuse to support the modern world, and no power can sustain it. You, the workers, alone make the modern world safe and possible.

Awaken to a consciousness of your great importance! Refuse to give modern capitalism your moral support. Organize to effect its modification and transformation through its immense dependence on yourselves. Organize your economic power just as it is exploited in industry. Organize industrially, for the salvation of yourselves and society—of which you, the workers, are the biggest part.

On all sides we see labor striving in this direction. In Russia, Italy, Germany, England, Japan, everywhere where modern industrialism holds sway, or has left its impress, is Labor raising its head and bestirring itself in behalf of a new era—the era of Labor!

True, it is amid much travail and defeat that Labor struggles; true, Labor appears at times like a rope of sand, or a broken reed; unreliable and impossible. But never before has it struggled on such a big scale and with such a great degree of near-success, as in the wonderful age. Never before has the new society appeared aborning as it does in the great, though apparently futile efforts now reverberating 'round the world. And never before was the old society so perturbed; so upset, so desperate and so frantic as at present. Labor, fellow workers, is far from vanquished!

Let us hope, then, with all the hope that the favorable evidence warrants, that Labor's next great effort is coming, and that the day of its triumph is nearer than may appear on the surface.

Onward Labor! Onward!! And upward!!!

### The Things that Count

Let us onward and upward with a due regard for the things that count, that mean something! Let's turn to our masters to see what they deem important in the strategy of social control. Let's see what Ford thinks, or what the General Motors does, for instance.

Ford's success would indicate that he knows what he is talking about.

In his interview with Chas. Wood, printed in Colliers, August, 1923, Ford said:

"The industrial organism is stronger and healthier than the political organism. It has more life flowing through it, more energy. Wouldn't wonder if industry would eventually absorb the political government.

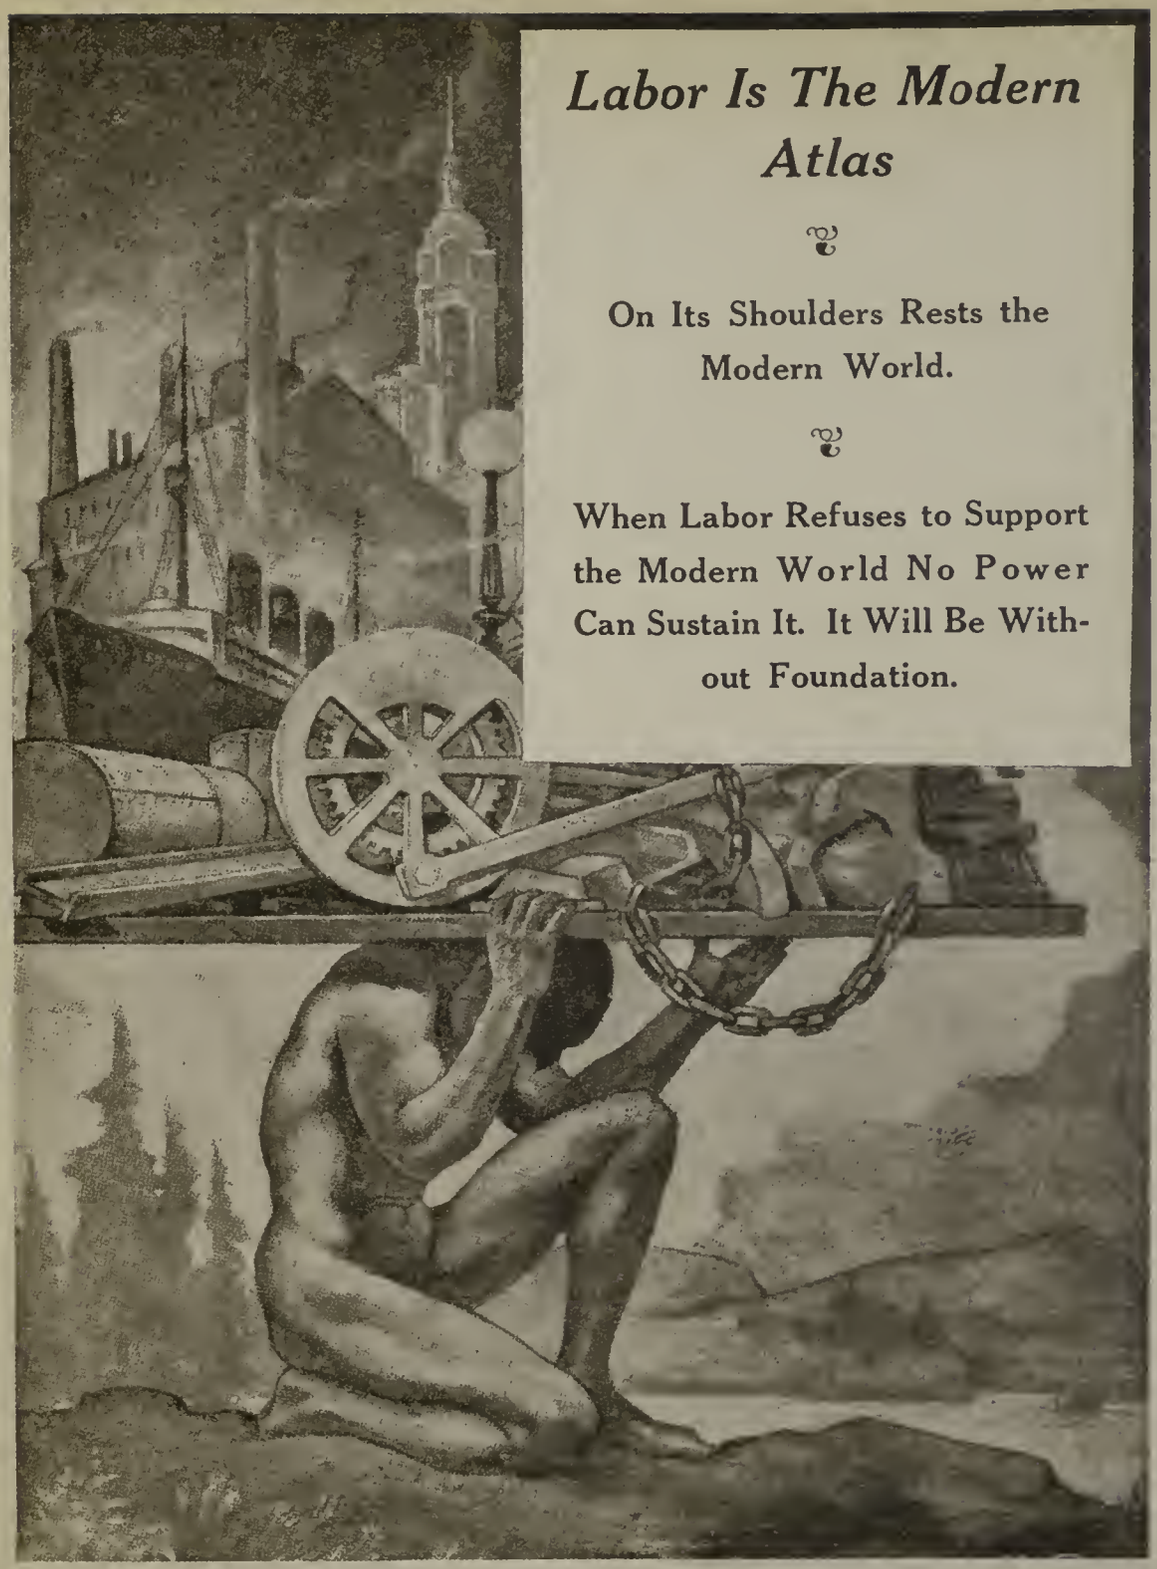
"We speak in awe of our 'form of government' and even pass laws making it a crime to criticize it. You can't imagine an industry thriving if it considered its form of organization beyond criticism."

It's in the industrial organism then that we should primarily organize. It is stronger, healthier, and more fundamental than is the political organism that is based on it.

Further, it is in the industrial organism that we are employed. It is there we are most powerful, because most essential. We should organize just as we work therein.

If we work in an auto plant, we should organize as an auto workers' branch of the Metal Workers' Industrial Union. If we work on a building we should organize a branch of the Building Construction Workers' Industrial Union. If we work in a packing house or a restaurant, we should form a branch of the Foodstuff Workers' Industrial Union. And so all down the line. Organize just as you work. Then interlock your industrial unions into one big union.

Don't organize according to trade, race, nationality, religion, or sex. Ford doesn't organize us that way. He employs all kinds of skilled and unskilled labor, mainly the latter; of all nationalities, sex, race, color and creed. Sixty different nationalities are working in the Ford plant, all for Henry Ford.



Labor Is The Modern Atlas
On Its Shoulders Rests the Modern World.
When Labor Refuses to Support the Modern World No Power Can Sustain It. It Will Be Without Foundation.

The industrial organism isn't based on any of these peculiarities. Nor is it centralized to the exclusion of specialization and decentralization. Ford pays minute attention to the individual employee and exploits him accordingly, fitting him carefully into his general scheme. We should also pay attention to individual aptitude and not try to run the entire working class through either a migratory or a home-guard mold. Not only does Ford, with his highly centralized plant, make allowance for specialization and diversity; but so does the General Motors. Its plan of organization, too, admits of wide differences of form and management among its 64 subsidiary organizations. The industrial organism is, let it be emphasized once more, made up of all shades of skill and ability, every kind of nationality, race, creed, color, sex and caste; and, finally, it co-ordinates the most diverse principles into one co-operative whole.

Labor also must organize as one co-operative

whole, embracing all kinds of labor, with room enough for industrial, branch and job autonomy, and an educated, efficient and trained membership and officers; with solidarity at all times as the principle on which all else is based.

Above all we must organize on a big basis, with a big vision and a big ideal to guide us. The wonderful age is a big age, an age of great achievements; and the working class will never amount to anything until it, too, becomes as big class-consciously as that age, and as great in class achievement. This requires big grasp, big ability, which, if lacking, must be cultivated and encouraged. The pride of skill and place, the prejudices of caste, the exclusiveness of race and sect, the jealousies of factional rivalries, have no place in big scale unionism. that is, in industrial unionism. Industral unionism must blend where it cannot modify or climinate these characteristics; following therein the lead of the big industrialism on which it is based.

Capitalism is universal, but within its universalism there is great diversity of group interests and organizations. There are corporations of all kinds, with international as well as national federations; employers' associations, as well as a US Chamber of Commerce uniting them all. Labor must be universal, too. Its universalism must be as flexible and inclusive as that of capitalism; or else cast iron rigidity will kill it, as cast iron rigidity always does.

Above all, Labor, organized in industrial unionism, must be experienced and efficient. To organize so as to place a premium on inexperience and incompetency is to place industrial unionism in constant jeopardy. Capitalism pays well for management, technical, muscular, and other ability and keeps it as long as it produces profits and results. Industrial unionism can well take a cue from capitalism.

But enough of detail: let's never forget the vast sweep of the wonderful age and the necessity for encompassing this sweep in a vast way so as to convert it into working class victory. **A working class victory would be the most wonderful achievement of this most wonderful age.** Do you favor such a victory?

Do you want the end of labor exploitation by securing to labor all that it produces, thus ending the cause of overproduction, unemployment and war?

Do you want a new era in socicty, in which human evolution will be less destructive and hateful and more constructive and happy?

Do you want a new society whose foundations are sunk deep in modern industrialism, with its dependence on labor and its consequent projection of labor into the place of prime importance, with the mission to change the wonderful age into the age of labor?

If you want all these wonders, join the industrial union of your industry. Study your industry; become familiar with its technology and peculiarities, in all their many phases. Prepare yourself for the new time coming! Prepare your fellow workers also. Get active among the unorganized in your industry. Get out among the workers everywhere, at all times, especially at the present time of unemployment. Don't let some dingy little hall, or some handful in a meeting be the limits of your horizon or activity. Get out among the workers. Arouse **them** to a consciousness of their economic power—of the dependence of modern society on the combined efforts—mental and manual—of the working class.

Stir them with the idealism of the new society—of the workers' society, where man will mean more than capitalist profit and capital will only be a means to his enrichment, instead of the means of his exploitation for private individuals, as is now the case.

Throw factionalism to the winds! Get away from caste or personal outlooks and wrangles. Take a big view of this big subject. Get out of the rut! Look up and onward! Expand! Grow!!

Remember the words of the preamble: "By organizing industrially we are forming the structure of the new society within the shell of the old."

To work then! Let's make good those words. Extend our message throughout the land to the auto, building construction, steel, railroad, foodstuff, agricultural, transportation, oil, in brief, all the workers in all the industries. Let's appeal to them all, whether migratory, homeguard, or technician; whether in the box car or in the city! Hold meetings in or near the shops, on or near the jobs. Make house-to-house visits. Spread the workers' press at the factory gate, on the trolleys, in the workers' homes—everywhere the workers move and have their being! Get the workers to think, to aspire, to Unite! And then the wonderful age will be wonderful indeed, for then it will be our age—the age of labor!

Long live Labor!

---

# Bought and Paid For

JIM SEYMOUR In "TOMORROW".

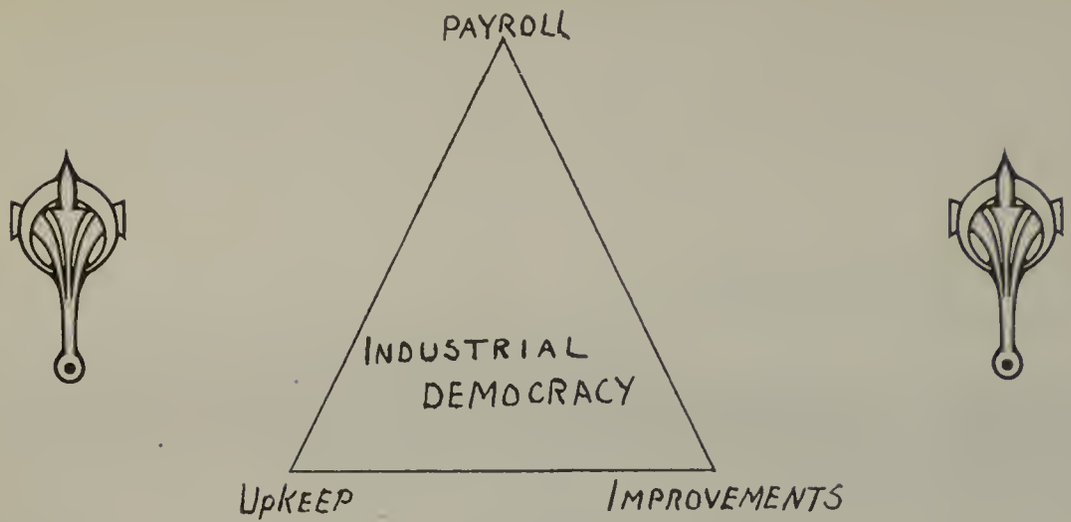
MY LADY is dressed in a wonderful gown
That rivals the delicate flowers of May,
The gold of the poppy entwined with its brown
Resembles the moonlight on wavelets at play;
My Lady is proud of her beautiful dress,
Where transmigrant tints of the rainbow are caught,
And pride is quite natural, all must confess,
To beauty adorned in what beauty has bought.

* * *

Rebecca is toiling away at the loom
That roars with the voice of a demon amuck,
The germs of disease in the dust-flurried room
Are seeking to strike where their fellows have struck;
Rebecca is sallow, consumptive and wan,
Her youth and her health into fabrics are made;
For dresses for others her lifeblood is gone:
Be haughty, My Lady,—the price has been paid.

# Industry and Life

By EDWARD NORWELD



ONE of Hearst's financial writers, under date of June 19th, writes:

"Broadly speaking, every alert management, industriously seeking to effect economics, is working for the benefit of you and me."

It does not take a great deal of insight to see that "you and me" can mean only the kept class, which includes the financial writers who pander to them.

"Are high wages and low selling costs both possible? In a broad sense the answer again is 'Yes.'"

He is right in that instance, but if he realizes how that can be achieved he is afraid to say so. Industrial Democracy is the true solution as shown by the triangle. The fruit of industry is dividends but absentee owners or non-producing stockholders are the parasites that eat the fruit and kill the tree. It is only necessary for any present day business to be run on the basis of the triangle i. e., to pay good wages, upkeep and improvements. All dividends should go back into industry for that purpose. As business is run in America today, dividends usually go to the kept class to furnish the members of that class with all luxuries of life and satiate all their vicious desires.

In another paragraph he says that the enlightened employer of today realizes that the higher the wages which feasibly can be paid the greater will be the purchasing power of the nation and the greater this purchasing power, the greater the business that can be done and the greater, therefore, our national prosperity. It is true that a great many employers realize that fact, but they attempt to bring it to realization without making any sacrifices on their part when it comes to dividends and income. That is impossible for there is a law of economics that is just as rigid and exact as the laws in mathematics. Take away any part of the industrial triangle just to feed the passions of a few pampered rich and the whole industrial structure will eventually crumble and fall.

Speaking of the public and forcing a lopsided deal upon it, he says, it can be done for a time but not as a permanent diet. It simply isn't economically practicable. He is right, but his conception of what constitutes the public is a little hazy. There are two classes—the kept class and the producers. The producers are all workers. The kept class is continually trying to get something for nothing from the producers. The producers are in the majority by millions. The producers equal the multitude and the multitude equals the public. The motto: "Abolition of the wage system," without an adequate explanation is the thing that has driven thousands of these producers or workers away from the greatest labor organization of all. Abolition of the present wage system cannot mean a return to primitive barter for that would only be going from bad to worse. All parasites or non-producers should be eliminated, but the workers, whether manual or mental, would still have to receive an income. If one is unduly sensitive about the word wages we can designate the name of the income one would receive, under Industrial Democracy or a partnership in industry, as salary.

Now when we get back to our financial writer again, he goes on to say, that the things he has set forth are or ought to be A B C truths understood by the least educated workmen. "But, unhappily, these truths are not understood by all workmen." Yes! It is, indeed, unhappily, for the kept class.

Now he quotes from an official of the General Electric Company and it is like putting on an old record on the Victrola: This is the closing paragraph: "Yes, treat workmen so that they will become genuinely interested in their jobs and they can do more than either capital or management to reduce costs and make it possible for you and me and every one else to enjoy a more generous share of comforts, conveniences and luxuries of life."

Some day workers may realize that they support

others in luxury while they receive the crust. There is no question but what big business is ruling because the leaders used their heads; used them to the extent of following this motto: "Any means are fair to an end." But now conditions have come that may make their end anything but what they anticipate. The word of a Chinaman or Turk is good, but the word of a big business man, as a general rule, is no good. Neither is a written contract if he awakens to the fact that one little point in it is inimical to his selfish end. It is usually an easy matter for him to find a loophole so that he can break a contract—"The Guardians of the Vested Interests" are usually up in arms to protect him. It is difficult to entertain the idea that he will expand with the moving forces and increase his intelligence so that he can hold his position against the assaults of rugged, pioneering minds that fear no obstacles. Before it is too late, he may awaken to his true position and abdicate, but I doubt it.

# Oakridge, Ore., Center Big Construction Job

**THE above town is located at the northern end of the Natron Cutoff. The latter is a big construction job undertaken by the Southern Pacific Raliroad. It extends southward to Klamath Falls, Oregon, a distance of over 200 miles.**

About 3500 men are employed by the various companies on the western slope of the grade according to Frank T. Rejotte, of one of the large contracting firms. The larger companies having men employed on the grade and doing actual construction work are: Utah Construction company, Kelley & Sullivan, Wren & Grenough, Bechel Construction, Henry & Mcfee, Rejotte & Winters, and Stewart & Welch who are working out of O'Dell Lake on the east side.

Somewhere in the neighborhood of 8000 men will be employed by the various units when the building operations are in full swing, according to Rejotte. Practically all of these men will be working this side of the summit and will be frequent visitors in Oakridge.

General Construction Workers' Industrial Union No. 310, Industrial Workers of the World, has a live branch at Oakridge. The membership is doing everything possible to extend organization all along the cut-off.

Social features here are not very numerous. Oakridge has more than its share of bootleggers that follow up construction booms. Its one hotel is located on the main street. Town is wide open: red lights and moonshine abound. There is no door on the jail, a wooden box-like structure. Drunks use it for moonshine festivals when money runs low.

**The morale of the IWW has good effects on the workers, as it keeps many old-timers from hitting the booze and getting drunk.**

Other old-timers cannot resist temptation. Some of the old construction workers know the bootleggers and pimps from other big construction centers such as Edmonton, Fitzhugh, Prince Rupert on the Grand Trunk; Anchorage and Seward on the Alaska government railroad; and Cordova on the Copper River Railroad. Of course, the politicians "stand in" with them.

So-called flop houses, also exist. These are put up in a hurry and built of the lowest grade of lumber. Proprietors harvest considerable profit from the workers when construction is going on.

Conditions in the camps, although improved during the last few years are still pretty rotten.

At north end of line Kelly and Sullivan, clearing right-of-way, charge 50 cents a meal for board and $1.25 a week for filthy blankets.

Rotten board; men cannot stand it very long. Lumbermen's employment office, Portland, Ore., is shipping slaves here. It's a grand harvest for the sharks.

General Construction Workers' Industrial Union No. 310 is carrying on a heavy organization campaign. Have to combat narrowmindedness of starving ranchers from stump ranches of Oregon and Washington. They are great in numbers and hard to organize. They are keeping camp conditions down.

The Natron Cutoff is a job that will last three years. Organization is going on at different parts of the line; and is having a good effect on the morale of the workers interested.

# Shattering a Workers' Myth

By MILT WHITTINGTON

**"AMERICA, a prosperous and happy land of workers who own their homes!" proclaim the bourgeoise yellow sheets.**

**"Our valuable employees are those who own their homes, or who are purchasing homes on our easy-payment plan," says the manufacturer. "We insist that all our employees purchase homes and we make it possible for the lowest paid and highest paid alike to own comfortable and respectable homes," he further states in his interview to the "Hundred Percent" magazine.**

Yes, O Yes! It is all so nicely doped out for the gullible Boneheads. The company's interests and the workers' interests are identical. Proof? Sure. The company insists that the worker enjoy a respectable little home, made possible by their gracious bountifulness, and the cost is so moderate. Only a few dollars a month pays for the home. It's easier than paying rent, only the rent purchases the home. And Bonehead's inherent patriotism wells up within him and he is proud to be an employee of the company that looks to the welfare of its workers, whom they allude to as "employees," not low-brow-like: "workers." He enjoys with immense pleasure reading the "human interest" articles in the company house organ that relate in detail the humanitarian activities of the president, in hate of those "home destroying reds." "Home" is the word with the Bonehead; it controls the whole range of his emotions from love to bitterest hate.

Now, why do the companies insist and make it possible for their employees to own homes? If corporations are so heartless and soulless as Bonehead has heard that the "home destroying reds" paint them to be, why are they so intrested in the welfare of those who work for them? And Bonehead immediately decides that the "reds" are a bunch of fanatics who never have had the intelligence or good fortune to have a job with a concern like the good and gracious company for which he works.

Approach Bonehead in a polite manner and put over some propaganda on industrial unionism and the chances are he will admit it is all right. Of course, if you happen to say that industrial unionism means IWW, he will paw the very air and you will have lost your audience. He will grant with you, long as you lay off the IWW stuff, that organization would do wonders. Then ask him how he would like to join the organization that he admits could do wonders. "I'd like to join you," he complains, "but I own a home. If I join I might lose my job, and I can't afford to run the risk. I have a nice little home here, so I can't leave it to hunt another job, though I do need better wages." This statement explains the condition of millions of American wage slaves who are victims of the "fear psychology"; fear of losing their job in the town where they own a home.

America! Our great and glorious land of fourteen-year-old mentalities! Boneheads, and they make up the major portion of our homguard civilization, average about fourteen years each in mental capacity. If they were older, they wouldn't be so easily led to be drugged by the "home" idea.

Now, to drive home the point with a dagger thrust: Corporations compel their employees to own homes so they will be tied to the job and will be afraid to organize and demand a living wage. They can well afford to sell homes on "easy payment plans" to tie the employees. The concern reimburses itself by dropping wages and dropping wages, and the Bonehead, dominated by the "fear psychology" will continue to hold on to the job with a death grasp.

Verily, the "home" opiate is the strongest American drug!

# International Solidarity

By HAL BROMMELS

UNITE! all groups of Labor, cement your strength in ONE—
Go, emulate the masters—and do as they have done.
There must be just ONE union, of Labor and ONE aim
For longings of earth's toilers, and hopes, are all the same.
Enunciate this message, ring out your wish today,
For Labor has been straggling too long upon the way!
Put forth YOUR every effort in that you wish to see
So that the time shall hasten of world-wide unity!
Beware!—Let no group dogma which hinders Labor's growth
Become your sacred leader to which you take an oath.
Permit no yoke to hold you, nor crush your energy,
For Labor has ONE purpose—and that is to be free!
Unite! All groups of Labor, cement your strength in ONE—
Go, emulate the masters—and do as they have done.
Join hands, O Struggling Workers, in world-wide unity,—
For Labor has ONE purpose—and that is to be free!

## PER UNION RULES

In 1905, a Swedish sailor was applying for citizen's papers in 'Friseo.

"What's the constitution of the United States?"

"Coffee and overtime."

"Who is the President of the USA?"

"Andrew Furuseth."

# One of Ours

By MATILDA ROBBINS

WE waited. The high ceilinged room with iron bars for walls through which could be seen the stone stairs leading to tiers of cells, was the prison reception hall. It was June outside, but here the stone floor and the cold, stale air coming up thru the grated walls chilled. Keys clanked. Doors opened and shut. Huge doors that were portions of the walls. They were opened by a guard whose sole duty seemed to be the opening and shutting of these doors. Opening and shutting of doors. He clanked his keys. They were the only living thing about him. He moved like an automaton opening and shutting doors. His face was expressionless. The guard at the table in the center of the dim, gray hall looked neither to the left nor right of him. He sat rigid, looking straight ahead of him. Into the depths he seemed to look through the grated wall.

Doors opened and shut. Keys clanked. Children came to see their fathers. Mothers their sons. Wives their husbands. A young prisoner was smiling up at his sweetheart. Looking up into her eyes ingratiatingly. His own eyes were feverish. There were deep marks around them of sleepless nights and torment.

The west wing door opened and shut. The guard shook his keys and stepped aside. Vanzetti! He came toward us with a quick, springy step, his figure taut, his wonderful smile falling upon us like a pale ray of sunlight. He shook hands with us. "I am so pleased to see you, comrades!" How soft and vibrant his voice! How his sensitive mouth quivered under his drooping mustache.

I had not seen him in three years. Not since that scorching day in July, 1921, when I saw him and his fellow victim, Sacco, in the steel cage in a Massachusetts courtroom. He leaned intently forward, his soft gray eyes full of questioning and of sorrow, while about him was being cast a net of lies upon which the Commonwealth built up its case and found him and Sacco guilty of murder. There was a light in those gray eyes then that could not be extinguished. Four years of the dim cell in the west wing have failed to extinguish it.

We talked. It was hard for me to bring the words up out of my throat. They got mixed up with the tears welling up in it and hurt with their throbbing. Vanzetti has a soft, melodious voice, but charged with the passionate appeal of the dreamer and the social rebel. Except for his comment that his ill ventilated cell hurts his lungs and that he cannot see the sky from the prison workshop where he makes automobile plates, he did not refer to himself again. But he repeated twice that he could not see the sky. He wanted so to see the blue sky!

How eager he was for news of the proletarian movement! How those soft eyes would light up with hope of labor's triumph; how sadden at labor's defeats!

Vanzetti has learned English during his four years of prison. He speaks it with the precision of a foreigner acquiring a new tongue. But he invests it with a charm of liquid inflection with which his own Italian tongue is so exquisitely beautiful. When he spoke to his two Italian friends who were with us, it was like music that rose up and vibrated through the prison catacomb. His smile was like a benediction. His eloquent hands play upon the heart.

"You have many friends everywhere," I said to him, "friends who love you and will continue to work for your liberation."

I shall always remember the wonderful light of gratitude that came into his eyes as he said, "Ah, I know, I know, I feel. That is why I am still living."

Still living! This noble soul, this generous heart, this dreamer of human brotherhood and beauty still living under the shadow of the electric chair! There was the night when 20,000 volts of lightning snuffed out the life of one man! What a night of horror! He lies awake thinking of the men killed and the men that kill. Passionate apostle of freedom and of service to mankind; rebel against a world where men maim their fellow men in the name of law; where justice is in the hands of men who cannot hear, who cannot see, who cannot understand the spirit of Vanzetti.

The jailor brought a little piece of yellow paper and slipped it into Vanzetti's hand. He clutched it. Under his mustache he bit his lips. The prison clock struck four. The visit was at an end. I held his hand for a moment and quickly turned away. Doors were opening and shutting. Keys clanked. I looked back. With head high and quick step Vanzetti was walking through the grated wall of the west wing.

## PROFIT IN 5 AND 10's

With the death of the wife of the late F. W. Woolworth, founder of a chain of 5-and10-cent stores, financial circles are discussing the income of the late Mrs. Woolworth, who was physically and mentally disabled for several years. When Woolworth died, five years ago, his income from Woolworth common stock amounted to $1,080,000 a year. This did not include his income from other investments. Since 1919 a 30 per cent stock dividend was issued, and the total Woolworth holdings will amount to about $57,000,000. It is estimated that the income will now total $2,100,000. This chain of stores is conducted along the usual 5-and-10 plan—employment of young girls at low wages, and trade unionism not tolerated.

# WOBBLES

## S'CANNED OIL!

Scandal is rife and it's all about OIL.
Candidates and cliques for once have to tOIL,
Alibi-ing out of the sinewy cOIL.
Now wrecking their chances the "public" to fOIL.
Dougheny and Sinclair declared that the sOIL
About Teapot Dome would yield them "fiel" spOIL.
Leas-ed we forget—they are sure "donc in OIL."

## HE SUCCEEDED

**Scene:** Small Pacific coast town. First open-air meeting since city ordinance prohibiting street speaking was passed. A fairly good sized crowd listening to Wobbly speaker. Town clown appears, makes his way to the speaker and loudly announces: "You can't speak here."

**Reply:** "I know I can't, but I'm doing my best."

The **law** walks away to escape jeers of audience.

## DELUSIONS OF GRANDEUR

Down in southern Missouri, Mose White, a colored farm hand, appeared at a neighbor's back door one morning and asked for the loan of a mule to do his employer's plowing.

"Why, Mose," said the neighbor, "your boss has a good mule. Why not use him?"

"Well, suh," replied Mose, "dat mule sit in the shade all day. Jes' won't work."

"What's the matter with him? Is he sick?"

"No, suh," was the answer, "dat mule ain't sick. He jes' think he's a gentleman farmer!"—Harper's Magazine.

## NOT SO GREEN AT THAT!

Two greenhorn Swedes were hopping it from the eastern part of the USA to Minnesota.

The fireman was taking a smoke during the night, and was attracted by one helluva splash in the tank.

He finally managed to pull the poor Swede up and squeezed the water out of him.

The latter rolled his eyes and blinked at the fireman. "Hay ye seen may partner?" he asked.

"No; whercinhell is your partner?" gasped the astonished fireman.

"Aye tank he bane in de smokestack."

Stop, Look, Listen! Then think, move, organize.

## THE SAYINGS OF A SEER

T-bone Slim says: After careful **perusal** he can find only one faction in the IWW—dissatisfaction —with capitalism.

## TRUE TO TYPE

FIRST BOOTLEG:—"He's a prohibition officer. Think we can risk bribing him?"

SECOND BOOTLEG:—"Sure; he's an ex-AFL official.

## A MONEY SAVER

An Irish emigrant when leaving the docks of Belfast aboard ship, noticed a diver going down near the vessel. He looked for a long time out at sea, for the man of mystery to come up; but all in vain.

When the ship was tied up in New York another diver was coming up. Pat rushed over and grabbed his hand with a real grip.

"Be Jasus! Old Boy," he exclaimed. "You're all right. I wish I'd a known it. I'd a-walked and saved my money, too."

## FOR CONSPICUOUS MERIT

"Noble man!" said the high-minded citizen to the policeman. "So you refused $3,000 spot cash to let this liquor truck go?"

"Yeah," admitted the modest cop.

"Fine! And were you rewarded for your honesty?"

"Sure. The chief slipped me a couple of cases."

Prices are still ballooning. The housewife trying to buy a mattress finds that even the price of down is up.

### A PLEASANT GIFT

Quick wit is a pleasant gift. A witness was being examined in an assault case. "Did you see this man assaulted?" asked counsel.

"No, but I heard him cry for help," was the answer.

"That is not satisfactory evidence," said counsel.

As he left the witness box the witness laughed loudly. The judge rebuked him and reminded him that he was showing contempt of court.

"What?" said the witness in surprise. "Did you see me laugh while I had my back to you?"

"No, but I heard you," said the judge

"That is not satisfactory evidence," answered the witness.

### RISKY AS IT WAS

A Catholic priest was driving along the road in the land of coo coos and hospitality! He picked up a little Negro who was paddling along the road, too!

"Do you go to church, little boy," asked the holy father.

"Oh, yas suh," answered the boy.

"What's your religion, little man? Are you a Catholic?"

"Good Gawd, man! No!! Aint it bad enough to be a nigger, widout bein a Catholic, too?"

### EASILY EXPLAINED

The new colored parson was all wound up. He was succeeding well in condemning almost every one of his flock to the bottomless pit.

But one old darkey having known the preacher's past, failed to understand why and wherefore the minister had gained the spiritual authority to act as judge of mortal man. So he jumped up and said:

"Look a heah, Parson! Aint you de man what busted into Mister Johnson's chicken roost last yeah?"

"Just lissen to dat foolishness," said the Parson. "Now breddern and sistern, you all knows I ain't tole you to do lak I does, but do lak I tells you."

### THE DOG HAD THE BEST OF IT

A certain young man works in a western sawmill and "keeps bach" in a shack at the edge of town. During a cold snap, he found it advisable to temporarily take a room at a hotel and eat at a restaurant. In his absence, the bottles of milk left on the back porch froze and burst. Said he: "That milk was all spewed out around the top and looked like cones of ice cream. I would have eaten it but I was afraid of broken glass, so gave it to the dog." When told that broken glass will kill a dog as readily as it will a man, he replied: "Yes, I know, but the dog don't have to work in a dam'd sawmill every day."

# Conditions in Alaska

CORDOVA, Alaska—I have just finished reading the Industrial Pioneer for June. I will say that it is getting better and better every month. It seems as if the fellow workers are taking more and more interest in it, for there are sure some good writers sending in some good literature.

This makes me feel like writing, too; so I am going to write about my fishing experiences here, that I have had this summer.

There has been a big run of salmon this year; in fact, the biggest ever known in Alaska. There have been hundreds of nets sunk with thousands of salmon in them.

I sure can't help but think what great exploitation there is in this country.

The following are the prices paid for fish and in the canneries. The company will hire a bunch of men and pay them for red grey salmon, 12 cents and a half; and for King salmon, they get 75 cents.

They are allowed $90 for grub, which includes the whole season and if they go over that they have to pay out of their own pockets. Imagine, to have to exist for six months on $90 worth of grub! They can only buy the very cheapest kind of food in order to exist! And if the cannery tenders break down, why they just have to pitch their fish overboard and have all that labor for nothing!

Now it costs a man $125.00 to come and go from Seattle, Wash., to Cordova, Alaska; so there you are.

The Japanese laborers are hired by the season. This year's wages is $350.00 for seven months. If they get a certain pack they are paid an additional bonus; and if not they are out of luck.

**Card No. 826267**

## WATCH FOR THIS!

**The sequel to the story, Annie, will appear in the November issue. It will be entitled**

**"NEMESIS"**

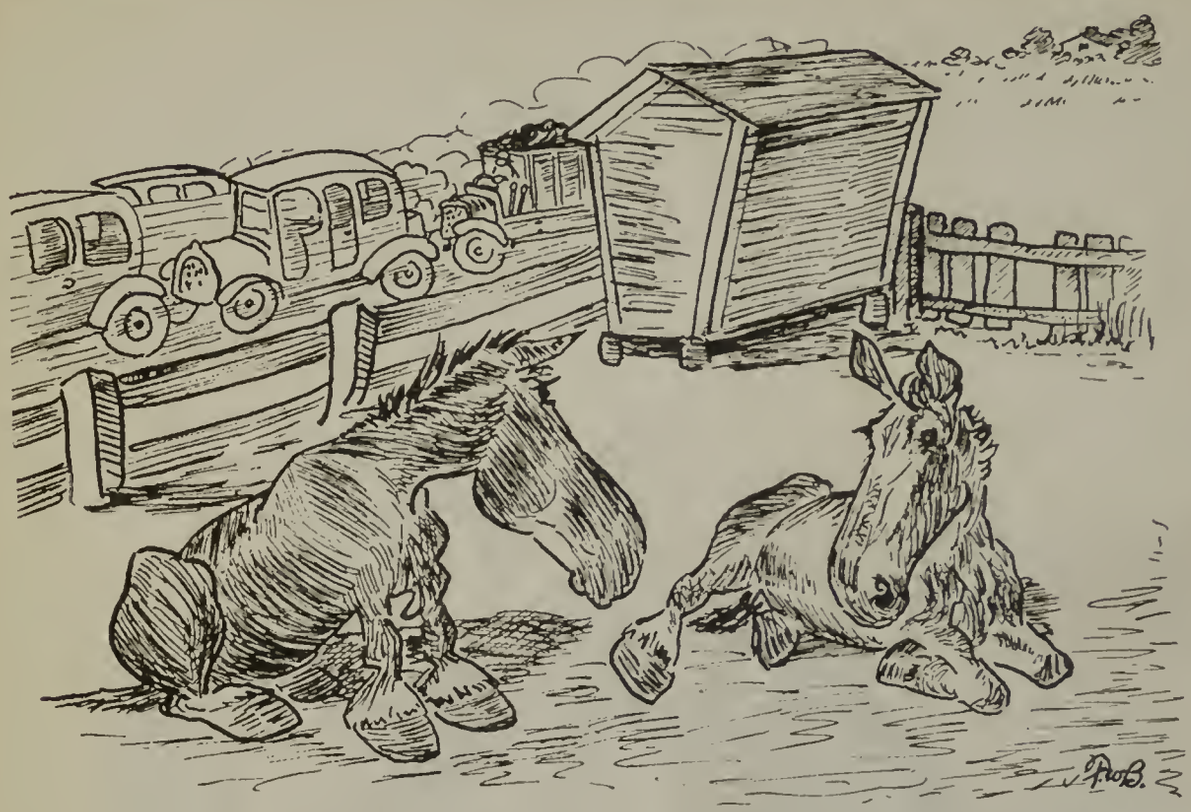
**Anyone familiar with the episode of the Verona at Everett, Washington, will understand what this new story is all about.**

**November 5th will be the anniversary of that terrible scene; and "Nemesis" will be appropriate for the occasion.**

**Subscribe for The Industrial Pioneer now in order to secure this and other good working class fiction. In addition, there will be articles treating of economics, organization, and current events.**

# If Horses Reasoned Like Men—Especially Unemployed Men

By FRED W. BOWERMAN



**First Truck Horse:—Do you think our unemployment will be for long, Charley?**
**Second Truck Horse:—At least until election is over.**

I RECENTLY passed an empty corner lot, where two old truck horses had been turned loose temporarily to loaf until needed again.

Many motor cars and heavy trucks were passing with their loads of men and merchandise.

The question came to mind, what these two old plugs would be talking about if they could converse with each other. They were out of work and loafing, just like a lot of men are at the present time. The workers in discussing unemployment usually make use of some of the following reasons for such a state of affairs:

First Worker:—Well, John, how long do you think before we'll get our jobs back?

Second Worker:—Perhaps not until they decide the present election down in Washington.

Third Worker (butting in):—That's where you are mistaken. The reason that we're out of work is on account of the soldiers' bonus, the Mellon tax bill and prohibition.

And so it goes, this argument about unemployment. The trouble is we workers don't realize that we are like those two old nags who have been crowded out by the machine. Those truck horses no doubt understand this question of unemployment better than we humans. The machine (the automobile) has taken their places, and the same holds true of us workers in the mill, mine, camp, railroad, ship, etc. The machine has taken OUR places.

Yesterday I read of a new machine now in use in the auto factories, which will turn, face and slot pistons at the rate of three a minute, and with an inexperienced operator. It used to take a skilled machinist thirty minutes to complete one piston.

You've seen the steam shovel at work digging as much dirt as fifty pick and shovel artists. You read about the automatic telephone switchboard which does the work without any central operator. New methods of mining coal dumps thousands of coal miners on the street. With the bottle machine they don't need glass blowers any more. In every industry machines are replacing workmen as the auto replaced the horse. The only trouble is, the average worker apparently fails to grasp this truth.

Many who know the machine is speeding up production and piling up more wealth for the owners of industry are led to believe by the company they work for, "that the more they make the machine produce, the more pay they will receive." Did you ever hear of a farmer feeding the team more oats because his flivver runs faster than the old team could? Then why think that the Standard Oil, the United States Steel Trust, the General Electric, the Great Northern Railroad, or any of

the other thousands of capitalist institutions are going to feed you more oats (more wages) because the machine produces more and better than hand labor?

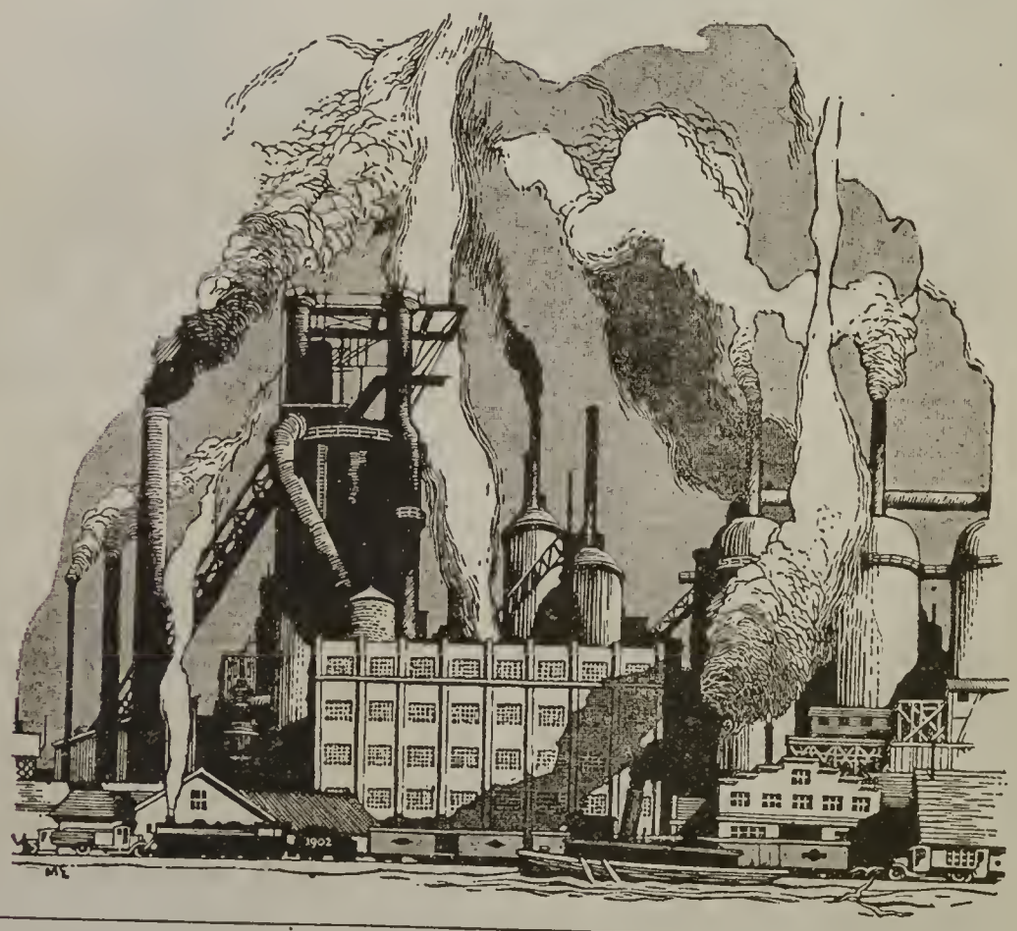
**Remember:** The company is not in business for fun. They are in the game for profits. The more profits the better business.

What are you in business for? You think you're not in business? Oh, yes you are. You are the most important factor about modern business. You who keep the wheels of industry turning. If it were not for you, there would be no business; no such a thing as industry, with all of its complicated and automatic machinery can run without you.

It is time that the workers awakened to their importance. Time the automobile worker, the steel worker, and ALL began to realize that it is the workers who now run, manage and operate industry from start to finish.

It is also time that we began to organize in industry, began to unite in an industrial union, so that our labor power could be used in our interests, instead of for the owners of the machines.

The machine is throwing thousands of us out of work. Let's organize around that machine, build a union, and take control of **those machines,** and run them in the interests of the workers instead of for the profits of the bosses. The One Big Union will do the trick. It is the worker's only hope.



**The Shop is the Workers' State. He Who Controls the Factories, Farms, Mills, Mines, Means of Transportation, and Communication and Exchange, Controls All Else. The Political State is But a Reflex of the Industrial State. There's the Workers' Capitol.**

# Annie

By ADAM NOIR

**The Tale of a Wobbly Girl's Unwitting Love for a Labor Spy and Its Tragic End—A Story that Exposes Once More the Viciousness of Industrial Espionage and the System of Private Capitalist Profit which It has Been Devised to Protect and Sustain.**

**"WE don't ask you to believe what we say, we don't ask you to believe what we publish. All we ask is that you give us a hearing, read our literature and THINK. And remember, no argument, either spoken or printed, is worth more than just whatever grain of logic it may contain."**

**The speaker was earnest and forceful, the crowd on the street corner listened eagerly, but it meant nothing to Jim Burton. That is, the IWW teaching meant nothing to him but disappointment. Through all the long weeks since he had been detailed to spy on them he had heard nothing but this eternal challenge to think; "read and think, listen and think. Then act in accord with the dictates of common sense and class interest."**

Never a word about destruction of property, never a word about killing capitalists or burning their homes, never a word advocating crime of any kind. Bah! Jim was sick of it.

Even his membership card; procured by representing himself as a school teacher—a wage worker—had not helped him to any real knowledge of the "Inner Circle" that was popularly supposed to meet in secret and plan all kinds of law violations. He was about ready to believe there was no Inner Circle. For two cents he would ask to be relieved and given something more exciting; a chance on the Dry Squad perhaps, where he could always be sure of his "Morning's Morning." Yes, he sure was tired of it and would have quit weeks ago had it not been for Annie.

There was a girl worth thinking about—that Annie Blythe. She was not pretty, and she was built too much like a boy to take a prize as a Bathing Beauty, but she sure was some little pal. Best of all, he was sure she liked him immensely and it would take but little effort to get her to actually love him. "Well," thought Jim, "if I do win out there, I'll take her out of this. No wife of mine is going to wander about here on the Skid Road at all hours, selling Wobbly papers to rough loggers, taking part in their street meetings, helping with the singing, even making speeches occasionally. No sir; none of that for Annie after we're married."

A collection was being taken up to pay the cost of literature to be distributed among those too poor to buy. Annie came round with the hat. Jim tossed in fifty cents, just as he had tossed in fifty cents each night since he became a member. It irked him to waste his money in this way. He would far rather have spent it over a certain "Soft Drink" bar he knew of, or used it to buy tickets at one of the Chinese Lotteries so numerous in the neighborhood, but then, one had to do something to inspire confidence—and, Annie always gave him a smile.

The collection was taken, the distribution of literature was made, the meeting closed, the crowd dispersed. As Annie started away with a group of others, Jim stopped her: "I say, Fellow Worker, what's the matter with going somewhere and getting a bite to eat? You look hungry, and I'm about to collapse. They won't need you any more tonight."

When Unemployment Enters Home.

Annie was hungry. It seemed to her that she was always just a bit hungry. Jim was a nice sort. He seemed to have plenty of money, so there need be no fear of imposing on him. She accepted.

They sought out a quiet restaurant, ordered a

good meal, and ate and talked for an hour or more. Afterwards, Jim saw her safely to her car and bid her good night.

Next evening, it was the same; except that when it came to paying the check Annie insisted that it was her turn. Jim objected vigorously, but she was not to be shaken. Finally, they compromised by agreeing to dine together each evening after the meeting and take turn about at paying the check.

This arrangement was kept up for many months; sometimes varied by a show or a dance, a boat excursion or a picnic, but always they went fifty-fifty on the expense. What they talked about, what they said to each other, is immaterial; but long before summer was gone they were engaged to be married, and the wedding was set for Thanksgiving day.

Jim believed he was the luckiest man in town. It is not every girl that will insist on bearing half of all expenses. It is not every girl that can be a real pal, and meet a man half way with a genuine spirit of give and take when personal whims and peculiarities are involved. In short, there are not many girls like Annie Blythe, and Jim knew it and was glad.

Annie was more than proud of her love. She spoke of it quite frankly with all her friends. All her friends were quite frankly pleased with her choice. All predicted great things for Annie and Jim. The Central Branch, in regular business meeting, gravely discussed the proposition and voted to give a big dance and entertainment in honor of the occasion.

Late in September a small cloud appeared on the horizon. Jim had utterly failed to turn in any incriminating evidence against the IWW and he was relieved from duty. More, he was dropped from the payroll and told, rather plainly, that the city authorities would be pleased to hear of his departure for other fields.

He was not in a position to loaf without a steady income. At all times, it had been his custom, after seeing Annie to her car, to spend many hours in wild carousal, and his discharge caught him broke and in debt. However, he was not lacking in resourcefulness.

Having always posed as a school teacher, he now told Annie that he had taken a position in a small country school in a neighboring county. While not directly asking for help, he so worded his conversation that she volunteered to lend him sixty-five dollars—every cent she had. He protested, but agreed to take the money with the explicit understanding that he be permitted to return it from the very first funds he received. With her money in his purse, with her kiss on his lips, with her cheery "Bye-bye, Jimmy boy." following him down the stairs, he quietly dropped from sight.

There was, of course, no position as school teacher, but there was labor trouble at Lumberton. The shingle weavers were on strike, and guards were needed to protect the scabs. Moreover, the padded cell in Lumberton jail was said to be crammed with contraband booze, and the sheriff was widely known as a man who never permitted his deputies to want for a drink. So, the very next day found Jim, effectually disguised and under the name of James Smith, on the payroll of the Lumberton Commercial Club and taking orders from the Lumberton sheriff.

Jim's fondest hopes were more than fulfilled. Not only was he permitted an occasional drink, but it seemed to be intended that he get drunk and stay drunk. Every one around the sheriff's office was more or less drunk. A sober deputy was looked upon with suspicion.

The work was pleasant. Nothing to do but walk along with the scabs as they passed to and fro between their hotels and places of employment, or parade up and down in front of one of the mills with a shotgun on his shoulder, and hurl verbal insults and warlike challenges at the few union pickets on duty there.

However, the strike seemed to be winning. The mere presence of the pickets, standing so orderly at the gates, quietly pleading with their unorganized brothers not to take the struck jobs, was apparently sufficient to prevent extensive scabbing. The order went forth that the pickets must be driven away and kept away; they must not be permitted to even come in sight of a scab, or prospective scab.

At first it was easy pickings. All one had to do was to walk out, bat a picket over the head with a club or gun butt, call the wagon and have him run in for disturbing the peace, assault and battery, inciting to riot, or any other charge that happened to come handy.

Jim was in his glory. In five days he broke five heads and sent five pickets to jail. As each arrest was rewarded with an extra quart of Sunnybrook or Canadian Rye, he felt that he was doing very well indeed.

Nor was there lack of material for slugging. For each picket sent to jail, two or three appeared to take his place. One morning a company of twenty or more appeared before the gate at which Jim stood guard.

The mill owner was furious. Hurrying up town, he collected a band of deputies and Commercial Club volunteers and brought them into the mill through a rear entrance. At a given signal, they made a sortie and drove the pickets out upon a long bridge across the tide flats. Another band of deputies charged from the opposite end of the bridge.

Caught like rats in a trap, the pickets were forced to fight; but could not for long, with bare hands, stand up against clubs and revolvers. As soon as one went down, he was thrown from the bridge to the stinking mud below.

Jim was elated. Single-handed, and under the

eagerly approving eye of the boss, he succeeded in beating down two pickets, and shot a third one in the leg. He felt that he had earned extra pay and resolved to ask for it—if he could remember about it when he was drunker and had more nerve.

But Jim was soon to learn that there are two sides to all things, including a slugging carnival. That evening as the scabs and deputies came from the mill they were met by a mob of strikers and sympathizers and given a beating almost as severe as that received by the pickets in the forenoon. Jim was especially mauled. After beating his eyes shut and breaking his scalp in a dozen places, they fixed a rope to his feet and dragged him through the mud for some hundreds of yards; only leaving off when it became apparent that further punishment might prove fatal.

He was a mighty sick man as he lay in the hospital that night; sick in mind as well as body, for he had learned that even a striking slave will occasionally turn upon his tormentors, and the knowledge filled his little soul with terror. The mill owner's wife and a group of lady friends came bearing armloads of hot-house roses, and made pretty speeches praising his heroism and devotion to American ideals. He replied in such flowery phrases as his limited vocabulary would permit; telling them he felt he had but done his simple duty and that he longed for the time when he could again take the field against all enemies of law and order. Nevertheless, he made the mental observation that he would quit and take on a job at honest work rather than again face those terrible strikers.

In addition to the strike, the authorities were being pestered by the IWW. While Jim was in the hospital, a group came to town, opened an office and were trying to hold street meetings. This might not have seemed so bad at some other time, but they were preaching Industrial Solidarity—and they were being heard. There was grave danger that the workers in the lumber mills would heed the call, make common cause with the workers in the shingle mills and tie up the industries of Lumberton from center to circumference. Such a catastrophe must be avoided, whatever the cost, and the sheriff was ordered to run the IWW out of town and keep them out.

Already several meetings had been broken up, the office had been raided a couple of time and the furniture smashed, and the Wobblies had offered no resistance. Jim decided to ask for a position on the IWW squad—as being safer than facing mobs of strikers. As soon as he was fit for duty his request was granted.

Breaking up IWW street meetings proved to be as troublesome as chasing pickets away from the struck mills. As soon as one speaker was arrested there was always another to take his place. Often, as many as ten or twelve were arrested in one evening. If they were turned loose, they mounted

**Bloated Plutocracy Has "The People" Bound and Terrified.**

the soap box again. If they were deported, they returned in a day or so and brought others with them.

Driven to desperation, the Commercial Club ordered terrorism. Each prisoner arrested was beaten to the extreme limit of physical endurance. When he recovered somewhat, he was beaten again, robbed of every article of value or convenience, and shipped out of town.

In time, the bothersome formalities of arrest were dispensed with. A batallion of deputies would simply form a cordon around the meeting and send in a number of their most husky and most drunk members to beat up on all within reach; spectators as well as speakers, women and children as well as men.

This sort of thing was as the breath of life to Jim. He made himself a special club with a rough surface so that whenever he struck anyone over the head he could give it a sort of dragging motion and fetch away tufts of hair and bits of bloody skin.

At first, he was worried by a report that two or three of the invading Wobblies were women, and he feared one of them might be Annie and that she might penetrate his disguise. Anyway, he didn't want Annie to get hurt; she was to become his wife pretty soon and he didn't want her all scarred up. But it proved to be only a trio of great, red faced, frowsy haired, female working stiffs. It amused him to punch them in their stomachs with the end of his club and see them

turn pale and vomit, and sometimes faint.

The leading spirit among the little group who fought so valiantly for free speech was an eighteen-year-old lad known to his fellow workers as Billy La Mar. Billy was not a speaker. He never mounted the soap box except it be to take the place of someone just arrested or knocked out. But, he was always on hand, and always busy; selling papers, leading the rebel songs, holding earnest confab with any who appeared to take an interest. Moreover, he seemed to have, in some sort, a charmed life. In every melee he escaped unhurt; in every one of the numerous times he had been arrested, he managed to give the deputies the slip before they could lock him up. One high official in the Commercial Club was heard to say that he would pay a hundred dollars for authentic news of Billy's death.

Jim wanted that hundred dollars and certainly tried to earn it, but somehow he and Billy never met. Nights when he had a chance to get in close to the speakers' stand, Billy was either absent on some errand or some other deputy got in the way. Nights when Billy stood near the speaker and led the singing, he was too drunk for active duty and was left on guard at the jail.

One night when he was sleeping off a drunk in the jail a prisoner was brought in. His left hand was mangled and bloody, gashes and bruises and smears of blood covered his face. One eye was swelled shut and the other was but little better. He screamed and cried hysterically because of the pain.

"Who the hell is that?" Jim wanted to know. "It's that damned kid they call La Mar," replied one of the guards. "Well, by God, I'll teach him to come squalling around here and wake everybody up," said Jim; and accompanied his words with a well directed blow from his famous club. La Mar sank to the floor unconscious and was dragged to a cell.

However much they tried to avoid it, the deputies were compelled to make an occasional arrest. In time, the total number of Wobblies locked up amounted to fifteen. To feed so many prisoners, against whom there seemed no probability of placing a charge that would stick, seemed a waste of public funds, and Commercial Club ordered deportation; but first they were to receive such a beating that they would not dare come back.

A short time after dark, the next evening after La Mar was brought in, a long line of automobiles drew up in front of the jail. One by one the heavily manacled prisoners were brought out and tumbled into the waiting machines. When all was ready, the procession moved away.

A few miles out of town they stopped at a place where the highway crossed the railroad. On either side of the crossing is a cattle guard; one of those sheet iron arrangements with a series of blades set at an angle of forty-five degrees and the edges serrated very similar to a cross-cut saw. Here, the deputies and Commercial Club volunteers, to the number of seventy or more, armed with sticks and clubs, formed in two lines about six feet apart and facing each other. One by one the prisoners were unbound and made to run this living lane and jump, scramble, or crawl across the cattle guard at the end.

As a prisoner passed down the line each deputy in turn struck him over the head or across the shins. If he became entangled in the cattle guard, all those within reach beat a tattoo on his back until he crawled free. If he faltered along the way, he was urged forward by a husky deputy who wielded a whip in the lash of which was braided a violin string that cut like a knife.

The last prisoner was a slight, boyish figure who stumbled and fell at almost every step. He had hardly more than crossed the cattle guard and disappeared under the trees along the track when the sheriff came panting along, shouting: "Say! Bring that last one back. That's Billy La Mar. We can't afford to let him off that easy." Jim fired his revolver in the direction taken by the prisoner but there was no sound to indicate that he had scored a hit. A few of the less drunk remained to search. The others, including Jim, returned to town.

Jim kept to his room all next day. Reaction from the excitement and prolonged drunk was upon him. His nerves were unstrung, his mind filled with vague forebodings. When he closed his aching eyes, he saw visions. He saw a vision of Annie; a most peculiar vision.

—There was a row of fifteen posts. Bound to each post with heavy chains was a figure swathed in coarse, blood-spattered cloth, dripping kerosene. With a torch, he passed from post to post, setting fire to the oil soaked figures. At the last one he paused to observe the effect.

—The flames roared upward. The cloth dissolved to ashes and fell away in great glowing flakes. The black smoke parted and disclosed the face of Annie. Her hair was burning but she smiled. As the smoke pall closed agan, she said: "Bye bye, Jimmie boy."

Voicing a terrible scream he sprang up and ran down stairs. They brought him back to his room and called a physician. That functionary said it was delirium tremens and gave him treatment for such.

There was much uneasiness in the ranks of the Special Deputies and Commercial Club Gun Men. They figured that if anything would provoke retaliation from the IWW the atrocities at the cattle guard would do it. Panic stricken with the fear of assassination, many staunch supporters of law and order left town.

Sick of it all, certain that a longer stay in Lumberton must end in death by the hand of one of his many victims, Jim drew what wages he had coming, borrowed all he could, laid aside his disguise and returned to the Big Town.

Knowing that boldness is the best kind of concealment in such cases, he reappeared at IWW head-

quarters and volubly expressed regret that the business of making a wedding stake had prevented his taking part in the action at Lumberton.

Annie did not come around the hall. She had taken new lodgings and no one seemed to know where she was. It was more than a week before he found her.

She was in bed. Her face was pale and drawn as if from a long illness. A patch of medicated cotton under a flap of green cloth covered her left eye. She kept her left arm out of sight beneath the bed-clothes. When Jim stooped to kiss her, she gently pushed him away, saying: "Wait, Jim. Wait until I tell you something. You may change your mind."

Protesting that nothing she could tell could possibly make any difference, he kissed her anyway. She burst into tears and, hiding her face under the coverlet, wept for many minutes. When again able to speak she said, in the dull monotone of one who has but little vitality and less hope:

"It was a foolish thing to do, I suppose, but the boys needed all the help they could get so I went to Lumberton."

Jim started, and his lips formed some word of exclamation or interrogation, but she continued as if she had not noticed:

"Of course none of them knew it was me, and I don't suppose any of them except George Radcliffe knows it now; I guess they think I just quit to avoid trouble; for I dressed as a boy, and I took the name of my dead cousin, Billy La Mar."

Jim started again; his hands clenched convulsively, he swallowed as one suffering from thirst. But the voice continued:

"I managed to dodge for quite a while, but one day the Mayor trapped me. He sent me a note asking me to come and talk it over, and saying he thought he could arrange about the meetings.

"They led me into his private office. There were four big policemen in there and as soon as the door was locked they commenced to knock me from one to the other like I was a hand-ball or punching bag. When I would fall, they kicked me until I got up again. One of them kicked me in the eye and it burst. But it didn't hurt as much as one would suppose—guess I had so many other hurts I didn't have time to feel it.

"Finally I fell and could not get up. There was an iron couch or cot or something of the kind in there and the Mayor dragged it over and put one of the legs on the back of my hand spread out on the floor and then jumped on it. The caster kept turning to one side and rolling off, so they took it out. Then one of the policemen held my hand still, while the Mayor and the others jumped on the cot and drove the leg clear through to the boards beneath.

"I guess I must have fainted, for the next thing I knew I was standing in the jail office and a deputy sheriff knocked me down because I cried and disturbed his sleep."

As she talked, Jim left his seat and paced the floor. Great beads of perspiration studded his flushed face, he shivered as with an ague. What thoughts flitted through his clouded brain can only be guessed, but Annie accepted his agitation and terrible look as evidence of righteous indignation and compassion for one he loved, and broke her monotone recital to say: "Please don't look so awful, Jimmie boy. I am not the first to be treated this way and I'll not be the last. It is all part of the game. It is the reward we must expect when we try to help others against their will. Calm yourself. There is more to tell. More, and worse."

Seated again, his hands convulsively gripping the sides of his chair, he stared straight ahead like one hynotized while she continued:

"Well, next evening they came and took us all out and loaded us into automobiles and carried us out into the country to a place where there is a railroad crossing and there they made us "run the gauntlet." But I suppose the boys at the hall told you about that."

"Yes," said Jim hoarsely, "I've heard about it."

"Well, I was the last to make the run. After I got across the cattle guard, someone fired a gun and the bullet struck me in the side just above my right hip."

Jim groaned and sprang to his feet.

"Come, come, Jim," she said. "You simply must not act like that. It only makes it harder for me to tell. Come and sit on the bed and let me hold your hand. It'll make it easier for both of us." He did as she requested and the monotone flowed on:

"It was only a flesh wound and had I not already been pretty well used up it would not have stopped me from running. As it was, I lay until I thought they were all gone away and then crawled to a nearby farm house.

"The woman telephoned for a doctor and one came and fixed me up. About an hour after he went away, five deputies came for me. The woman begged for me the best she could, but when she told them I was a girl and in a dying condition it only made them more determined. Dragging me out of bed, they carried me to a little open spot in the woods and—and—oh, Jim, I never can be your wife now. I never can be the wife of any good clean man. Jim! Jim! . . . " He was gone. Rushing down the stairs four and five steps at a jump.

It is possible that under the influence of her words he had some passing thought of seeking out the perpetrators of this foul deed and exacting summary vengeance. It is possible that he had thoughts of taking his own life as some slight penalty for his own foul deeds. But, as generally happens with such characters, he compromised by getting drunk. He got beastly drunk and stayed so for a week. Moreover, in his maudlin condition, he talked—and he talked to George Radcliffe. George was a timid soul, and his mind was a bit clouded, but he had a memory like a phonograph. He could keep a secret like the Sphinx, but he knew his friends—and, he knew a skunk when he smelled one.

On the ninth day Jim was sober again; eold sober and repentant. His thoughts were of Annie:—Of course, after her little accident, there could be no marriage; the mother of his children must be a woman of untarnished virginity. But after all, Annie was a good scout and he would do what he could to help her. He would rent an apartment and install her as mistress. Maybe, after a while, when she recovered her strength a bit, she could begin to take in a few dollars; she had a very winning way, and he knew lots of fellows who would welcome an introduction. Why, they might even, later on, lease a "rooming house" and install a few girls—as "chambermaids." Yes, that was the thing to do. Surely he owed her that much. And this was Thanksgiving. He would go to her at once with the glad tidings. No time could be more appropriate than now, on the day that was to have been their wedding day.

Eager to spring his surprise, he entered without knocking. She was not in the room, but, on the pillow where it could not be overlooked, was a note addressed to him. Hastily tearing it open, he read:

"Jim:—I know you will come here on Thanksgiving day. I have willed it so and I know it will be so. George Radcliffe has told me all, and I know that George never lies.

"I can forgive a lot. I can even forgive those poor drunken brutes for what they did to me that night in the woods. But I can never, never forgive myself for willingly, eagerly giving my soul and body, my life and my love, to such an unnamable monstrosity as you. I can never survive the disgrace of your kiss on my lips.

"If you wish to further pollute my poor broken body, look for it in the bay."

For almost five minutes Jim stood motionless. Then, with a grim smile, he picked up the 'phone and called police headquarters.

Next day, the newspapers carried the headline: "Female Terrorist Drowns Self Rather than Submit to Arrest." That's all.

# Los Angeles Employment District Snapshots

By JIM SEYMOUR

HE was a cement worker, strong as a bull, as he needed to be. He was out of work but he was Irish and didn't mind it. An unfailing good humor is quite an asset.

"The pay isn't so bad," he replied to my question, but there isn't enough work for all of us. But it is better than most common labor; we don't have to compete with the general run; you have to be pretty husky to handle concrete."

A Ford drew up to the curb and a man climbed out.

"I want to get two men to burn brush," he said.

A tall, lanky youth with an unintelligent face overheard and asked: "How much you pay?"

"Fifty cents an hour."

"Fifty cents! Gee, I'll work for thirty-five!"

My companion gasped and clenched his fist, moving it as though the palms were itching. The farmer looked at the young man in amazement that turned rapidly to contempt.

"I don't want you," he said. But he hired the Irishman and another fellow and instructed them to meet him there at 2:30.

"You see what we're up against?" asked the Irishman as the farmer left. "We don't have much of that on cement, but for most of the jobs we have to buck the likes of that big scissor. Lots of the bosses are looking for them, too. Oh, well, everything is lovely now and I can prove that I'm respectable—beginning at 2:30."

I made some brilliant remark about a long lane with all curves eliminated.

"Sure," he replied, "most things come out all right in the end, but I have always been seriously handicapped as the result of an accident that happened when I was very young."

"How so?"

"The ship that my mother came over in was delayed at sea and I was born just one day out of New York."

"How can that affect you now?" I asked.

"Why, I lost my chance to be President."

He spoke without even the ghost of a smile, but a moment later was laughing heartily.

"But sometimes a bo does make it," he said soberly. "Jack London did. Say, there was a character—never forgot his origin—had quite a lot of Jiggs in his makeup. When I was over in Honolulu he pulled a good one. Some society dame sent him an invitation to attend a feed and wrote 'Full dress' on the card. Jack didn't have any dress-suit but he went out and bought one. Had it delivered to the woman and he stayed home."

We chatted a while about The People of the Abyss and The Iron Heel, then he said: "Well, by the time I climb around some chow it will be 2:30. Hope I see you some time when I'm paying off."

# Over Eight Hundred Hear Geo. Speed (Continued from page 6)

"tar-pot committee's" conduct, "I tell it as 'twas told to me."

As an eyewitness to the raid, the writer can vouch for the scenes enacted there, as well as seeing a truck, loaded with workers, driving away. Many theories were suggested as to the possible destination. A sailor said to the writer that they had sent out patrols to trace the truck, which seemed quite plausible, since the navy might be interested in the report that it contained sailors, but evidently no one found the truck, although we now know that it went to Santa Ana canyon, forty-five miles away.

It took about thirty minutes to complete the wrecking of the hall, when someone gave the command—"Scatter."

There was no way to get out of town without passing through either the upper or the lower business section of the city. As the truck went on Twelfth street, they in all probability took the lower route, thus passing near the police station.

Suffice to say that the Los Angeles Examiner reporter was getting names of the injured before any police arrived. So far as the writer knows, this reporter may have been on the scene all the time and this theory gains color when it is recalled that, in its "scoop" on the following evening, the paper came out two hours earlier than usual. As the reporter also attended the mid-day meeting, following, it is possible that he tried to have the paper on the streets of San Pedro before the street meeting got under way.

In flaring head-lines the Examiner stated that the IWW was going to dynamite the morgue, and then prepared its statement as the result of an ambiguous "rumor."

This brief digression is made in order to emphasize the gravity of the situation under which Fellow Worker Speed so tactfully proclaimed the position of the IWW before that multitude. Many a speaker might have quailed under the existing tension.

Now we shall follow the story of the kidnaped men.

On this night-ride the truck was accompanied by about twenty-five automobiles, while on the truck itself, were members of the mob and some in sailor's uniforms who held guard over the victims with guns. Meanwhile a continuous barrage of terrifying remarks, such as, "which car had the ropes," mingled with threats suggesting Wesley Everest, was cross-fired between the guards.

After a two and a half hour drive, the canyon was reached and across the entrance to a grove was suspended a large banner, bearing Dante's inscription over the gates of hell and "You are now entering the chamber of horrors", "You have come to the end of your journey. Prepare to make your peace."

As the lights of the automobiles added a grewsome terror in this sylvan glen, a fire was started beneath a cauldron. During the heating of the tar, the victims were made to undress. Then a large tub was filled with the tar and some black oil, into which the men, one at a time, were forced to sit, while with a dipper, more of the sticky murk was dumped over their heads.

When one was thoroughly covered, he was led away and secretly told he could get away by following orders, otherwise he would be overtaken and subjected to torture and the rope. The whispered orders were that on the command to run, he would run as fast as he could and when a shot was fired, he would scream as if in mortal agony. They may have also spoken of the hanging of the six Italians in New Orleans, but the writer's informants did not include this in their statement.

Imagine the guttural sound of wild animals roaming in the woods! Imagine the suspense of each succeeding victim, on hearing the piercing outcry of the preceding fugitive, when the shots rang out. Imagine the melancholy feeling of desolation, when a banner is brought out, bearing the legend, "The end of a perfect day."

Realize that the fact that no masks or robes were worn tends to a feeling that this would be the end, where none would live to some day identify their assailants!

Remember the tales of the vigilantes, that were told on the ride to this lonely wilderness! Put yourself in this place and think, if you were the last of the six, whether your stomach wouldn't as lief your lips drained hemlock, rather than castor oil! Yet these plutonic incarnations of the imps of Beelzebub, forced a Spanish worker to drink a quart of castor oil, by strangulation.

The "Fascisti of America" had evidently taken a leaf from Mussolini's black-shirts.

And, lest the reader conclude that, in this recital the writer drew on his imagination, it may be proper to add that the entire ordeal was carried on in a close proximity to an automobile containing a woman and a girl. If they had no morbid desire to witness the shameful proceedings, it was not the fault of the gallants, who invited them to go along.

When the "ceremony" was concluded, the automobiles sped away in the darkness, while the victims returned, only to find that all of their garments, including shoes, had been immersed in the tar.

With what little they could take to wrap around their loins, they set out on the forty-five mile

trip, back to San Pedro. As it was almost day, a good Samaritan picked them up, after they had gone six miles.

In concluding this story, which reads like a narrative from the days of the Inquisition, it might be apropos to suggest, that if any who took part in the disgraceful debacle, have a spark of regard for our vaunted civilization, they at least return the eighty-four dollars they took from their victims and send it to the hospital, to ease the agony of the little innocents, some of whom cannot even sit up, but must lie in one position all the time.

To them, that charge the IWW with being atheists, the writer will say that if these deeds were done in the name of the Deity, then the all-seeing eye may be storing retributive justice in the nether regions, whence emanated the spawn of all that is vile. If you are not the hypocrites your villany demonstrates that you are, then your accursed soul must take with it the condemnation of Hi[illegible] that said, "Whatsoever ye do unto one of th[illegible] little ones, that ye also do unto me."

You may pray in your ceremonies, "God give us men!" but your prayer sinks into a vaporous platitude and becomes a mockery of the lone Nazarene, whose footsteps you profess to follow.

As it is written that "by their fruits ye shall know them," so you may yet find yourselves with Dives, in the charnel house of knaves, imploring Lazarus for a drop of water to anoint your parched and polluted tongue.

Perhaps, when that day comes, we may extend to you our sympathy, feeling that you have made the supreme atonement, but alas! it will be too late.

# A Challenge: Right is Might

By GEO. GARRETT

HOLD up your head, vain swine,
And advance to meet me.
With my trusty blade, bared, naked,
Tempered from the steel of Truth,
I'll pierce your arrant Hypocrisy,
And false Philosophy;
"MIGHT IS RIGHT."
Might that has been built
On the blood and tears of women and children;
On the stunted bodies, and blood-belching lungs
Of toiling wage slaves;
On the wan or painted faces of females,
Compelled to barter their sex charms
As a commercial commodity, and in exchange
Receiving bare necessities, disease and shortened lives;
On your ill-paid soldiers,
Whose blood you use to cultivate
The fields of foreign lands;
On your mental prostitutes, who,
Accepting your thirty pieces of silver,
Consciously betray progress (the real Messiah)
With their lies, lies, lies.
On your scientists, who,
Saturable to your damnable blood lust,
Further the development of guns and gases,
For the destruction of human life,
While babies die through underfeeding,
And defiant disease, unchecked,
Is a faithful ally to your vicious task;
On your drugs, dopes and poisons;
On your churches, professing to save souls,
But standing idly by, while bodies are destroyed,
Advertising subservience to YOU false God Mammon;
On your holy bible, book of absurdities,
Atrocities, contradictions and obscenities,
Reflecting the supposed inspiration
Of some omnipotent paradox, who,
Is very good to some children, (after they are dead)
And destines others to fire everlasting.
Deny, if you can, my accusations,
You ugly, hideous creature,
Whose claws are dyed red with the blood of many victims;
And hear my voice;
For I am the harbinger of the New Age—
Demanding the beauties of life for all mankind,
Not a mere few.
And as my loyal companions, reason and experience,
Grow stronger and stronger,
Your downfall is inevitable,
For happiness is our right—
And RIGHT IS MIGHT!

## EFFECTS OF ENVIRONMENT

Less than two per cent of the 30,000 boys and girls from the Dr. Barnardo's Homes in England, who have been sent to Canada and Australia have been failures. These children came from the most densely crowded and destitute area of the United Kingdom, and every one was a castaway until rescued.

# The "Great" Billy Sunday

By JACK METTE

SINCE the beginning the labor movement has been fought by the churches. Preachers and priests have raved and cursed the labor unions for taking unfair advantage of the boss. Men (?) of the Billy Sunday type prance over the country, breaking chairs, foaming at the mouth, hurling vile curses at unions, IWWs and anything else that looks advantageous to the workers.

Many of us have seen the antics of the GREAT Billy Sunday, who breaks chairs, turns hand-springs, tells eight-dollar-per-week store girls to take whatever pay the boss is minded to pay and to trust in Jesus. Whether Jesus will make up to these poor girls their lost pay when they go to Heaven the GREAT Billy does not say. Sunday is dead against labor unions. He places the curse of Christ on them all. But it seems that he waits until he hits non-union towns to put out these curses in the name of the Lord. I have never heard of the GREAT Billy making one of his anti-labor speeches to an IWW audience.

After listening to Billy Sunday, one wonders just what the good Lord has against labor unions and workers who are trying to better their condition in this world. We are forced to wonder just how long this GREAT slinger of the Gospel would continue to spread the Word of the Lord if it were not for the Iron Men involved. The Good Book, so I HAVE BEEN TOLD (I have never read it) tells us that Jesus was a soft spoken and very quiet man. Then why is it that this loving old fellow sends this chair smashing maniac to put his curses on us? My curiosity is aroused. I ask again: What has labor done that is wrong in the eyes of the unseen power said to be above us? Is it because we are organizing to better our conditions? Is it the Lord who is worried over unionism, or his chief chair smasher? Who pays Billy to sling his muck at the workers? If we knew the answer to that last question most of us would lose what little religion we have.

But Sunday is not the only sky pilot to preach against us. They are everywhere. They rave and tear their hair and shout themselves hoarse over a strike. They put curses on us so freely that we wonder how the Lord keeps up with his muck slingers in fulfilling all their curses. But we have never seen one single damned curse come down on us yet. And still we hear the preachers cry that the people are deserting the churches. Is there any wonder?

Since the beginning of time, man has worshipped something. He is like a small child. PAID speakers tell him of great things to come when he dies, that is, if he is good. Otherwise they have a place called Hell where you roast for all eternity. There seems to be no reward for man on this earth. He has to die to get rewarded. Very few seem in a hurry to collect their reward. The more religion they have the more they fear to die. If I thought I stood a good chance of going to that land of bread and honey the preachers talk of, dying would be my greatest pleasure. But as it is I am afraid that most of these anti-labor Gospel slingers will be my companions in Hell, if there is any such place, and then it will be HELL.

# The Radical Christians

THE churches present an interesting spectacle. Some of them are developing "radical parties." The latter are trying to make capitalism square with the ideals of social service, the brotherhood of man and the fatherhood of God. They are having a hard time of it. Apparently, the worst place on earth in which to teach Christianity is the Christian church of all denominations. They seem to prefer the flesh pots of capitalism instead. Though they denounce "materialism" most strenuously they are not averse to wallowing in the worst manifestation of it ever known to man.

However, the "radical" church "parties" are to be given credit for their attacks on capitalist religion. Especially is the Methodist Federation for Social Service, noteworthy in this respect. Under the leadership of Harry F. Ward, chairman of the Civil Liberties Union, who has proven a staunch defender of the rights of the IWW, it has adopted the following platform:

"1. That the Church should stand firmly for the rights of labor as well as capital to bargain col-

War God Sets World Afire.

lectively through reprcsentatives of their own choosing;

"2. That thc Church should urge the organization of industry in such a way as to furnish continuous employment of labor;

"3. That the Church should advocate the enactmcnt of a Constitutional amendment to regulate child labor in all thc states on a uniform and adequate Christian basis. Furthermore, we advocatc that thc Church should foster and organize campaigns of education among the peoplc of the United States on thc question of child labor;

"4. That the Church should stand firmly against the use of the injunction in all industrial disputes as a violation of the rights of American citizenship;

"5. That we favor the increased socialization and control of public utilities and natural resources and all essentials of life."

The Methodist students in convention assembled at Louisville, Ky., April 18-20, 1924, adopted resolutions denouncing war as "the greatest of all crimes," because "it includes all crimes;" setting forth that "war is self-defeating as it fails to accomplish its own purposes"; and calling for its outlawry through international organization.

In the May 15 issue of the Methodist Federation's organ "The Social Service Bulletin" will be found the following editorial:

**"To Arms! To Arms!**

"By all means let the War Department have its way if it plans to mobilize the entire National Guard, the Reserve Officers and even industry next Septcmber as our newspapers arc now hinting! There are plenty of people in this country who foolishly imagine that militarism undcr the guise of 'preparedness' or 'national insurance' is something holier than it is in Europe. So, on with uniforms! Shine up the brass! Let the bayonets gleam! Let the cannon boom!—munition manufacturers need more business! Cheer the flag, boys, as if the highest form of patriotism is to help build an unbeatable army and navy! We second the motion; 'mobilize our entire nation as if we were going to war!' Call it 'a farewell to Pershing who retires the next day' or 'a hint to Japan.' Nothing could be a more effective text for preachers and Christian editors than just such a demonstration of the lengths to which our miltarists have carried us—citizens' training camps, military training in schools (includng a few so-called Christian colleges) and now a general mobilization! To arms, to arms!—and then, 'Remember Germany!' "

The future alone will show whether, as in the past, Christian radicalism is merely a sentiment that disappears before stern reality; or a factor to be reckoned with.

# Young Peoples' Labor Education

ONE of the promising developments within the labor movement recently, is the establishment of thc National Association for Child Development. This organization developed as a result of a number of conferences of labor men and women, educators, and parents, who realized the great need of acquainting thc growing generation with the social and economic problems that face mankind and preparing Youth for intelligent participation in the work of bettering society.

The National Association for Child Development plans to carry on its work through children's clubs, summer camps and other similar means, and is now working on a program that promises to bc fully as interesting to the children as that of any of the present boys' and girls' organizations. There is in this new program no trace of the military or anti-social features that are so prevalent in other children's organizations, and the program includes many social service activities that will be bound to help in the development of the social conscience of the children, and will lead to an understanding of labor problems and of the need for international peace.

This new organization will begin its work this year with a summer camp at Pawling, New York. It is expected that this camp will accommodate fifty children. The fees that will be charged will be just enough to cover costs. Arrangements are also being made with labor, co-operative and community centers, for the establishment of childrens' clubs under the guidance of this organization. Offices of this organization are at 70 Fifth Avenue, New York City. The Executive Committee and officers consist of many prominent labor men, women and educators.

# The Amalgamated Almanac

THE Amalgamated Clothing Workers differs radically from the Industrial Workers of the World. It engages in many undertakings, like banks, co-operation, politics, etc., which obscure the class struggle and its fundamental economic basis. But there are some things within these limitations, which it does very well, indeed. One of these is its illustrated almanac for 1924.

This is a production worthy of the working class. It is typographical, literary, and pictorial art of the foremost kind, combined with history and economics of value to the workers everywhere.

Too long have the workers been content with printing and art of an unbecoming character. They should study the Amalgamated Illustrated Almanac for 1924 and learn how to reflect their own true worth both ably and well.

# More Catholicity Needed

THERE are more things in heaven and earth than are dreamt of in your philosophy," so says Hamlet to Horatio. And so one might say to anyone inclined to take a strictly sectarian view of the labor problem and its solution. What is needed, to these latter ends, is not sectarianism, but catholicity; because the former conduces to warring factions, while the latter makes for a triumphant solidarity.

There are many working men and women who believe that the development of the proper form of industrial unionism is the sole task of industrial unionists. They theorize and discuss this subject among themselves so much as to lose all sense of either proportion or perspective. The result is a loss of contact with the great mass of the workers and a failure to understand their peculiar ways of thinking and acting.

The mass of the workers cannot realize the necessity for an improved form of labor unionism, until they are educated to that end. It will not do to say that the failure of their old forms do that. For that is only partly and not wholly true; as they attribute, quite often, their failures to causes outside of their faulty unionism. They believe that some political cause is to blame, and not their bad unionism. Hence the need for education along economic lines; hence the need for a working class press that will discuss other matters than industrial unionism—such discussion to be a prelude—a clearing of the ground— to and for industrial organization.

No IWW, for instance, can reach a working man or woman who sees free trade, unrestricted immigration, etc., as the cause of working class degradation and misery. They must be disabused about these theories. Again, no IWW can win the Negro, without denouncing peonage and color, race, or creed discriminations. Nor can the IWW reach the believers in craft unionism, or disabuse them of that belief, by a lack of sympathy with the craft union aspirations for more wages, shorter hours and better conditions. It is all right to aim at the abolition of the wages system, but let the aim be a good one or the bull's eye will never be hit. The true marksman will go among the workers, fraternizing with them, helping them in their struggles, counseling and advising with them, and laboring hard, in various ways, for the creation of that class conscious feeling which is the basis of real solidarity.

It will not do to shut ourselves within ourselves; to, squirrel-like, run around the same old ring and get nowheres, despite strenuous efforts to the contrary. The working class is our class.. Let us go to them and be of them, in every sense. Then and only then will we have the workers won to our ways of thinking and organizing.

# Hearst Exposes Himself

WM. R. Hearst is the typical "friend of labor." He advocates high wages for the workers. At the same time he is trying to force compositors on his Seattle Post-Intelligencer to accept lower wages than those paid by his competitors.

The 1924 wage scale, accepted and being paid by other Seattle daily papers, provides for increases of 7 1-7 cents per hour for day work and 10 5-7 cents per hour for night work for compositors.

Hearst demands of his composing room "hands" that they accept decreases of 7 13-21 cents per hour for day work and 8 2-21 cents for night work on 1923 scale.

In other words, Hearst offers to pay the Post-Intelligencer compositors 14 16-21 cents per hour less and 18 17-21 cents per hour less than his Seattle competitors.

As a result, Hearst's Seattle compositors were forced to strike, and are now out, with strike-breakers filling their places.

As usual, union pressmen, teamsters, newsboys, and some dozen or more branches of "organized labor" are remaining at work and helping the strike-breakers to defeat their union brothers.

Not only is Hearst a typical "friend of labor," but so also, is A. F. of L " unionism."

**Don't waste your pennies on the Hearst press, in the belief that you are helping the working class.**

**Buy the IWW papers, such as Industrial Worker and Industrial Solidarity; also The Industrial Pioneer.**

# Pensions Exposed in Court

Some months ago Morris & Co., packers, merged with Armour & Co. The former had a pension fund. which the merger refused to take over and administer. Hundreds of aged employes were thus left without support in their last days.

Twenty-four of the Morris pensioners thereupon brought suit to compel the merger to establish a fund to guarantee payment of their pensions. The court proceedings attending these suits bring out the real nature of these subsidies.

"We have shown by the testimony of these pensioners that they refused offers of higher wages with outside companies because Morris & Co. held out the benefits that they would receive under the pension scheme," Mr. Armstrong, their counsel, said.

Reports of economic experts were read. These held that whenever pensions were paid by employers wages accordingly were lower than in places where no pension funds were maintained.

Pensions, then, are devices wherewith workers are underpaid, and, in cases of merger, cheated out of wages due to them. They are a means by which cheaper labor is secured and all labor is held in subjection. For it is a well-known fact that pensioners are loath to either strike or complain. They fear to imperil what they regard as their dearly bought old age fund.

Workers should object to pensions. They are uncertain of payment, as the Morris-Armour merger demonstrates; and they are destructive of self-reliance and labor unionism. Above all, they are devices wherewith to deny to labor the current rates of pay; which, in the long run, aggregate more than the pensions paid. That alone should condemn them; the other objections only serve to emphasize this primary rejection of pensions.

## Recognition

The Davenport, Iowa, ***Free Press***, organ of organized labor, recognizes a good thing when it sees it. Under heading,

## What to Read

It lists a number of foremost periodicals, like ***The Nation***, for instance; and includes, near head of list,

## The Industrial Pioneer

It also gives particulars as to contents, subscription rates, price per copy, address of publication, and so on. This growing recognition of Pioneer merits,

## Will Stimulate Readers

# Do You Know

## Ten Salient Facts About California?

CALIFORNIA has an average of nearly two earthquakes a week. The seismological report for 1923 gave a total of ninety-four shocks of varying degrees.

APPROXIMATELY 90,000 animals have been slaughtered to date, as a result of the hoof-and-mouth disease at a cost to the taxpayers of $3,732,406.41, and $45,000 more for property.

LAST year over eight hundred mortgaged farmers were driven from their homes in Sacramento County alone. This is one of the richest counties in the state. What of the poorest?

IN CALIFORNIA crops are burning up because of an acute water shortage, yet thousands of dollars are being spent to attract home-seekers.

FEW people know that a small group of individuals have stolen all of California's timber resources. (See report of Public Lands Commission).

OVER 150,000 children under the age of 13 were found working in California's various industries last year by investigators. Proving that child labor flourishes here.

RECORDS show California to be at the lowest of moral depravity. Conditions in Hollywood are too well known to require further comment.

NO STATE is more corrupt, politically, than California. Hardly a week passes without some new scandal involving officials of the state.

ILLEGAL stock selling and confidence men abound in California. Millions are lost annually through fraudulent stock sales —witness her oil swindles.

A CRIMINAL Syndicalism Law which sends workingmen to her "Twin Hells," San Quentin and Folsom, for from one to fourteen years if they dare protest against such infamous conditions, exists in California today.

! WE ASK you in the name of humanity to use no California goods and spend your vacation some other place.

For further information communicate with California Branch General Defense Committee, Box 574, San Francisco, California.

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Mobilize for Class War

September 12 is "Defense Day," is mobilization day for the capitalist class of America. They have set aside and appointed this particular time to try their military machinery, to fling great masses of men together; to drill themselves in their rapid equipment, and to play, just to practice, the art of manslaughter.

Just as a test, the capitalist class of America will try for a day to weld us all into a gigantic lightning-flashing, thundering weapon of menace, to have it lying ready at hand for the war lords of Wall Street to seize and wield like Thor's skull-splitting hammer our fathers believed in.

"Defense Day" is a day of doom, a day of death, to all workers—full of threat of war, begetting anger and fear in the debtor nations against whom it is a demonstration.

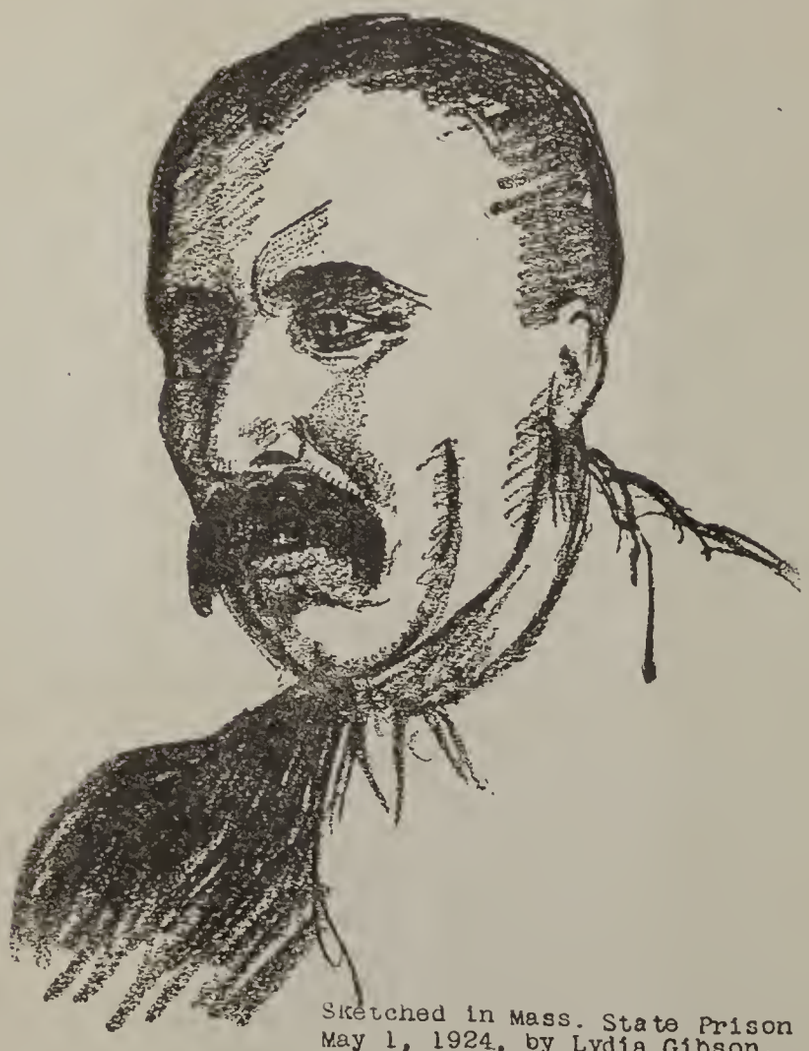
We workers reject this proposed war absolutely! We will have none of it! If Morgan wishes to collect his debts in Europe, let him go shed his own blood—not our blood.

But that is not enough. The hosts of murder and spoliation are in training.

We must be organized, too, and ready of speech; we must be determined; we must be trained, and aggressive, if we are to save them from the buzzard's feast the money masters are preparing for them.

We, the IWW, the fighting vanguard of the labor movement, must rally the working class; we must mobilize ourselves; we must oppose the army of toil to the army of massacre; we must assault, turn over, and entirely destroy this capitalist system that sets us tasks, and steals our sustenance, and sports with our lives. We must mobilize every day for class war, in the same spirit that Morgan mobilizes on September 12 for the cash war.

Join the IWW, and carry the red flag forward!



Sketched in Mass. State Prison
May 1, 1924, by Lydia Gibson.

## BARTOLOMEO VANZETTI

For four years now, Bartolomeo Vanzetti, and Nicola Sacco, the man whose name will go through history, inseparably connected with his, have been shut in a Massachusetts prison, with the electric chair staring them in the face. They were convicted of a payroll robbery in which men were shot, and the chief evidence against them was that they were radicals stirring the populace to anger with their story of the murder of another radical, Salsedo, killed by the Department of Justice and pitched out of the upper story of a New York skyscraper.

Both Sacco and Vanzetti are sensitive, poetical men, full of passion, loving life and liberty, and free air and warm, rich sunshine. They are suffering in that prison, waiting for the hot electric current with which capitalists mean to kill them.

# Events and Victims

By BARTOLOMEO VANZETTI

**A Story of How New Liberia Turned From the Arts of Peace to Those of War, and How the Workers Fared in the Transition—The Power of Movie and Press; How It Was Exerted to Effect the Great Change.**

THE events which I am going to relate to you, my reader, took place in New Liberia, where I wandered for many years, working from time to time, in many different places and under varied circumstances, as dishwasher, pastry cook, porter, storekeeper, gardener, laborer, fisherman; in short, earning my bread by the sweat of my brow wherever and in whatever way I could.

The western coast of that country, according to geologists, is being eaten away by the tides, and the land slowly but inevitably yields to the restless surges which stir it, submerge and cover it. The eastern coast, too, seems subject to the same phenomenon, at least at certain points with which I am very familiar.

Will this engulfment continue, or will it be stopped by one of the many still unexplained conditions which have determined and facilitated the infinite forms of matter and of life? Will they disappear, those shores so vast, so beloved and so desperately disputed; each bush, tree, cliff, rock and hill of which have been so bitterly contested by a handful of men poisoned by greed and folly? What destiny has time in store for that land all-possessed by a foolish and feverish human activity; strewn with shanties, slums and mediocre houses for its industrious working people; with villas and palaces for its idle or ill-occupied rich; with the gigantic creations of human genius and labor interwoven; with the marbles and tombs of its departed poets, sages, learned and proclaimed heroes? Will the blind seas sacrifice that land to their greedy gorges in order that the fabled Atlantises may raise again their heads, bowed many millenniums but still desirous of the light, to the mighty caresses of the sun? Or will that land be spared to witness the tragi-comic auto-destruction of the race; or to become the last receptacle and final grave of degenerated tyrants, deceivers and ruffians, and, from the last hour of the darkest age, to see the clear dawn of sane and free days arise?

* * *

The good New Liberians, instead of watching with philosophical inertia the invasion of the sea, think only of their sea-walls, and busy themselves with constructing and causing to be constructed great concrete walls along the most dangerously threatened points of the shore.

A gang of workmen—all foreigners, from the engineer to the humblest laborer—had been busy erecting one of these walls since the beginning of the spring. They had toiled so hard through the summer and the fall, that at the beginning of winter the work was almost completed.

"Well, in a few days I will be fired; I must look for another job," I told myself one gloomy afternoon, as I watched the fog slowly stealing from me the sea, the sky and the sun.

That night, instead of lying down to smoke and read, I did what I always do in such emergencies,

I went to the poolroom of my friend Gennarino, a very able, intelligent and enterprising barber. There the working men of the neighborhood spend their winter evenings reading, smoking, playing, disputing about politics and chatting about work. There one may learn news of the labor market in the vicinity.

"I hear they are looking for hands in Greenland"—a friend told me soon after I entered, "but I do not know anything for sure. Johnny who works there can tell you more about it."

I went out and walked towards the theatre, hoping to see Johnny, whom I knew to be passionately fond of moving picture shows. That night they were showing a screen version, a fragment of one of those romances which distort truth and realities; falsify history; provoke, cultivate and embellish all the morbid emotions, confusions, ignorances, prejudices and horrors; and, purposely and skilfully, pervert the hearts and, still more, the minds. The characters of these morbid melodramas are always of two opposite types, one very good, the other very bad. The good ones are the good folks who are always good, always do good, are always right, and in the end always triumph. The others are always bad folk, who are always wrong, always do evil and finally pay the penalty. Just the reverse of life!

Thus meditating, I reached the theatre. Of course it was, as usual, crowded to the doors. The common people, being all heart, with little brain and less knowledge, are passionately interested in such senseless stories, and not a scene escapes them. They develop a wild and unreasoning affection for the unreal characters of the unreally good, whose hatreds and loves, risks and triumphs they share, and,—and fervid hatred for and resentment against the unreal characters of the unreally bad gang. They lose their heads, weep, sigh, laugh, smile, fear, hope and throb, and, forgetting their cross and infamy, leave the theatre more stupid than when they entered it. So it is in New Liberia.

As the first performance of the show was still going on, I stopped in front of the main entrance of the theatre, and stood on the curb of the sidewalk. I felt sure that I would see Johnny come out of the show, or that he would see me; anyway, that we would meet. It was still early in the evening and many women were going back and forth doing their shopping, or taking an evening stroll. Some were alone, some in friendly groups, a mother and her daughters, or sisters together. I silently watched them, exchanging salutations with some, —all so familiar to my eyes, though so strange to me.

Beside me on the sidewalk stood a large group of men of all ages—the regular evening habitues of this particular point on the sidewalk. They looked the passing women up and down. They jokingly commented upon the age, walk, figure, face and family relations of each woman that passed. Feeling uneasy, I turned toward the street; almost unconsciously, I lifted my head. The fog of the afternoon had disappeared, the air was cold and clear, the sky cloudless. Beyond the foliage and branches of two fine old trees between which I stood, some stars appeared in the vast black concave of the sky. I looked at them thinking, contemplating, sensing my smallness, and, at the same time, the deepness and fullness of life! The small things and noises around my low level had disappeared, faded from my consciousness.

Just then I felt a hand upon my shoulder. I turned, and there was Johnny standing beside me, looking into my face with a smile—a smile that plainly said: "You fool you, to save a few nickels you deprive yourself of such pleasure as I have just enjoyed." We talked for a while and then separated. The next morning I was to start with him for Greenland.

On my way home I was churning in my mind: "What shall I do? The wages are lower than I am getting now, and furthermore, thirty cents train fare and an hour longer to work daily. Damn the government! But the winter is long, and there I shall be able to work every day regardless of snow, rain or wind. I will go."

The next morning I got to the station just in time to get my ticket and board the train. I found a seat beside Johnny, who had arrived in good season. As soon as the train started on its way, my friend began: "You see, Mr. Greenland's two factories were both closed at the beginning of the war; now, he has begun to manufacture cannon shells in one of them."

"Bombs," I interrupted.

"And now," my friend went on, "they are working day and night, and turning out great quantities of them. You can't imagine what terrible work it is—water, humidity, steam, smoke, smells, heat, fire, acids; a veritable hell. The wages are good, but there are certain kinds of work that nobody wants to do."

"I understand," I mumbled.

"The factory we are going to is manufacturing dyes and colors. Before the war these products were brought from Germany. Now they are made here."

Seeing that I was silent, he added: "Anyhow, the poor fellows are earning a living."

"Yes," said I.

I was not in a talkative mood because I felt the keen need of mental concentration. I was thinking.

There on the other side of the pond the war rages, destroying the flower of European manhood, covering those regions once beautiful by nature, and made more beautiful and wondrous by the hands and intelligence of all the bygone generations, with bloody and desolate ruins.

Here the human beings who have migrated from

# Moving Mountains for Molehill Wages

By THE WORKERS OF BINGHAM

**AN ARMY of some 50,000 men," says an advertisement, poetically, "are blasting their way to the heart of the Pacific Northwest's mountain ranges:**
**"Battering in perpetual night at the treasure vaults of the centuries—**
**"And bringing up to the sunlight a million dollars of precious earth each day."**
**This it calls "a mighty episode in the epic of 'The Second Winning of the West.'"**

But what about the men—the miners—who, "battering in perpetual night," bring to the light of day minerals approximating an annual value of $300,000,000?

How do they fare in this "mighty episode"? What is their share of this $300,000,000? They surely must be rolling in prosperity, and steeped in riches such as would delight a Croesus or a Midas!

Unfortunately, one may read the advertisement in vain, but not a word will he find regarding wages, hours, or conditions of employment for labor. On this point, the advertisement is as still as a cemetery on an exceptionally quiet night.

The inference is, of course, that mine labor is well paid; and that to it goes most of this vast annual wealth production.

Nothing could be farther from the truth! The inference is not borne out by the facts, collected from a wide field of mining activity.

Throughout the Pacific Northwest,—in Montana, Wyoming, Idaho, Washington and Oregon,—as well as California and Utah, the metal miners are paid low wages and work amid hard and dangerous conditions to make the dividends of the mining corporations higher every year.

Very truthfully, accordingly, can the Salt Lake City Chamber of Commerce, say, for instance, in the booklet, "Utah's Importance as a Mineral State": "Dividends show large increase. The published divi-

**A Private Army At Public Expense—Strictly Anti-Union**

# Machine Revolutionizes Mining

By BOB HORSELY

**Not a Static Industry, But One Undergoing Great Changes — Physical Labor Now Giving Way to Power Machinery—The Individual Miner to the Gang System—Miners' Unions, Guided by Wrong Economics, Politics and Competitive District Organization Unable to Meet Crisis of Unemployment that Has Developed—Working Class Principles and Industrial Unionism the Way Out.**

MINING coal appears to be a static industry. It seems to continue without change. But such is not the case. In the bowels of the earth, a change of methods is slowly taking place. This is revolutionizing the industry.

Each industry has a history of its own, from a primary commencement to a technical ending. Coal mining has its history also. But only a miner of long experience, who has seen its growth and advancement, can understand its phenomena.

I started mining at an early age. The mine where I worked had not introduced mining machinery, such as we see today. Modern methods were not known; and mining was done by physical labor applied to the pick, hand drill and shovel. It was a hard task to wrest the coal from where it was placed by Nature.

This mine was in England and conditions of labor in those days were very different from what exist today.

Coal mining, in any period, is a dangerous occupation. A man entering a mine is confronted with some kind of danger from gas, foul air, bad roof, wet work, or explosions. He must understand these things so that his fellow men will not be in danger from his ignorance.

The hours of labor for boys during my days in England were 10 hours a day. They used to go to work at 6:30 and return at 4:30. In winter, we saw sunshine one day a week and we used to thank the Lord on that day for allowing us to live for further exploitation.

Diggers worked 8 hours at the face, working on the two-shift system.

Many of the mines were wet. This had a bad effect on the health of the miners; and caused many premature deaths by its effects. It made the miners susceptible to many of the diseases rampant, such as miners' asthma, flu, etc.

The mines were worked on the block system. They did not have crosscuts, but had to convey the air to the face, by the use of canvas. Bad circulation of air was the result. The miners used open lights in some mines that were free from gas; but safety lamps where there was danger from gas. These lights were very bad for the eyes, causing a continual strain upon them.

The miners had to mine the coal and shear the left side before they were allowed to blast with powder. Drilling was done by the hand-drill. Foul air and wet work caused much dissatisfaction.

In the assignment of places, the companies had a system of "cavels" just the same a sa lotery. This occurred every three months. There was a district to be occupied and the miners worked in gangs of 4, and when their names were drawn out they went to that district. By this method, the companies hoped to even up the good and bad places among the miners and keep them satisfied. If the place was bad there was no chance of a change.

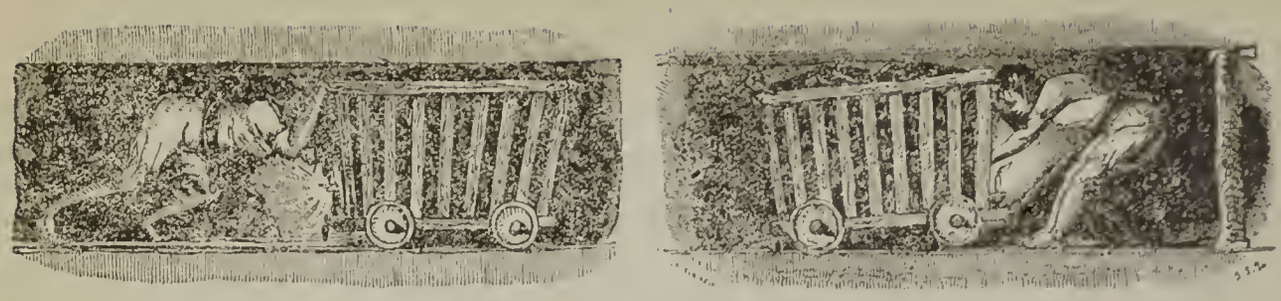
The houses were made of brick and were owned by the company. If a miner quit on account of conditions of labor, it meant evacuating the dwelling place also. There were no sanitary accommodations; open toilets, water faucets were on the street; and there were many other inconveniences. The companies just considered the miner a dumb beast of burden; and, judging by the parasites who lived from his labor, it would be wrong if we said he was anything else.

The companies charged the miners nominal rent, which was kept off the payroll. Only miners with large families occupied the large houses. This was done to make a man think of his family before he quit his job. It was a millstone around the neck of the slave, to keep him fastened to the mining industry.

### Organization Into Unions

Under such conditions, the miners organized into unions. The latter were so constructed that the economic weapon of the strike was rarely used. The miners' unions were political in their character and action. This has been mostly responsible for the rise of the English Labor Party. Because of the betterment of conditions by so-called laws in favor of Labor, the unions' methods of redress were influenced in favor of politics.

The unions ultimately found by experience that laws were always made in favor of the ruling class, irrespective of their alluring character.



Women's Work In Early Mining Industry—

For example: there was a protectionist policy passed recently which was to safeguard the interests of the mining industry. It was to work for the mutual benefit of both sides. After it became effective, 300,000 miners were paid £15,000,000 at a time when £6,000,000 was paid in royalties to a handful of parasites who owned the land by hereditary titles, acquired by fraud and stealing in the early years. In addition, profits were £11,000,000, which made a total of £17,000,000 of surplus value, derived from the socially necessary labor power of the coal miners.

Faced finally with conditions of starvation, the miners used the weapon of the strike, but, with the forces of the state arrayed against them, they returned to their miserable conditions.

The English miners' unions were not organized on the basis of the class-struggle. They were only a form of organization intended to extract from the owners a few mercenary rights surrounding the sections in which they were organized.

### Political Slogans

The use of slogans commencecd with the formation of the English Labor Party. Recently, they have been "Capital Levy," "Abolishment of Militarism," "Nationalization of Mines," "Old Age Pensions".

After years of struggle, the English Labor Party politicians are now in power. But having long visions and short memories they have forgotten their slogans. Instead, they build battleships, organize emergency measures to defeat strikes, etc.

They used to wear short pants when they went to work, . Now everything is "Democratic." Ramsay McDonald wears short pants to go with the King to church and hear the choir render that revolutionary hymn, "Fear Not O Land."

(No red flag there; it is out of place in a church as much as church should be out of place for a red.)

The English workers now begin to realize that the politicians were floating at anchor. Instead of following slogans blindly, they should have understood what they meant and organized as a unit to abolish the wage system and wrest the means of production out of the hands of the exploiter. Not nationalization, but confiscation, should have been their motto. The English unions must be organized into one organization to liberate the workers from the throes of reactionary despotism.

### Mining Advancement

In later years, English mining methods have improved. They now use the drilling machine, new methods of hauling and hoisting. With the quickening of production, the English miners are producing more coal. Although making more money in wages their style of living remains practically the same. Everything they buy has increased in price so that their wages have less purchasing power when they trade at the store. Real wages is therefore the actual **value** the worker receives in relation to the **value** he has produced. It always will remain so that the slave will be on a sliding scale of poverty as long as this form of exchange exists.

—Makes the Present Mining Employer Look Like This

The advancement in English mining methods displaced labor power, because machinery began to do the work formerly done by the miner and, consequently, he was discharged to join the unemployed. With no other work in sight, emigration was the only thing left for him and he was forced to seek a new country to follow his trade.

### Mining In the United States

Many English miners, arriving in the United States, soon found they had to learn anew. Other methods were in operation. There were different surroundings in their home life. The unions outside of mining were craft unions. The coal miners were organized in an industrial union; but this operated on a sectional or district basis. Contracts were signed separately and East was pitted against West during the negotiations to effect an agreement. The miners' demands were "decent conditions," "a fair day's wage for a fair day's work," etc. These measures were only palliatives, a further step to more slavery.

Production of coal here was more intensified by the method of shooting off the solid. The miners in the old country did not mine under the coal but used black powder to blast it out. They could load more coal by this method. They worked entries and rooms.

Hauling was done by mules to the parting and by electric motor to the shaft. Before the union compelled them to shoot after the regular working hours, miners used to work amid that blinding smoke and there was always danger of an explosion.

### Mine Explosions

There is nothing more terrible than an explosion. It creates havoc and death wherever it strikes. Explosions are caused by varying conditions. Some by ignorance, such as lack of knowledge of the proper use of safety lamps. Some by accident and some by negligence on the part of the mining company. The last factor is seldom given as a cause.

All haulage ways should be kept in a damp condition. This keeps the air from affecting and stirring up the dust. This dust is a mixture and, when dry, contains the potential force for ignition. This dust will ignite and explode under pressure of warm air stampeded by the concussion from the effects of the shooting of coal. When these shots are fired, the concussion stirs up the air elements in passage ways. Friction ensues and, given the conditions necessary, an explosion will be the result.

Gas ignited sometimes will be local or pocket gas. But where gas is general, there are always some widows and orphans left. There have been a few explosions recently that tell their tale of suffering. The workers are always the recipients of these "benefits".

If one of the aristocrats of labor happens to be there, it is safe to assume that the incident will receive the attention of the press, more than the suffering of the victims who are left without the breadwinner to face this world in poverty and rags. I have seen the effects of a few and it is always the same.

### Conditions of Non-Union Miners

There is a competition continually manifested in the mining industry due to union and non-union production. The East and South are the sections in which most of these conflicts have taken place. Some of the items causing these conflicts may be of interest:

(1) In the non-union mines there is no check on the company and the miners are given a false weight on the coal loaded, sometimes getting 2 tons for a car containing 4 to 5 tons.

(2) The miners are not allowed to see the scales on which their coal is weighed.

(3) Company stores are maintained in defiance of the law against them and against forcing employes to trade in them under threat of dismissal.

(4) Miners are charged 20 to 100 per cent more than the normal selling price of goods and are virtually kept in the status of a feudal serf.

(5) The miners are paid in scrip only redeemable at these stores. They never see real currency and under this method are always in debt to the company.

(6) The companies control the ballot box; presenting the miners with marked ballots and threatening them with dismissal, unless they vote as ordered.

(7) Miners work in powder smoke and there is no inspection of the mines. They shoot when ready to do so. Explosions are always the sweetheart of this system of mining.

Many other items of intolerance could be stated but these few will suffice to show what the open shop means to the industrial worker in the mines.

### Fighting for Rights

A fierce fight took place to organize the non-union field; and many lives were sacrificed trying to better the miners' conditions therein. The miners succeeded on a small scale but not enough to be a power. The reactionary leaders, as usual, miles away from the struggle, gave their moral support.

In the strike ensuing, the atavistic culture of the 100 per cent mine-owners is manifested. Miners are evicted from the company houses. They have their furniture thrown into the street. Hundreds of miners are exposed to cold and hunger in tents, henhouses, and cow-sheds. Under conditions such as these, they live on coffee and beans. Children are born into the world in unbelieveable circumstances. They are targets for the amusement of the guards, and these buzzards of the master class feast on the misery of the miners in their ghoulish glee. Many miners are clubbed into insensibility because they defend their wives and children.

### Appeal for Aid

The appeal for aid is sent out; but the appeal for a general strike is not on the calendar. The mine-owners in other states, reason the union sages, are not responsible for the crimes committed elsewhere.

Union miners still keep the market filled with coal, earning a respite at the expense of the members of their own class who are fighting their battles.

Ontario Miners Live in These Boxes

# Nothing Whatever In Common

By
D. A. McKENZIE

I WISH to begin this brief statement of conditions of metal mining in Northern Ontario by drawing attention to the first paragraph of the I. W. W. Preamble:

"The working class and the employing class have nothing in common." There is no place on the North American continent where the words are proved more certainly true than in the metal mining district of Ontario. Here we find the married workers who produce millions of profit every month living in little, box-like, insanitary hovels. Those of them that are not so lucky as to own a few pieces of furniture and a wife (who is a slave to a slave) live in vermin and disease infested boarding houses into which no profit-loving farmer would allow his stock for fear that they would contract disease and die off. In the mad rush for gold in these camps the young men of the working class of the world are being murdered, some of them slowly; others more quickly as when tons of rock crush the life out of their bodies. When such an accident happens a mock inquiry is held with the mine managers, captains and shift bosses present to intimidate any witnesses who might accidentally tell the truth and put the blame for these murders where it belongs: "On the profit system."

A short time ago the writer attended one of these farce inquests. When a witness would take the stand there were the managers, captains, shift bosses and other prostitutes of the corporation affected. They sat, piercing the witness with their eyes. An observer could see the witness reach out for the truth, then falter when those serpent-like eyes would cut into his thoughts; and with the threat of starvation staring at him there he, the witness, would wiggle through with the concocted evidence, give a kind of half-choking, half-terrified sound, and with the hunted look of an animal step down off that stand where men are supposed to tell the truth and nothing but the truth. Then sit scowling.

Let us examine the dividend statements of some of these robber corporations. Looking up reports we find the Hollinger Gold Mines at Timmins, Ontario, with a production of over six-millions of dollars for the first six months of 1924. We see dividends being paid every few weeks. To quote from authority, from the 26th of June to the 14th of July this mine paid a dividend of $246,000.

We find the Dome Mines close by producing $2,121,980 for the first six months of 1924, and paying $2 per share on one million shares. In this instance the workers receive $121,980, that is, counting all materials, machinery, etc., and the parasite receives $2,000,000. This is the history of practically all the mines in this district. For the first three months of 1924, there was produced in the mines of Ontario, $811,545,151. The workers received back in wages during that period $1,159,160. This was divided among all the workers who contribute their labor power either mining the ore or manufacturing the machinery for mining and milling the ore, producing timbers and all basic material required.

The workers of Ontario are producing 133 millions of dollars in gold and other metals per year, and receiving only $4,636,640. The miners of Ontario are each year handing over $129,863,160 worth of minerals to the parasite who never works. Here we must ask the question: Is there any other animal as docile as the miner of Ontario? I do not believe any other animal works like hell and hands over to another lazy animal practically all that he produces.

You say: What can we do to change this terrible state of affairs?

### How To Get It

Here the four-cycle internal combustion engine gives us an example of what to do. On the first stroke it organizes or draws in the combustible materials (Organization); on the second stroke it compresses them into a useful or properly assembled effective mass (Education); on the third or power stroke it takes up that energy which has been assembled in the previous strokes and **Bang!** that power is immediately transferred into useful energy (Emancipation); the fourth, or scavenger stroke, purges all exploded or useless gases, or that material that is of no further use (Abolition of Capitalism).

We therefore see a remedy for all these existing evils in the mining and all other industries, which is namely, to organize along scientific lines and educate the workers to the control of all industries. Then only can we expel capitalism and poverty from this earth as does the piston of the engine expel all useless gases from its cylinder.

# The Copper Situation

By LEE TULIN

**FROM the viewpoint of capitalist economists, the present outlook for the copper mining industry in the United States is not encouraging. Prior to a few year ago, a small group of American capitalists virtually controlled the world's copper industry, as 65 per cent of all copper production came from mines here. Most of the remainder came from small, scattered mines that had a high cost of production, and many of these were also owned or controlled by American capital. But in the past few years' great deposits of copper bearing ore have been discovered in South America and the Belgian Congo. No mines in the U. S. can compare with these in either richness of ore or in size of ore bodies, which means that the American stranglehold on the copper industry is about to be broken. This accounts for the pessimism and the comparatively low market price for refined copper.**

Nearly all of the copper mines in the United States have reached and passed the peak of their production, and are now on the down grade on the road to depletion of their ore deposits; or have reached a stage where profit—the incentive of all capitalistic enterprise—is nearly impossible. In this respect, copper mines differ from most gold, silver, and other mines. Copper mines are not worked out suddenly. They drift to a stage where great depth, low grade ore, heat or water and increasing cost of development make dividends impossible under normal conditions of the market.

### Copper God Is Jealous

With the American mines on the down grade, and the cost of production mounting every year, it means that the near future will see other than American financiers dominating the copper industry, unless they can get control of the South American and African properties. It is quite evident that this is the objective now, as a few months ago the Anaconda Copper Mining Co. purchased the entire holdings of the Chile Copper Co. Further concentration will undoubtedly follow.

### Visit Famine Upon Us

The Chile Copper Co. is at present producing 200,000,000 pounds of copper per year, and has enough ore in sight to last one hundred years at this rate of exploitation. The present production of the property can easily be more than doubled, which will undoubtedly be done; as consideration for the future generations is an unheard of quality with those who dominate the copper industry, and all other industries. In fact, instead of endeavoring to conserve Nature's lavish bounty, the object and hope of the profit hungry vultures of the Copper Trust seems to be to reduce resources as soon as possible so as to enable them to secure famine prices for what they have left; and to make it profitable for them to send men down into the dark, hot depths of their old, no longer profitable and abandoned mines to bring out what little can be salvaged of the large deposits of low grade ore that heretofore have been passed by in their mad rush for profits.

From a lecture given June 26th by Ira B. Jorelemon, before the Commonwealth Club of California, we glean the following:

**". . . In the developed ore reserves and the ore which may reasonably be expected from known districts, there is copper enough to last forty years at the present rate of production. New districts may add ten years more. So the copper shortage is probably far in the future. Even if consumption increases at the rate of ten per cent a year, which has been the rate of increase for the past twenty years, the shortage will not come for ten years or more. Unless the consumption increases much more rapidly than before, the copper industry must find some better solution to the problem than the HOPE of famine prices." .. .. "In the United States, the yearly consumption of copper per capita was, in 1923, 13.6 pounds. This is approached only by Belgium with 13.1 pounds. The average for countries of Western Europe was only 4.9 pounds. While in the Orient and in Russia less than half a pound was used for each person. If only the civilized countries of Western Europe used as much copper in proportion to the population as we do, the increased consumption would amound to 1,674,000,000 pounds per year. This possibility brings the HOPED FOR COPPER SHORTAGE MUCH NEARER."**

"Hope of famine prices." "Hoped for copper shortage." Hoping for the time when nature's resources of copper ore will have reached their dotage, knowing that they cannot be replenished! Longing for the time when all the world's' copper mines cannot produce copper enough to fill the needs of Humanity! Here we have a typical example of the psychology of our profit-mad rulers of industry. Never a thought nor a care for what the world will do when the great deposits of copper, the metal that to a great extent made our present industrial development possible, are gone. "We should worry" is still their slogan, despite the warnings of engineers and the statements of technicians that copper is indispensable and that there is no satisfactory substitute for it in electric power plants and transmission lines.

The trouble with those who hold title to the deposits of copper ore is that, after the war had ended, in their excessive zeal to bring the country back to "normalcy"—more work at less pay—they overlooked the economic fact that under normal conditions, where there is competition, commodities sell or exchange at their value. During the war, under abnormal conditions, copper rose to over 30c a pound. Consequently, with the memory of this ("blood money" still fresh in their minds it is hard for

them to now receive but twelve or thirteen cents.

Before the war, the world's copper production was approximately 2,000,000,000 pounds yearly. During the war, the production jumped to over 3,000,000,000 pounds per year, and this production was continued for nearly two years after the war had ended. Prior to the war, production and consumption of copper were practically evenly balanced. As fast as new methods of production were introduced, as fast as new mines were opened up, new uses and needs for the metal were developed. The copper producers had no difficulty in selling at a good price all the copper they could produce. During the war, their problem was production, as production could not keep pace with the demand. But now, due mainly to the extensive surface steam shovel operations and the man killing speed-up system that has been introduced and submitted to underground, the problem has changed from one of production to that of finding markets. The problem is the same in all industries. Because workers are so numerous and so extremely productive that periodically millions of them are unable to find work, a worker, one who merely produces commodities, receives very little consideration under capitalism. But, a salesman, a good salesman, one who can go out and sell people things that they do not want or need is considered invaluable. Thus we now have a "Copper Research Association," sponsored by the leading copper companies to find new uses for copper, and to induce manufacturers to use copper where they have formerly used some other material. We also have an army of salesmen to try and convince the people, that, instead of buying things made of wood, iron, nickel or some other metal or material, they should buy what is made of copper.

### Hail! The Gang's All Here!

The Anaconda, Phelps-Dodge, Calumet, Guggenheimer, Utah and Clark interests control the copper industry of the U. S. Of these, the Anaconda, of Standard Oil affiliations, is the largest. Besides having title to approximately 90 per cent of the ore in Butte's famous "Richest Hill in the World," which in itself is a larger holding than that of any other company, they own or control extensive holdings in Arizona, California, Mexico and South America. Their latest acquisition in Arizona is the New Cornelia properties at Ajo. This mine will soon be producing 100,000,000 pounds of copper per year.

While these great companies have been organizing, concentrating, expanding and forcing smaller producers to the wall, what have the men who have sweated and toiled to mine the copper, and those who mill and smelt it been doing? Have they followed the example of the owners and organized themselves into a powerful economic organization that represents their interest? It is regretable that the answer is, "No," for the industry as a whole. Although the nucleus of a powerful

**Machine Miners Get Copper Out Fast**

organization has been built among the miners, there is yet no semblance of such an organization among the mill and smeltermen.

The smelters are the key positions of the industry. The smeltermen hold the most strategic position, due to the fact that a sudden strike in a smelter would mean the immediate loss of hundreds of thousands of dollars to the owners. This is a fact that the boss realizes full well. And understanding the menace to his profits by the presence of a militant labor organization, to check this, he has encouraged the reactionary Mine, Mill and Smelter Workers' International Union of the AFL and in many places the check-off is in effect.

### "There's Power in the Union"

The great stack of the East Denver smelter, which still stands, is a monument to the economic power of smeltermen. No smoke has soiled the heavens from this stack—once the highest west of the Mississippi—since July 5th, 1903, when a strike was called and all the metals in the furnaces were "froze," never again to pour their stream of profits into the owners' greedy clutches.

The process of taking ore from a mine and converting it into refined copper requires three months' time. The present supply of refined copper in the U. S. is but slightly over 200,000,000 pounds. This is only enough for one month's consumption. It is doubtful if the surplus of refined copper will ever appreciably rise above this figure, as the copper companies do not care to tie up money in surplus stock. This means that a thirty day strike in the copper industry would wipe out every pound of surplus, bring about copper famine; and assure victory.

This is but the beginning of the age of electricity. The great power plants cannot live without copper. The copper miner's day is nigh if he will but organize in his Industrial Union of the I. W. W.—the METAL MINE WORKERS' INDUSTRIAL UNION NO. 210.

# The Labor Press; Past and Present

IN a lamentation against the "proverbial ingratitude of democracies," The Nation, as quoted in the article on Terence V. Powderly, to be found elsewhere in this issue, declares:

"Labor does not honor its past; labor papers are born and die whose editors never suspect that Boston had a labor daily in the sixties."

The latter charge cannot be truthfully alleged against the editor of the Industrial Pioneer. He has in his possession a little leaflet issued by the American Bureau of Industrial Research conducted by the University of Wisconsin. It is entitled, "Report of Work, 1904-1906."

Therein we learn of the discovery of files of 9 labor papers published in this country between 1827 and 1837. One of them is, "THE MAN, of New York, a penny daily published from 1834 to 1835, and said by James Gordon Bennett to have been the first penny paper in this country." From which it is easy to see that that Boston labor daily of 60 years was not the first nor the most remarkable of its kind. There were others, that surpassed it in many ways, even before its advent.

There have also been other labor dailies since that Boston one. There is the New Yorker Volkszeitung, now 50 years of age and the oldest labor paper extant. In 1886, it made possible the launching of The Leader, a daily organ of the Henry George mayoralty campaign of that year. Then came The Daily People, Socialist party organ, launched about 1900. Later came the Socialist party's New York "Call" and still later the Leader. All are now defunct. So is is the Minnesota Star. The Milwaukee Leader and the Seattle Union Record are still with us. So are the Jewish Forward, Daily Worker, and Il Lavoratore, lately arrived in Chicago.

Industrialisti, begun in 1914, at Duluth, Minn., is the only daily I. W. W. paper in existence. It is printed in Finnish. There has been some talk of making The Industrial Worker, twice-a-week I. W. W. organ, a daily, too. But nothing actual has transpired yet.

We like to talk about the labor press, without realizing how really insignificant it is compared with either labor's importance, or the capitalist press, whose poisonous propaganda it is created to combat. As shown above there are just a half-dozen dailies devoted to as many labor elements. They are scattered all over the country. While this is a big improvement over previous conditions and therefore worthy of encouragement, it still leaves much to be desired.

Compare these six dailies with the daily press of New York City for instance. Says a recent survey:

"New York City now has seventy-seven daily newspapers, printed in fifteen languages. These seventy-seven papers circulate daily in practically every corner of the city. There are thirty-two foreign language papers, enjoying a circulation of over one million. Seven papers are devoted to the interests of the boroughs of the greater city. Of the seven financial papers, three dominate the field with 90 per cent of the circulation. Class papers add twelve to the list. Finally two small papers are issued by colleges in the city. The total circulation of these papers is far over 5,000,000. Over $100,000 a day is spent by citizens of New York for their newspapers. There are 15,000 people employed by the newspapers of New York. If those indirectly employed by the papers were counted in, the figure would be much higher."

Consider what this flood of 5,000,000 daily circulation means to the labor press! Why, the latter is simply overswamped, drowned out in this overwhelming deluge of words, words and words. Under the circumstances, the labor press certainly needs development; it needs increase in numbers and efficiency. In The Federated Press, there is a good beginning towards this end. This is a new departure in labor publications. Its membership is approximately 200 labor and liberal papers. While this does not bulk very large, as compared with the Associated, United and Universal, Press, with their thousands of member papers and ramifications all over the world, it is an encouraging showing in the right direction.

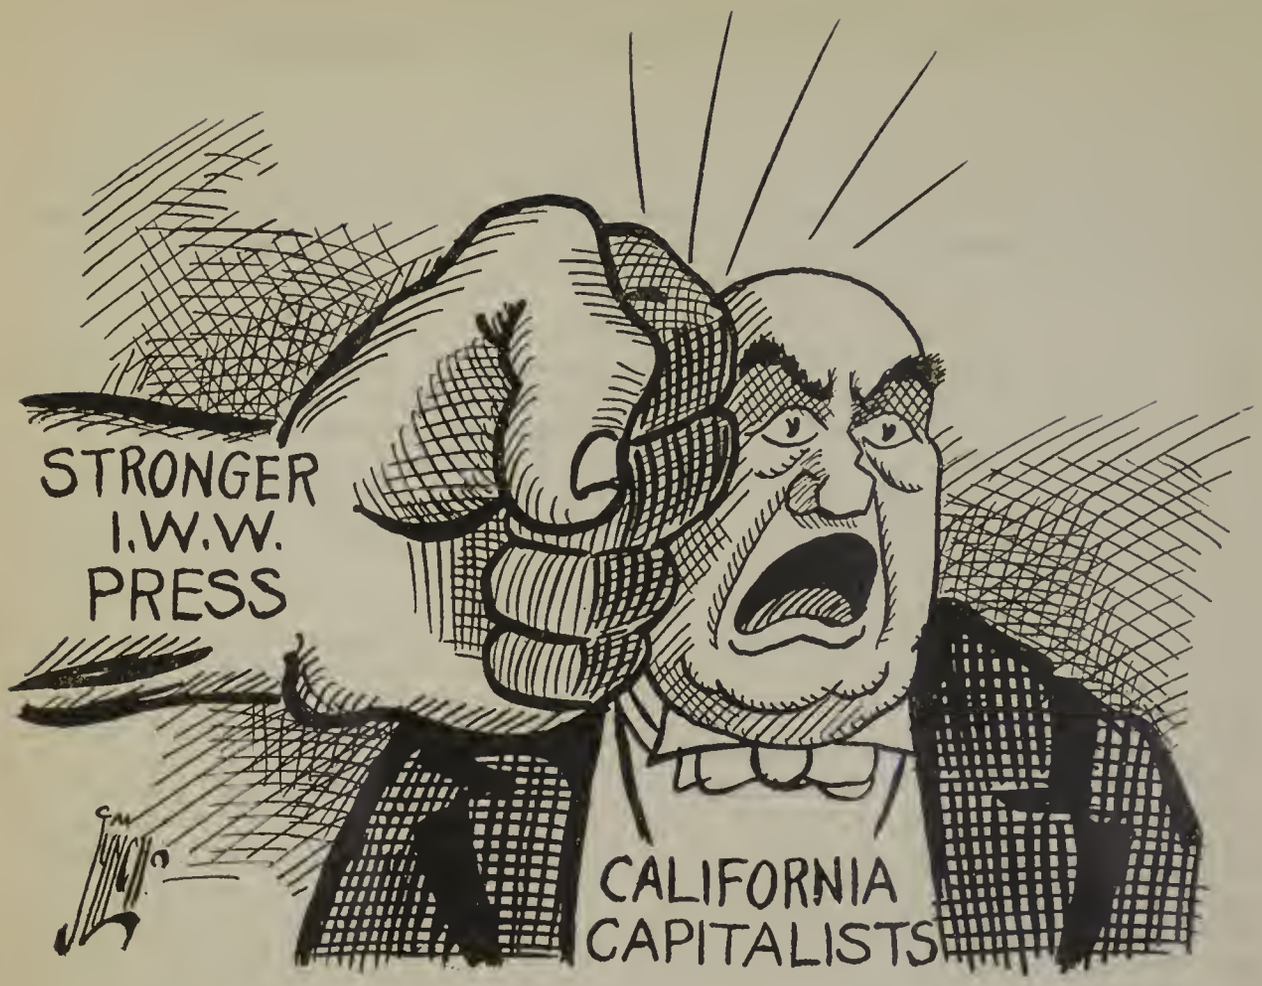
Another thing that will help to build the labor press is a better working class understanding of its problems and difficulties. The workers generally expect the labor press to duplicate the capitalist press in every way; if not surpass it. They fail to realize that the capitalist press is an evolution, in which big capital and trained ability of the highest order play the most important parts. The workers on the contrary, expect the labor press to subsist and thrive on poverty and with the most undeveloped staff and environment possible.

The workers should realize that getting out newspapers is a giant job, requiring lots of capital and ability; and they should hasten to secure both for the labor press by giving their pennies to the support of its various publications, instead of the capitalist press, which is engaged in stifling labor's aspirations in every direction.

**INDUSTRIAL SOLIDARITY**

**Got to Keep It Going Good**

This is the official organ of the IWW. If you are not a member, at least you want to know the viewpoint of the organization on important labor questions. The IWW has made history, and will make history. The Industrial Solidarity is its mouthpiece. Let's have a subscription. Address, 1001 West Madison St., Chicago, Ill. Subscription Price, $2 per year.



# Let's Strike Back

IT isn't necessary to tell again the story of California. It isn't necessary to remind the workers who read this magazine that the capitalist's gunmen, the bloody mob of Ku Klux Klansmen who raided the IWW hall in San Pedro on June 14 have got their victim, at last. The IWW weekly and semi-weekly papers have told the details of the death of Mrs. Lizzie Sunstedt, our fellow worker, brought to the grave by injuries sustained during the raid, complicated by the worries and difficulties into which she was thrown through having to care for her little daughter May, who was scalded so badly by the same mob.

No, we think all who read the IWW papers know these things. We think they know enough about the horrors of San Quentin's jute mill where union men are confined until their lungs give way from the dust, just because they will not promise to surrender their cards in the Industrial Workers of the World, the only union of the migratory worker, and the hope of Labor everywhere.

We think they know of the thousand and one other infamies: the perjuries, the frame-up, the police consenting to gunmen's violence against the IWW, the fate of Mooney and Billings, still languishing in prison, and of the Wheatland hop-field pickers, still suffering through their terms of life imprisonment.

What, indeed, is the use of telling you all these things again?

Let us remedy this situation at once. Let us tighten up the lines, grit our teeth, and hit the enemy and hit him hard.

We must be more aggressive. We must fling ourselves into the business of educating and organizing with greater zeal. We must carry the battle into the enemy's territory. Our answer to the California outrages must be greater resistance when raided, and ceaseless, day and night effort to build up an organization that can meet the raiders half way and take them by the throat.

NO MORE NON-RESISTANCE. **There's nothing in this bunk about turning the other cheek! If you do it in California, they pour boiling oil on it!**

# Does Labor Prevent Thought?

By JANE STREET

**One of the Big Questions in the Minds of Thinking Revolutionists Is One Dealing With How the Workers Will Ever Be Able to Voluntarily Submit to the Monotony of Machine Production.—The Article Following Hints Indirectly at a Solution of this Problem.**

**IT is commonly admitted, though without statistical proof, that the skilled worker is less revolutionary than the unskilled; the reason usually assigned therefor being that the mind of the skilled worker is so engaged with his work that he has no time to think of revolutionary matters.**

**In line with this argument is the preconception that the unskilled workers so greatly outnumber the skilled that taken en masse their potential power renders the revolutionizing of the skilled workers of minor importance, until, as one writer expressed it, "cataclysmic changes jar them into functioning."**

This latter statement involves a rather befogged outline as to just what the revolution is, as contrasted with the clearly-painted and well-defined scheme of organizing the workers industrially as an imperative revolutionary prerequisite, as conceived by the IWW.

**IWW Not an Organization of Unskilled Workers**

It is not true that the IWW is an organization composed mainly of unskilled workers. The agricultural worker, irrespective of what he knows about the seeds, soil, the growth and fecundity of plant life, furnishes the technological skill and knowledge necessary in manipulating the machinery of agriculture. Nor is it merely the unskilled workers engaged in machine production who have gravitated toward revolutionary organization. The handicraftsman is not unrepresented: The woodsman wields his axe, a hand tool, with the most marvelous dexterity. The seaman performs most unusual feats of skill with his rope, to say nothing of the self-discipline evinced by scaling the dizzy heights to which in his work he must become accustomed; besides which is his maritime knowledge and skill in handling the big machines of transportation which plow the ocean from continent to continent. Nor must we leave out of consideration the miners,—for instance, the tunnel workers, those magnificent fighters on the Hetch Hetchy project toward whom the heart of the "revolutionary-minded" is still beating its silent applause. The IWW embraces all these skilled workers.

**Classification Into "Skilled and Unskilled" Out of Date**

But the classification of the working class into "skilled" and "unskilled" is peculiarly out of date. The distinction is hardly noticeable in the machine age; the differentiation is of no consequence to the proletarian; and the bourgeois statistician fails to compile any figures in regard thereto. It belongs primarily to the ideology of the AFL craftsman, placed there in the very early days of craft unionism, when he depended on winning his strike on the fact that his work could not be performed by the uninitiated or unskilled. For reasons of expediency, he continued to regard himself as "skilled" long after the machine process and the specialization of labor rendered his trade, so far as manual operation and previous preparation were concerned, oftentimes on a level with the unskilled.

The preparing of the suds of dishwater so that grease will not adhere to the cooking or eating utensils and to the receptacle in which they are washed (which ought to be regarded as an important act of social service!) requires as much skill and technological knowledge as the mixing of mortar in building a house, and more mental and manual finesse is required in the handling of the dishes than in the carrying of the hod. But the job of dishwasher, unlike that of the hod-carrier, has never been dignified by being described as "skilled labor." The self-complacency of the craftsman is not due to his "superior knowledge" but to his higher wages; not to his creative interest but to his greater sense of economic security.

**Skill Does Not Require Mental Application**

So also the contention that the skilled worker is obliged to think about his work (and hence pres-

**A Wobbly Trying to Make 'Em Think**

ent an argument for increased wages for his particular craft!) is a curious bit of old-time craft unionism propaganda. The very meaning of the word "skill" precludes the idea of the necessity of conscious mental effort. It presupposes a task which repetition has rendered automatic. Work which requires conscious thought cannot properly be described as "skilled."

All labor requires thought. "Unskilled" labor is merely labor which the generality of human beings have acquired the skill to perform, such as sweeping, tamping, shoveling, etc. The mental application necessary in learning these movements it is impossible to estimate. They involve the tedious efforts of infancy in learning the co-ordination of muscles, ability to judge distances, etc. Man has a curious little habit of making his hands think for him. This leaves his brain free for further exploits.

The amount of thought required, or the amount of time the thought process requires (the time element being immeasurably short!) of a porter sweeping a doorway and that of an electrician in placing a wire through a hole in a wall is about the same. The porter must know where the dirt is and the electrician must know where the hole is.

**Workers' Brains Not Single-Track Affairs**

An electrician can install the most delicate electrical apparatus, say in a modern office building—can pick out his tools without error, fasten the parts of the equipment together without hesitation, test the finished job to his entire satisfaction, while all the while he can be talking to the office stenographer about some American Legion dance; and in the meanwhile she has transcribed her shorthand notes and typed a business letter that is a perfect masterpiece of "brain work." Yes, just as well as a bell-hop can carry a grip, a pitcher of water and a parcel to three different room numbers without a mistake, all the while sizing up some new guest for tips, figuring out with more or less accuracy, his business, disposition, family affairs, destination and the probable size of his pocketbook, and cursing him inwardly (the only part of the whole mental process, perhaps, which takes on the form of words!) for his class-conscious arrogance. And the dentist in performing his dignified scavenger work does not have to review all that he has learned in college about the composition and decomposition, formation and growth of teeth when he looks in your mouth, but after the momentary mental effort required to size up the case, he proceeds to apply his skill—provided, of course, that he has had experience enough to become skillful—with his mind possibly as free to roam as that of a "gandy-dancer." And if a carpenter can't drive a nail and not think about it, he isn't a carpenter; if he can't put in a window and ruminate on the chances for industrial freedom if he wants to, he is not used to putting in windows—he is not a skilled worker at all.

**Ways In which the Worker's Mind Is Tied To His Job**

It is granted, of course, that mental application is exacted in many occupations in connection with both skilled and unskilled labor. The chiropractor, who is properly speaking a mechanic, must weigh carefully certain considerations before applying his mechanistic knowledge of the human spine to the requirements of the patient before him. Were the machinery of the human body less complicated, the weighing process would resolve itself down to that of a stationary engineer in looking after the needs of his particular pattern of engine.

In the running of a streetcar, a locomotive engine, an elevator, an automobile or tractor, the sewing machines in garment factories or the looms in the textile plants, however automatic the workers' operation of the machines themselves may become there must always be in the background of the mind of the operator, an alertness, a keen judgment for details, a sense of responsibility which preclude the possibility of anything like a restful attitude of mind. This is characteristic of the machine age. The average worker nowadays performs in a matter of fact way, work, commonplace jobs, which considering the points of speed, responsibility and regularity, would have driven our ancestors to immediate nervous prostration.

In the pecuniary management of industry there are great armies of "mental" workers. These are machine operators. They operate the telephone, the typewriter, the adding machine, the dictaphone, the multigraph and mimeograph machines, etc. Although their clothes and hands are unsoiled, these workers bear all the earmarks of the machine process. The great god Machine breathes into them its breath of life—speed, responsibility, regularity. They are all keyed up to an approved American standard. In practically all large telephone exchanges in this country are hospital rooms, where operators who have fainted or become hysterical or who have become otherwise temporarily incapacitated, are given medical assistance gratuitously by the telephone companies. The large percentage of cases of nervous prostration among stenographers is a matter of common knowledge. They are all highly skilled workers. Their efficiency is gauged, not by the degree of concentration they are able to bestow on the operation of their various machines, but upon the extent to which their minds are free for other minor important details, the operation of the machine having become automatic.

A telephone girl, after months and months of careful training must be able to break in on the line of the "B" operator, busy with an incessant string of numbers, and, finding a pause of a few seconds, pass her call and get her trunk line. She must be able to pull down her cords and put in her plugs automatically, her mind must be free from the bewilderment of the unskilled, before she can

funetion in modern industry—in this age or in any other. Otherwise she is as incompetent to perform her task as a ehild of six years is to sweep a house. A stenographer who must use conscious mental effort every time she pushes down the shift key or the back-spacer of her typewriter eould never get out the correspondence of a modern business office. In faet, matters of punetuation, spelling, the transeribing of shorthand notes, and sometimes the eopying of typewritten pages may beeome automatie. In evidenee of this last instanee are eases of stenographers who have failed to reeognize page after page of words they have eopied, the same having left no traee on their conseious memories! A bookkeeper whose mind must be so engrossed in the use of an adding maehine that he will make a mistake in his figures if anyone says to him, "Give us a grand total, too, please" isn't effieient enough to hold a job.

These "mental" workers deal in words or figures, spoken or written, all day long. Their minds are probably chained to their jobs more than those of any other class of workers. To enslave the worker's mind by such a process, however, so completely that the thought of rebellion has no time to enter, is an impossibility.

### One Thought that Was Born In Labor

If the human mind thought in words alone sueh might possibly be the ease. But great truths come crashing down upon the human intellect, having little to do with words, and asking afterwards for expression. At the very point in the slave's life where his mind might have been totally enslaved, rebellion is **born**! The IWW never originated in the restful mind, in brains unstimulated by aetive hands!

In faet, where no rebellion exists the propaganda of the IWW is misunderstood, repulsed. Words never make rebels; at most they ean augment rebellion, develop it, express it. Words that express unheard-of, undreamed-of ideas make little impression on the human mind. To be a rebel a man has to be a slave, a worker; to build a new soeial order, to come to eomprehend its possibilities, he must organize and let his intelleetual insight unfold with the exeeution of the plan.

### How Do We Think?

Who knows, perhaps man's natural way to think is to do? Perhaps the modern "projeet method" of edueation for ehildren is applieable to all mankind. How tediously and painfully man has set himself to the job of thinking! From time immemorial he has coneoeted various poisons which stimulate the brain but in the end destroy him. The male has required of the female that she inspire him to effort, and failing has cursed her for his failure. How tragic is that great silent army of human beings in this age who earry with them to the grave the knowledge of their own latent talents which they laeked power to develop. With what bitterness and shame they secretly eondemn themselves for not unehaining these saered impulses within them that so shriek out for expression! Only a few geniuses have been abnormal enough to achieve sueeess, whom investigation shows to be physieally related in many cases to the insane. The thinkers, in this age in whieh we live, go into the silenee and grope about their ancestral brains and by the use of words diseover ideas which had never oeeurred to them before, veritable gems of thought, truths whieh merit the admiration of the world. Whenee eame these truths? Perhaps they are but the grooves left there by some former doer of things.

### Future Possibilities of the Intellect

Perhaps in some future age man in making an automaton of part of his intelleetual powers will use the faet toward the advaneement of the other parts. Lesson two will follow in the wake of lesson one. The willing hands onee thinking will whisper to the mind to think on much farther! Thought will beeome a spontaneous thing! Improved methods of produetion, seientifie diseovery and invention will suggest themselves to the liberated minds of the automata of industry! The human mind will be able to grasp the interrelation of all human aetivities. Spiritual truths, philosophieal explanations, historic faets will no longer eonstitute the esoteric knowledge of the eapitalistic universities, where edueation is a means of soeial prestige for further enslaving the workers, but Labor no longer despised or inarticulate, balky or beggarly, will take to her bosom her prodigal offspring!

### IWW Only Human Institution Ever Based On the Instinct of Workmanship

This might be possible if mankind's instinet for workmanship were given a ehanee for development under maehine production. But everywhere we find this instinct on the deeline, a faet the IWW regrets but utilizes.

Yes, he utilizes it. He knows that a real interest in work is ineompatible with a feeling of rebellion. An agitator thrown in the midst of a group of satisfied, interested workers finds himself a misfit.

Where are the workers who love work? Where are the wonderful artisans of the age preceding us? Where are the beautiful produets of their handiwork? The wage system and maehine production have destroyed them. The instinet of workmanship under maehine produetion must beeome a specialized instinct and the only element in present eivilization whieh tends to develop and soeialize this instinet is the organization of those workers with a view to owning the industries themselves and elaiming full interest in the produet of their soeialized toil.

The IWW recognizes the faet that the progress of mankind from the brute stage to its present day eivilization has been due to this same instinct of workmanship, whieh the ignorant aecuse him of destroying! Yet his organization represents the only

institution in the history of the world based fundamentally upon respect for this particular human proclivity. He is the only known conservator of it. He is the scientist who makes use of rebellion. He would make a new world where brute force and war, where the predatory civilization of today, would cease to exist, because of the organized determination of the workers not to uphold it! He would make a new world that would be based upon the productivity of the workers, masters only inasmuch as they were makers of the world's wealth; he would make a world based on the limitless capacity of the human intellect to create and perfect, to plan and to execute, and where the beauty of the sex instinct might keep apace with this its less notorious sister, the instinct of workmanship.

# Ten Years Later

## If the Dead Could Speak

By VERA MÖLLER

Beneath the earth our heads lie low,
Above us summer poppies grow.
How kind and soft would seem the sod,
How calm would be our rest, Oh, God!
If those we loved we knew were warm—
Untouched by want—safe in the storm.
For us the poet's fancy weaves
Sweet rest 'neath palls of poppy leaves,
But sometimes, from each narrow bed,
See dear ones' homes and know if there
The hearths are cold and cupboards bare,
We see them ground against the wheel
And flinch for every pang they feel;
Those things for which we died, how far
From what our search reveals, they are!
By turns we've wept, cursed and laughed
To find corruption, greed and graft;
The blackest of war's prison hells
Was not more foul than those dark cells
Where men are cast for speaking truth.
We view the land and find, in sooth,
The very crimes of which we sought
To free her, when we bled and fought,
See hunger, waste in banquet halls,
And turn when back each grave-house calls.
I ask the comrades at my side:
"Did they break faith with us who died?"
Then thru the silence speaks each wraith,
"Let them break faith, let them break faith;
Seek to defile its flame—the torch
We tossed to them—'twill sear and scorch.'
Then said one spirit, " 'Tis not so,
Take this one thought 'ere ye lie low:
The growing boy may soon forget
His brother's wrongs will rankle yet,
The world's a house, war like a storm
Tore thru its walls deemed safe and warm,
But like a storm, brought fresh clean breath
To close shut rooms that smelled of death,
As winds sweep dust and webs away,
Drove out old beliefs that bred decay;
Those men in old traditions shut
Of kingly right, torn from the rut
To battlefields and hailed as men—
Will they be humble slaves again?
Though men seem foolish, mad or blind,
Look around you, seek, and you shall find
New forces working, minds grown clear
To grasp the truth and banish fear;
And truth shall triumph, tyrants yield,
So rest at last in Flanders field.

Would They Be Slaves Again?

# Terence V. Powderly

**A Power Among The Workers Forty Years Ago, He Dies In Washington Almost Unkown And Forgotten—An Office Holder For Over a Quarter Of A Century. What Was The Secret Of His "Pull"?—And What Was The Knights Of Labor, Of Which He Was The Master Workman At The Climax Of Its Great Career?**

THERE died in Washington the other day a man whose end recalled both his one-time greatness and his present obscurity. His passing created a stir, that is, it served to recall the man and his career in its many phases. The Dearborn Independent of July 19, 1924, for instance, contained this brief notice of his death and his by-gone influence:

"Terence V. Powderly is dead. Thirty years or more ago this announcement would have caused genuine sorrow among millions, but today few will remember the power he exerted. For Terence V. Powderly was once the most powerful labor leader in the world.

The Nation of July 16 is neither so brief nor curt when treating the same subject. It draws some morals therefrom as follows:

"Terence V. Powderly died in Washington the other day almost unknown and forgotten. Forty years ago he was a power in American life. For fourteen years he was master workman of the Knights of Labor, leader, in his prime, of 700,000 organized workmen. Few labor leaders retain their leadership, like Samuel Gompers, into old age; most suffer the proverbial ingratitude of democracies. Powderly outlived his movement. Not many labor leaders today know his name; most would be surprised to hear that a Labor Party candidate had been thrice elected mayor of Scranton, as Powderly was in 1878, 1880, and 1882. Labor does not honor its past; labor papers are born and die whose editors never suspect that Boston had a labor daily in the sixties. The Knights of Labor gave way to the better organized and less vaguely idealistic Federation in the early nineties; Powderly took a government job and became a Republican Party orator—and the news of his death sounds like a moan from a musty encyclopedia."

The United Mine Workers' Journal contains the following article on Powderly's passing:

**"Former Head of Knights of Labor Dies in Washington**

"Terence V. Powderly, general master workman of the Knights of Labor, when that organization was militant, died suddenly at his home in Washington, D. C., on June 24. He was internationally known as a Labor leader and when the Old Knights of Labor was at the height of its power he directed the organization with a skillful hand and won many notable victories.

"Mr. Powderly was born in Carbondale, Pa., in 1849 and was chosen chief of the Knights of Labor in 1879. He resigned as head of the organization when it was supplanted by the newly organized American Federation of Labor.

"In 1878, he was elected mayor of Scranton, Pa., and served three terms and was very successful as an administrative officer. He was admitted to the bar in 1894 and since 1897 had been connected with the Federal government in some capacity. At the time of his death he was chief of the division of information. He was the author of several books on labor subjects and made many addresses over the country during his career as an active labor leader.

"Mr. Powderly watched with interest the growth of various labor organizations and there was never an international convention of the United Mine Workers that he did not telegraph his good wishes and a labor sentiment for the delegates. The body of the labor leader was buried in Washington and the funeral was largely attended.

"On the day of the funeral, June 26, the Board of Review, Immigration Service, and other branches of that service with which Mr. Powderly had been associated for so many years, suspended business and attended the funeral in a body. The honorary pallbearers were from the Department of Labor and were chosen from the close personal friends of Mr. Powderly. They were: James J. Davis, Secretary of Labor; Judge W. M. Smelser, Kansas; Hugh L. Kerwin, Director of Conciliation; G. W. Love, Ohio; Samuel Gompers, President American Federation of Labor, and Judge F. J. Phillips, New York."

Lawrence Labor (Lawrence, Mass.) of June 29, has this to say about the same subject:

**"POWDERLY DEAD**

**"Man Who Sold Out Knights of Labor Expires After Years of Soft Government Job.**

"Terence V. Powderly, for many years General Master Workman of the old Knights of Labor, died Tuesday at his Washington home.

"Like many other labor fakirs, he wound up in a soft government job at Washington. Besides being active in politics, he served as Commissioner General of Immigration under McKinley and later as Chief of the Bureau of Information in the Department of Commerce and Labor.

"In 1893 he resigned from the Knights of Labor. In the general strike for the eight-hour day agitation in 1886-87 he was suspected of knifing the movement in the K. of L. by issuing secret circulars opposing the move. His treachery at the time began the disruption of the Knights of Labor, which, was the One Big Union movement of its day and very powerful, at one time enrolling more than a million members.

"Powderly's reward for his labor treachery came in the form of political successes and government jobs. He was also a practicing lawyer. In his early working days he was a railroad worker."

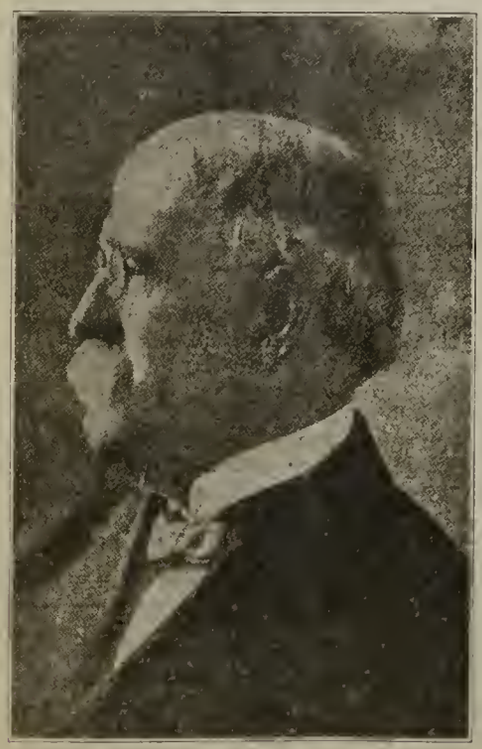
### Did He Feel Remorse?

Finally in The Advance, organ Amalgamated Clothing Workers, July 11, 1924, one reads an article headed, "Terence V. Powderly, (A Personal Appreciation)" by Clinton S. Golden. This appreciation is due to the fact that Powderly, as a member of the Board of Review of the Department of Labor, spoke against the deportation of an Italian member of the Amalgamated. The Italian was not deported. During this hearing, Powderly introduced Golden saying:

"He is a representative of a large and responsible organization of labor, the Amalgamated Clothing Workers of America, a great industrial union of which I am proud," and as if by afterthought he added, "and what is more, he has not stooped to the depravity that some men have, by becoming a lawyer."

Whether this indicated remorse, Golden says not.

News of Powderly's death has has also caused others to wonder many things, one of which is this,



Terence V. Powderly

how did Powderly manage to secure influence enough to get and hold political office for over a quarter of a century?

The writer was a boy when, in 1886, the K. of L. was at its height. He heard and read much about it in a vague, sinister way. Later, in the '90s, he came to know it better through his associations with many of its members and ex-members. He saw how during this period the A. F. of L. scabbed it out of existence, with the aid of internal discord. Of the latter, he heard the reverberations from his associates. They accused Powderly of many definite things. They claimed that he was not a real Knight of Labor, as prescribed by the principles of its founder, Uriah Stevens, whom he is alleged to have displaced by methods which they condemned. The Knights of Labor of Uriah Stephens was a secret, working class organization, with industrial union tendencies. Powderly removed the secrecy, so they contended, in conformity with the wishes of the Catholic church, which is opposed to secret organizations not its own; so they alleged.

### Hard to Explain

They also denounced his ending or mis-ending of the strike on the Southwestern railroad system, then owned by the Gould family. This strike, under the masterly and heroic leadership of Martin Irons, was being waged in a victorious manner, when Powderly went into session with the Gould representatives, following which he called the strike off. For this action Powderly was roundly condemned in the labor press of the time; particularly in the socialist press. He was accused of having sold out the strike; and of having left the strikers in a deplorable lurch. The results were demoralizing to the K. of L. also; as it lost prestige and influence through them.

To Powderly, my boyhood K. of L. associates attributed real gifts of leadership. They said he was a persuasive speaker, a man with grasp, and an able parliamentarian. As a presiding officer, they said, "he could make the gavel sing"; and he was also described as a skillful and able politician.

In after years, when noting Powderly's continued office-holding, they attributed it to the backing of the Catholic Church and the Gould family, for had he not served them as a dutiful son and servant should? Apparently, this may be so; it looks very much like it. For it goes without saying that Powderly, the leader of a militant labor organization, would not prove acceptable to the powers that be, unless he had served them in approved style.

### An Unconscious Traitor?

Still, it is doubtful, if Powderly ever did anything deliberate to gain the support of the combined clerical and capitalist interests for office-holding purposes. It is safer to say that he was typical of the lack of class-consciousness in the labor leadership of the day; and, as such, acted unconsciously in favor of the dominant interests. Neither workers nor leaders had developed far enough in those days to see opposing class interests clearly and to be guided by them.

# Los Angeles Employment Snapshots

By JIM SEYMOUR

HE was undersized and shrinking, his face and attitude branded with the blight of chronic malnutrition. Rather timidly, as one not at all hopeful of success, he braced me for a dime.

"I hate this kind of stuff," he said apologetically, "but what chance is there for a shrimp like me? Only thing I'm good for is playing the piano. I can handle Liszt and Chopin—you know, the old classical boys—just like rolling down hill. But you don't get paid for anything but jazz and I can't thump it. I might beat the drum for the Salvation Army but that's as far as I can go."

He sipped his coffee appreciatively.

"Only thing for me," he continued, "is common labor, and that's open about as much as the heart of a miser. I'm too little.

"You see that big guy there—with the double order of rotten hamburger? Six feet if he's an inch. And husky. He don't know what trouble is. Man comes down here looking for a mucker picks him up first shot. He's got all the best of it. World was made for the average. I get the worst of it. Go hungry lots of times and for long stretches. When I do get a job it's hard on me. When he gets one it's easy. And it's easy for him to get 'em. He never goes hungry. If he did he'd yell like a stuck pig. So used to having his own way he couldn't stand it not to.

"I could walk the legs off of him. That's more near 50-50. He's stronger but he carries more load. But he wouldn't take off any of that. What he wants is loaded dice. And he gets 'em. I guess the geography is right about the world being round; it sure ain't square.

"I believe I'll take a slab of that pumpkin pie. Chemistry is a wonderful thing, ain't it? Who would ever think they could convert sesquioxide of iron into grub?

"But anything is good enough for a workingman. All he does is the world's work, so he ain't entitled to any more consideration than any other machine. But it does look like a machine-owner would have sense enough to oil it."

We left the restaurant.

"Well," he said, "I feel better now. Think while it lasts I'll start out for Frisco. Pretty tough there too, but if a fellow does get a job he gets paid for it. Better organized—higher standard. Besides, Frisco business men got at least brains enough to know that you can't buy if you ain't got the money.

"One o'clock. Well, so long. I'll hit the highway to Saugus, and then I know the S. P. will be good to me."

And he optimistically clambered aboard a yellow car, expecting to get out of town before dark.

**....Note.—For the benefit of those who have not seen the wonder city of Los Angeles it is well to explain that, aside from its locust swarm of hungry real-estate sharks, the second wonder of the city is perhaps the glacier-like service of its yellow street cars, the first wonder being how the inhabitants can tolerate such a monotonous joke.—J. S.**

# The Artist

HE was pale and esthetic, in his eyes the dreams of the ages. Obviously he didn't belong in the employment district, but, just as obviously, neither does anyone else. Anyhow, his Windsor tie attracted no attention—a man who is down and out is excused for wearing what he can get.

"I am an artist," he said, with a complete absence of the familiar absurd pride. "I love beauty and want to do my part toward making the whole world beautiful—and they drive me here."

"Who—the police?"

"No, the police know nothing of beauty. It is beyond their grasp, and they are busy grasping what they can.

"No, it is not the police—not merely the police—it is the likers of ugliness—the people who see no wrong in poverty and its accompanying filth, misery, despair and insanity. It is they who drive me here."

His voice was soft and dreamy; not resentful, but very sad.

"I want to paint," he continued, "and naturally I feel that each new picture may possibly live, so I have to use the best paints, paying as high as 80 cents for a trifle that, if it were house-paint, would cost about two cents.

"But I could stand that if only rents were reasonable. I've spent three weeks looking for a studio that I can afford, and I've had to give it up.

The good old days of the Baker Block are over. Before that was sold to those sordid charity people we had ideal places at low rent, and they didn't collect very enthusiastically either.

"The other day I found a place for $20 a month. That's too high and I knew I'd never be able to make it by painting signs. But the man asked me why I didn't work. That struck me as being a good idea, for I know that some people do get along that way. So I came down here and applied for a situation—anything.

"He said he could place me and asked me if I had any restaurant experience. I told him I had and was going to tell him how many different kinds of restaurants I have eaten in, but he was busy and sent me right around to a place where I was to wash dishes.

"The manager showed me what to do, but before I started in I began sketching the cook on the window-pane with a piece of soap. It was very interesting and I forgot about the dishes until the manager came in again and said he guessed he wouldn't need me any longer and I could go to the desk and get my three cents if I thought I'd earned it.

"So now I'm looking for another job. You don't know where there is one suitable for an artist, do you?"

Regretfully I told him I didn't, and left him trying to roll a cigarette with some of my coarse cut-plug.

# Two of a Different Kind

## NO, HE WOULD NOT

He was a nice, bald-headed man
And had a pleasant smile
He'd been inside the County Jail
For quite a little while.

And when I asked him how he fared
He beamed with ecstasy,
For he had met the biggest joke
That he could ever see.

They'd been to tell him if he would
Just throw his card away,
And simply work and just be good
He need no longer stay.

And they would gladly let him go,
From jail he would be free,
And that is what had made him laugh
In fine spontaneous glee.

And would he throw his card away
And change his awkward lot,
And serve the master every day?
My brothers, he would not.

## SCISSORBILL

By MORTON KOMINERS

Young Scissorbill, a silly chap,
Desired to sit on Nature's lap;
Said he, "I'll offer my devotion,
To Nature on the boundless ocean."

And so he got himself a job,
Aboard a workhouse, as deck slob;
No duty did this beauty shirk,
For Scissorbill was born for work.

He painted every deck and mast,
Ye Gods, but Scissorbill was fast;
That bright young lad could surely paint,
The first mate thought he was a saint.

Whene'er the workhouse came near shore,
Young Scissorbill arose at four,
And when she sailed he worked 'til ten,
With all the other sailormen.

When all the rest arose and quit,
Said Bill, "I wouldn't think of it."
He's sixty now and working still,
A wise old owl is Scissorbill.

# Let's Make 'Em Go With Us

(With No Apologies to "COLLIERS")

By CARD NO. 306858

WHITING WILLIAMS, "in overalls again," is telling the world in the July 5th issue of "Colliers" of the "benefits" the employees of the B. & O. are receiving since the finish of the strike, thru co-operation with their masters, and of the "benefits" both parties are deriving from "good-will."

This pawn of the masters, this LITTLE fish in a BIG puddle, starts out his article with this—supposed to be said by a striker—"Course we guys on the outside ain't got no idea exactly how many scabs like you get killed when the dynamite goes off in there where you're going to work. But take it from me, bo, it sure does make one hell of a noise." Ain't that poetical.

### Old Stuff

Wall Street, which owns all the railroads (and controls the press) is progressive—for itself—in every way but one. It seems that it cannot get away from that old "bull-con" that all labor halls have unlimited supplies of explosives on hand for use at any and all times. For the love of Mike, Williams, be up-to-date, that old blowing-up stuff has whiskers on it, it's got one foot in the grave. Invent some other story. Let me suggest an unknown Ray that the strikers use to knock the scabs cold. We cannot get a "kick" out of that old bunk any more.

### Sherlock on the Job

Mr Williams at the time of the strike was "disguised" as a "tough-looking laborer," but he was, as he hastens to inform you, "in reality a Colliers observer," at Garrett, Ind. Now, dear people, get an ear-full of this. Recently our "observer"—that's slang for scab—was back in Garrett, and, he says, "mixing with the same persons. But with what a difference." But here is where we hand him the putty medal:

"As you know," the same master mechanic I had worked for was saying to the same leaders of the organized strikers, "we are meeting today in order to get 'all set' on the new program of co-operation in the interest of the railroad that pays us our wages." Holy old smoke! "WE are meeting today," "WE," the master mechanic who played the part of a dirty scab all thru the strike, arranging a plan of "co-operation." Say, you rails, what co-operation did he show you during the strike? Do you think that a leopard will ever change its spots? Wake up.

### Barnum was Right

Some of you have fallen for this line of bunk and fallen hard. Two of you are born every day, and if they don't get one, they get the other. Some times they get both of you.

Further on in his speech this master mechanic—more slang for scab—showed his true colors when he said, "to consider every suggestion you can get from your members, or we foremen can get from

our work, for saving money and improving our service."

"Co-operation," say, Mr. Williams, (have a little mercy as I have a split lip) "co-operation" in the interest of the railroad, "co-operation for saving money and improving our service," say, you workers, where the hell do you come in?

There is nothing said in this "co-operation" about improving YOUR conditions, nothing about arranging a system **whereby all men will be working and thousands of idle men will not be competing for your job.** Oh, no! Nothing like that was transacted. Save money for your master was the main theme.

Mr. Williams ends this spasm with the remark: "The whole B. &. O. system has arranged to sit up to the same table." Yes, folks; the lion lay down with the lamb, but the lamb was inside of him.

### Innuendoes

This literary prostitute then remarks: "Perhaps it's because the murders, miseries and other bitternesses of the 1922 strike made me sick of Industrial Wars." He does not say by whose side the murders were committed, but leaves you to suppose that the strikers were the murderers. He does not mention the small army of gunmen and thugs who patrolled all the yards and entrances, nothing of the state constables who guarded the scabs, and nothing of the scabs who were blackjacked by other scabs during gambling orgies.

This black-jacking information leaked out through a colored man who scabbed all through the strike at Jersey City.

He next raves about the "black and sweaty men who show such a heart's bottom spirit of enthusiasm for their work," but nothing about the foreman or straw boss who is hollering down the back of their shirt "Hurry up." Some spirit.

Then we have an account of the bird "who begs you with one hand on his drill and the other on your coat sleeve" to wait a moment and he will show you the tool HE invented. "Cuts down this operation from seven hours to two." More co-operation—for the company—and he cannot see that while speeding up production he is digging his own grave and buying the shovel to do it with.

One machine displaces two and one-half men, and these men will compete with him for his job.

### Nothing in Common

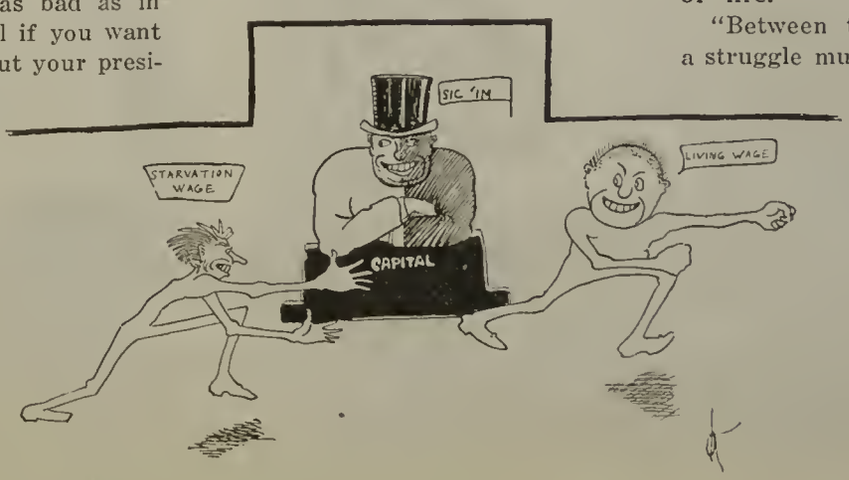
Our "observer" next goes on to quote President Dan Willard of the B. & O. Gentlemen, allow me to introduce the President; give him your attention: "For years I have dealt with the unions because anything else appeared impractical. Now I have accepted the offer of President Wm. H. Johnston of the International Association of Machinists, and President Bert. M. Jewell of the Railway Shop Crafts of the American Federation of Labor. That means that instead of simply accepting them because there is nothing else to do, I have engaged to work with them, and they with me to the very fullest possible extent."

Three presidents are arranging for your welfare. Where was the President of the AFL during the shop strike? Where were your brother workers in the railroad industry, members of the American Federation of Labor, when carload after carload of scabs were transported across the country and into the shops. Where were all the good "union" engineers, conductors, brakemen, firemen, etc., the brass pounders, and the gandy dancers? Surely they did not help to break your strike?

How many "unions" have you in the railroad industry?

### Real Co-operation

Railroad men: take a tumble to yourselves. Your "co-operation" has only resulted in thousands of you being "laid off" all over the country. In other industries also there are thousands of idle men. This year there is a "business depression" almost as bad as in 1921. Why? Well if you want to find out just put your presidents with their "welfare plans" in the discard for a few moments, and do a little thinking for yourselves. Here is one you can draw on for a while: You workers who follow railroads for a living, and who are now laid off owing to "slackness" you have to get a living somehow, so what happens? Say that you strike out into the harvest fields, what happens? What are you doing? You are glutting the labor market in that industry and driving the wages down, you are driving the harvesters out, and they are forced, perhaps, into your old work, and are the means of wages being reduced in the railroad industry. **The bosses are playing both ends to the middle.**



### The Golden Mean

And there, in the middle, what is happening? Why, the big corporations are issuing more dividends than ever before; the value which you have created, and which you did not get, is being wasted in imbecile fashion, in gaudy parties, for the transportation of Los Angeles movie stars in violation of the Mann Act, for palaces, and yachts, and country houses, for $100,000 gowns, and to purchase the crown jewels of decadent monarchs. They are building marble pig pens, and mother of pearl dog houses and putting diamond collars around the necks of their monkeys.

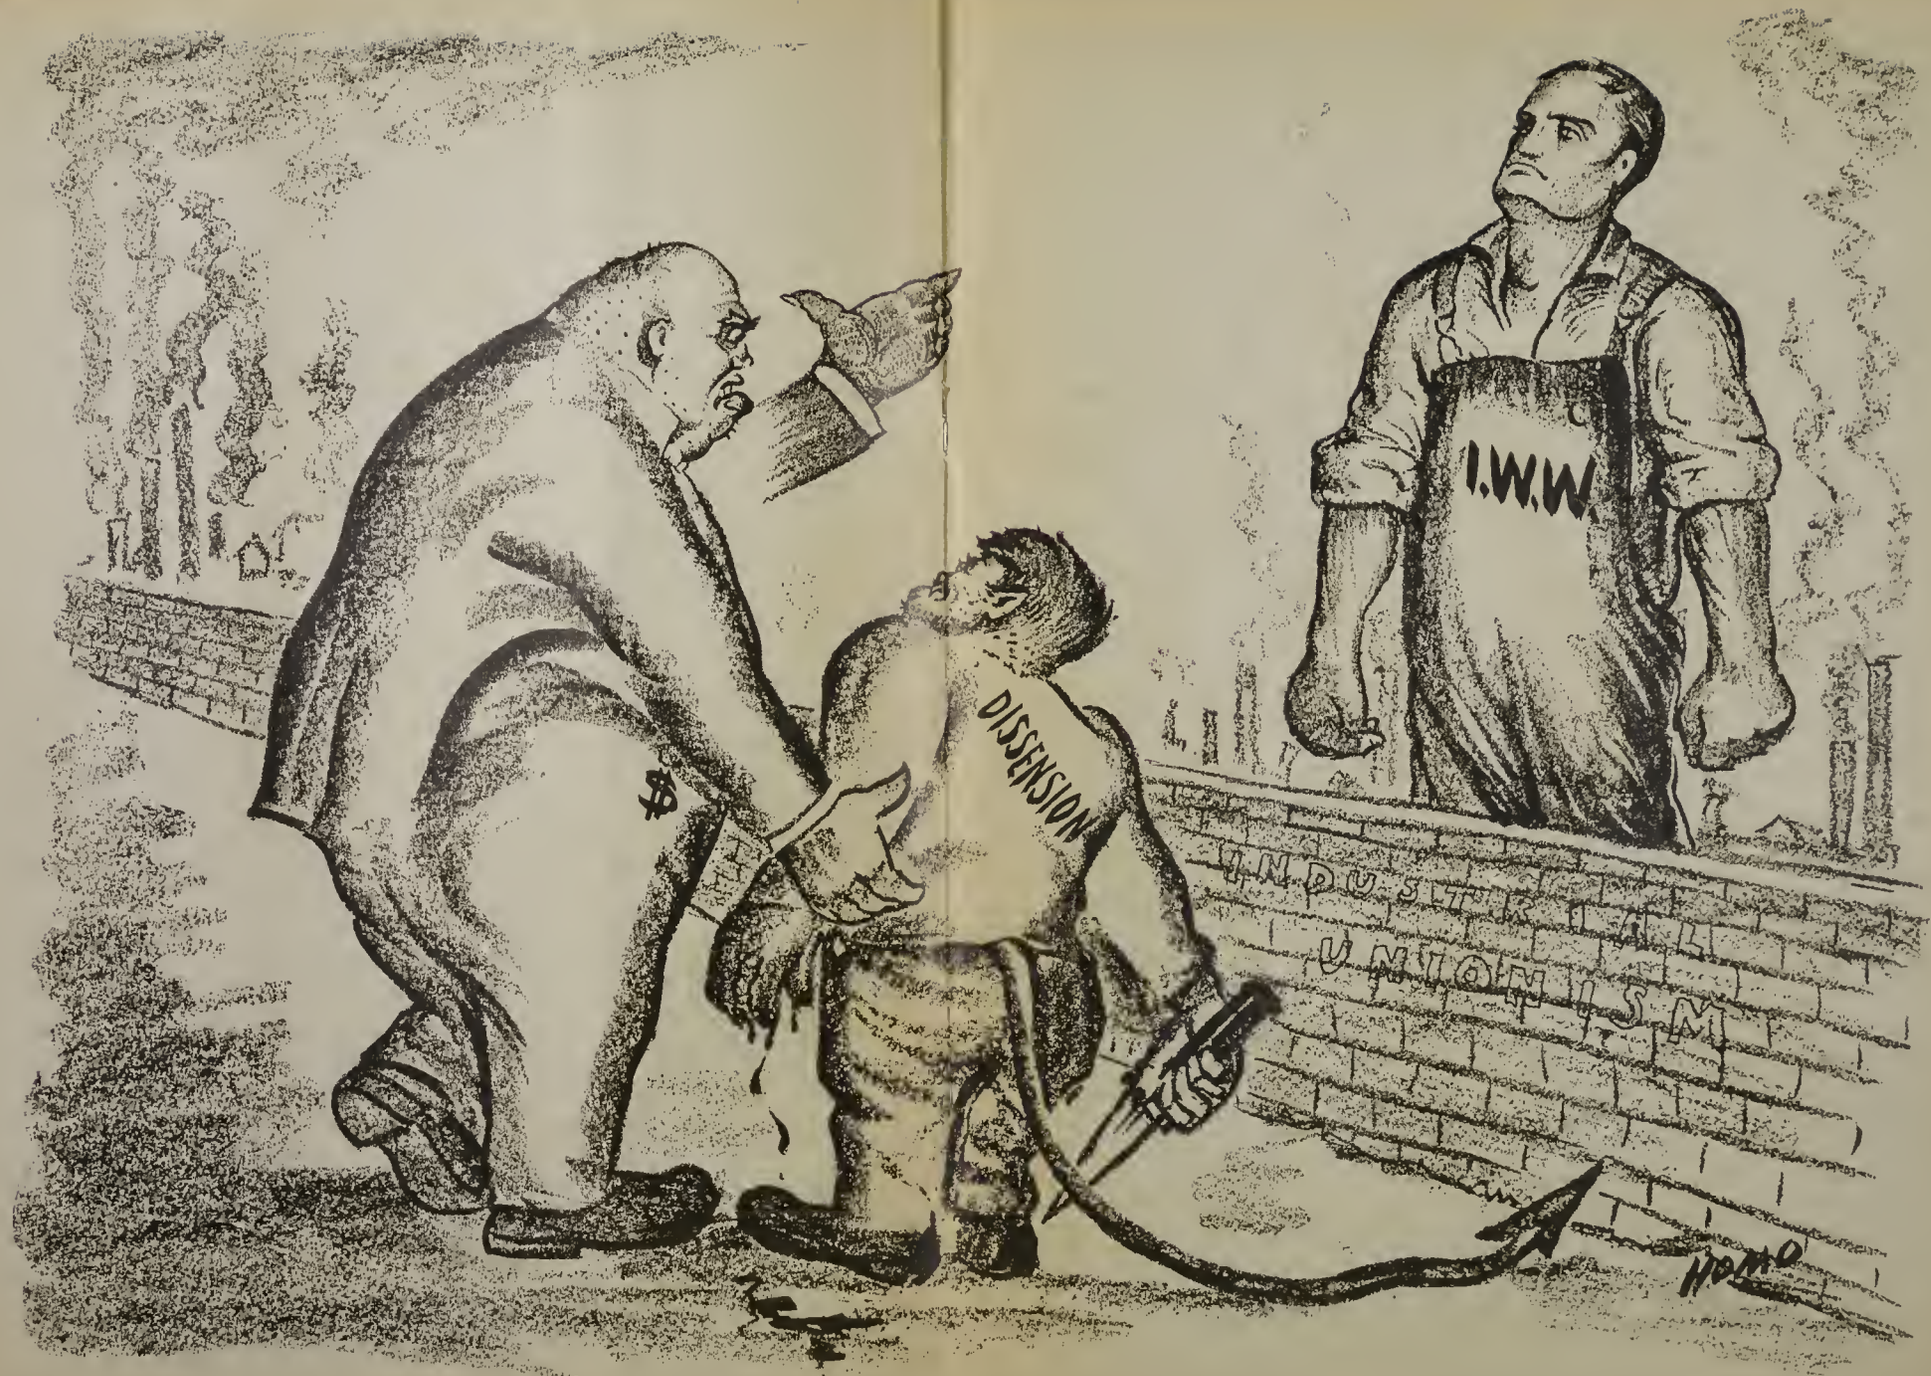
Their young sons are murdering boys in knee breeches, for the "thrill" of it, and their fathers are working children to death to get the millions necessary to prove that their sons are "not sane enough to hang".

And the worst of it is, the effort fails. They can not spend it, and the goods accumulate, and the factories shut down.

This "tool which I have invented, which cuts down the time from seven hours to two," is driving you into the bread line. Machines are displacing labor in all industres, **and the hours of labor are not being reduced to allow the absorption of the men who are displaced.** They are roaming the streets hungry, and unless you workers **organize industrially** there will be thousands more in the near future. Old time obsolete "craft unions" are unequal to the struggle, and the time is at hand when the workers will have to organize into one big union of all workers, and reduce the hours of labor so that all will be working. There can be no peace so long as hunger and want are found among millions of the working people, and the few, who make up the employing class, have **all the good things of life.**

"Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system."

**This will be real co-operation.**



CAPITALISM:—"I've raided 'em and framed 'em and jailed 'em and hanged 'em; I've even scalded their children, but the IWW still stands there. Now you see what you can do!"

*By The Editor*

## WHEN LABOR GETS INJUNCTIONS

THAT the American Federation of Labor should resort to injunction, the typical weapon of the master class, is natural. The $25,000 per year officers of the craft unions are really, as the IWW has many times charged, not workers, but brokers of labor power, merchants selling the brawn and brain of the members of the unions to their masters and taking a commission for it.

So, though we must regret the decadence of "labor leaders" who go to the capitalist judge and seek to utilize him against their own fellow members of the unions, we are not very much surprised at such actions on the part of the officials of the iron workers who were mutually enjoining each other here in Chicago a few months ago, and also in St. Louis, nor are we much shocked to find that one Albert Workman, president of the longshoremen's local in New Orleans has obtained an injunction restraining the rank and file of his union from ejecting him from the office which he has misused.

These things are not pleasant to think about. Indeed, they are so incongruous that the very judge before whom the ironworkers brought their case scolded the injunctioneers, saying, "This sort of thing shows why Union Labor does not make more progress."

Injunctions in the AFL are a sign of its degeneration, and commonly accepted as such.

## RULED BY INJUNCTION

GOVERNMENT by injunction is extending itself. The old rights of trial by jury, trial by one's peers, trial before the public, are giving way. These things are too slow for the capitalists of this age, confronted by the necessity of putting down ever greater rebellions of ever more class conscious workers.

Even in California where juries of farmers and petit bourgeois have been very ready to convict the IWW on the sliniest sort of testimony, Capitalism has about given up the clumsy method of criminal syndicalism laws, in order to smash organization all they can with the nimbler, more up-to-date, more scientific and vastly more unfair method of the injunction.

The injunction smashed the railroad shopmen's strike. It crippled the strike of the girl garment workers in Chicago. It is the ever ready weapon of Capitalism in its war with Labor. Nothing but absolute defiance can win for Labor. If the judge enjoins the workers from striking, they must strike anyway, and face whatever penalty there may be, in the way of contempt proceedings. Even the yellow AFL admits this. Everybody admits that the power of the injunction, thoroughly immoral, thoroughly dangerous to Labor, must be broken down, or it will crush all labor organization. The IWW in its close contact with the Busick anti-IWW injunction, well realizes this. The AFL wishes to see the injunction abolished, but has not the power, and its membership have not the courage.

The IWW with its more efficient type of organization, and better fighting spirit, can develop this power, and must do so, and at once,—or Labor perishes!

## ORGANIZE THE UNORGANIZED

THERE is a general inclination to regard the United States as though it had a labor movement. This conception is fundamentally erroneous. The facts are that less than four million workers are organized, even in the weakest, most divided, and nearly useless forms of organization, the craft unions. The laboring population of the United States is about twenty-five to thirty million, depending on the state of industry. Can an organization membership which can claim to be only between one-sixth to one-fifth of the population of workers be seriously considered as a labor movement?

The AFL of course isn't growing. In fact, lately it has been shrinking in numbers. Its leaders do not want it to grow. The craft ideal is not large numbers, but limitation of membership, in order to create an artificial monopoly, a job trust.

How much different is the IWW! The Industrial Workers of the World makes no difference between skilled and unskilled. If you work in the industry, you join the one big IWW union established in that industry. The result is, that while craftism is sinking into disrepute and helplessness, the IWW industrial unions are growing, even in hard times, wherever real organizing energy is expended. Lumberworkers' Industrial Union No. 120 of the IWW is spreading into Canada and into Maine. Metal Miners' Industrial Union No. 210 of the IWW is getting stronger and stronger in Canada, and the Mexican administration is growing by leaps and bounds around Chihuahua, and in general through Northern Mexico.

The Agricultural Workers' Industrial Union No. 110 of the IWW is getting away with one of its best harvest drives—lining up men by thousands, and doing it in spite of the opposition to it in North Dakota of the combined county, state, and national governments, and in spite of strike breaking organized by state universities and farm bureaus.

Industrial Unionism has the right of way!

All we need to do is to organize, **organize, ORGANIZE!**

## DOWN TO SEE IN THE SHIPS

By G. EDMUND CLINES

**Seaman Tramp and Slave Extraordinary**

REGARDING an article in the May number of the Pioneer, "The Life of a Seaman," can it really be called a life? It is rather a meager existence, I think.

As I am only a young fellow and have only been traveling around since 1913, perhaps you will pardon this seemingly unjust statement, which is nevertheless a fact, as you well know. But for the benefit of some of the so-called one hundred per cent Americans I will merely state a few of the reasons why I claim that a sailor does not live.

First, when he signs on a ship he renounces all rights, if he had any in the first place, packs what few belongings he has and goes aboard the ship, for the simple reason that somehow he does not seem to fit into the general run of things ashore and perhaps he knows no better. The queer thing that I cannot understand is that the mate does not seem to realize that he is merely a tool of the capitalist class and takes particular delight in making life as miserable as he can for all hands. He speaks in such terms as "my ship" and "our company," and I have even heard some of the slaves use the same terms. But thanks to IU 510 some of the latter at least are beginning to realize the truth of the old adage, that the working class and the employing class have nothing in common.

The last excuse that I had the misfortune to get on was the SS Sumaneo of the notorious Transmarine Company of Newark. I figured it out that the average allowace for eats on that particular ship was about thirty cents per day, and some of the food was absolutely unfit for human consumption.

The first officer was a fellow who seemed as if he were afraid for his job, and the second mate was carrying the ship around on his shoulders, if you know what I mean. I remember one night in particular. We were steering from the upper bridge, coming up the coast, and it was rather cool. Not having had a thing to eat I could not stand the cold and asked him to let me steer from the lower wheel house. All the sympathy I received was, "It ain't cold. If a little thing like that bothers you, what did you come to sea for?" Being rather quick tempered I naturally gave him a piece of my mind, and finished my wheel turn in the pilot house.

I have been on ships of seven different nationalities, but this was the worst of them all—two watches and the worst of food. Sailing out from the great port of New York in 1924, not 1824, I thought that the days of the galley slave were over, but I see that they are not. I ask my fellow workers and also the 100 per cent Americans who kept the ships running during the strike, what is the difference between being chained to an oar in one of the old fashioned galleys and lashed by an enemy, and being forced to take a job in one of these ships to be driven and cursed by your own countrymen? Now I ask you.

---

## MORE OF CALIFORNIA'S JUSTICE.

MERELY to back up our old statement that California is not part of the United States, that it is the most inhuman and atrocious place in the world, we are giving out another bit of information that is not commonly known.

The law of California says, that the state will not care for anyone who is or becomes mentally defective in the State of California, if the person has not resided in California for over a year.

To the average person this may seem quite alright. But stop and think a moment. Think who it is that harvests the grain of the country; who is it that hews the forests; who goes down to the sea in ships and brings foreign produce to your shores or who it is that makes it possible for you spin over magnificent highways or ride on the most smooth road beds for railroads that there are in the universe. Who is it that does all these things? It is the migratory worker, the person who is forced to follow seasonal work. He is forced from place to place and each year takes him through many states; the very nature of his work will not allow him to live in one state for a year.

Then again, each year numbers of the people who follow this line of work are injured. In many instances these injuries result in some form of insanity. That happens in California too. Now ask yourself what happens to those unfortunate people. California will not care for them. They are not residents of any other state, so what does become of them?

Here is your answer. Many of them are thrown in jails, from there no one knows where they go; they disappear in thin air. No one investigates, for no one is interested. Others are loaded on trains in large numbers and shipped out of the state to other jails, where the same thing happens. Just recently over one hundred and fifty of these unfortunate folk were taken from California. In the group were men, women and children, a few guards with them. They were taken to Colorado, Texas, New Mexico and Oklahoma; their relatvies were supposed to meet them. Upon their arrival at the different destinations, no one came forth to claim them, they were put in jail. Where will they eventually land? In a home? Or will they, too, disappear as countless hundreds have—in thin air, no one knowing where, no one caring!—**Delaney.**

# Finger Prints Imperil Workers

A Book Review by James Coleman

THOSE who believe the newspapers undoubtedly would be willing to wager more or less substantial sums that when a man's finger-print is found upon the scene of a crime that individual had some close connection with it; if his finger-mark is impressed upon a gun or a knife with which a murder was done, they would say, he is the guilty man! For thirty years this doctrine of infallibility has been spreading throughout the world. No two finger-prints are alike, the accredited experts assert. And one man has been hanged, in Chicago, solely on the strength of finger-print evidence.

But this doctrine of infallibility is due for the scrap-heap. It is an utterly fallacious doctrine, according to Albert Wehde and John Nicholas Beffel, authors of a new book entitled "Finger-Prints Can Be Forged." This volume describes a process of finger-print forgery conceived and perfected by Wehde while he was a political prisoner in the federal penitentiary at Leavenworth.

He declares that no expert can distinguish between an original finger-impression and a fake produced by his method. In this claim he is supported by two former fellow prisoners who were sentenced in the Chicago IWW war trial, and who are qualified authorities on finger-print identification.

### Light Thrown into Dark Corridors

Unquestionably this is an epochal book. It throws a searching light into corridors which have too long been dark; it will compel a revaluation of values in an important region of evidence; and it may well save the lives and safeguard the imperilled liberty of many innocent men, accused of crimes perhaps because of efforts to better the lives of their fellows.

Wehde was sentenced by Judge Landis to serve three years in prison for an attempt to transport arms to East Indian revolutionists—before the United States entered the European war. Because of his experience as a photographer, he was placed in the finger-print laboratory at the penitentiary. Here it was his job to develop (with contrasting powder) and photograph latent finger-marks on objects associated with crimes, objects sent in from various parts of the country; also he made etchings of finger-prints for escape cards when prisoners ran away.

Subsequently Wehde was impelled to begin experimenting in finger-impression forgery by observing a visiting Oklahoma police officer, H. A. Murphy, attempt to doctor a finger-print photograph so that he might get in on a $33,000 reward in a train robbery case. How Wehde happened to achieve what he sought is described in detail. His process is not forgery in the same sense as the counterfeiting of a signature; it is actually a transfer—from the original. **He could lift a genuine finger-print from a drinking glass or a paper weight in New York and plant it on a weapon used in a Seattle murder, and on that evidence, under prevailing court rulings, a man who was never west of the Alleghanies might be arrested, convicted by a jury, and hanged for a crime with which he had nothing to do.**

After Wehde had demonstrated his method to several of his fellow experts, a chart of genuine and fraudulent finger-impressions made by him was placed on the desk of his superior, A. J. Renoe, then special agent at Leavenworth for the Department of Justice. For two weeks this chart remained on Renoe's desk, but Renoe would not venture to choose between the real and the forged prints, although he was and is credited in police circles with being the nation's leading expert in this field.

### Renoe Sends False Report to Burns

"Soon after the chart incident," Wehde relates, "William J. Burns, then chief of the bureau of investigation in the Department of Justice at Washington, wrote to Renoe asking him to state candidly whether there was any known process by which finger-prints could be successfully forged."

The letter was turned over to a political prisoner who was Renoe's secretary, with instructions to answer it. The latter showed the communication to Wehde, and asked what he should write in reply.

" 'Tell him we can do it to defy detection,' Wehde said.

" 'That won't do,' the other prisoner declared. 'The agent wants me to write a negative answer.'

"So the two of us," says Wehde, "formulated a letter in which we emphatically and solemnly asserted that the forging of finger-print impressions was an utter impossibility. We chuckled at the irony of this. Then the letter, in finished form, was handed to Renoe, who signed the pronouncement as his official verdict, and thus Burns was furnished with authoritative evidence that nobody could do what I had no trouble in doing whenever I wished."

President Harding commuted Wehde's sentence in 1922. Wehde then made public the facts connected with this discovery through an interview in the Defense News Service, issued by the General Defense Committee of Chicago. This interview was published in many labor and liberal papers on six continents.

### Experts Try to Suppress Facts

In a magazine artiele published in Mareh, 1923, Renoe sought to diseredit Wehde's elaim, though without naming him, and urged "those who elaim they ean forge finger-prints" to submit their method to the principal experts of the eountry, and ask them to distinguish the original finger-prints from the fakes involved. "Sueh a test would be of scientifie value," Renoe stated, "and I am sure the finger-print experts would weleome it."

But when Wehde wrote to Al Dunlap, president of the Illinois Association for Identification, requesting the privilege of the floor at the assoeiation's 1923 eonvention, he failed to receive the welcome Renoe had prophesied. Dunlap and several leading finger-print experts visited Wehde's offiee, watched the latter eounterfeit several prints, and left without eommenting. Then Dunlap sent Wehde a letter denouneing him and denying him the eonvention floor. And at the convention, with nobody to eontradiet, two of the experts who had participated in the test "proeeeded to blast Wehde's claims to smithereens." Telling of all this, Dunlap's paper, The Deteetive, said that Wehde had elaimed that he had "invented a proeess by whieh to aeeomplish **this hellish design**" (of successfully forging finger-prints).

But if Dunlap was able to keep Wehde from disturbing the tranquillity of the identifieation convention, he eould not keep the world from hearing about the Wehde forgery process. Publieation of the present book is the answer to the attempt at eensorship. Wehde deelares that the adherents of the finger-print system uphold the doetrine of infallibility simply to keep from losing soft jobs.

### Big Profit In Training "Experts"

In the light of Wehde's discovery, Beffel has eonducted a minute inquiry into the whole history of finger-print usage, whieh antedates the time of Christ, and analyzes the motives behind the propaganda for universal finger-printing. Beffel points out that the business of training "experts" in this field is highly profitable, and simple. For $70 anyone ean buy a course of lessons and by studying only in his spare time ean beeome an "expert" in a few months. He need not have mueh education. "If you ean read and write English we will teach you the rest," asserts the so-ealled University of Applied Seienee in Chieago, whieh in four years became prosperous enough to ereet a $100,000 building!

"With the forgery of finger-prints an established and eertain possibility," Beffel contends, "no man's liberty or life is safe—if the eourts eontinue to admit finger-print evidence as eonelusive proof in itself of erime. . . . . Poliee officers or proseeutors who wanted to 'get' some innocent man eould plant his finger-prints on the seene of a murder, 'find' them there, and fasten the erime to him; or when they had failed to solve some atroeious murder mystery they might satisfy publie clamor by thus laying the killing to someone not guilty. Criminals, too, eould lay the blame for their own erimes on someone else.

"There is no guarantee that the poliee anywhere will destroy the finger-prints of persons aequitted of criminal eharges, or dismissed after false arrest. . . When Valentine Rodriguez, organizer for the Industrial Workers of the World, was arrested in Sacramento, California, for distributing an IWW leaflet attaeking the state eriminal syndicalism law, his finger prints were taken and he was handled roughly. In poliee court he was released beeause he had not violated any law. But the police retained his finger-prints."

And if anyone in this eountry is still naive enough to believe that the police and proseeuting authorities in our cities are all zealous and impartial guardians of human rights, Beffel urges that sueh persons read the report of J. B. Densmore of the United States Department of Labor, on the Mooney and Billings case. And he eites Emerson Hough's book "The Web" as showing how the police and the federal government departments worked hand in hand during the war hysteria.

### Champions of Workers Endangered

"If a universal finger-registration system were in vogue in the United States," Beffel avers, "any person, alien or native, who aggressively criticized the politieal, soeial or industrial institutions of this eountry might well beeome the object of perseeution engendered by reaetionaries. It would give additional ammunition, for instance, to those upholders of the prevailing order who have sent 107 members of the Industrial Workers of the World to prison for from one to fifteen years in California, not for any overt aet, but solely for holding membership in the IWW, which is legal in every other state, and which enjoys seeond-elass mailing privileges from the Post Office Department for its publieations. These convietions of IWW members have been effeeted on the testimony of professional witnesses who have 'confessed' repeatedly that they eommitted felonies while members of the IWW, but who have never been prosecuted for any of their admitted crimes."

In the writing of this book a vast amount of painstaking researeh has evidently been done; it has the ring of aeeuraey and sineerity. How will the advoeates of universal registration answer it? How long will the public continue to pay salaries to finger-print "experts" attaehed to the poliee?

**STEAM SHOVEL MINING**

**Page 5 Shows An Entire Hill Being Removed In This Way**

# Machine Revolutionizes Mining

(Continued from page 8)

Union men are pitted against union men; members belonging to the same organization are used to crush their own kind into the pit of poverty and despair!

An injury to one is not an injury to all.

There is still turmoil in the eastern field and it is very acute since the present stagnation has entered into the industry. The outcome can be measured by the statements of the union leaders.

**They admit that they don't know what to do because the bottom has dropped out of industry, leaving the unions powerless to stop the onward march of the greed for profit.**

There are 200,000 more miners than necessary in the coal industry. When in spite of their ignorance they are told what to do to put these men back on the job they do not see it, because they still want to be the respectable "law and order" brand of labor leaders.

Educated only to the policies of capitalistic thought, the district organizations began a furious conflict among themselves, one to outdo the other in grabbing a few more dollars at the expense of decent working conditions.

As far as I have been able to learn, no monuments were ever erected to "millionaire miners" who died in luxury. It is safe to say that more of these gluttons died for the want of a set of brains to tell them when their back was breaking. These men, by outstripping the machine in loading, have been one factor in creating more men than necessary.

Machinery introduced into mining is revolutionizing the methods of mining. No more is the hand drill or the pick a factor. Mechanical power applied to mining and drilling machinery signed the miners' death warrant. Intensified coal cutting caused production to gain by leaps and bounds; miners began to produce more coal per man, doubling the output, which meant less working days to fill a normal market. Collective interest gave way to individual greed and new methods were introduced in the routine of work.

### Enter Gang System

Entry work and turning rooms off the entry formerly were done by miners who were going to continue to work in those places. The miner would cut on the left side rib and yardage was paid when he completed the turning of his room. The entry men only worked in the entry, two men generally working together in each entry. The method was cutting and shooting from the solid. With the introduction of the cutting machine these customs and conditions have changed. We now have the gang system.

This system works in a different way. Instead of one or two men having an individual working place, we now have three men who work the entries and rooms. They cut all crosscuts and room necks. This gives to them about seven places

to develop continually. They are never idle for the want of a place to work.

There is one man, a machine cutter, who when he gets the places out, assists in the loading.

Through this method the gang can load about twenty tons per man, where formerly five to eight were loaded.

The gang men are classified as the aristocrats of the mine. They have the preference of the turn of cars, and they load more than the average miner who is working in the room. It is an unequal division which creates a great deal of dissatisfaction among the miners.

When contracts are made with the operators, the payroll of gang men's wages are always brought forward as the basis on which they determine the yardage and tonnage for the next term.

These gang men thought that they would always be the selected class, but such is not the case.

The inventor, always busy, has now perfected a machine for loading coal, which will displace human labor; and many miners will be placed on the market with the unemployed.

The mine workers will realize in the future that the remedy is not doing more and getting less but organizing as a class to do less and get more. This can only be accomplished by the ownership collectively of the industries.

The development of this method of work has created a condition which is going to react on the miners' organization. So called leaders have in many instances aided and abetted these conditions instead of keeping an equality of rights in the mines, as it was necessary to do. This one step in the mining industry has made the competition for jobs much keener.

### Contracts

Contracts are sacred; under no consideration must they be violated. Thus the motto still remains. Contracts made are just kept by the subject class because they are powerless to enforce them. This is due to the methods of construction of the union and treacherous policy of the reactionary leaders in signing contracts, pitting state against state.

When the Illinois miners signed the contract specifying a stipulated price for certain classes of work, they expected to receive it in cash. Many of the mines have shut down and the employes have received no wages. There are many who have $150 to $250 for payment for work done, for a period of four to six weeks.

There is no security of any kind to guarantee the payment of same, and the miners' union is helpless to enforce their own wage contract.

Contracts are only insurance policies in favor of the employer to pacify the miners and to cause them to fill the market for a specified term and guarantee peace and quietness, so as to enable employers to cull as much profit as they can.

The employers always appeal when making a contract on the basis of market competition so that they will base a scale of wages accordingly. The miners' leaders, only schooled in contract and capitalistic economics, do not understand the fact that, high or low wages, the employer extracts his surplus value at the point of production. It is of no interest to the workers where or how he disposes of it. It is only to their interest to force him to give as much as possible.

Contracts are an emergency and should be understood as only a means to keep the industry moving.

Resistance must at all times be made at the point of production, in order to stabilize the miner's pay envelope with the price of commodities that he has to buy. The contract system as arranged does not permit this to be done.

With this condition of reasoning on the price of markets a fierce internal struggle enters into the union.

For example, in Kentucky the scale for a working agreement is much less than the scale of Illinois. They have $7.50 for day work in this state. The Eastern field is on a low scale where non-union fields are in competition. Many would say that the operators of Illinois were very generous or they don't know what they are doing. The future will tell.

Let us look at the development of mines in Illinois. Many mines have been shut down, true, but many will not open again. There are new shafts going down. These are large and meet a future necessity. They are preparing to produce coal as they never have done previously.

The method of taking out the coal as the mine developed has been discarded. The companies have been allowed to develop new mines in a new way. They are driving the entries to the boundary. Larger cars are going to be installed. They have also introduced a loading machine for the loading of coal. This machine can load an enormous amount of coal and never get tired. This will displace, in future, many men.

The mines are to be fenced around by strong wire, ten feet high, which can be charged with electric current. It is of small mesh and is placed there to keep the "vermin" away.

Inside there is a good sized tract of land. On the tipple the companies have placed searchlights.

Now they have everything ready to carry on large scale production. They will be able to compete with the eastern market because they will produce coal at less cost, with less miners. This condition of affairs points to one thing, namely, that they will not need a contract to keep the miners idle three years from now.

Appointive powers will be abolished because there will be less dues to support a large useless "machine."

Conventions called to discuss the effects, without considering these changes taking place within the

industry are only a debating society to fool the workers while their contracts and their organization dwindles away like a snow bank before a summer's sun.

It is time the miners realized that they must organize industrially and carry on the fight where the conditions for settlement arise. Their leaders are causing a chaos by their methods of organization and delivering the workers' interests piecemeal to the wolves of finance, the coal operators of America.

### Conclusion

We have seen the development of mining, at home and abroad, from small production to superproduction; from hand labor to machine production. Owing to this revolutionary change, thousands of miners will be unable to secure work. We see the unions remain the same while the development of industry undermines their foundations.

As Marx points out: "The modern laborer, instead of rising with the progress of industry, sinks deeper and deeper below the conditions of existence of his own class. He becomes a pauper, and pauperism develops more rapidly than population and wealth. And here it becomes evident that the bourgeoisie (capitalists) is unfit any longer to be the ruling class in society, and to impose its conditions of existence upon society as an overriding law. It is unfit to rule because it is incompetent to assure an existence to its **slave** within his **slavery**, because it cannot help letting him sink into such a state that it has to **feed** him instead of being **fed** by him. Society can no longer live under the bourgeoisie; in other words, its existence is no longer compatible with society."

These facts are now facing you miners. You have carried on many strikes to remedy the effects of this system. Your rights as union men were subjected to the whim of the state during the war, but when you tried to better your condition in this war to exist the corporations used their forces against you.

Sectional strikes have dotted the country; but one state pitted against the other in coal production has always spelled defeat to them. Legalized by the methods of the union, offset by the palliative of "moral" support.

This form of the strike is hopeless and useless. It is like a man trying to pull himself out of a bog by tugging at his own hair.

We found also that union men hauled the coal from the mines that were on strike.

Industrial organization of transportation and mining into one union is necessary to stop this state of affairs.

You have 200,000 more miners than the industry can use. This through the advancement and quickening processes of machine production. They will be thrown out to take their place among the unemployed—no room for the slave within his slavery.

You will condemn the machine. It is not the machine. It is the ownership and control of the industry whereby machinery produces profit for a few and not for the workers, as it should.

Mankind stands at the door of a new era. Your past will not save you.

Unions as now constructed cannot cope with the situation. Instead of fighting for wages, contracts, check-offs, insurance, as static conditions, we must understand they should be only a means to an end to carry on the work of organizing the workers as a class to fight as a class to wrest the industries from the hands of the exploiters.

A revolution has been going on under your very eyes. You did not understand it. Now you realize it. It forces you to wander for the elusive job.

Each industry has developed along side of mining and has acted in the same way: the surplus workers are also forced to join the unemployed.

Each day this army is growing with no chance of diminishing. They are victims through the ignorance of the working class, not understanding the economic laws governing society.

Coal! Coal! Shining Black Diamonds! Your color is slightly red. You are stained with the red blood of the slaves who sought in their quest to earn an existence. In future your color will be jet black, because the machine will be your partner. Human labor will be pushed aside, and the miners will be forced to starve or fight.

The miners thought they could compete with their brawn against the machine, but it was an illusion.

Machinery has enslaved mankind, but it will also be its liberator.

Thirty-six thousand miners in Illinois are on the verge of disinheritance.

Miners, study your condition: learn the correct way to organize. Your future is at stake. The industrial form of organization points out the way.

All workers must organize in one union to offset the tyranny which is surely coming, and stop the injustice created by working against each other.

## INJUNCTION DEFINED

An injunction is law made by a judge; and its penalties are fixed by the same judge; and the offenders are tried before the same judge; and the verdict is rendered by a jury of one man—the same judge; and the sentence is pronounced by the same judge.

An injunction is a law that is found on no statute book.
A law that has never been voted on by any set of legislators.
A law that has never been signed by any governor or president.
A law that exists without the consent of the people.
A law that came into being as the law of one man.

# WOBBLES

## DOWN SOUTH

A negro went into a bank down south to get a check cashed. He stood in line a long time and finally his turn came. Just as he got to the window the teller put up a sign: "The Bank is Busted."

The Negro: "What do you mean, the bank is busted?"

Teller: "Well, it is, that's all; it's busted. Didn't you ever hear of a bank being busted?"

The Negro: "Yes, but I never had one bust right in my face before."

## SLACKER

Foreman—"'Ow is it that that leetle man always carries two planks to your one?"

Laborer—"'Cos 'e's too blinkin' lazy to go back for the other one."

## THE EARLY BIRD

"So you're working for Deacon Klutch now," said one hired man. "'S'pose you're woke up every morning by the roosters crowing?"

"No," replied the other hired man. "I wake the roosters up and start 'em crowing."

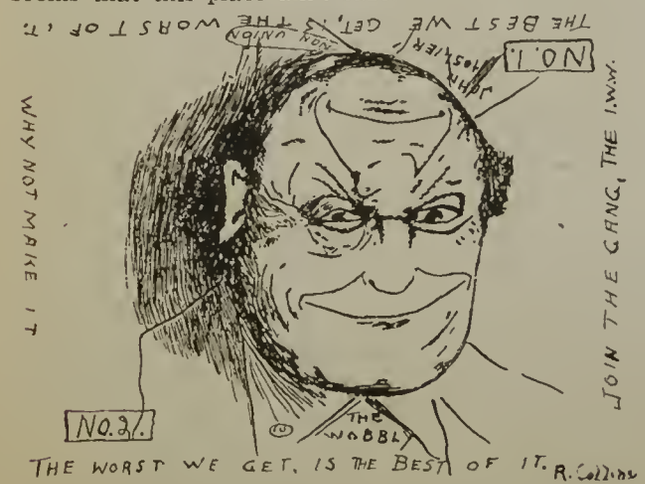
## IN AN UNSAFE PLACE

A carpenter sent to make some repairs on one of the more fashionable sorority houses, entered the place and began work.

"Mary," said the house mother to the maid, "see that my jewel case is locked at once!"

The carpenter understood. He removed his watch and chain from his vest in a significant manner and handed them to his apprentice.

"John," said he, "take these back to the shop! It seems that this place ain't safe."



**The Savior of the Capitalist**

Millionaire (after a hard day's golf): "I'm dead tired tonight."

Wife: "Never mind, dear; perhaps La Follette will abolish golf! He's very radical, you know."

## HOW COULD HE KNOW?

A certain employee in a big manufacturing concern ambled into the office about 9:30 and found the boss infuriated.

"Do you know what time we begin work in this office?" he thundered.

"No, I can't say that I do," replied the tardy one, "but they're always at it when I get here."

## LUXURY

**MISSION STIFF** (to worker just paid off): Brother, kin I have . . .

**WORKER**: Sure; sit down here at the counter. Order what you like.

M. S.: Coffee an'.

.W.: Naw, I'm flush, see? Go ahead, eat a real meal; order up!

M. S.: Oh, thank you, thank you, brother. Uh, two coffee an's!

# New Proof in the Centralia Case

"MURDER will out," and evidently, so will perjury, also the proof of legal frame-ups. There are eight members of the IWW in the state penitentiary of Washington, at Walla Walla. They are serving sentences of twenty-five to forty years, that is, life sentences, for being convicted of murdering Warren O. Grimm, an officer of the American Legion in Centralia, Washington.

Notice we say, "convicted" of murdering, not "guilty" of murdering. The evidence piles up, inexorably, bit by bit, to show that these men are guiltless, that if any of the eight now in prison fired the fatal shots at Warren O. Grimm, they had every moral and legal right to take his life, and are therefore, not guilty of any murder and should be walking about in freedom, at this moment.

STATE OF WASHINGTON }
COUNTY OF LEWIS } ss

I, Clyde DeWitt, residing at 1201 Marion street, Centralia, Washington, was standing on the sidewalk at the northwest corner of the intersection of Second street and Tower avenue in Centralia on the afternoon of November 11, 1919, when the Centralia division of ex-service men in the Armistice Day parade, after marching northward to Third street and x turning back, was marching southward again. Some time during the week before Armistice Day, I remember hearing some boys in the X Logan district of Centralia, where my home is located, talking about a plan to raid the I.W.W. hall.

When the Centralia ex-service men were in front of that hall on their return trip, they stopped. Then a man on horseback who was some distance ahead of them blew a whistle. I saw several soldiers run toward the I.W.W. hall, and saw them pounding against the front of the building. Then I heard a lot of shots and I turned and ran into Second street, so that the Co-operative Store building, near which I had been standing, was now between me and the Centralia soldiers. I crossed Second street, and went behind the Ax Billy confectionery store. Shortly afterward Lieutenant Warren Grimm also came behind the Ax Billy store. He pulled up his shirt and said: "Oh, God, I'm shot!" I saw a wound in his abdomen. Another soldier was with him and caught him as he fell.

I had seen Grimm many times on the streets in Centralia, and knew xim that he was a lawyer and a fine baseball player. I am certain that he was not near the corner of Tower avenue and Second street, where I was standing, at the time when the I.W.W. hall was attacked and when the first shots were fired on Armistice Day.

(Signed) Clyde DeWitt

Subscribed and sworn to before me, a Notary Public for the State of Washington, residing at xxxxxx Chehalis, Washington, this twenty-first day of June, 1924.

O. A. Tucker

Witnessed: Pearl Malin.
G. M. Tucker.

**One of the Three Latest Affidavits**

The latest thing in their favor is a set of three affidavits, secured by the General Defense, from citizens of Centralia. Two brothers, Cecil and Clyde DeWitt were high school boys at the time of the shooting, on Armistice Day, 1919, and they now swear on their solemn oath that they heard the American Legion men planning to raid by force of arms the IWW hall in Centralia on November 11, for the purpose of misusing the members of the Industrial Workers of the World who might be in the hall. These two boys watched the parade of Legionnaires on the date set, and saw them attack the hall. Warren O. Grimm was near the head of the attacking party, and they saw him when shots were fired in self defense by someone inside of the hall.

This evidence is duplicated by another affidavit, sworn to by P. M. Crinion, a retired property owner, who stood not over 150 feet from the hall when the attack took place.

The prosecution which tried to hang these members of the IWW knew all these facts, for Cornier told them to the prosecutor, personally. But the prosecution concealed them from the defense, and from the jury, intimidated the defense witnesses, filled the town with soldiers and intimidated the jury, and brought about a false verdict of guilty. Nine of the jurors admitted before these last affidavits were secured, that the verdict should have been "not guilty" and six of them made affidavit to that effect.

# Gus and Ole

By ADAM NOIR

**EXCITEMENT ran high in the Oleson home. There was much turning and twisting and running about, much high pitched conversation, much joy; for tomorrow would be THE Sunday and everybody was going to the picnic, and it was necessary that everybody and everything be ready when the truck came along.**

**The truck would be furnished by the mill company. In fact, it was the mill company that was giving the picnic—for the pleasure and benefit of its employes and their friends. Of course, each family would have to furnish its own eats, and each individual would have to contribute his share of entertainment, but the company furnished the trucks that would haul them to the grounds, and the grounds belonged to the county in which the mill was located, so, you see, it really was a company picnic after all.**

More than that, the company had donated the money to be distributed in prizes. A dollar for the fat women's race, a dollar for the three-legged race, a dollar for the high jump and a dollar for the broad jump; a dollar for this and a dollar for that, probably ten dollars in all.

Best of all, there would be a competitive tryout to choose members for the company baseball team, the company drill team, and the company rifle team, all of which would compete for the championship of the county with similar teams from other mills at a great inter-mill tournament to be held the first Monday in September—Labor Day.

Thelma, aged fourteen, was almost sure she would win the prize in the girls' race; she won it last year, and had been training for weeks.

Carl and Ivor, aged eleven and eight, had tied themselves together, ankle and knee, and were practicing industriously for the three-legged race.

Mrs. Oleson knew she could not enter for the fat women's race. For, although she had once been rather plump, it was in the old days before she had so many children to care for—before she had to work so hard.

Gus was almost certain to make the rifle team. For he had served as a sharpshooter in France, and already had several medals attesting his skill.

Ole had also served his country overseas and was even a better marksman than Gus, but, somehow, he did not seem to care for such things any more. He had the air of one who had met with great disappointment and disillusionment. He seldom spoke, but when he did it was not comfortable to hear. Not that he was bitter spoken or sarcastic, but his words had a habit of penetrating to the very center of one's consciousness and causing one to think—and thinking is seldom a comfortable occupation.

When Axel, the father, came home to supper, he did not contribute to the general enthusiasm. In fact, he was a sort of wet blanket, gloomy and silent. Notice had, that afternoon, been posted announcing a wage cut to take effect the following Monday.

The superintendent had been kind enough to call the men together and explain to them that wage reduction was made necessary by a falling market and consequent reduction in the price of lumber. He did, however, cheer them up somewhat by saying the mill would operate overtime, two hours a day, and those who worked this time, at the regular price per hour, would actually receive more money than they had before.

Axel was eagerly glad for the few extra cents a day he would receive—for every cent he could scrape together would not begin to pay for the things he longed to provide for his family—but he did not believe he was physically able to stand the gruelling strain of those extra two hours. Since the eight-hour day had come. the pace at which the men worked had grown faster and faster until now it seemed to him he was more fatigued than he had been in the old days when he worked from daylight 'til dark and seldom saw his family except by lamp light.

Gus and Ole had also been notified of the cut and it became the topic of their supper table conversation.

Mrs. Oleson did not like the idea of overtime, for it meant that she must get up earlier in the morning to cook breakfast and be an hour or two later in serving supper, but she quickly calculated the benefits to accrue from the added income and decided that if Axel would take care of his health and would not drink so much home brew beer, (he drank a full pint almost every evening), and would chew less "snus," maybe he could stand it. Anyway, he owed it to his family to work as many hours as possible, health or no health.

Thelma thought her father a perfect brute to even hint at quitting or losing time just when she was entering high school and needed so many new dresses and things. She broke down entirely, and almost spoiled her eyes with weeping.

Carl and Ivor did not, I am afraid, catch very much of the conversation, but they got the idea that their father was planning to do something terrible that would spoil their fun, and they stormed and wept, and said they did not believe Axel was their father anyway, and begged their mother to get a divorce and marry a man that would be good to them.

Gus told Ole, in an aside, that the wage cut would probably not affect them. For the superintendent had privately told him that those who qualified for the baseball, drill and rifle teams would not have their wages reduced, and would not be required to work overtime on practice days.

Said Ole: "Listen, kid. I should think you'd 'ave had enough of that drilling and shooting over in Argonne wood. Don't you know these rifle teams are being organized for no good purpose? Don't you know that the mill companies plan to go on cutting wages and lengthening the hours and speeding up the working pace to the very limit of human endurance, and that when the limit is reached and the slaves begin to growl and grumble, the rifle teams and the baseball teams, and all such, will be expected to become deputy sheriffs or special police or something of the sort and club and shoot the discontented ones back into submission? I ask you, can't you see that?"

"Aw, can the mock heroics," said Gus; "I certainly do not know anything of the kind, and you do not either. You've been listening to those dam'd foreign agitators until you've about lost your mind. Anyway, the cut won't affect you and me if we make the team, and if you're not a bigger fool than I take you for, you'll make a try for it. True enough, you were born in this country, and our parents were born in this country —in Minnesota—but the kind of talk you're handing out shows you're a damn poor American. If you don't like the way we do things over here, why in hell don't you go back to Scandiahoovia?"

Ole did not attend the picnic, and a few days later the superintendent called him into the office and paid him off, saying: "I'm sorry, Ole. But lumber is moving so slow we find it necessary to cut down the crew or we'll soon have the yard piled so full we can't turn around."

"If you can't find sale for your lumber, why is the mill running overtime?" asked Ole.

"You get to hell out of this office and off this company's property, and stay off, or I'll have you arrested." shouted the superintendent.

* * * *

Gus made both the rifle and the drill teams, and soon attained high standing in each. Following the Labor Day tournament, all teams were combined to form what was called The Milltown Guards, and, so great had become his popularity —and his standing with the mill owners—that he was unanimously chosen commander.

Carried on the books of the company as a foreman, at wages much higher than he had ever dreamed of getting, he devoted all his time to organizing and instructing his little army. Never one hour did he put in actually producing or helping to produce lumber, or any other values. He moved in the highest society, and became engaged to the superintendent's daughter. He abandoned his little room at home and took the finest suite in the best hotel in town.

He was not arrogant, however, but a jolly, good fellow with everyone. In a few weeks he became the idol of the town, to be emulated by every schoolboy and pointed to as an example by every parent. Above all, the solid business men never tired of singing the praise of Gus Oleson, and of calling attention to his active loyalty to American principles and high ideals.

* * * *

Ole could not get another job in Milltown and soon drifted away. Wherever he went, he found conditions pretty much the same. Everywhere, wages were being reduced. Everywhere, the longer workday was being re-established in the guise of overtime. But, he found that **not** everywhere were the workers submitting without protest. In many places, unions were being formed. In many places, he heard men speak of actually demanding more wages and shorter hours—even shorter than eight hours.

Ole joined the union, and being without a job much of the time, tried his hand at organization work. He could not make speeches, but he could sell papers and distribute literature. Also, he developed considerable organizing skill. Eventually, he was sent to Milltown to open a hall there and do what he could to educate and organize his old friends and workmates.

His one visit with his folks was not pleasant. Axel had been unable to stand the gaff and lost his job; and was now a prisoner at the county stockade where he was sent under the "Lazy Husband Act" which permitted his wife to draw a certain sum from the state for each day of his incarceration. His mother greeted him as lovingly as her nature would permit, but when she learned that he was connected with "those terrible unionists and agitators" she froze up and said she guessed he had better get a room downtown, "as the neighbors might talk if they see you hanging around here too much."

Thelma would not come in the room while he was there. And Carl and Ivor could talk of nothing but Gus and his soldiers; and state that they were being drilled in the Junior Auxiliary to the Milltown Guards.

He did not meet Gus—and they never did meet until that last day—for although they frequently passed on the streets, Gus always pretended not to see him.

His work among the mill hands prospered nicely. Large numbers were soon coming to the meetings, and a goodly number were taking out membership cards. He thought that by Thanksgiving they might be able to call a strike and force a resumption of the old wage scale and the abolition of compulsory overtime work. But, for Ole, Thanksgiving was never to arrive.

One night, early in November, his mother came to see him and said that on the morrow, when a certain society was to hold high carnival, the parade would march past the union hall; and that when the Milltown Guards, who would march in the rear, came opposite they would stop and wreck the hall and tar and feather its occupants, and run them out of town.

She told him this because, as she said: "You know how Gus is. If he gets started, there's no telling where he'll stop. The town is almost floating in hard cider, and everybody will be more or less drunk. And—I hope you'll go away tonight, and not come back 'til things quiet down."

Ole did not underestimate his danger, and he was not too calloused to respect his mother's feelings, but he felt that his first and greatest duty was to uphold the organization to which he had pledged his life and honor. So, as calmly as possible, he replied:

"Listen, mother. I do indeed know how Gus is, and that there is probably no limit to what he will do if he can. For seven hours, Gus and I lay, side by side, in a shell hole over there and beat off wave after wave of the enemy, until when we were relieved it was not possible to walk in any direction without stepping over or around their dead bodies. Yes, I know Gus, and Gus knows me. Just tell him, if you please, that this union hall is my shell hole. He'll know, then, what to expect."

It is but fair to say that she did kiss him goodbye when they parted.

Morning dawned, quiet and serene. As the day advanced, members dropped in and spoke of a threatened raid. Some of them discussed the advisability of trying to defend the hall. Ole said nothing, but smiled enigmatically and went ahead with his office work.

When the parade came in sight, the hall contained about a dozen persons. Some of them slipped away. A few stayed. None of them were armed. None of them except Ole really believed there would be a raid. He continued to smile and work at his books.

When the parade had passed and was turning to come back, he gave a large envelope to a fellow unionist with the request that it be taken at once to lawyer Simms. The envelope contained Ole's last report to headquarters, filled out in due form to the last detail—and to the last minute.

The head of the parade was now re-passing the hall. Ole closed and locked the door. Turning to the few who were present, he said, "Boys, if any of you want to leave, better go out the back way. It's going to be pretty hot here in a few minutes." Then, moving to a center table, he spread out upon it an automatic pistol and twenty or thirty extra cartridges, and sat down facing the street.

The Milltown Guards came opposite. Gus rode at their head on a prancing horse. He blew a whistle and his company right-faced and marked time. A second blast caused them to crouch like runners on the starting line. With the third, piercing note, they sprang forward and, in a moment, crashed against the door.

The splintered door flew from its hinges and fell inward, a half dozen raiders falling on top of it. Ole commenced firing.

The storm of bullets was too much for them and they broke, several staggering, stumbling, falling and dying on the streets, blocks away.

Gus saw the break and sprang from his horse to rally his men and lead them in person. As his foot touched the sidewalk, a bullet sped through the doorway and caught him square in the mouth. His head went back, his arms went up, and he sank to the ground, to rise no more.

Ole, his pistol jammed and useless, seized a chair and laid about him so effectively that more than a dozen went down under his blows before he was overpowered.

* * * *

Well, they hung him to the bridge that night. Hung him and shot him full of holes. And everybody said his fate was none too severe for one who had killed his own brother. "And Gus was such a clean, wholesome, upstanding young American, too."

## MOVING MOUNTAINS FOR MOLEHILL WAGES

(Continued from page 5)

dends paid by mining companies in Utah in 1923 will amount to more than $10,000,000 exclusive of $1,702,224 paid by the United States Smelting, Refining and Mining Company, which controls mines at Eureka and Bingham as well as mines in other states."

There is an indication as to where the wealth produced by this "battering in perpetual night at the treasure vaults of the centuries"—most largely goes to—to further enrich already rich stockholders.

A few facts and figures from one of the big metal mining centers will make more evident the truth of these assertions.

Reference has already been made to Utah. This is a notorious low-wages and non-union state.

Take Bingham Canyon, for example. This camp has been producing ore on a big scale for the past fifty years. There had never been a change-room at any of these mines here until the IWW came in last year and called a strike which lasted only six days, and won practically all demands. There is a modern change room now, at each of the mines.

But wages are still low, when one stops to consider the high cost of living. Wages run from $3.10 up, mostly not up. Room and board costs at least $40 per month, so you can see what there is left, even if a man works steadily.

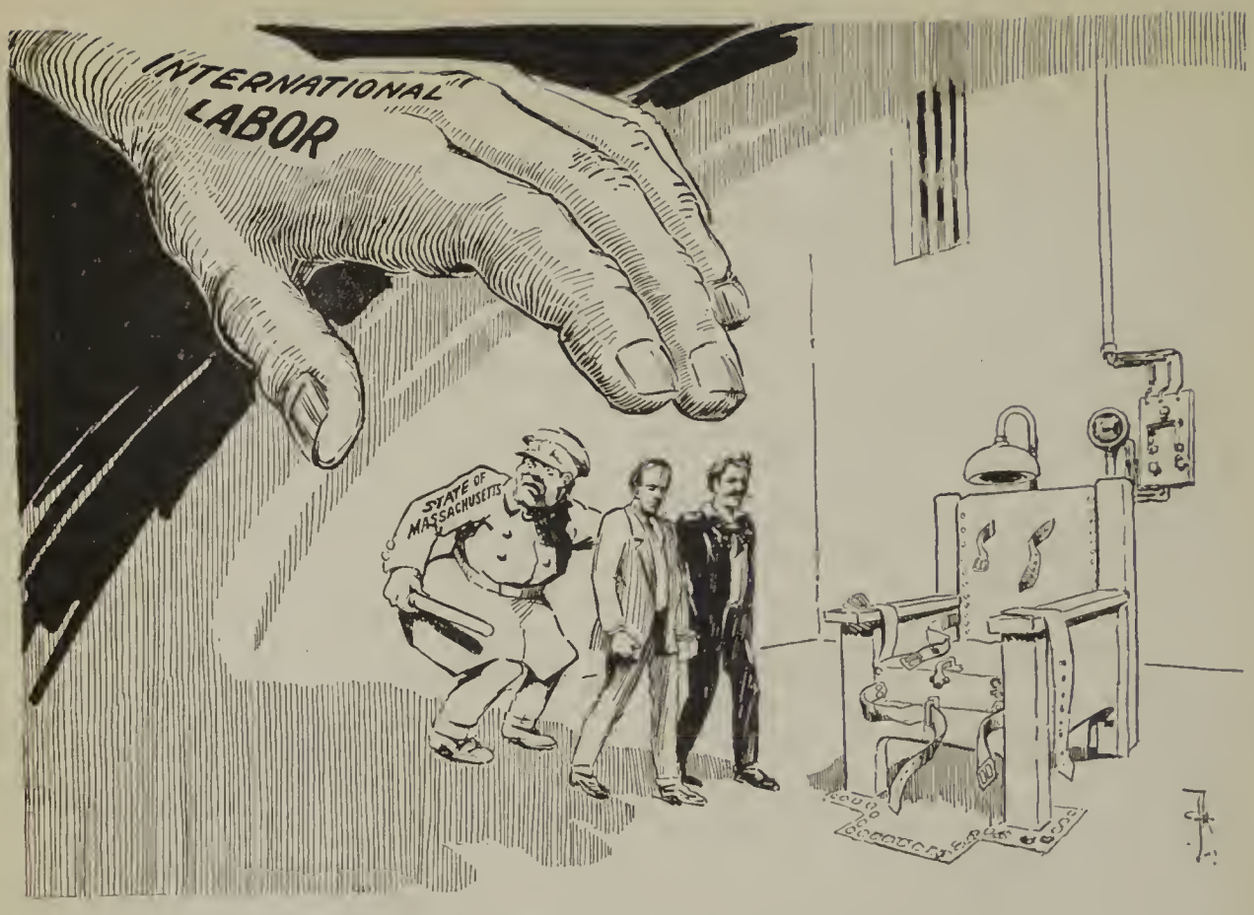
# Coney Island

By MIRIAM TEICHNER

I have seen the people at play, and my heart cries out in sorrow.
It is meet that a child should have toys, and there must be play for the people.
But the toys of a child—are they good when they leave it a-fevered with playing?
Are they good when their paint is a poison that crimsons his lips and his fingers?

I have seen the people at play, and their playing is not as it should be.
It is play that is fevered and wild. Their laughter is pitched nigh to madness.
And the look in the eyes of the men and the lure in the eyes of the maidens
Is tainted and painted, and not as it should be, with joy in the playing.

I have seen the people at play. The hot yellow lights scarred the heavens,
And turned them a strange sickly hue. The sky and the sea were so peaceful,
So purely and splendidly blue. And there came a shy small moon-maiden
And tiptoed her path through the zenith, but none spared a moment to greet her.



**Sacco and Vanzetti Have Not Been Executed—Yet**

# Events and Victims

(Continued from page 4)

the warring nations suddenly espouse the causes of those fatherlands whence they have gladly fled in search of bread and of a new life. Those from the neutral countries are extolling to the stars their birthland's governments which know how to spare their peoples the scourge and the horror of this insane war.

Each of the two fighting groups is dead sure of being in the right, of having been attacked first, of being entitled to victory which will bring great advantages; while the neutrals laugh at both sides and look down from a superior height with benign compassion upon them, posing as supermen who know all things.

These disinherited of the many fatherlands in whom the forced exodus from their native place has frozen the very tears in their hearts, to whom everything was denied from bread to education, whence are they drawing their antagonistic opinions, their false information, their thousand errors, their equivocal reasonings, their unjustified indignation and foolish hopes, their passions, hatreds and grotesque vainglory?

Alas, it is just because I believe myself to have a little knowledge of some of the sources of this evil, that I am classed as a rebel and an innovator, and have the time to tell you, my reader, these reminiscences of mine. Instead of an interrogation to myself, the above question was rather a statement of facts brought to my mind by the logical train of thought on war matters. But just at this point, as I glanced through the train, I saw the glaring headlines on the newspapers which everyone was devouring.

There was my answer, in part at least—the Press! Yes, from the press which calls itself Italian, New Liberian, German, Spanish, English, French. The inciting scribblers, prostituting their intelligence for the gold of those who desire war, keep their pens busy concealing and perverting the truth, safely hiding their infamy behind the excited ignorance of the masses, which makes every lie possible.

The helots of the earth are going mad. The newspapers are rapidly increasing their circulation. The shrewd pile up fortunes. How wonderful is war! All are posing as generals, strategists, economists, statesmen, and, oh, the gorgeously colored, great ideas they are thundering forth!

But the comedy gives place to tragedy; ties of

friendship and affection are severed; daggers are sharpened and revolvers fondled. Thus the beautiful, the holy war becomes another cause of dissension, hatred and competition into which, by pressure or social conditions and their own ignorance, the workers are driven.

But in the New Liberians the war excites only contempt and execration. To them the peoples across the ocean, cutting each other's throats, destroying towns, fields, forests, roads and bridges, are but stupid people of inferior minds, without ideals, hordes of barbarians, blind and docile tools in the hands of greedy kings, who use them ruthlessly to further their designs of conquest and domination by violence, fraud and robbery.

"No," they cry, "we will never join in such a barbarous game. We, free citizens of this republic, we elected as our president a man who has promised to keep us out of the war.

It is true! Now the nation is galvanized by pride. From his seat the President of New Liberia has proclaimed: "The New Liberians are too civilized to fight and to entrust to arms the defense of their rights. New Liberia will never take part in the war."

Marat was right when he said: "It is necessary to praise the people; it is necessary to intoxicate it by a vain exaltation of itself in order to more easily and better deceive it."

* * *

During this period New Liberia is rapidly overcoming the economic crisis which has afflicted her for several years. As if by magic old industries acquire new vigor, new ones are established and thrive, unemployment is disappearing, the labor demand is becoming urgent, wages are rising . . . . but still more are prices and profits.

Who is performing this miracle? Whence this unexpected blessing?

The war has performed the miracle. The blessing comes straight from terror-stricken cities, from the smoking ruins of villages, from devastated fields, from cold deserted hearths, from the oaths of the slayers and the curses and groans of the dying young soldiers, from rivers of blood and heaps of rotting corpses.

**And here, in New Liberia, without remorse or sorrow, they are gladly taking advantage of the opportunity and feeding and equipping the war. By making the war possible they are reaping undreamed-of profits and colossal fortunes.**

* * *

A vigorous jolt of the train coming to a standstill tore me from my meditation.

"We are in Greenland," sighed Johnny, starting for the door. On my way to the factory I looked about me. It was a wonderful morning, the air bracing and clear as crystal. Under the bright rays of the morning sun each object stood out clean-cut and vivid, and the wild Nordic panorama of the place appeared in a glory of light.

The railroad station, all red save the black roof steaming with the damp of the past night, looked like the summit of a mountain; the rails glittered like a busy plough-share curving and disappearing into the forest; forest to the right, forest to the left. Further on the windows of some houses were aflame with the reflection of the morning sun glancing through the naked tree-trunks and branches; and high above all, amid a strangely alive black and grey multitude of trees, loomed upon a distant hill a wooden belfry topped by a cross gleaming in the sunlight and dominating over all.

This village is one of the very many industrial, feudal, tenures, scattered amid the forests along the river banks and coasts of New Liberia. It bears the name of the overlord who owns by law the two churches, the two factories and almost all the houses and the soil itself. I leave it to your imagination, my reader, what may belong to such an overlord by arbitrament or even by desire—if, from your knowledge of the ancient feudalism of the old nobility in the name of God, you can deduce the possibility of this actual feudalism of the present-day bourgeoisie in the name of the law.

When we reached the main entry John pushed the door open, and quickly closed it behind us as I crossed the threshold. What a difference from outside! I felt an instinctive impulse to flee—to return to the sunshine and life-giving air, blessed and pure. But I resisted, and followed John who, after a few steps, stopped in front of the superintendent's office and said: "I am going to work; you wait here, and when Mr. D— comes in, ask him for a job."

I waited, and while waiting I examined my surroundings. Inside the entry there was a hall about thirty-six feet long, and about half as high as the building. A door and a window opened on the left wall—both looking into the superintendent's office. The right wall was blind. The long hall led into a great room with small windows, and in it was a crane on wheels running from one end to the other.

This was the factory.

Barrels and demijohns reinforced by wooden frames were piled here and there. At the rear, the floor was coated with cement. Here stood two huge wooden tanks about fifteen feet high with platforms and iron railings round them. Wooden steps led to the platforms. The enormous covers of the tanks were kept suspended over them by fixed cranes. Metal pipes of various dimensions were to be seen all around. A very long rubber hose lay along the floor.

Human figures covered with dirt and wearing high wet boots and rubber gloves were moving round the tanks.

While I was observing intently, Mr. D— entered his office. Presently he came out and looked at me inquiringly.

"Have you any work for a laborer?" I asked.

"'I need men for the tanks. I pay them ten cents an hour more than the other laborers."

"I don't want to work at the tanks."

He started to go, then stopped, made a half turn, glanced at his watch, and said: 'Go to work with the laborers."

* * *

The old wooden floor had to be replaced by a new one of concrete; raw materials and new machinery had to be unloaded, manufactured goods and empty vessels had to be shipped. All of which was entrusted to the laborers. The timber from the old floor, which was still usable, had to be removed and piled up beyond the factory, while that which was useless had to be taken to a little creek in the woods nearby where the drainage water flowed in a lazy stream which every few steps made a little pool and then resumed its feeble journey.

I soon realized that if the other factory was, in John's words, "a veritable hell," this was the extreme limit of purgatory.

There was not a mouse in the factory, not an insect in the woods and waters nearby. Even the birds kept far away from it and circled it in their flight as a ship steers round a danger spot, or soared high above it. The vegetation all around was dead or withering.

It is civilization, it is prosperity—which Johnny says "makes the paupers live"—that projects poisons into the air and water, driving out everything that is not artificial. But can man—man who is the most sensitive and delicate of creatures —thrive and rise where the very birds, mice, insects and plants are unable to exist?

* * *

The foreman was a New Liberian of gigantic stature. He had the simple mentality, the habits, the manners of a man born and raised in a village. Unfit as he evidently was for the surroundings of a modern industrial plant which grinds and subordinates everything to profit—he must have got his position through "pull." He was slow, inexperienced, incapable of harassing the workers, and good at heart. We treated him well and tried to make up for his inexperience by our industry. He was amused and laughed at the many ingenious devices with which the experienced worker multiplies his physical strength and motions, and, watching our calculations of time and motion, he wondered how we laborers had learned in the practical school of life those elementary principles of physics and mechanics which we had not had time and opportunity to learn in schools of learning.

Working and Stifling

And yet sometimes the luminous eyes of this simple giant became cold when observing us. He had heard so many wild tales, so many horrible stories, about these "foreigners," who smiled at him and with whom he had come in contact for the first time. He hardly understood himself his vague feeling of distrust; something beyond his own power to analyze, something intangible, instilled into him a sort of fear, a repugnance, a hatred which strangely intermingled with his lack of mental strength to understand. At moments it seemed that they might be good men, then again, because he had not always known them, he thought it must be impossible that they should be good; and yet he could not point out even to himself in what way they were bad. They were "foreigners," that was enough; that was the answer.

At about two o'clock in the afternoon a thick greenish fume began to rise from the tanks, rising to the ceiling and then floating down again in a cloud-like mass. From this and from the tanks themselves emanated an irritating odor of sulphuric acid gas, stifling and choking the workers and burning their eyes. Soon tears were streaming from my smarting eyes, and I asked the man next to me if they were manufacturing dyes or asphyxiating gases.

Coughing violently, and with his eyes closed, he answered: "Wait, and you will find out."

I did not have to wait long. A layer of fumes rose and covered the whole of the ceiling of the factory, then gradually descended to meet a new cloud rising from the tank. The cloud grew thicker and thicker. The thicker it got and the nearer it came, the greater was our suffering. There were convulsive coughs on every side, the tears poured from our eyes, and finally we were all coughing and crying. The men at the tanks quit their work and hurried away, followed by the carpenters working near them. Handing over our shovels, we stopped work also, as it was impossible to keep our eyes open. The windows were flung open, but without result—we got no relief; our suffering became unbearable, the fumes choked us and burned our eyes until we were frantic. Coughing, weeping, blinded, gasping, groping, we went back to the door. Here we stopped, hesitating, until a puff of the pestiferous exhalation almost overcame us. At last we threw open the door and rushed into the open.

* * * *

Now that the "men of the tanks" were near to me, I had a chance to observe them. I scrutinized each one, I tried to understand them. It was not

so difficult to understand their thoughts and emotions at that moment. They were New Liberian farmers who had quit the soil for the factory, yielding to the spell exercised by the fascination of the town upon their native mentality, urged by the occult social factors which they unconsciously obeyed. Under the sincere sunlight they looked more haggard than they appeared in the factory. Pale, emaciated, dirty—a pitiful lot! And yet, upon their countenances were deep lines of strong determination and great hopes. These sentiments were written all over them, even in their gestures. That in their minds were whirlingly dancing fascinating dreams of glories and great fortunes was as evident as the poisoning of their cells that caused their ghastly appearance.

They were repeating to themselves: "Thus, even as we, and maybe still lower, many men have begun whose fame and wealth the world is now bowing down to. Ah, yes, it takes hard work, strength of will, perseverance, self-denial, the spirit of sacrifice, to become rich and powerful."

Knowing that we had refused to work at the tanks, and were satisfied with our lower wages, and, worse, satisfied to wield the shovel which they already cordially despised, it was plain that they held us in contempt as "cowards." They did not say so, they kept silent, but let it be understood by that very silence, the very air seemed to echo: "Cowards, you will always be miserable."

"Yes, it is true," my thoughts answered their looks, "we shall always be miserable, indeed, always more miserable, as long as we do not know how to free ourselves and find the impetus, the courage and the strength to conquer and master our own destiny. But in a premature grave you, poor cheated fools, will witness the wreckage of your absurd hopes and false faith, while physical weakness, multiplied vices, false sentiments and oppression will be the only heritage that fate, shaped by your own folly and that of others, reserves to your children."

What perversion! How far they have strayed in so short a time!

Who ignores what happened in the latter part of the 18th century when the great industries at their inception called for service which no one was willing to give? Who ignores the violences which, after vain promises and allurements proved fruitless, were used to drive the peasantry from the country to the city, to compel them to leave the loved furrows and give the strength of their arms to the new machinery? To become twice slaves—slaves of the masters and slaves of the new machines! Who ignores the intervention of the law which first deprived them of their fields by the abolition of the communal lands, then condemned to the gallows the rebellious peasants it had forced into vagabondage; and the bloody rebellions of these same peasants, bloody with their own blood alone?

And yet these ancient peasants showed a heroic

**Slaves of the Master and of the Machine**

resistance. Because they loved their fields, their independence, the northeast wind as well as the dog-days, and under the blazing sun and the lash of the elements had grown sane and normal, exuberant with life, they instinctively felt and clearly thought that in the cities and factories people lost health both of body and soul.

Finally having been deprived of their lands, compelled to a vagrancy punishable by the gallows, they submitted and went to the cities, to the factories—to physical and moral aberrations.

But ever since those days a great dream of redemption, token of a radiant future, has flourished in the spirits of the vanquished. And only by the realization of that dream which will abrogate every unjust mortgage upon the rights and the value of life, do the vanquished expect to attain that place assigned by nature to every man born of woman at the banquet of life.

But now, and here, these arch-conceited villeins, docile descendants of brave and rebellious grandparents, are abandoning their own fields, liberty and health, to run to the factory, in a mad attempt to attain wealth. Why?

* * * *

A man appeared at the gate to tell us that we might return to our work. We silently obeyed. Each one resumed his task.

* * * *

It is customary for every experienced laborer, when new on a job, to imitate the methods, habits, and conduct of the older workers. This is the only way to avoid being abused by the foreman, to preserve the rights acquired in the conflicts between masters and slaves, and also to escape the bitter rebukes of the other workers.

The next morning, following the rule, I observed and did whatever the other workers did. Thus imitating them I was given a pair of new gloves, and was much surprised to see the men seizing their shovels and cleaning them with great care. They scrubbed and scraped the handles as hard as they could, using a scraper that they afterwards threw away. Wondering at this, I asked the reason for such unusual cleanliness.

"Do you see this greenish layer of dust on the shovel? It is poison. This is a dangerous busi-

ness; watch out, take care. Get new gloves every morning; clean your shovel thoroughly; clean your hands carefully before touching anything you eat. At the slightest scratch run to the drugstore. You see, we are working among the most dangerous poisons all the time. Remember, and do as I tell you as long as you work here."

I thanked him.

* * * *

Several weeks passed without accident except the daily exhalation of sulphuric acid and a few comic episodes arising from the obstinacy of the laborers concerning the work about the tanks. One morning we noticed several pipes turned and others broken to pieces around the tanks, and the traces of an abundant use of water. A strange silence reigned in the factory. What had happened during the night work? A calamity? Had that water been used to cleanse the floor of human blood? I shall never know.

A few days afterward something happened, which, though apparently insignificant, was soon to cut off an exuberant young life, to whom the future was smiling with the fascination of a thousand illusions.

To explain this happening, I must go back a little. From the first day of my arrival, my attention had been attracted by the queer ways of one of the men. He was a handsome youth of about twenty-seven years, of rather short stature, but broad shouldered, strong and agile. His dress was something between that of a clerk and a laborer. He spoke to no one. He moved quickly, often passing his hands through his thick hair when it hung down his face, and if his hands were occupied, he would toss it back from his forehead with a beautiful, energetic movement of his head.

For several days I tried to find out what his regular trade was, but without success. I saw him move about, stopping here and there to wield furiously the pick, shovel or hammer—strike a great blow to the right, another to the left, then drop the tool as if it were burning his hands.

He handled all kinds of tools in succession, changing places and working with surprising restlessness. An old laborer easily recognized the symptoms. Alfred—this was his name—was a job hunter, morally faithless. As with all adventurers, he was trusting to dishonesty, legal or otherwise, to get the leisure, the comforts and the satisfactions which the honest worker cannot afford. Not sufficiently ignorant to share with the simple-minded folk the childish hope of an equitable reward for labor; not sufficiently educated to be familiar with the natural law of compensation; unwilling to work and without an independent income, he could only depend on evil, which he did. He thought he saw a chance to "rise," to "get ahead." The time and the place were propitious.

He was sure that Germany would be utterly defeated and that New Liberia would inherit leadership in the production of chemicals. If anyone had told him that within a few years the New Liberian barons of the new industry would have to engage lobbyists and politicians to obtain protective tariffs and laws in order to withstand the competition of German products, Alfred would have thought him crazy.

"Here it is possible to get a good position," he was thinking. It was sufficient for him to show that he had no scruples, nor weak or human respect for the less fit than he, in order to prove that he knew how to use authority and command. At last he was wearing his first laurels!

The first laurels . . . ! He had succeeded in supplanting the old foreman, who thus became a plain laborer!

But this man, so harshly treated, knew how to conceal his internal suffering. Only a slight paleness, an unnatural brightness of his blue eyes that gradually grew colder, and a repressed tremor that shook his huge body—the most cruel form of weeping—whispered of the battle within.

The sorrow and shame of a man who had in himself the sincerity and virtue of an era which is disappearing awaken our pity. That evening, in his home, the giant wept like a child, and with him wept his old aunt, a spinster who had been a mother to him.

That same evening Alfred was kissed by his young wife as the brave and victorious are rewarded—he was fighting and winning his way upward.

And we realized that we had lost out in the change.

* * * *

The next morning Alfred arrived at the factory confident and happy, this time in command. Also the blue-eyed giant had arrived, but to be commanded, to take orders, to obey. And to be commanded for the first time, at his age! To be commanded, he, with white hair, whose ancestors had fought for the glory and independence of the fatherland, commanded by a despised intruder from across the border. This was too much for a man who sincerely believed himself to belong to the elect, the people pre-elected by God and nature; to a race for whose benefit and service the semi-human rabble, the nameless, graceless hordes driven by hunger, misfortune and ignorance to the sacred shore of his native land, had been created.

Sleepless and sorrowful he had passed the night, recalling, understanding and realizing all the perfidy and trickery by which Alfred had supplanted him, feeling ridiculed, humiliated, offended. A mortal hatred seized him. He tried in vain to hide his anguish under the cloak of an external calm. We saw him turn pale as he picked up his shovel to start with us to heavy labor.

Alfred was determined to show his superiority over his predecessor by trying from the first hour to make us work harder than before. He had laid his plan of procedure.

That day cement was being prepared for the new

floor. The new boss seized a tub of water and began to pour it into the material as fast as he could, knowing that the material must be mixed as fast as the water is poured. By setting a fast pace he intended to force us to do likewise.

Laughing at the way he not only soaked the men around him, but also himself, we exchanged knowing looks.

The days had passed when a tremendous labor crisis rendered the "meat work," the most despised, turned the workers from their huts, deprived them of their daily bread, forced them to prostitution, espionage, crime and suicide. The beautiful, the holy war, had relegated all that to the memories of the accursed past. We exchanged knowing—planning looks. We were not afraid of losing our poor jobs. Were we not sought after, respected, appreciaated, petted and flattered? Did we not seem to live among different people in a different world? The rabble had not forgotten the insults, the ineradicable sufferings, and everywhere it took advantage of the favorable opportunity and revenged itself by returning worse for evil to the slave-driving foremen, and by doing slow, careless work in place of the former bestial toil.

"It is very undignified—in fact, dishonorable," someone, strong in morals, may observe.

Undignified—true, but not dishonorable. Can the slaves be blamed if they have been defrauded of common sense and dignity? Of the "natural sense" as Marat used to say? And if they had not been thus defrauded, would they be slaves at all?

To one who warned them that a historical tragedy had been started and not a carnival; that by working they were making themselves the accomplices of the masters and tyrants; that no one would be spared; that darker and more ferocious would be unemployment, hunger, shame and desperation—the slaves replied that the war will disclose to the lucky survivors (among whom, of course, each was sure he would be) an earthly paradise. And to one who insisted upon teaching them, they replied: "Is it possible that you, a ragamuffin like ourselves, presume to think that you know more and better than the storekeeper, the barber, the journalists, the preachers, the kings and their ministers, and the President himself?"

But to return to facts—slaves are so accustomed to toil that they worked even harder than the interest of the owners and the Society for the Prevention of Cruelty to Animals would have allowed horses to work. Never before in history was the sweat of slaves more vain for themselves, more productive to the slave-drivers.

Well, reader, I have gone a little off the beaten path, but the conditions and reasons exposed in this digression, are just the conditions and reasons which brought about our agreement to play a practical joke on our new foreman, and to escape punishment.

Instead of keeping up with Alfred's speed, we did just the opposite and began to mix the material very slowly, so that Alfred soon saw that he had poured in too much water. Then he ordered us to add more cement and sand, and we purposely added too much, and more water was required, and the joke would have continued if Alfred, understanding the ill feeling, had not gone away followed by our jeers of derision.

He had certainly made a bad start, but scorn was not sufficient to cure him. Alfred was not bad at heart, it was simply that he had to "get ahead" and make his career by tormenting, or seeming to torment, his underlings. He thought that the way to succeed was the show of authority. It made him feel big and powerful, and he thought it would make him look as he felt. He proudly looked upon his recent promotion as the first step toward success. Young, sufficiently educated, he anticipated a far better position than his present one, if, of course, he knew how to play his present role. His duty, he believed, was to behave as he had done that morning. He had a lovely young wife who made him very happy, and their baby, beautiful as love, was just blessing them with its first smiles.

For this woman's sake, for the sake of their child, Alfred was unjust to his fellow men. Worse than wicked, he was unconscious of the urge which compelled him to seek the happiness of his beloved ones at the expense of other men's happiness.

Whose the fault, if not that of present-day society based on competition and antagonism which compelled him to play the role of either wolf or lamb, as all others must be either wolves or lambs?

* * * *

During the weeks following the day of his promotion some of the men contracted the dreadful infection of which I had been so carefully warned by my fellow worker.

It began with small white blisters between the fingers and the toes, and the skin began to break out in an eruption which spread gradually to the forearms, the armpits, the breast, and finally invaded the whole body, causing swelling and an almost intolerable constant itching. Some were so seriously affected that they had to undergo medical treatment for several months. However, in spite of this fact the number of laborers increased because the winter season was driving them, as it had driven me, from their regular work. They were glad to get any kind of work rather than remain idle through the winter.

Production was being increased, and more raw materials and new machinery were necessary, so that, in order to accomplish many different operations at the same time, the men were sometimes divided into gangs. In such emergencies one of the gangs was entrusted to the ex-foreman, whom,

to tell the truth, the superior offieer never eompelled to work with us; on the eontrary under one pretext and another they tried to keep him away from us. But he was so outraged and offended that he disdained their efforts and kept with us for sheer hostility.

Sometimes we were detailed to work outside the faetory, away from the direct surveillance of the head offieer. Then Alfred would reveal himself. He would ehange his manners and seem to say: "I am not as bad as you believe me; this is the world we live in and that is the role I must play; that is all there is to it." And he would pass a paekage of eigarettes around.

* * * *

More than a month after his promotion, Alfred one fine morning in January left the superintendent's offiee, and with a determined expression and rapid step came to us who were mixing cement. He picked out some of us and ordered us to follow him. We went out and walked toward a freight ear near whieh a Slav driver was waiting, holding the reins of two horses hitched to a wagon.

The eompany's private track reached almost to the gate of the factory, but many years of disuse had made it almost unfit for use, therefore the freight ears had to be stopped at some distance from the faetory. This freight ear was loaded with maehinery parts which were to be taken to the faetory. Alfred's face, voiee, words, gestures, everything about him showed plainly that he was over excited, dominated by a fixed idea to the point of obsession.

Why? It was very simple to understand. When ordering him to do that work the superintendent had taken out his watch to look at the time. Most likely he did it automatieally, through foree of habit, but Alfred gave to the possibly uneonscious gesture a wholly different interpretation, and was terribly agitated.

In little things as in big the slaves are as a rule, and rightly so, hostile to their master and his eommands. But there are eases in whieh, owing to either colleetive aberrations or personal unexpressed interests—or things held to be so—they surpass in their zeal the most optimistie expeetations of those in command.

Sueh was our ease.

Alfred took hold of a hand truek with such wholehearted earnestness that we believed he had determined to get one wagon load to the factory before noon, and we helped him willingly. Before twelve o'eloek one wagon load was not only in the factory, but unloaded. At one the whistle found us at the freight ear ready to begin work again.

There were just about two more loads left in the car, as the most stupid of laborers would have easily seen, and we had four hours ahead of us in which to finish the job. It eould have easily been done in three hours, and, after all, the objeet was to empty it that day to save the demurrage. Obsessed by the desire to show off, to prove his ability to turn out work, Alfred seemed to be possessed by a devil. Instead of attending to their work, the men were compelled to watch out for the safety of their feet and legs, whieh were eonstantly endangered by Alfred's frantie efforts.

John and I went to the opposite end of the ear to take down a heavy steel beam. Suddenly Alfred ordered us to stop work, though the wagon was little more than half full, leaving more material in the ear than eould be taken in one load and not nearly enough for two. But Alfred did not reason, he ordered us to start for the faetory. Thirty minutes later we were baek in the car.

"All hands here," he commanded as he plaeed a hand truek beside a very heavy bloek. With an "all together" effort of muscle and will the bloek was hoisted upon the wagon. Another still heavier bloek was plaeed beside the first. On top of these a steel axle was placed, and in the spaces between some lighter pieces. Evidently Alfred had determined to empty the ear with this single trip of the wagon, but seeing at last the absurdity of the idea he ehanged his plan, and in order to make us for-

**The Ancient Struggle: To Be Free**

get his harshness and stupidity, took out a package of cigarettes and passed it around.

The New Liberian giant turned his back, refusing the offer with a disdainful growl. The rest of us smoked and laughed at Alfred's foolishness. There were only a few pieces of metal left in the car and the wagon was overloaded.

Alfred threw away the stub of his cigarette, got on the wagon and ordered us to follow him. Seeing that I remained in the freight car he asked me if I was afraid to get on the wagon.

"Certainly I am," I answered; "the wagon is overloaded."

He smiled and gave orders to start. John and I feared for those who were on the wagon, and we followed on foot a short distance behind. The wagon wheels creaked and groaned ominously on over the road which had been made rough and uneven by the sudden frost which had followed several warm days of rain.

When the wagon reached the level of the northeast corner of the factory and was turning toward the gate, the laborers, judging it safer, jumped off. At the gate the driver made the horses turn so that he could back them into the factory. This for good reasons, the first being to avoid the risk of the horses being frightened or hurt by the pieces of machinery picked up by the cranes passing over their heads, and secondly on account of the narrowness of the place.

The Slav driver maneuvered with such admirable skill that the wagon was soon in the desired position. The ex-foreman had jumped off with the others. Only Alfred remained on the wagon so that he would be ready the moment the crane got in position to start to unload.

The driver backed his horses and the wagon into the gateway, but in so doing he bumped against one of the walls. The space was very narrow, and it was extremely difficult to handle the horses. Three times he urged the horses forward, and as many times backed them, without succeeding in crossing the hall.

Both driver and horses grew more and more nervous. Alfred was on the wagon, his eyes fixed on the crane. No one was paying any attention to him. As nothing had happened coming along on the rough road, there seemed no reason to fear an accident on a smooth, concrete pavement.

The driver again got his horses in the right position and in a voice of thunder shouted to them to start, but the team had been badly trained and made a jump forward, which shook the wagon dangerously.

At a still more imperative shout from the driver, the team bounded forward, causing the wagon wheels to strike violently against the threshold, which was slightly raised above the pavement, that the bolts securing the body broke and the loaded frame started to slide off.

Alfred turned pale, but with admirable presence of mind and agility got on his feet and slid backward onto the floor unhurt. He tried to get out of the way of the falling load, but in stepping back he hit his shoulder against the big chain of the crane. The poor fellow, in his fear and excitement, did not realize the nature of the obstacle, for instead of pushing it aside and going ahead, he stopped, stared in terror at the falling load, and then jumped against the wall, shoving his shoulder against it as though he would push it out of the way. But evidently he did not feel safe, for he made another convulsive movement, hit his foot against a shovel standing against the wall, stumbled, and fell on his back near the truck.

Then he tried to master his terror. A fatal victory. If he had continued to be terror-stricken, he might have intuitively rolled over and escaped danger. But the effort he made to control his mental faculties had paralyzed his body, and for an instant, while the enormous load of steel was about to fall, he remained motionless, conscious of his imminent and horrible doom. Without a movement of his white face his eyes grew serene and turned upward.

Speechless, nailed to the ground by horror and impotence, following his every move, I longed to cry out to him to roll over, but my throat would not emit a sound.

A dull, heavy noise made the ground tremble. The noise was followed by a tremendous metallic vibration as from an impact of iron against iron, then a moment of deathlike silence, broken by an indescribable scream of pain and despair. Alfred was supine on the floor, the three heavy steel beams across his legs, crushing his thighs and groin.

His legs were broken, but it must have been the excruciating pain in his groin and thigh that made Alfred scream and scream again.

The New Liberian carpenters working near to whom I called with all my might and who must have heard Alfred's screams, thinking the victim was only a "foreign laborer" kept on hammering and made no move.

My fellow laborers who had witnessed the accident seemed as powerless as I. At last I was able to rush to the poor lad and, seizing hold of the beam across his groin, I strained with all my strength, but in vain. Screaming entreaties to my fellow laborers until they awakened to action, we tugged and lifted and at last the heavy beams were removed from Alfred's tortured limbs, and then, gently, tenderly, we carried him from the tangle of machinery.

While he was imprisoned beneath the beams scream after scream, incoherent, obscene oaths and blasphemies had leaped from his pain-wracked lips. But now they ceased. A great change came over his face. The lines of almost unendurable pain were erased as if by magic. His eyes cleared and it seemed as though he could in his dying moments understand those things which all his life had been

sealed mysteries to him. In pain he was at peace.

Certainly I had no hatred for this man now, though a few minutes before the aecident I could have hated him as mueh as I despised him. If he brought us a great deal of trouble, he brought more to himself.

Superior to the torture of his flesh, the torture of his soul rendered him silent. The approaeh of death seemed to reveal all that Alfred might have been. A dignity worthy of man, a serenity of face, a poise of soul, all seemed to be expressed in those last moments, before the virility of those eyes should be gone forever.

* * * *

The next day, commenting on the aeeident, every laborer was of the opinion that it was much better that Alfred should thus have eaused his own death before he had eaused some real worker or workers to be killed, as would inevitably have been the ease, for "this is the world, and that is Alfred's role."

And I, by a vast association of ideas and eomparisons, saw in Alfred not only the victim but the symbol of mankind. Mankind striving, like Alfred, to overload the wagon of life with faults and absurdities, and reducing itself in the end to the same eondition as Alfred, bruised and broken, perishing with an obseene phrase upon lips made livid by approaching death.

Because there is no other way out: Either renew or perish.

THE END

# The Illusion of War

By RICHARD LE GALLIENNE

WAR I abhor, and yet how sweet
The sound along the marehing street
Of drum and fife, and I forget
Wet eyes of widows, and forget
Broken old mothers, and the whole
Dark butehery without a soul.

Without a soul, save this bright drink
Of heady musie, sweet as hell;
And even my peace abiding feet
Go marching with the marehing street.
For yonder, yonder goes the fife
And what care I for human life?

The tears fill my astonished eyes
And full my heart is like to break
And yet 'tis all embannered lies,
A dream those little drummers make.

O it is wickedness to elothe
Yon hideous, grinning thing that stalks,
Hidden in music, like a queen,
That in a garden of glory walks,
Till good men love the thing they loathe.

Art, thou hast many infamies,
But not an infamy like this—
Oh, snap the fife and still the drum,
And show the monster as she is.

FOR PEACE OR WAR?

# The Industrial Pioneer Gains Favor Everywhere

A flood of testimonials from readers shows that the Industrial Pioneer is more than winning its way—it has won the interest and regard of the working class of America, and its influence is spreading beyond the seas.

### AND WHY SHOULDN'T IT?

Where else in America, or in the world, for that matter, will you find any monthly magazine as bright, up-to-date, and attractively illustrated, dealing fundamentally with industry from a worker's point of view?

### IT IS PROLETARIAN ART

The best efforts of the real rank and file of the revolutionary wide-awake IWW, are saved for the Industrial Pioneer. Poetry, science, painting, photography: the skill of the novelist and of the short story writer, as well as the technical observer and special feature writer, are all found among the common people. They bring to their literary work a freshness and soundness of thought that is lacking in the more sophisticated, more artificial pensters of the bourgeoisie. People read the Industrial Pioneer for its beauty, its information, and most of all for its sanity.

### YOU CAN HELP

You, as a proletarian yourself, should help in this great work. Write for the Pioneer yourself—you don't know what you can do until you try. And see that it gets circulated. You don't know what you can accomplish, until you take a bundle order on the street. If you haven't any address, use the subscription blank below to send the Pioneer to some homeguard.

# BEWARE!

California is the land of rattlesnakes and plague, earthquakes and volcanoes, poverty and grasping greed. Out of it come like a miasma, hoof and mouth disease, botulism, poisoned celery, typhoid fever, and occasionally the Asiatic scourge, the dread bubonic.

Socially, California is also a viper state, dripping the poison of criminal syndicalism laws, sub-normal and perverted police forces, the gagging Busick injunction, the practice of burning alive its own insane children in fire-trap "homes," and of scalding with burning grease the children of the I. W. W.s and hounding their mothers to the grave.

All these things have one cause—the venomous nature of California Capitalism.

Boycott California until it cleans up!

Boycott California until it releases all class war prisoners!

# BOYCOTT CALIFORNIA!

# TAKE FIVE---AND THINK
## ABOUT
# JOINING THE IWW

Agricultural Workers' Industrial Union No. 110 of the I. W. W. has fought the good fight from Texas to North Dakota. There may still be harvest workers who failed to join it. To them we say: "Be quick—take your place in the great work of freeing humanity—join now—there is still time."

## Private Property and Morality

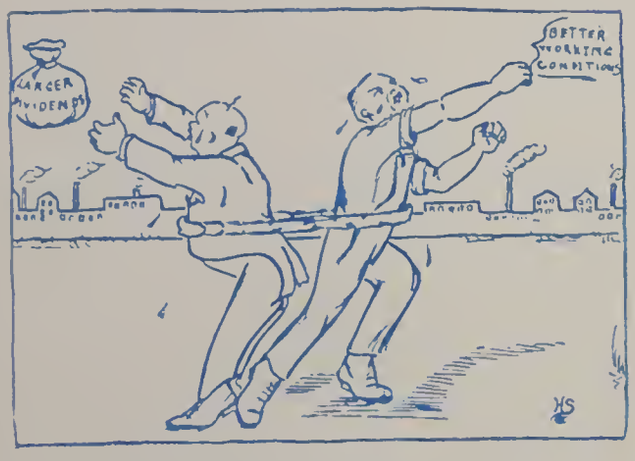
## One of the Pall Bearers

# Rhymes on the Preamble

By VERA MÖLLER

## NOTHING IN COMMON.

Have the gorged beast with fresh blood on its claws
And its torn victim any common aim?
What fellow-feeling does the hunter have
For the wild creature that shall be his game?
What thinks the master as he views his slave,
Whose aching muscles strain beneath the load,
Except how far that slave shall serve his ends,
How far it shall avail to use the goad?
He that must starve and toil and he that lives
On other's toil in luxury and ease—
He that would rise, he that would crush him down—
What common object can there be twixt these?
And there can be no peace while millions want
And there is hunger amid those who do
Earth's useful toil, while the good things of life
Are in the clutches of the idle few.



## THE STRUGGLE MUST GO ON

Between these two the struggle must go on
Until the workers of the world arise
And claim the world; until within their grasp
All the machinery of production lies.

## TRADE UNIONS.

When the management of industries is centered in few hands
And passes into fewer still, we find
Trade unions can no more cope with the master's growing power
And change has left old methods far behind:
For groups of workers are transformed into opposing forces
In labor's ranks until, in the wage war,
Unions in one industry but help defeat each other;
They grapple hands that made the roof and floor.
Trade unions aid the masters in spreading the delusion,
They preach to all the victims they despoil,
That there are common interests between the men who labor
And parasites who live upon their toil.

## THESE CONDITIONS CAN BE CHANGED.

Through but one course can these conditions change,
There is one way alone that's safe and sure;
Let all the unions group themselves in one,
The worker's interests shall be secure;
So when one union fights the master's greed,
All men must cease to toil, not only in
That one industry, but if needs must be,
In EV'RY union, so each strike MUST WIN.

## THE ABOLITION OF THE WAGE SYSTEM.

Instead of the craven motto on our banner:
"A fair day's labor for a fair day's pay,"
Inscribe the revolutionary watchword,
"Abolish the wage system." Clear the way.

## THE HISTORIC MISSION OF THE WORKING CLASS.

'Tis the historic mission of the workers
To do away with capitalism's sway,
To organize, not only for the struggle
That must be waged with greed from day to day,
But to prepare to carry on production
When capitalism's bloody reign is o'er;
When all industry is controlled by workers,
Then slaves and tyrants shall exist no more.

## BY ORGANIZING INDUSTRIALLY WE ARE FORMING THE STRUCTURE OF THE NEW SOCIETY WITHIN THE SHELL OF THE OLD

Work hard, work fast, erect the new
Till higher, hour by hour,
Above old walls that sag and sway,
The fair new walls shall tower.
The worms that breed in rot eat through
The old walls sham and gilding,
They sway and totter to their fall;
Keep building, building, building.

Till ringing o'er the master's boasts,
His threats, the mob's wild clamors,
Shall come the sound of stone on stone,
The steady beat of hammers.
The death's head grins o'er crumbling walls
Where blood stains glare through gilding,
They echo to men's shrieks and groans;
Keep building, building, building.

What tho' they tear you from your task:
Go into prison singing
While other workers take your place
And keep the hammers ringing;
From the vibrations of the blows
That ring beneath your hand,
The tyrant's structure shall collapse
And your's alone shall stand.
In vain men prop up crumbling walls
And hide their rot with gilding;
The world's salvation lies where YOU

# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

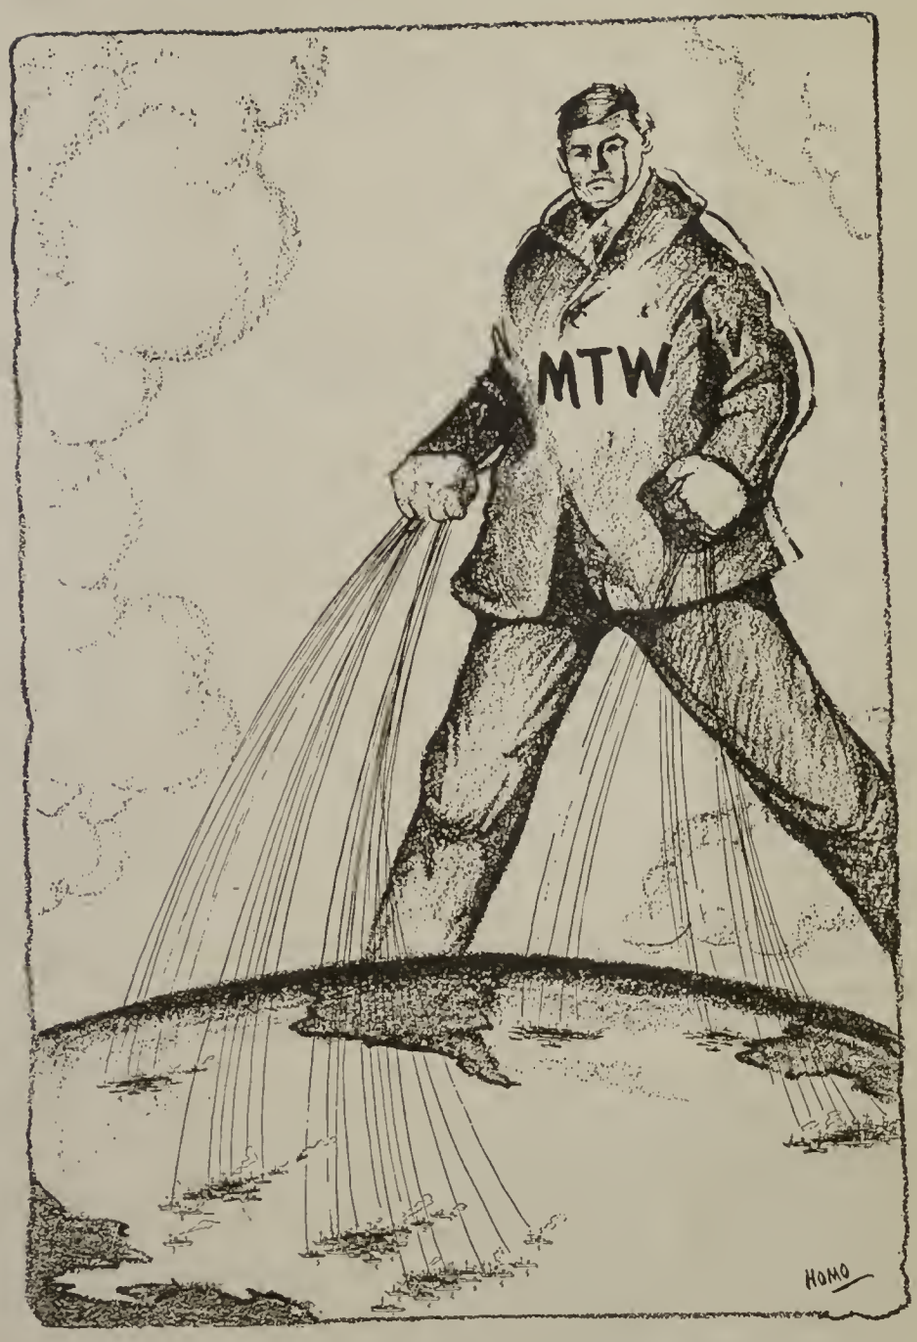
Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.



All the Power He Needs
If He Would Only Use It

By VERN SMITH

## SECTION I—CAPITALISM COMES IN SHIPS

**THE ship is the first peculiarly capitalistic tool. Those germs of capitalism referred to by Marx and Engels and other historical materialists as having existed long before the real reign of capital are almost all of them incubated in the holds of ships.**

**The ship, even the earliest ship, fulfills completely the requirements that Engels lays down as necessary in the machinery which is well enough developed to be the basis of a machine made capitalist structure of society.**

**In the sense in which a ship is a producer of capitalism, and in the sense in which I have used the word here, a larger structure than a one-man-power boat or canoe is meant. The ship, as early as** 3,000 B. C., was a social machine, with a crew, and a certain amount of division of labor between navigators, sailors, oarsmen, pilots, military officers, and soldiers. In this respect of requiring a crew to manage it, the men who work upon it producing none of them a personal product, but all co-operating to a common end, producing a common product, namely an ocean voyage by the whole ship, even an Egyptian galley simulated the most modern of machines for large scale manufacture. There was "social production coupled with private distribution of profit and product"—co-operation in production, with the owner of the tool, not the workers who operated it, getting the product.

### Could It Have Been Better?

There is no way to tell whether, if ships had been invented during periods of primitive communism, they might not have been managed communistically, "for use and not for profit," nor whether there might not have been ship meetings of all the workers on board, and ship committees directing all but the technical aspects of the common work, and directing the ends, even to the technical navigation, steering, etc. Something of this sort exists among the joint stock junks on Chinese rivers, where the boat is divided into compartments and various merchants (some of them deckhands on the junk) store their own product in their own compartments, having each of them an even say as to the course of the voyage, the ultimate destination, etc. I do not know whether this situation improves working conditions for the merchant sailors or not, but it seems as though it should. Of course, they are still merchants, and not primarily workers, and their scheme is not much like what the class-conscious workers of today are trying to achieve. But it seems to have, like so many of the customs and social arrangements of the Chinese, an echo in it of earlier, tribal, communal life, in which classes did not count for much if they existed at all.

As a matter of fact, shipping appeared in Eu-

FIRST TYPE OF SEA GOING VESSEL

**Egyptian Galley of 2500 B. C. Photograph of An Inscription. Writing at Top of Picture Indicates All on Board Are Saluting The King. The Double Mast Is Unstepped And Leans On A Rest.**

rope, Africa and Western Asia only after the class system was developed, after the military and the priesthood were very much in evidence as the defenders of landed aristocracy, and after division of labor and handicrafts had gone to the point where the merchant was able to function, and to make money.

The ship developed essentially as a trading instrument, a thing in which to carry goods from city to city up and down the great river of Egypt. A raft would float products of southern Egypt down to the mouth of the Nile, but something more was required to go the other way, against the current, and this meant keels, hulls, rudders, oars and sails.

### The Sword Writes Its History

The importance of the ship for military purposes was soon discovered, and the military aspects of the ancient galley have been so overdescribed, and so much emphasized, at the expense of the peaceful commerce of the time, that one conducting research into ancient navigation would get the impression that the navies of Egypt, Phoenicia, Greece, Rome and Carthage were entirely war vessels, loaded down with nothing but oarsmen and soldiers, sitting packed like sardines, and with mighty little room for cargo.

This is an error, due to the fact that history for so long a time has been military history, and nothing more. There was plenty of merchant shipping in the ancient times, depending much more on the sail than on oars, though using man-power also, as an auxiliary force. The Greek friezes, and some of the vases (reproductions of which can be seen in the art museums) show long, narrow, many-oared war vessels in pursuit of relatively shorter, wider waisted, fewer-oared merchant ships.

Indeed, the war galley is merely a modification of the merchant ship of the period, as a study of the cargo boats of the Egyptians and Phoenicians will prove. It is interesting in this connection to observe that it was those countries which had long rivers, or short strips of sea, as their easiest means of communication which carried on and evolved shipping. It was not the most warlike nations, even those which bordered on the sea. Assyria and Persia, the most military nations of ancient times, reached the ocean, but since they were great continental powers, depending on agriculture for their sustenance, and on beasts of burden for their internal communications, they added nothing to the improvement of the ship, made no inventions along this line, and depended on the Phoenicians and the Greeks for their military navies.

### Where Merchants Rule

All the authorities of the U. S. Naval War College, headed by Mahan himself, have insisted on the essential weaknesses of such "artificial" navies, as compared with the "real" navies of seafaring (commercial trading) peoples. Probably this difference is not so important now, when ships have become something like floating machine shops, but

ROMAN MERCHANT SHIP

**Does Not Differ In Type From Greek and Phoenician Merchant Ships. At Times, Oars Were Used For Motive Power. The Men Are Out Of Proportion.**

it was important in its day, and shows that the ship is the merchant's invention; he started it, used it, and developed a capitalist society around it. It is quite impossible to imagine the landed aristocrat taking to the water, and abandoning his fortresses and his slave agriculturists for the uncertain life of a tramp captain—and if he did such a thing, he would become a merchant of the seas, anyway.

The great naval powers of antiquity were those nations in which handicrafts were fairly well developed, and which had natural harbors, or were for some reason forced to rely on water for communication between parts of their empire. Egypt and its river has been mentioned. There was China and its two big rivers. There was Phoenicia (Tyre and Sidon) with their good harbors and their position impregnable except by sea. There was Greece, a mass of islands, little peninsulas, and bad mountainous roads, except for the water ways.

Then comes Carthage, a good harbor, with a narrow strip of fertile ground around it, and nothing but desert back of that. Of course the Carthaginians were a commercial people from the first, being a colony of the Phoenicians. The practice of founding colonies on the islands and distant mainlands, followed by Tyre and the Grecian states, increased the necessity of shipping, for communication and for trade, and reacted to develop the ship itself, as it went on longer and longer voyages.

Finally there are the shipping towns of the northern part of Italy, Venice, Genoa, and Pisa, which made themselves independent through their wealth, gained in shipping, and introduced banking, bills of exchange, government by the bourgeois (or citizens), class war between the rich and the poor, and other capitalistic customs, at a time

(1300-1500 A. D.) when the rest of Europe was still pretty much in the feudal period.

### Forms and Facts

As proof of the fact that the ship and societies founded on sea-borne commerce are capitalistic, even in a world still largely aristocratic or feudal, it is only necessary to consider their form of government.

It is obvious that the republican (or parliamentary—no real difference between them—) form of government is peculiarly adapted to a commercial, capitalistic people. Where votes are to be the basis of political power, money counts most, and certain arts of the politicians, remarkably like those of a salesman, count secondly. This gives the men with money, especially if they be at the same time business men used to clinching bargains, the real rule of the country; whereas, if birth counted most, and military prowess counted secondly, as in a monarchy or despotism, the possession of money would not necessarily be of immediate advantage in the securing of political power.

Aristocracy and despotism in general are therefore the typical forms of government of landlord states, and republics and parliamentary governments are the typical forms of capitalistic states, even as democracies, the assemblies of the whole people, are the typical forms of government of primitive communities, or tribes.

Now which are the great republics of history? Modern western Europe and American states, of course, are either republican or parliamentary in form, since all are capitalistic. The only exceptions are the military despotisms of the Fascisti, etc., and that is something else, the breakdown of the state apparatus of capitalism, its decay.

Of the feudal states none were republican or parliamentary except just those Italian cities we have mentioned as sea-powers. There were also some German city states, sea-powers themselves in a small way or given over to manufacturing commodities for sea-trading.

Of the older states, Rome, the Macedonian Empire, Assyria, Persia, the Eastern Asiatic states, all these were aristocratic, agricultural empires—none was republican, except that Rome preserved some of the forms of republicanism from primitive communism through her traders' wars with Carthage, and gave them up when she turned to an agricultural empire.

On the other hand, Carthage, the Greek colonies (independent), the Greek cities, and Phoenicia were all part of the time or all of the time republics, which shows that the capitalist class, the merchants especially, were a strong influence.

### Two Phases of Renaissance

Let us now return to the later middle ages, the period of the renaissance. It is well to be explicit about this renaissance, for there were two phases, the first not much recognized, not as much as it deserves to be. Everybody knows about the second period, the magnificent outburst of art and letters, of scientific discovery and exploration. That second period was about 1400 to 1500 A. D. But there was an earlier renaissance, which caused the second. It was the revival of invention, as a social force. In fact, it was certain inventions, useful to shipping, and especially useful to navigation, that made the turn from the feudalism of the Teutonic peoples to modern capitalism.

The record of written history from earliest times down to the present, is a story of peoples who start as tribes, with economic classes of little importance, settle down and begin to farm, develop classes, weaken themselves militarily thereby, and succumb to some freer, fresher tribesmen, who then go through the same process. From the time of the pyramids (say 3500 B. C.) to the first glimmer of renaissance (roughly 1100 A. D.), there were no essential, primal invention. There were no new principles discovered. There was a certain amount of development, to be sure, but no single invention of a useful instrument was made to compare in its effects with the invention of the bow and arrow, fire, steam locomotion, or the electric motor. The life of the French or German or English serf in the twelfth century was so similar to the life of the Egyptian peasant of pyramid times, if we think of the tools used, and the methods employed for production of necessities, and the mental processes involved, and was so similar to the life of the intervening peasants of Babylonia, Persia, Greece and Rome, that a description of the social economy of one is almost a perfect description of the social economy of any other. One had no tool and knew nothing that the others did not have and know. Agriculture was non-progressive. The land was far more conservative than the sea, though little real progress was made there, during this period.

### Our Forefathers Were Failing

In the twelfth century the Teutonic class society of Europe, which had reared itself on the downtrodden remnants of the Latin class society of Rome, Gaul and Britain, was tottering into its period of decadence. It might have lasted on, slowly degen-

erating as the Roman Empire lasted and degenerated, for five hundred or a thousand years, but would have sooner or later collapsed before some fresh blooded swarm of, perhaps Slavs or Mongols. The Huns, a Mongolian people, seemed to be hitting it hardest about the time of the first crusades, which is about the time of that revival of invention which preceded what is usually called "The Renaissance."

Now this first renaissance, which changed the course of history, and threw social evolution out of its rut, bringing in capitalism, as a transition stage from primitive communism to the industrial commonwealth of the future, was chiefly due to the ship. In order to explain just how and why, it is necessary to take a brief glance at the evolution of the ship itself.

## SECTION II—EVOLUTION OF THE SHIP

It is supposed that the keels of ships evolved from the center plank or log in a raft (which was sometimes bigger than the others), that the side planks of ships came from the fence around the raft platform, or from planks or shields used as bulwarks on a big dugout canoe, and that the ship's ribs have evolved from bars used to strengthen the sides of "sewed ships," such as the Madras surf boat. This is all pure speculation, and sounds a little fanciful.

But we know the Egyptian ship fairly well from the pictures in the tombs, from the descriptions of Herodotus and other Greek writers. It carried a square sail with yards, and tackle for raising them. The mast was in two pieces, stepped apart at the bottom, lashed together in the middle, and separated a little at the top, again, to hold the yard between them. There was an upper, spar deck. The boat carried 20 to 26 oars on a side, in one bank, and had a raised bow and stern, and a ram (above water) for attack on other boats. There were four or five paddles joined together for steering, and they were worked by a tiller. We have pictures of boats carrying cattle.

These ships made trips out of the river Nile into the Mediterranean. They sailed as far as Crete, on which Egypt had a colony.

The Phoenicians made the ship larger, primarily for Mediterranean rather than river usage. As early as 900 B. C. they had decked ships, and especially they invented the bireme and trireme, the galleys with the rowers seated 'tween decks, and with one row of oars above another. This was the type of vessel, especially used for war, for at least two thousand years. The scheme by which the rowers managed to sit one above another and still have leverage for their oars, was a very ingenious one, not discovered again until 1834 when the records and plans of an Athenian shipyard were unearthed. The arranging of oars in "banks was done by seating each

# From a Man in Prison to a Good Christian

**When Eugene Barnett took his stand with the I. W. W. in their great struggle with the Lumber Barons in Washington state, he knew he was subject to persecution. Probably it did not surprise him much to find himself framed up along with seven other fellow workers, and placed in Walla Walla Penitentiary for his alleged conspiracy to defend the I. W. W. hall in Centralia against a murderous mob of Legionnaires.**

**But he did not, probably, expect to be gassed at long range by bible sharks. We are giving you his answer to one of them—you can tell what the letter was like that he received by the answers he makes to it.—Editor.**

Walla Walla, Washington, July 29, 1924.

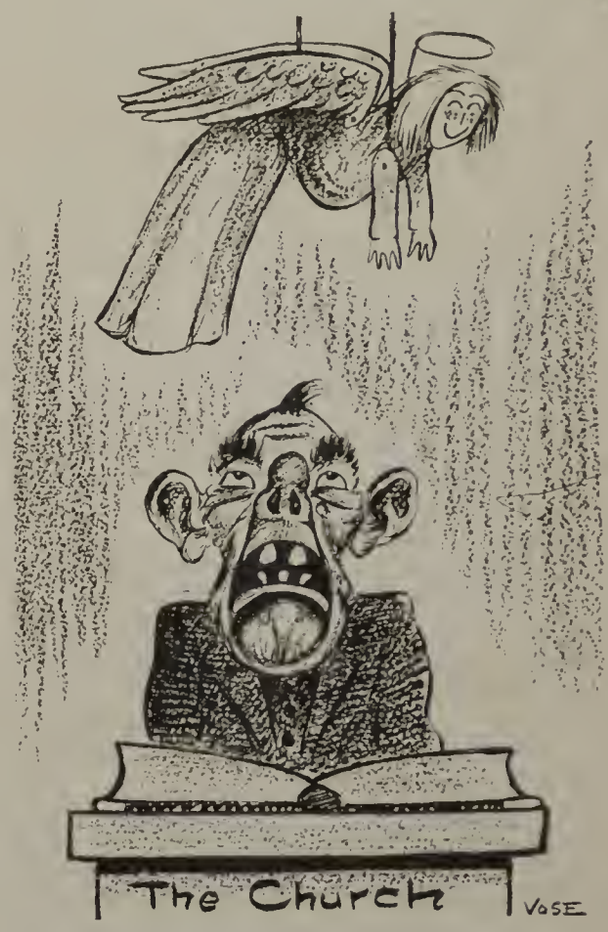
DEAR SIR:—Your letter of July 20th eame to me this week and has been read by me until I have almost memorized it. It is the most remarkable letter I have ever reeeived, for while you yourself bring one indietment after another against eapitalism you do not seem to realize that you are doing so, and you go right ahead in the same letter and eondemn us for organizing to abolish the system that breeds the wrongs you eomplain of. I ean toueh upon the various points in your letter only briefly for it is quite lengthy and I am limited for spaee.

When your first letter eame to me I was inelined to believe that you were "hoosiering up" on me; feigning ignoranee to get a "rise" out of me and find out just how little I know. But sinee this last letter eame to me I am thoroughly eonvineed that you are entirely ignorant of the fundamental prineiples of the I. W. W. and that you haven't the least eoneeption of the elass struggle and the eorrupt, insane system under whieh we live.

You tell me of a man whom you "virtually took from the gutter some years ago" and of how you fixed up a room for him in your basement and even gave him an oeeasional meal and all you asked of him in return was that he serve you faithfully as housekeeper and handy-man around the place. Then when he drank until you eould not depend on him you turned him out.

Were you helping him beeause he was a fellow man, or beeause you needed a eheap hired man? You have probably never admitted the real reason to yourself. You see I put two and two together, so when a little farther along in your letter you say, "I hope that I may find another needy man to whom I ean give a helping hand and one that may be trusted. I must have help from somewhere for I eannot teaeh and be housekeeper and handy-man all in one," I ean readily see your motive for helping the poor vagabond. You show the real modern "Christian" spirit in hoping you will find another needy man.

You quoted quite a lot of Bible passages in your letter so I will hand some of it right baek to you. But you must understand that I don't believe it. As



an organization the I. W. W. is not eoneerned with religion and if any of its members ean believe that stuff they are at liberty to do so until edueation takes the superstition out of them. But sinee you mentioned your hired man drinking I will give you a little Bible on the subject. Prov. 31:6, 7, says, "Give strong drink unto him that is ready to perish, and wine to those that be of heavy hearts. Let him drink and forget his poverty, and remember his misery no more."

I am strietly temperate, do not drink anything intoxieating and have never even used tobaeeo in any form. The I. W. W. as an organization is trying

to edueate the workers against the evils of booze and never overlooks an opportunity to tell them they cannot raise a erop of brains by irrigating their bellies with booze. But we do not stop there. By organizing the workers into the I. W. W. we are giving them the power to elean up the camps so they can stand it in them without being drunk. Instead of making them drunk so they will forget their poverty, the I. W. W. is edueating them and organizing them to abolish poverty.

Next, you say, "To me one of the most discouraging things about the I. W. W. is its apparent unwilling attitude toward work." Where did you get that opinion? Certainly not out of an I. W. W. publication, for we advocate shortening the hours of the working day to such an extent that everyone will have a chance to work, including the parasites who now do nothing but "own" for a living and who never produce anything in their whole worthless lives except misery for the workers who produce all the good things of life.

In speaking of the Industrial Pioneer which I had sent to you, you say, "Your magazine is the bitterest it has ever been my lot to read." Yes, it is the bitter truth, without any sugar-coating. The truth about wrong is always bitter to those who would perpetuate that wrong.

You make much of someone having said that "murder could be more readily excused than seabbing." I assure you that the I. W. W. does not excuse either, but it recognizes the fact that the scab is the worst murderer there is, for he not only murders his own family by aceepting wages insufficient to nourish them, but also reduces the standard of living for the whole working class and dooms their babies yet unborn to lives of drudgery and poverty. Even now the papers are telling us of thousands of workers dying in the South, of pellagra, which is a faney name for starvation. Think of that, thousands starving to death as they work, in the riehest nation in the world! Think of the two million unemployed in the U. S. right now, in harvest time—the busiest season of the year!

You say we teach hate. That is untrue. There is not another organization in the world that would stand half of the persecution the I. W. W. has stood without resorting to violenee to defend itself. Have you read what the nice "Christian" mob did in San Pedro? It is the first artiele in the Industrial Pioneer. If you can read it without crying you are harder hearted than I am.

You say, "In your fight for the betterment of the workers you are very far from the teachings of Jesus as I know them." The best answer I can give you for that is, you have got your idea about his teachings from the same source that you got your opinion of the I. W. W. from, that is, from the master class. I have a better opinion of Christ than I could possibly have if I accepted the murderer Constantine's perverted version of his teachings. I know there never was a time since the world began when a man would be crucified for preaching "Servants, obey your master." You aeeuse the I. W. W. of teaching hate and you deplore it. Yet the book that is the source of your opinion about Christ, preaches hate and tells us so in what purport to be Christ's own words. Only those vietims of eapitalism who are ignorant hate the eapitalists as individuals. "We hate the rotten system more than other mortals do." But we do not hate its victims and the capitalists are victims as well as their slaves—the wage workers. The I. W. W. does not teach hate but your book does. I refer to St. Luke, 14:26, which reads, "If any man comes to me, and hate not his father, and mother, and wife, and children, and brethren, and sisters, yea, and his own life also, he cannot be my diseiple." In the tenth chapter of St. Matthew, verses 34, 35 and 36 read as follows, "Think not that I am eome to send peaee on earth. For I am come to set man at varianee against his father, and the daughter against her mother, and a daughter-in-law against her mother-in-law. And a man's foes shall be of his own household."

You ask what I have done for the working elass. I have tried to help them climb out of the mire of wage slavery onto the broad plains of Industrial Unionism. I have helped to show them that they have a higher mission in life than to be work animals, living in poverty all the days of their lives while piling up profits mountain high for idle parasites to expend on eozy clubs, wild women and "love nests." I hope you will read every issue of the Industrial Pioneer as long as the subseription I had sent to you lasts. If you will honestly do so, I know you will want to continue your subscription for by that time you will begin to see how wrong your present opinions are.

You tell of teaching school nineteen years "in a damp, eold, unventilated and unlighted basement." We haven't an agitator in the organization who could draw up a more damning indietment of capitalism in so few words. When the richest country in the world sends it babies to sit in cold, damp, unventilated and unlighted basements while the propaganda of the ruling elass is being instilled into their little minds to make them efficient slaves, or willing eannon-fodder, ready to die on some foreign battlefield for the "Glory of God" and the profit of their masters—the ruling class—the profiteers, then it is time for the fathers and mothers of those babes to wake up and organize into One Big Industrial Union, and take possession of the earth and the maehinery of production, and run them for the benefit of all mankind instead of for the profit of a few idlers.

Have you read the "Brass Cheek", "The Goose Step" and "The Goslings?" Upton Sinclair, Pasadena, California, is the author and you can get the books from him. I highly recommend them to you. The last two should appeal to you particularly as they are an exposé of the school system.

You speak of what I owe God, my wife and my baby. I don't owe God anything. If there is a god he owes me more than he ean ever pay me. I owe

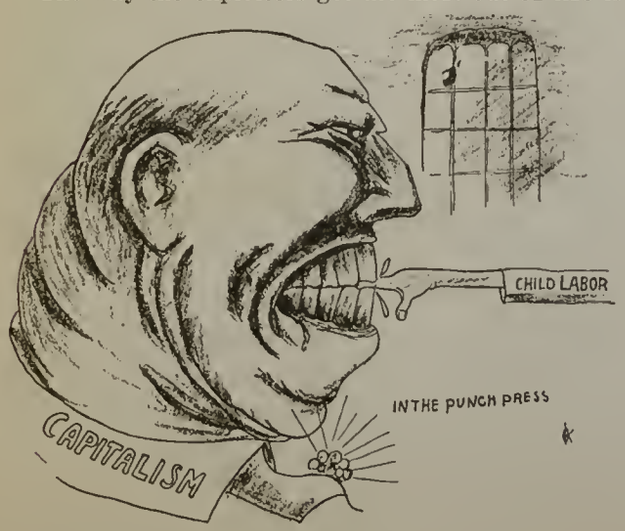
my wife and baby all the love that a good, kind and loving heart can lavish on them and I am trying to pay them with interest.

At the close of your letter you wail again about us agitators not working and say, "If anyone of your agitators had worked as hard as I have and could show working people the secret of getting the most out of life I would feel that his opinion was worth far more than all the agitation he could muster." A little common sense reasoning on your part would show you that if we were not workers the master would not fear us. For the workers are the only ones who can stop the profits of the master class.

But since you seem unable to reason I will give you just the answer you ask. I began to work in a West Virginia coal mine when I was only eight years old. I was a little child, scabbing on union men who had organized and gone on strike for enough of what they produced to enable them to support their families without being forced to put their babies to work two miles under the ground to earn something to keep life in their little bodies. I was helping the Coal Barons of W. Va. crush the union and fasten their gunman rule on five counties. Thousands of workers, men, women and children, have been murdered there since then, and thousands are starving there today as a result of what I and others did in 1899. I used to go to church then, in a little schoolhouse owned by the coal company, and listen to the preacher, who was also owned by the coal company, thank God that the scabs were real Americans who would not allow any set of men to deprive them of their God-given right to work for such low wages that it was necessary for every miner's son, who was big enough to hold up his head with the weight of a miner's lamp on it, to go to work in the mines, while his mother and sisters took in washing or sewing from the "higher-ups" or kept boarders to help fill the family larder.

I will never forget one little boy **five years old** whom I saw with all the flesh torn from the bones of his little thighs after he had fallen beneath a trip of mine cars on which he was trying to set the brakes.

The way the exploiters get the most out of life is



THIS IS THE LIFE THAT BARNETT KNEW

no secret. I can easily illustrate their method for you by telling you the story of a man who was so lazy that his neighbors decided to do his wife a favor by lynching him. Just as they were ready to string him up he promised to do better and begged for another chance. They let him go and he went straight home and raided the sugar-bowl where the good wife kept the money she got for taking in washings, and with it as capital he hired a carpenter to build a shed, placed twenty wash-tubs and boards in it and hired twenty women for three dollars each, per week, to do two washings a day. He then hung out his shingle, "Jones' Hand Laundry, Family Washings Done for One Dollar Each." He cleared one dollar and fifty cents per day on the labor of each woman and now that he was exploiting twenty women instead of one the neighbors all called him Mr. Jones, with heavy accent on the "mister" and held him up to the youths of the village as a real American and shining example for them to pattern after.

You may think this story exaggerated but it is not. I have worked in the mines for $3.00 per week. I have worked in a tailor shop in Egg Harbor City, N. J., pressing coats ten hours per day for $2.00 per week. I worked in the Liberty Cut Glass works cutting nappies and bowls for three dollars per week. I counted scales in Winterbottom, Carter & Co.'s knife handle factory for $3.50 per week. I have seen my sisters equally exploited in the sweat-shops of New Jersey and Illinois. So you see you are wrong when you say I have been misled by leaders. I know by bitter experience. And there are thousonds of other fellow workers (agitators) who can truthfully say the same.

You say, "I cannot hope to change you; in fact, so far as my limited experience goes it would be quite useless to do so." That is true, for:

**"We have a glowing dream of how fair the world will seem**
**When each man can live his life, secure and free;**
**When the earth is owned by labor and there's joy and peace for all**
**In the commonwealth of toil that is to be."**

Yours for Industrial Freedom,

**Eugene Barnett.**

## "Woe To The Vanquished!" Who Are The Vanquished? They Are the German Wage Slaves—Twice Beaten, Once by the Allies With Shot and Shell, and Again by the German Capitalists, with Lying Promises. Woe To The Vanquished, Until They Rise And Fight The Class War.

By MARY HOPE

THIS is the street of the poor, Haas Strasse . . . Witness the famine-blue bodies of children (who remembers the flaxen-haired Hans with the rose-pink belly and laughing eyes?): the sight of mothers searching the gutters with pitiful intensity for swill; the beggars, proud as those to whom they make their appeal, beggars standing in little groups on every corner, no more an unfit or alien remnant of the community than the rest of the proletariat; old women huddled on doorsteps for days, numb with hunger, in a stupor, later removed by the police . . . whither? . . . Haas Strasse shrugs a shoulder . . . old women? We are all old, old with misery and hunger. Yes, even the poets have forgotten to sing; those who sing are mad. The intelligentsia haven't official quarters and persons of influence, utilizing their wit in attempts to get free passports, anywhere, England, Russia, America . . . Prostitutes continue their fleshly occupation even during precarious physical weather and on a Sunday become a part of Pastor Max's meetings, no longer shunned female rabble. Indeed, far less corrupt are they than Pastor Max himself who does not forget those whose cupboards have a crust or two... Hunt high and low for Gretchen with the "pure sweet eyes of love and lips, only the northern sun has kissed"——fortunately for that aesthetician, he died before his Gretchen . . . his lovely maidens taken from the warm roofs and scented gardens of the past and given to master Hunger who fattens and thrives more each day on the puny bones and their blood of Haas Strasse.

Past the Courthouse Yards, the gardens are still green. Red-topped and blue flowers grow virile above the grass and pigeons dip their white breasts in the springs. Further over, the tables and chairs of the Beer Gardens are thrice full and joyous; only occasionally does one observe the ease and nonchalance of the belly-full topple a bit . . . The Beer Gardens, only ten minutes walk from Haas Strasse.

The evening somes soft and grey and a little wistful where the noise is indistinct. No one comes to the Garden's silent parts, not even the shelterless, and it remains since the coming of misery, the habitation of those who can withstand the thrust of beauty. The stars drip golden dew into the trees and quiet springs.

The Beer Gardens still feel the weight of bellies in which the yellow malt stream flows in apathetic volume. No need for starlight here. The bright lanterns are lit and the glaring postlamps are rigid through the circles of tables and the public platform in the midst . . . Last week Ebert spoke . . . He speaks distinctly but his words cling together in a curious vagueness, as though waiting for a propeller to set them going in a wind of effect. He lowers his eyes and his voice sounds as if he is ashamed . . . Perhaps he is thinking of his virile and idealistic youth spent in pregnant actions and potent dreamings . . . Now he is old, a stupid apologist for the puny sense of revolutionary spirit left in him . . . a socialist, floundering, bewildered by the muddy intricacies and perpetual evasions of parliamentarianism . . . The people drink their beer and remember a word here and there. Women glance at their tender, naked breasts topping satin bodices, a surreptitious flash of pleasure in their eyes. Sensual messages flit from the men who find no need for words. . . . Ebert speaks on . . . Well-to-do prostitutes are glad to be relieved from the perpetual discipline of the forced vivacity . . . and all the time, the speaker's words trip through their ears like gay squirrels hunting and cracking nuts . . . Later on, every one rises to a patriotic song. The Garden floods with the cornet's militaristic growl, the blatant voices of the men and the soft shading of female voices . . .

Slowly in twos and threes the lights snap out. We have drunk, sung and made love. Now we go home satisfied, but a little uncomfortable around the lower portions . . . Voluminous liquid . . . Now one look at a quiet Strasse, houses set on it as primly and luxuriously as the hats on the heads of virtuous grande dames. Then to bed, a soft one. A luscious nest for clean birds who will dream of feathers flashing on the long green run of grass in tomorrow's sun, and the dipping of the breast in the sparkling springs of love . . . **We live on Strasse Bourgeois.**

But the street of the poor, Haas Strasse. Long ago these people slept snugly and also dreamed. I remember the red-smeared mouths of healthy jam-eating children playing in the gardens; there were peaceful worker's hands setting flowers in the sunny windows; the Frauleins had a song to give one on the summer evenings; the smell of fresh cheese and cabbage was no less a common smell than the sound of a universal rhyme urged by the first star in the paling evening sky . . .

But now . . . Haas Strasse mocks itself, has slashed the pink breast of its mistress, the Past. Haas Strasse puts a mad laughing month at its own pool of blood . . .

You will witness Haas Strasse tasting other blood, the blood of the foreigner . . . the bourgeoisie.

**Winter comes . . .**

# Private Property and Morality

By ROBERT GRAYSON

EXPONENTS of the present scheme of human relations never tire of reiterating that society is wholesomely rooted in a subsoil that is ethically desirable, and as a consequence its social fruits are conducive to the best interests of the greatest number of the human race. Pursuing such reasoning in an address recently it was my experience to hear the renegade, George R. Lunn, who used to be Schenectady's socialist mayor, but who is now a political climber, being Lieutenant Governor of the Empire State, say that man's first right was to the possessions he was able to acquire, and that private property is the right of all men.

This is a claim that can no more stand the pressure of logic than can a house of cards the first blow that comes along. To realize that something is very much wrong with the world requires no exceptional acumen. Few, indeed, exist in it very long without finding this out to their sorrow. Our eyes alone tell us from every glance that the arrangement of social affairs is inequitable and manifestly unfair. The world is divided between those WITH and those WITHOUT. The latter are in an overwhelming majority. To be without means hard labor, or unemployment, industrial illness, accident and premature death after the poorest manner of existence. The word cheap is written all over us; it punctuates every act of our lives. These are patent facts, indisputable among those who have learned the truth of them by bitter experiences.

Probing the ulcerous condition reveals that all this poverty, drudgery, insecurity and degradation proceeds from a central fact, a diseased root incapable of maturing aught that is good for man. And this underlying culture center of social bacteria is nothing more nor less than the mainspring of bourgeois affairs, private property. That which our well-fed opponents and masters proclaim to be inherently moral and of primary benefit to mankind is exactly the reverse, being innately subversive of the welfare of the masses and inimical to the healthful growth of all that is a boon to humanity.

### Facts—Not Words

It is not, however, sufficient to make this broad statement. Neither is it our purpose to rest the case on a mere statement. That is the tactic of the opposition, who resort to words alone, not being able to bear the searchlight of analysis. Thus it falls to us to state the case against private property briefly, and after having done so we must proceed to show whether its existence is consonant with a high standard of social development and an impulse to the noblest ethical progress of men and women.

The present scheme of wealth production is called capitalism. Under its sway the workers operate complex social tools side by side. But while their labors

are social; while the workers are herded together in factory, mill and mine and wherever work is performed, the ownership and control of the gigantic means of wealth production are held by an exceedingly small group of rich capitalists, who do no useful work themselves but to whom the vast proceeds of working class toil accrue. Private property in this age means the right of a man or group of men to own millions and billions in wealth; to employ workers by the hundred thousands and millions; to say when these workers shall slave and eat, and when they shall walk the streets jobless and hungry. It means giving to a small clique of financiers and manufacturers the right of life and conduct over the major part of the race. Our masters decree not only what we shall eat, how we shall be clad, where we shall dwell, but whether these primitive requirements shall be guaranteed at all. Their power is strengthened constantly by the accumulation of unpaid labor, or surplus value, that part of the business of industry commonly called profits. Profits are what the workers are robbed of by virtue of the efficacy and goodness of private property. Under the workings of private property a monstrous trinity enslaves the vast majority of the people. They are bowed under the weight of that triune keystone their weary backs are forced to support, Profit, Rent and Interest. In short, private property of the tools by which wealth is created means in effect the small minority saying to the large majority: "You toil while I eat."

### The Fountain of Blood

An article of this nature cannot take details into account. But it can state that from the evil of private property spring the war, want and waste that curse humanity. Private property means unpaid labor, surplus value, an accumulation to be reinvested by its takers. By the modern quest for markets and virgin fields in which to invest the wealth robbed from millions of workers, commercial rivalries are bred and wars are fomented. If there is anything ethical or socially desirable about war we fail to see it. But the evils of private property are always at work even when not blazing high in the spectacular way of war.

The insecurity suffered by the masses is a mental torture of great violence, and of itself a damning indictment of capitalism. The rich live longer lives than the poor. Infantile mortality among the well-to-do is less than among the slaves. Insufficient wages to female workers has ever been a direct impulse to harlotry. Employers pay inadequate wages not through any particular, personal animosity or greed, but because competition demands that low wages be paid, and where monopoly holds the field the race for power insists on an ever-growing rate of profits. Where so many counts present themselves to the indictment against private property little enough can be covered here.

The world is sick—almost to death. There are millions of men and women tramping the streets of America—this paradise of opportunity—in a vain search for jobs. Over every household of the worker possessing the precious job hovers the specter of Insecurity, while miseries attendant upon low wages and long hours on the one hand, and part-time employment on the other, stalk through his quarters. A smiling land is darkened by industrial depression, the natural result of laws in keeping with the operation of private property. So long as there is not work for all who desire it violence is riding rough shod over us. So long as there is a hungry child in a hovel and bread withheld by the mandate of private property violence rules supreme.

### Social Production

That simple tool by which a man once could make a complete article for the satisfaction of a human want entitled its possessor to undisputed ownership. But when countless workers join their brain and brawn and mingle their sweat and blood in the creation of commodities by the help of tremendously large and intricate machines the product of this common effort of right should be commonly owned, together with the instruments of its making.

To say nothing more of the baneful social effects of private property which are observable at all angles, one further remark is permissible and pertinent. To extract surplus value is itself immoral, even should the victim be fortunate enough to suffer no ill effects, which is never the case. Private property means individual ownership of social instruments, and the protection of the individual's right to rob the workers. As such it is highly injurious to the race, and especially obnoxious to the slaves.

The situation will not right itself. No one is going to set the slave free but himself. Divided we are easy prey for the united master class. United industrially we can throw a phalanx into the battle for freedom destined to win the final victory. Exemplifying solidarity we can win a world for our kind. We do not ask for less. But we do ask for our own. Our labors and those of our class have made this world; we prepare to come into our own. United we cannot be defeated.

### Social Morality

From the cornerstone of common effort and common welfare shall be developed a new morality unknown to a world that puts a premium upon wholesale robbery, wholesale murder and wholesale hoggishness. It is hardly necessary to say in concluding that we do not believe that a factory or a railroad should be the private property of any one man or small group of exploiters, and we do believe that a toothbrush or a pair of shoes should be the private property of each one. The distinction seems warranted as there are asses in the world whose sense of degree is very dull.

Social operation of productive tools privately owned is a contradiction that cannot continue indefinitely. Industrially organized workers shall rearrange matters to their own moral satisfaction.

# An Incident in a Sailor's Life

ANONYMOUS

**It may be that not all who follow the sea for a living have exactly this sort of experience, but many of them certainly do. It is probable that not all of these who find themselves picked out for punishment by bad tempered mates and masters find such loyalty and solidarity on the part of their shipmates, but some do and more will, when the seamen are organized.**

**FROM the slave market at Antwerp I got a Belgian ship early this year—the Australier belonging to the Lloyd Royal Belge Company and bound for Buenos Aires. I had to buy bedding, blankets and eating utensils.**

**The second day on board the ship we started to get bad eats. We had stew for breakfast, stew for dinner, hot water for soup, black water for coffee, one pound of bread each for 24 hours and no lunch for night time. There was no messman and we had to carry all our own grub from the galley, and wash our own dishes.**

The firemen were kicking about the grub all the time; one was sick, another wouldn't work, and we always had a kick coming. I just waited at first to see what they were going to do. One of the firemen said he was going to take the food up to show it to the captain. We all went up with him to the bridge. The captain told us that if we didn't like it we could throw it overboard, as that was all we would get on Belgian ships.

I had in my suit-case all kinds of I. W. W. literature—Marine Workers and Solidarity—so I gave them to the crew to read, and then got busy on the job. I started calling for job action, but nobody would pay any attention to me.

The grub kept getting worse and worse every day, and every day and night I kept talking with the firemen and sailors urging them to use job action. When they asked me what kind of action to use I told them "I. W. W. action," and that if we would all stick together we could get all we wanted. I got them to go to the messroom to hold a meeting and decide what we would do.

We usually carried 180 pounds of steam, so we decided to cut the steam down to 140 pounds, and bring her down to half speed. The A. B.s decided that when they went up on the bridge they would keep the ship a couple of degrees off her course all the time.

### "Half Fed—Half Speed"

I was on the 4 to 8 watch, and saw to it that the steam came down to 140 pounds. When the engineer came hollering about the steam, we told him that we couldn't do any better because we were sick and hungry. The same thing happened on the 8 to 12 watch, and again on the 12 to 4 watch. The engineers were very glad to see the action that was being taken because they, too, were getting bad grub. When the captain hollered to the engineers about the steam, they told him that they couldn't do any better as the firemen were sick and hungry.

The captain, hard-boiled as he was, had to get up at 6 o'clock in the morning to go into the galley and show the cook how to prepare the food. We got better grub for a couple of days. When the grub went down again, down came the steam, until we got better grub again. The more kicking we did the better grub we got. The firemen and sailors saw the benefit of this action and we kept on kicking.

The captain sent the steward to the fo'c'sle with a piece of writing paper, and told us to write down on it what food we wanted every day. This is what we put down on the paper:

BREAKFAST: Oatmeal, milk, beefsteak, fried eggs; or fried pork chops or boiled eggs; fruit every morning. Sugar and butter to be on the table all the time.

DINNER: Two kinds of meat; roast beef, roast pork, pudding; a glass of milk for each man; good potatoes and bread and butter.

SUPPER: Beefsteak and cold meat; fried potatoes, tea and bread and butter; fruit.

Thursday and Sunday dinner: Roast chicken.

We sent this to the captain. He did not want to give it to us, so we went down and held the steam at 140 pounds for two days.

But the captain was wily as well as hard boiled, and he tried another trick to break our solidarity. He called us all up on the bridge, asked us if we wanted port wine or Scotch whiskey, and told us that he would give us 100 francs more if we would keep working and that any time we wanted a drink we could have one.

### Booze Fails

We went back to the messroom to think the matter over, because we knew that he was trying to fool us, and meanwhile the steam stayed at 140 pounds, half speed. Two of the firemen broke ranks—an old Norwegian of about 60 and a Turk. They liked to have a drink and were willing to do what the captain said. As they would not stick with the bunch, we put them out of the fo'c'sle.

When the captain hollered for more steam, we told the engineer "plenty to eat, plenty of work—rotten

eats, rotten work." The engineer reported to the captain, and the next day all the firemen and deckhands were called up on the bridge. We were given all that we asked for on the paper—except the chicken, and there was none of that on board the ship. The captain told us that when we got to a South American port we would get the chicken too.

When we hit Rio de Janeiro, Brazil, some stool-pigeon told the captain who it was that had told the workers what to do. So one day he called me up on the bridge and asked me if I wanted to pay off. I told him that I would if he would give me my transportation back to Belgium. He started to raise hell with me and then said, "Go ahead and do your work; keep up the steam and don't raise any more trouble like this."

### Solidarity Beats Consul

At Rio a man was hired who was a member of the Marine Transport Workers and an American citizen. When we reached Santos, Brazil, this man went to the American consul and got a job on an American ship, but our captain refused to pay him off. He went to the consul, but the consul wouldn't help him as he was on board a foreign ship. He then went to the captain of the port; and together with him and the Belgian consul our captain came to an agreement, by which this man who had worked seven days wasn't to get a damned nickel for it.

We felt it was up to the firemen and sailors to help this man out, and held another meeting. We decided to go slow on the job, and if the captain or engineer said anything to tell him that we wanted the man to get the money that was coming to him. We went slow on the job for three days. The chief mate and engineer reported to the captain that the men were not working because they wanted the man to get his money. On the fourth day the captain ordered the cook not to give us any food. Nobody went to work that day. At last the captain got sick and tired, sent for the man and paid him all that was coming to him.

We left Santos for Santa Fe, Rosario and Buenos Aires. There we loaded 416 head of cattle and took 20 cattlemen aboard. Each one of these had to pay the company 51 pesos and work his way over to Antwerp.

After ten days out at sea from Buenos Aires—no more fresh meat, no more pork chops or beef steak. Down came the steam and the ship was brought to half speed. When the engineers hollered at us we answered, "Rotten eats, rotten work. We want fresh meat." After the ship had gone slow for three days, the captain had to kill three cattle to give us fresh meat. Then the ship went to full speed again.

The cattlemen, though they had paid 51 pesos, were getting worse food than we got before. We told them not to feed the cattle next day, and that we would help them out and see to it that they got the same food as we had. The next day they were kicking to the cattlemen's boss and finally they got the same grub as ourselves.

A couple of days later we were striking again, holding the steam at 140 pounds. This time we were kicking about the small wages—we were getting only five pounds a month. The engineers told the captain that we were going slow because we were getting such small wages.

Then one morning the captain called me up to the bridge at 7 o'clock. He told the chief mate to put the chains on me and tie me up in the bunkers. When the firemen saw that he was tying me up they called everybody on deck—firemen, A. B.s and all. Everyone got a board or a bar and they stood in line like soldiers. After ten minutes the ship stopped. Then the captain told the chief mate to let me go.

Ships sailing from Buenos Aires to Antwerp take 31 days on an average, but we took 42 days, and we had good weather too. We were working slow and getting good grub—so the more days the more dollars. When we reached Antwerp not one of the firemen got logged and we all had good discharges from the engineers. I was the only member of the Marine Transport Workers on board, but all the men had good Wobbly ideas. They stuck together when it came to the time for action.

# "Red Rockets"

By MAC

It is deemed advisable to draw up the following list of questions to be propounded to the applicant for membership. The questions are not so numerous as Mr. Edison's, but they are more in touch with every-day life as seen through red spectacles.

I. Where does a one hundred per cent American carry his brains when he has any?

II. What is the average weight of same? Give answer in milligrams.

III. What would become of the American Labor movement if Sam Gompers dislocated a monkey gland?

IV. Why did Nature provide Sam Gompers with an allotment of skin so absurdly out of proportion to the amount of mutton it contains?

V. Where do you think Sam Gompers will go when the American workers come out of the ether?

VI. What is the general effect on the Ku Klux Klan when its Grand Imperial Wizard wizzes?

VII. If the American Legion had any intelligence what particular form of suicide would it commit in shuffling off this mortal coil?

VIII. What does Henry Ford know, if anything?

IX. Do you believe a one hundred per cent American can lick ten foreigners without getting blisters on his tongue?

X. What do you think would be a good mental tonic to the worker who is always worrying lest the Capitalists might get sore and gather up their belongings and leave the country?

# One of the Pall Bearers

By JANE STREET

HE was hungry, he was cold, he was out of work. And he knew why. He realized the economic causes of suffering. He was able to grasp the situation in which the human race found itself in the age in which he lived. He could see the whole capitalistic system at a glance—knew it from A to Z—at the top the bargainers, the gamblers in the product of human toil, struggling and warring with one another for markets where they might dispose of their booty; at the bottom the workers paid too little to buy back what they had created and thrown out of work in great hordes until the "surplus" was disposed of. He knew the cause of war, of unemployment, of crime. He knew he lived in a dying system.

But this afforded him small relief. He understood, of course, that through organization the workers might cut their hours of labor and thus make room for many of the unemployed. But the great herds had not done so; and he was included in those herds.

He knew also that his wife and baby suffered; and that capitalism was no respecter of maternity or childhood. The woman whined and the baby squalled, and their misery was of that familiar sort that no longer suggested great cataclysmic changes in society in general. He knew that they were hungry and cold, as he was hungry and cold, and he roamed about in hope of solving in some way his own personal problems.

There were five possibilities: He might find some money—this, in his pre-revolutionary days, he would have considered Providential; but not believing any longer in Providence, it sank into the realms of the unreal, if not the impossible. If favorable opportunity presented itself, he might be able to "bum" some money on the street; but here he applied the law of the survival of the fittest, and realized that he must compete with those geniuses who seemed especially qualified to make a success in that line, while he was more apt to be "pinched" than to be paid for his personality. There, of course, was the detestable prospect of borrowing—if he could but forget it—it destroyed his morale long before it exhausted his credit. Or he might find a master willing to buy his labor; but workers were being turned out of jobs instead of being taken on. And for months and months he had counted on this hope and each day it had failed him. Honesty, he thought, had been machined into him; and he couldn't give up the thought of making money by working for it. But there was the fifth alternative—to steal it—a plan very difficult of execution.

It was only at nightfall that he gave it definite consideration. All doors to jobs were then closed. Night dropped down her curtain to shut out hope from the foolish minds of the workless workers until another day should whistle into existence, and their weary search should start anew.

He wandered out into the rich residential district, where the bourgeoisie vied with one another in the display of wealth. He knew that they were parasites upon the working class, that they were the robbers of the weak and destitute and useful of mankind. He felt no qualms of conscience in taking from them whatever he was able to take.

Through lighted windows he could catch glimpses of the inside of their mansions. Liveried servants ocasionally opened and shut doors. "What slaves they are," he murmured. "They would help send me to the penitentiary if they caught me peeping in those windows! What an array of comforts and luxuries I would find there—all made by the slaves who are dispossessed! Yet I would not know where to look for such articles as I might carry away. I am not familiar with that ground. It is only in the factory where I help create wealth that I have access to it at all. And there the slaves bring it in, and I help work on it, and other slaves take it away again. Ah! But after the Revolution the factory will belong to all of us and we will have the wherewithal to be supplied with the handiwork of all other workers." A night watchman glowered at him. He turned his steps back toward town.

"And the watchdogs of capitalism are too well trained and too well paid," he added. "The little crook hasn't one chance in a million."

But along the street curbs he saw many luxurious limousines, from which came to his ears the voices of beautiful women—women in whom he saw no beauty, and for whom he felt no chivalry and no mercy. Occasionally a man in rich fur overcoat would alight in front of him and pass into a house. If he only had a gun he would hold one of them up and get enough money to feed his wife and child. He was willing to take a chance, he decided. But he had no weapon on him but a pocket knife. He must get a gun. He knew no one who owned one. So he must borrow the money with which to buy one.

With this in mind he quickened his pace and bent his steps toward the lower end of town, where a petit bourgeois friend of his kept a cigar store. He had heard that this small business had recently failed, throwing its proprietor back into the ranks of the proletarians, where he belonged. "I saw him duck across the street when he saw me today. That's because I owe him so much already. He's really a good fellow. I'll pay him back when I get a job.—Maybe he will loan me enough to buy a gun anyway."

He passed by a noisy cafe, from which issued, to torment him, the savory odor of broiling steak. He was conscious of being tired and glanced at a clock, hoping that his friend's place of business, which was now not far distant, might not be closed. It was but 10:30. He quickened his steps. At least, perhaps, he might sit down without fear of arrest and

find solace in the camaraderie of the revolutionary-minded.

Ahead of him he saw a woman stop several men, and he saw that his turn would come next. He knew her and having no money wished to avoid her. So he darted into a narrow dark street and stood close up in the shadows of a doorway. From his place of concealment he had a good view of her face where she had stopped on the sidewalk.

He had known her when she was quite young. She never had any sense, he told himself, never could get into her head anything about the revolution; but she had been very beautiful and many a man had dreamt he was in heaven when he basked beneath her smile. Anyway, he had argued, in this age when marriage for the workers was a crime, she had had sense enough not to marry, and not to bring children into the world of misery; and long ago he had accepted her prostitution as a matter of course.

But now as he scrutinized her face he saw that the charms of youth had departed; her delicate chin quivered and he saw despair and hunger written on her face. Pity seized hold of him and he wanted to go up to her and speak to her in creature sympathy. "But, no," he said, "capitalism has commercialized her. It's only money she wants." And he held close to the dark wall.

"Well, hello Al, old dear," her voice rang out in genuine pleasure of recognition, as she accosted a man on the sidewalk whose clothes bore all the marks of opulence. Her voice still retained something of her old magnetism,—there was nothing metallic or mercenary in it, but it suggested something so human, little trickling tears of joy. It seemed to put something straight in the mind of the man in the doorway, to make him recover from his shock at the sight of her.

"Get off the public street, you hussy, or I'll have you locked up," came the big brute's voice, and he struck her in the face. With a stifled shriek of pain she shrank into the alleyway, and here backing away she turned upon him a half-whispered, half-hissed volley of curses and vile names that chilled the blood of the silent listener in the doorway. Her once beautiful features were hideous with rage and the suppressed murder that was in her heart. She hurried on and in an instant disappeared on a street around the corner.

Her assailant stood still on the sidewalk—possibly held there by the fury of her curses. He now removed one of his expensive driving gauntlets and was lighting a cigar.

Suddenly creeping upon him from behind there appeared a veritable monster in human form. He was hatless and his long hair streamed in the wind; his deadly palor, his dilated nostrils, his set teeth and his wild eyes bespoke the madness of the cocaine fiend. He held his hands like claws, ready to dig into his victim. He seemed to be unarmed. "Stick 'em up and be quick about it and don't move," he commanded.

"What the—" started the bourgeois, turning around with well-fed physical courage. But he got no farther. The claws grabbed at his throat and he was down in the dirty alley without a whimper and without a motion. Perhaps a flash of steel might have been seen in the light of the street lamp, or was it merely the finger nails of the dope fiend that tore the flesh open? The man in the doorway was not sure. He felt sick at the sight of the blood that continued to flow there on the pavement and the job ended. The bandit could be seen across the street coming out of a drugstore sniffing something from the back of his hand as he walked hurriedly away.

"I have seen that little fellow before," soliloquized the unwilling spectator. His stomach began to get back to normal as by an effort of his memory he removed his mind from the horrors of the present. He now recalled vividly the details of the meeting.

He was standing on a street corner talking with an IWW—one of those foolish fellows, he soliloquized, who believe in beating their heads against an iron wall!—when this same fellow came along.

"Hello, there, Bill," came his hearty greeting to the wob.

"Hello, Jo," was the response.

"Are you workin'?" inquired the workingman. "When did you get out?" simultaneously asked the crook. They both laughed at their characteristic interrogations.

"Oh, a couple of months," said the wob; "I'm out on bail—may get ten years for believing in the right of the workers."

"Yes, I worked a little," answered Jo.

"I wondered if that was a workingman's happy smile you were carrying around with you," bantered the IWW.

"No, I guess my working smile is a different thing altogether," said the bandit.

"He was my cell-mate," explained the IWW after Jo was gone. "Highwayman. He is not old, but he has spent fifteen years of his life in penitentiaries."

He wore his working smile tonight all right, thought the man in the doorway, whose mind simply lacked the power to connect up the monstrosity he had just laid eyes on with the human being he had met on the street that time. This was outside of his pale of realities.

He was anxious to go, but afraid to move. His eyes were riveted upon the bloody face a few paces from his feet. Suddenly he spied hanging half out of the overcoat pocket a bill fold, literally bursting with money!—an oversight on the part of the bandit.

How his heart thumped against his chest at the unexpected prospect! His first impulse was to grab the money and run. But his mind had been so long dressed up in what he termed "revolutionary psychology" that he must use it at this time. The whole marvellous police system of capitalist society was created to guard the rights of the prop-

HAVANA HARBOR ON STRIKE

The upper picture shows Havana harbor with struck boats tied up. The sailing boats in the right center are similar to those use by "Viveristas."

To the left is a Cuban marine, on strike-breaking duty.

Directly above are Cuban cavalry—guarding scabs.

# The "Viveristas"

By MARINO

THERE are all sorts of ways of working for a living, and the class-struggle permeates them all. One of the most unusual is that of being a "viverista," a catcher of live fish. There is only one place where "viveristas" are to be found, and that is Havana, Cuba, and west coast of Florida. Out of Havana and formerly, but not now, out of the neighboring port of Matanzas, run fishing schooners, boats of 60 to 150 tons burden. They carry crews of eight to fourteen men, and are provisioned for voyages of from twenty to forty-five days. In the winter they go to the coast of Yucatan, and in the summer they come up to the coast of Florida, in both cases looking for the fish called "Cherna".

The "Cherna" are caught by hand lines, and hooks, with sardines for bait. When the fish are pulled on board, the first thing to do is to see whether the little creatures are bloated. If they are, they have to be poked with a special instrument to get the "wind" out of their gills, and then they are thrown into the hold of the fishing schooner, to stay alive, for the hold is full of water. All day, as long as it is light, the crews keep patiently at work, hauling in the unwilling "Cherna". The reason of course is that the fishermen must live.

Often enough they do not live so very well. When the fishing boat comes into Havana, their romantic life ends and commercialism starts. The fish have to be sold. There is no free market for the "Viveristas." The ships they sail on are owned by one or other of three companies. These companies place orders for the fish, as they have sales. Meanwhile the fish are kept in barges, with tanks through which the water of the bay sweeps. The fish are the property of the fishermen until they are taken by the

companies, and must be cared for by the fishermen. Meanwhile they die, one by one, and that is the fishermen's loss. Sometimes they die altogether, from the water in the bay turning "rotten." That is a considerable loss to the fishermen, whose only pay is two-thirds the value of the catch, and who must provide their own food and all other expenses except those of the boat themselves.

Their work is almost as dangerous as coal mining in the United States of America. The fishing grounds are cursed with cyclonic storms, very risky things for such small schooners as the Cherna fishers use. It is the custom to tie up the ships for a couple of months in the Fall of the year, to avoid the most severe of these winds.

However, so great is the greed of the capitalistic owners of the ships, and so great, too, is the need of many "Viveristas," that some of them put out to the fishing grounds even in the cyclone season. The result, of course, is wrecks. There are lives lost every year, even in the "safe" season. At the time of the big strike, several boats which were at sea, and had not heard of the strike yet, were capsized on the way home.

### The Viverista, Microcosm

The history of the class-struggles of the "Viveristas" is the history of Capital and Labor, in miniature: the same deadly feuds between capitalists, the tendency towards trustification, and the immediate coalescing of even the bitterest enemies among capitalists, when it is a question of fighting Labor.

There are three big employers: first, the company owned at one time by Raul Mediavilla, now deceased; secondly, the company owned by Victoriano Bengochea, now serving life for murder; and lastly the company called, "Compania Cubana de Pesca".

The story of Mediavilla is instructive. At one time, a few years ago, he owned the largest company, and was building up a trust by J. D. methods, but he was met with a little unfair competition himself. His main rival, Bengochea, hired a man to kill him, and the murder was duly consummated. The result was a terrible feud between the two companies, both of which continued to compete in the live fish industry, and after a while, Bengochea came within reach of the law, and was arrested, tried, convicted, and sentenced to life imprisonment, at the request, and because of the urgent pressure of the company of the murdered man.

But before the arrest, and while the hatred between the two cliques of capitalists was at its height, there was a strike. Between seven and eight hundred "Viveristas" walked off the ships, in Havana, to show their dislike for a plan the bosses had to reduce the pay for fish from nine cents a pound to about seven cents a pound, all fish weighing less than one pound to be rejected.

No sooner was the strike declared, than all these larger capitalists, those with blood on their hands, and those who were trying to avenge the blood of Mediavilla, united, presenting a solid front to the striking workers.

### Good Strategy

There were a few independent bosses, and the strikers forced these to give in all along the line, and place their ships, twelve in all, at the disposal of the strikers. There were a few men placed in each of these ships, and fish were brought in for sale. There were about 150 men working, in this manner, and they were pledged to turn over half their earnings to the strike committee, which took the money and maintained a common kitchen, to feed all men on strike.

The workers, well organized, and acting through their strike committee of which Adolfo Garcia, now editor of the Spanish language I. W. W. paper, Solidaridad, was a leader demanded some things themselves. They wanted the company to guarantee to take at once on arrival in port, the catch of three ships a week—more if they wanted, but anyway three ships full. The strike ended with a compromise, in which the company agreed to take two ships of fish, to amount to at least 45,000 pounds, which would have been some help, if the strikers had kept up their organization.

### "Eternal Vigilance—"

As a matter of fact, they allowed it to sink in effectiveness, and the bosses, by a great show of force, and through the use of American capital to break a waterfront strike, succeeded in smashing both the waterfront union and the union of "Viveristas".

Even in their moment of defeat, however, the fishers turned and reorganized, and succeeded by a boycott on the "Compania Cubana de Pesca" in tying up twenty ships out of the thirty-five owned by the company, and in winning both moral and material advantages.

So that is the story of the "Viveristas," so far. They discovered what the I. W. W. has always been telling the workers, that only by organization and by vigilance can anything be gained for workingmen.

# The Social Forces

By JOHN CANNAVAN

## CHAPTER I

### No Neutrality in Class War

CLASS interests divide society into two warring camps between which there is no neutral territory and among whom there are no neutrals. The proletariat is compelled to recognize that in the battle which it must rage on its own behalf of it will encounter hostility from every other social element. It seems in "the public" only an awkward attempt to segregate that portion of itself which is waging battle in some sector of its world-encircling battle line. Moreover it is an attempt to segregate that portion solely for the purpose of more easily dividing its forces and rendering its efforts futile. To the militant proletariat there is no such thing as "the public," in the general application and acceptance of that term.

To the workers, "the public" is a confusing term. Without appearing to, it is meant to cover all that portion of a community which is not directly involved in an industrial controversy, and in which, by the way, the quality of neutrality is supposed to abide. But the fact is that the same elements for strife are present in "the public" as are actively in opposition in any industrial controversy that is being fought out. The class division runs as cleanly through "the public," though there be temporarily the appearance of peace, as in a strike situation where it cannot be mistaken; and it only waits upon some provocative happening to present manifestations similar to those of which "the public" are supposed to disapprove.

When "the public" is analyzed, it is found to consist of wage earners and employers—the same factors which are present in and parties to every industrial dispute—and it is impossible to find in it that quality of neutrality with which it is supposed to be endowed. "The public" is never concerned about justice. It is always dominated by the idea of expediency. It is under the influence of the dominant class and is incapable of unbiased social judgment. It concurs in the capitalist conception of what society ought to be, and is disposed to attribute any inconvenience to capitalist society as a crime committed by the workers. It is not neutral. It cannot be. One proof of this lies in the acquiescence of "the public" in the conception that every striker is potentially a criminal; and with general

approval, the executive and police powers, "in the public interest," act upon that assumption; for we find that, whenever the workers in an important industry break off relations with the employers, every one of the repressive and miscalled corrective state powers are set in motion and directed against them. The proletarian movement expects them to act in no other way, because it recognizes in these institutions safeguards which the capitalists have erected for the preservation of a social system of which they are the beneficiaries. "The public" is a convenient camouflage by which they seek to identify the momentarily non-combatant proletariat with themselves, and to array them against those proletarians who are actively fighting some issue in the class war.

### The Convenient "Public"

For instance, when the coal mine workers struck last April, the cry of "the public interest" was raised against them. An organized effort was made to prejudice the workers in other industries by harping upon a shortened coal supply, with a consequent increase in prices. The propagandists held the mine workers, and only the mine workers, responsible for the interruption to coal production and the social inconvenience resulting therefrom.

The workers were incited to believe that the strike action of the mine workers was inimical to them. But what really happened was that the unsocial and unjust treatment to which the mine workers had been subjected compelled them to demand redress from those who stood between them and the society to which they had been rendering an indispensable service. The battle waged by the mine workers was actually in furtherance of the common labor interest. The owners' part in the suspension was cancelled to the greatest possible extent. And, after all, society does not depend upon the coal mine owners for its fuel supply, but on the workers. This is why society is always ready to identify itself, as "the public," with the capitalist interest.

So, also, when railroad men or other workers in basic industries strike, "the public" is invoked as a reason why such industrial interruptions should not be permitted.

The capitalist ownership, the anti-social cause of these interruptions, is hidden by those interests which use "the public" for that purpose.

The idea that "the public" is a section of the people who have no special partisan interest in the outcome of an industrial conflict is untenable, for outside of other considerations, the success of the workers in a strike very often acts as a stimulant to other wage workers who are temporarily included in "the public." Likewise, if the outcome is favorable to the employers actively concerned, other employers, who are temporarily of "the public," will be heartened to join issue with those other workers who were also temporarily and simultaneously of "the public." These workers will in turn become the objective against which a newly aligned "public" will be directed, under the banner of neutrality.

This subterfuge, which has been used so often and so successfully to divide the workers and to array one part of them against another which was pressing some point to their common advantage, is soon due for the discard. The line of cleavage between the dominant capitalist interests and the wage workers will dispel the illusion that the wage workers can ever serve their own best interests by actively opposing the efforts of their fellow workers, or by in any way assisting to defeat them when they are striving to improve their conditions. On the contrary, they will realize that their own interests can best be served by aiding their fellows at such times.

### The Smoke Screen Lifts

The bogey of a third party to a strike—the public—will be laid when the workers realize that it is put forth as a disguise for what the capitalist interests want society to be. When the social significance of strikers is understood, even to a moderate degree, it will be impossible to work this ancient gag. When it is realized, as it will be, that the strike is the workers' weapon for fighting the battle of progress, not only on their own behalf but on behalf of society, so great will be its potential effectiveness that labor will need only to carry it in sheath. While the strike is the weapon of last resort by the workers under present day arrangements, because of labor's failure to appreciate its position in the capitalist scheme of things, the time is at hand when the threat to strike will be labor's first weapon.

Labor is coming to realize that capitalist society is concerned only about its own convenience. Until the supply of society's needs and wants are interfered with, it gives no heed to how, by whom or under what circumstances these wants are supplied; and then it only seeks to remove the obstruction with as little inconvenience as possible and without at all striving to discover and remedy the causes which brought it about.

The proletariat, from its contact with and control over the tools of production, can and does use the strike as a weapon by which it endeavors, by shutting off the source of the employer's profit —the use of its labor power—to force concessions from him. As a weapon used intentionally to impress society the strike has never been employed. The reason that it has not, is because the workers do not understand its potency as a social weapon. They do not understand the social character of their own service.

### Traitor To Itself

That they do not understand is the crime of the labor movement. In America the economics of labor are a sealed book to the workers. In the so-called organized labor movement of the United States few workers are acquainted with the laws that govern capitalist production, or even with the

history of the labor movement, and still fewer of them recognize the greatest outstanding labor fact of our time—the class struggle.

The organized labor movement of America has served the interests of capitalist society by fostering economic ignorance among the workers. Insofar as it has any philosophy, its teachings deny the class struggle. It has always catered to the idea of "the public" as a distinct social division. When, as a result, the workers are confronted with an emergency, they are at a loss how to proceed, because they know nothing whatever of their true positions; everything they believe they know only serves to render them worse than helpless, and they blunderingly contribute to their own defeats and undoing.

Acceptance of the idea of "public neutrality" has cost them many dear experiences; as, for instance, the Landis award in the Chicago Building Trades disputes; and the decision of an arbitrator in the New York Printing Trades controversy. The Railroad Labor Board is a standing refutation of this absurd fiction. The consciousness that the neutrality of the public is fictitious is growing among the workers. Nourished by the demonstrated inability of "public" representatives to decide impartially this feeling will develop into class consciousness with ever increasing rapidity.

That there are no neutrals in the class war, the facts of industrial life are impressing upon the proletariat which is forced to bear the brunt of the battle, because it is in the vanguard of the social army. Upon this element the capitalists launch every attack through which they aim at further conquests. Here it is a cut in wages; there an increase in hours and at other times they are speeding up the machinery and forcing intensity of personal effort by the workers. The capitalist's ambition can only be served by forcing the relinquishment of working class ambition; the security of the capitalist class is predicated upon the insecurity of the working class. This dangerous philosophy of the capitalists—with its restricted vision—makes no allowance for a breaking point. There is a failure to appreciate that, while the empty cupboard may serve the capitalist momentarily, hunger, like fire, may be a bad master as well as a good servant.

### The Human Commodity

To sit in an office and estimate building materials is one thing; but men, packages of labor power, if you will—human commodities—while they are still commodities, are other than and entirely different from all other commodities, in that they are the embodiment of aspirations, ambitions, hopes, desires, wants and wills. In the mass they are held in check only by a lack of consciousness. Once they are driven to recognize the class nature of the struggle that victimizes them, their accomplishments will only be limited by the limit of their perspective.

To abuse the power they wield is the tendency of all tyrannies, and they have all ended by creating the means by which they were to be overthrown. Capitalist autocracy is no exception. Perhaps never before in history have the lines been drawn so tautly, that separated exploiter and exploited, as today. The industrial autocrats are visiting oppression and denial upon the most potent force that humankind has ever produced. The fancied power of the capitalists is only a reflex of the lack of consciousness of the working class. They are continually and continuously disturbing labor without recognizing that labor is power. When they have annoyed the toil-worn sleeper of the ages into wakefulness, with the impression of his centuries old dream holding and dominating his consciousness, they will stand shivering before the giant they have aroused.

The problem of labor is the "problem of life" for the working class—of survival for the race. Every influence, regardless of the source from which it emanates, which oppresses labor in any way or to any degree, is not only anti-labor but it is anti-social as well. The workers constitute the only element necessary to human existence; that is, to the survival of the race. They are the indispensable social element. Every movement of the workers, when followed to its logical conclusion, will be found to have a social objective. Labor cannot win advantages for itself alone. Every right it secures for itself reinforces the social guarantee and signalizes that humankind has overcome an obstacle in its onward march. Every move, in promotion of capitalist ambition, is anti-social, for the capitalist ambition can only be gratified at the expense of the other great social division—the working class.

### Deterioration of Human Commodity

Whenever it becomes necessary to throw millions into unemployment; to employ and to ruthlessly exploit the women, the mothers and potential mothers of the race; to condemn childhood to malnutrition and a treadmill existence; to overstrain the workers with long hours and intensified effort upon depreciating living standards, the physical qualities of the race are being constantly lowered and society imperilled.

To deprive the child of his playtime and opportunity for education is anti-social in the extreme. And of this capitalism is guilty. Everything that capitalist property dictates to its holders militates against the welfare of the race. The highest types of manhood are selected for destruction in wars, and the race suffers deterioration as a consequence.

All these factors the proletarian militants have taken cognizance of, and are working to the end that their significance be made known to the workers. They fight against almost discouraging odds. But the experiences of the workers are adding to their forces. Every day brings new recruits to inspire and reinforce them.

# The Right to Live

By A. BUCKER

**The Struggle For Existence, and the Economic Urge That Is Back of It—Not a Poetical Figure, But An Actual Fact—Worked Out in Factory, Field and Farm, It Gives Rise to Labor Organization and a New Idealism.**

IN the July issue of The Industrial Pioneer is an article by James Lance under the caption "Smoke Wreaths and Visions" which splendidly sets forth the aims and aspirations of those migratory workers known as "harvest hands" which are the driving force in their great effort towards organization. In this article the author somewhat beclouds the issue at the very start with the following, more poetical than realistic, declarations;

"Certain urges and instincts which motivate the inhabitants of this old world, to an interested observer, are an endless source of wonder and speculation. Through them birds, beasts and their prouder biological descendants act in a manner which seems to have been determined by forces above and beyond their control or power of resistance. Our northern songbirds leave us to doleful contemplation of those days rendered more melancholy by the absence of their soul-stirring voices when the first breath of old King Winter paints the leaves bronze and purple and threatens dire things to come. The king salmon feels the urge thousands of miles down the latitudes and returns from his wanderings through the spaces of the southern ocean to spawn in the river in which he was a fingerling."

According to Fellow Worker Lance, the migrations of the above mentioned species of the animal kingdom seem to be an entirely unsolved mystery to the human mind although he himself later on in the article in question indicates quite clearly where to look for an answer to the seemingly unsolvable puzzles. As a matter of fact, there is nothing in these migrations that is any more mysterious than there is in the migrations of the harvest hands, the lumberjacks or construction workers.

### Why Bird Migration?

Is it not quite reasonable to assume that the simple reason why the northern songbird migrates to a southern climate during winter time is because the struggle for existence compels him to do so? That in no way is he prompted by a desire for adventures or for traveling, neither does he intend to deprive some lonesome dreamer in the northern climate of the pleasure of his song, but he must make the journey or sacrifice his life.

We may also be justified in presuming that said northern songbirds belong to a species that has originated in the more temperate climate of the north and therefore cannot withstand the scorching sun of the tropics, hence his march towards the north every summer. As a matter of fact, his journey towards the south in winter time does not extend any farther south than what is necessary in order to encounter a suitable climate. Those songbirds who have originated in the tropics, like the canary bird, do not migrate but content themselves with a stationary home.

Similarly with the king salmon. Is it not logical to presume that the reason for him leaving the stream in which he was hatched is because the supply of food available was not sufficient for the multitude of hungry salmon, hence he started on his journey in search for something with which to sustain life? That he goes back to the identical stream in which he first saw life is rather doubtful. Most likely he accepts any stream that facilitates the necessary swift current required for his fulfillment of his second strongest natural urge, the preservation of the species, and there performs his duty towards the future generation. We may only point to the fact that millions of salmon eggs are every year transferred from one place to another and deposited in the hatcheries and the process seems to meet no obstacles in the form of some kind of an inherited natural disposition in the species to be propagated just in that particular stream in which it was hatched.

### Inherent Desires

Now to come to the next sentence in the article in question, we find that Fellow Worker Lance is inclined to believe that it is some kind of an inherent desire, peculiar to the migratory workers who follow the harvest field, that drives them out to the fields, a desire that cannot be resisted. It says: "And every spring when the breezes in the cities begin to give promise of hot stuffy nights and sweltering days between walls of stone and pavements of yielding asphalt the migratory worker thinks of the open spaces lying beyond the confines in which he has been passing his days in irksome monotony and—starts for the harvest."

This sounds poetical and no doubt is, and it is certainly very novel especially to one who was born and raised in a farming country and had to start aforementioned journey to the agricultural fields every spring, and start out at an early age at that, barely seven years old. As a matter of fact it is something new when one recalls how many tears were shed by children who were compelled to journey out in the field at six o'clock in the morning and work in the sugar beet fields ten or twelve long

hours per day. These kids certainly had a peculiar manner of expressing their joy over the splendid opportunity offered in exercising their natural desires and demands. To me and to all who ever labored on the agricultural field it stands as a fact that what drives us to do it is not the cravings for the open fields but economic necessity that urges us on.

### Why Not Widespread Desires?

If we are to accept some particular adventurous desire on the part of the agricultural workers as being the main driving force that compels them out into the field, why not then look for some similar traits in the physical and mental make-up of the workers in other industries? Why not then dwell upon that peculiar characteristic in the lumberjack that compels him to leave his shelter in town and proceed out into the snow and cold or in the pouring rain in the woods and take down the trees and transport them to the sawmills, or the construction worker who is also unable to resist such undefinable urges and ventures out in the mudholes contracting an abundance of rheumatism and other sicknesses in seasons when all other human beings prefer the more comfortable fireside in the home?

There seems to be no other explanation for the migration of the workers than their struggle for existence. It is not the hot sun on the pavements in town, neither the beauty or the greatness of the open fields or the majestic forests that put us on the hike, but our empty stomach and ditto pocket book.

### Heroic Struggles

Looking at the question from this point of view, and this only, it is with a great joy we behold the heroic struggle of the migratory workers towards building up a force strong enough to secure for them a place in the human family. It is the first real and conscious attempt made by the workers in their own behalf and conducted by themselves. All struggles in the past on the part of the workers have been class struggles, have been an endless effort on the part of the toilers to reassert their human rights to existence, but they have always been more or less unconscious attempts so far as the masses themselves are concerned. First with the inception of the IWW have such attempts on a large scale been undertaken directly by the workers themselves, and by workers conscious of the part they are playing in the evolutionary process known as life. Up to the present time the suppressed classes of mankind have been nothing but tools in the hands of their masters for them to use in their struggle for existence, similarly to the cultivated flora and the domesticated animals which today serve as an instrument in the hands of the owning class for their perpetuation in power.

### Cultivated Flora

Our cultivated flora has undergone many changes as a result of artificially stimulated growth and grafting, cross breeding, etc. Thanks to such methods its fruition has either been enormously stimulated, as is in the case of appples, pears, and numerous vegetables, or entirely ceased as witness seedless oranges, grapes and other seedless fruit. Although in either case it might be considered an advance so far as the owner of the plants is concerned, as to the plants themselves it means complete suicide should they be left to themselves. There is not one tree in a modern apple orchard of today that could survive in the struggle for existence should it be left to itself. In a very short time the whole orchard would be overgrown with some wild flora which has not been devitalized through any artificial cultivation.

### Domesticated Animals

Similarly in regards to the domesticated animals. In a modern chicken ranch the hens lay at least fifteen times as many eggs as in their natural and free environment. The cattle are either developed with a view to obtaining as much milk from them as possible, or else such characteristics developed that make them especially desirable for beef animals.

These husky and strong looking animals, if left without human protection and forced to fight their own battle for existence, would certainly be unable to survive. They would go down in defeat either against the elements or against some sturdier species of the animal kingdom. Yet they are the acme of usefulness to mankind.

Shall the millions of the toiling masses sink down into a similar dependency upon a small group of men who own them like they own the trees and the crop on the field, or the domesticated animals? Shall we, the workers, develop ourselves similarly to the domesticated animals so that our only value will be our usefulness to our owners? Shall we be nothing but a means in the hands of a master class by which that class can so much more successfully struggle for its existence?

If we are to become independent human beings, participating in the struggle for existence in our own behalf, it is necessary that we develop ourselves independently also. We must refuse to be domesticated in behalf of some particular class in society to whose interest it is to develop certain qualities within us and suppress others. And if plants and animals through artificial means have degenerated so that they are unable to reproduce themselves in an offspring sufficiently strong to survive, there is nothing to indicate that the same could not take place among suppressed classes of the human race.

The migratory workers are laying the foundation for an independent race through their relentless prosecution of their organization. **At the rate they receive assistance from other groups of workers, the workers as a class will gain a correspondingly larger amount of security in life.** The battle carried on by the harvest hands and other groups of militant workers, by the IWW as a whole, is far more vital than we are prone to think at a first glance at it. It is much more than a battle for a little more of the good things of life in the present form of society. It is a battle for the preservation of the whole human race with a biological significance far greater than we can really comprehend today. It is a battle for the right to live.

## Verses by Laura Tane

### GARY RIDES SWIFTLY

The wind blows and blows
Where the green arm of the forest
Waves a sun-yellow handkerchief
To the wind that blows and blows . . .
A smothering vomit of smoke and slake
Over the honest misery
Of Braddock, Youngstown, Homestead
. . . . steel towns
Through which Gary rides swiftly
In a closed automobile . . . steel towns
Which have no sun-yellow handkerchief
For the wind to blow into.

### VAGABONDS

Many times I saw them
Standing on the roof of a red freight train
Running swiftly into the south wind.
Strong-faced men
Looking as if they had held themselves
In the sun a long time.
A rough laugh they gave me
Sitting on the quiet hill . . .
But no longer do I wait
For the growl of the swift-running animal
As I sit on the quiet hill.
I too have become an Incorrigible . . .
A vagabond-thief of yellow mornings
Running on swift feet out of the darkness.

### PROMISE

A silver promise the dawn did keep
As I bent over my love asleep:
Her hair lay rippling in a blackened sea
And a lost red flower where her mouth
should be.

But now the day's demands are made
I bend beneath a monster's shade
Of sweating grease and a steel forge roar
And the silver promise is no more . . .
And the lost red flower is no more.

### WE KEEP THE BOATS WARM

The lady slips into her silken bed
The light is golden above her head
Her cabin is warm as a chimney-nest
No cry of the east wind disturbs her rest.

But we below hear the snarl of the sea
As we shiver our limbs, men who are free;
The days spill hot coals upon our skin
The night weaves a blanket from a bliz-
zard wind . . .

The lady climbs out of her nest-warm bed
The sun is golden above her head;
When we face the sting of a furnace heat
Or the eyes of the coals look thru our feet.

### PITTSBURGH ANNIE

Her curtains were white when she was
young,
When the Gary chimneys were just begun;
When the slake was hid in the mists of sun
Her curtains were pure as a virgin nun.

But now the windows are bare and black,
The roses are dead behind her shack;
Her old man died on the mill's wheelrack,
Today she rides on her son's deathhack.

TRANSPORTATION OF MAN POWER IN THE HARVEST

# Crossing the Line

**LIKE a flood, creeping down the valleys and lowlands, sweeping higher and higher up the hillsides, leaving an island here and there, only to submerge them later, the harvest rushes northward. Or, like a forest fire, or a grass fire, it goes, because it strikes the standing grain, and passes along, leaving nothing behind.**

**Yet, it is not quite like either of these, for the flood goes up the Mississippi Valley, and the flame that burns off the grain is not red fire, but red card men, who save it, and do not destroy it.**

The yearly harvest of wheat starts in the early days of June, in the northern part of Texas, and the state of Oklahoma. By the middle of June it has followed the wide line of ripening grain into Kansas, which is the second largest field of harvesting activity. By the middle of July it has pretty well cleared up the Kansas fields, the River Brothers, and the funny Kansas anti-cigarette laws, and the good Dutch custom of five meals a day are left behind in Eastern Kansas, and the hot, dry-land header-barges are left behind in Western Kansas. Then comes the more sparsely settled, poorer yielding Nebraska, and we are ready for the northern harvest belt, South Dakota, and especially North Dakota, and across the line into Alberta and Saskatchewan, Canada.

As this is written in the latter part of September, the line is being crossed, harvesting is under way in the Moose Jaw country, Canada.

More lines than one were crossed by the Agricultural Workers' Industrial Union No. 110 of the I. W. W. this year. More crises than one were met and overcome.

### The Land of Martyrs

The first was the hostility of the farmers of the South, which in previous years has resulted in anywhere from half a dozen to half a hundred victims. Men were arrested for criminal syndicalism, state vagrancy, or nothing at all, and kept in jail for years, months, or weeks, at the whim of the banker-controlled authorities.

This year there were few arrests, and fewer convictions in Oklahoma and Kansas. The strenuous battle put up by the General Defense has

BIG THINGS WILL COME OF IT

The Agricultural Workers' Office in Moose Jaw, Canada. It is small yet, but only a beginning.

made criminal syndicalism frame-ups expensive and uncertain; the law has been abandoned. Preliminary educational propaganda in the I. W. W. press and by leaflet has proved to the farmer of the South that the banker is his real enemy, and that the I. W. W. does not hold him guilty of all that the banker does. The I. W. W. has convinced at least a part of the farmers that they might as well pay decent wages as not, for what they do not pay to their harvest labor, the grain elevator monopoly and the country town banks will take from them, anyway.

In North Dakota this season opened most unpropitiously. As if to demonstrate that the I. W. W. was right when it accused the state of being under the control of the industrial rulership of the country, the farm bureaus, which are joint bodies composed of farmers and county agents, who represent the United States Department of Agriculture, the State Board of Agriculture, and the state universities, working hand in glove with the governor of the state, were ready for the Wobblies with a pretty clever, well organized scheme for the lowering of wages and the worsening of conditions.

First of all, they had advertised far and wide that North Dakota had a bumper crop. That was true. Moreover, the crop was late, and there was wide-spread unemployment throughout the East. So before the harvesting started, they had North Dakota flooded with the unemployed.

Then they proposed to create gangs of strikebreakers in the country towns, recruited from among the drugstore cowboys, and the bunch that usually join the American Legion, the Ku Klux Klan, and the state militia. The farmers were notified of the wage to pay, usually from $2.50 to $3.50, and told to extort a pledge from each man they hired, that he would never ask for more, this whole season.

Then Governor Nogles' famous "Forty-eight Hour" proclamation was issued, calling on all officers of the law to permit no one to remain in their jurisdiction over forty-eight hours without a job. This was intended to compel the harvesters to go to work at whatever wage was offered.

The whole thing failed. The I. W. W. no longer approached the North Dakota harvest fields in the old-time, haphazard, reckless way. They no longer kept their delegates in the jungles. They used the sensible plan of stationing district organizers throughout the harvest "front," and these men, stationary delegates, learned their districts thoroughly, knew every job and every man, and cooperated with all other delegates and stationary delegates.

There were enough workers in Agricultural Workers' Industrial Union No. 110 of the I. W. W. to compel the farmer to hire some of them, or he couldn't get in his harvest. They insisted on having organized crews. They gave the unorganized man plenty of time to learn the organization, but then, if he wouldn't join, John Farmer had to fire him, or shock his grain and thresh it himself. Not only that, but his neighbor had to do it too.

As a matter of fact, there were few strikes, and practically speaking, no strikebreaking. John was whipped. He never had any interest in the fight anyway. The county agent system forced him into it, and the agents were badly whipped.

And Agricultural Workers' Industrial Union No. 110 of the I. W. W. sweeps on, harvesting the grain of the Middle West, demanding and getting fair treatment and about twice the wage the harvest worker would have obtained without it. It is crossing the line—the line between mere card selling and the permanent, organized control of an industry. The march of events, and the necessities of the situation are forcing it forward.

"THE JUNGLES"

Waste Places Where Unemployed Harvesters Congregate. The I. W. W. Motto Is "Out of the Jungles and Organize the Job!"

# One Man Against the System

A BOOK REVIEW By GEORGE MORESBY

IN the north end of Lincoln Park in Chicago there is a bronze memorial group by Gutzon Borglum. It portrays John Peter Altgeld, once governor of Illinois, standing with one arm outstretched over the heads of three kneeling figures—a poor man, his woman and his child—and the other arm held out in appeal to the world to be square with all the disinherited ones.

He stood as one man against the system which exploited the multitude, and he fought with shining courage. He pardoned the three so-called anarchists who had been sent to prison for life for the bomb-throwing in the Haymarket, not as a mere act of mercy, but because he knew from an analysis of the case that there had never been the slightest proof that they had anything to do with the killing of the policemen on May 4, 1886. And thus he brought upon his head the wrath of all who tried to block the movement for the eight-hour day.

Then, in the Pullman strike, he battled by telegraph with President Cleveland in protest against Cleveland's act of sending federal troops to help move trains at a time when the state authorities were maintaining good order. And because of this, plus the anarchist pardons, he became the target of one of the most bitter onslaughts of vilification in history. For nearly a decade his name was anathema to newspapers, magazines and men upon the public platform—until, in 1902, a broken man, he died.

Curiously enough, in the years that have followed, his name has gone into the discard. No man in public life has been more completely forgotten; one has ground for suspecting the newspapers of an undiscussed, automatic conspiracy of silence against Altgeld's memory. But now one man who has not forgotten has broken the silence. Waldo R. Browne has written a biography in which the full stature of this tragic figure is revealed. It is entitled "Altgeld of Illinois." Browne has evidently made a careful and exhaustive research of documentary sources for the data he uses. He has done a sterling service in stripping away the ugly myths attached to the name of this man who fought the system. The book is rich in illumination.

Altgeld was born in Germany in 1847, and was brought to this country by his parents when three months old. His father was illiterate and narrow, hard-headed, close-fisted. At an early age John Peter was pressed into service on the father's farm near Mansfield, Ohio. He wanted an education, wanted to become somebody out in the world, but the father was opposed,

and at times used a horsewhip to enforce parental rules. When the Civil War began, the boy was thirteen. Three years later, in response to a call by Lincoln for fresh troops, he joined the army, and for several months carried a gun in the swamps below Richmond. Years later he explained that in entering the army he merely did what other boys were doing. "It was the enthusiasm of those days, the drums and the flags and the rest of it, that led me to enlist," he said. "Not all that I went through in the war required half the courage that it took to sign the anarchist pardons."

He returned home after the war, and took up the routine on the farm again. In the winter of 1866, however, he became a schoolteacher as a partial escape from the atmosphere of home. He wanted to study law, but there was too much bitter objection to that from his parents, and so he kept on teaching until he was twenty-one. Then with ten dollars of borrowed money in his pocket, he set out to wander. For a year he was a migratory worker, suffering hardship, but pushing on. He moved southward and westward to Cincinnati and across Indiana and Illinois to East St. Louis, covering about 500 miles on foot, stopping occasionally to work for a meal or a night's lodging. In St. Louis he worked for a few weeks and studied law at night. Next he was laborer in a railroad grading crew near Fort Scott, Kansas. He became sick there with army fever and nearly died. Later while working for a farmer near Savannah, Missouri, he got acquainted with Judge David Rea, a lawyer there, who gave him a chance to study, and in 1871 Altgeld was admitted to the bar. He was then twenty-four.

**We desire to expose the futility of reformism. Altgeld was as good a man as Jesus Christ, and wise, too, in his generation, but he failed as miserably as Christ. He did not leave the world a better place to live in. Revolution alone can do that.**

Presently he was elected prosecuting attorney of Andrew County, Missouri. But, says Browne: "He was not long in discovering that the system of which he had now become a part had little to do with securing the ends of abstract justice—that indeed, as often as not, it must necessarily defeat those ends. As later characterized in his own words, it was a system 'based on a

mistaken principle; . . . a great mill which, in one way or another, supplies its own grist; a maelstrom which draws from the outside and then keeps its victims moving in a circle until swallowed in the vortex.' . . . After serving but half of his two-year term, Altgeld resigned."

Then, in 1875, he invaded Chicago, rented an office in the Reaper block, and partitioned part of it off for a sleeping room. Several strokes of good fortune brought him into contact with successful attorneys, and enabled him to better his position. In 1886, at the solicitation of friends he accepted the Democratic nomination for a judgeship in the Cook County Superior Court. He received the indorsement of a labor party which had lately sprung up in Chicago, and won the election.

He is credited with "making a change in the method of instructing juries in his court, which tended strongly to aid justice and secure intelligent consideration of the facts by juries." In 1890 his associates on the bench made him chief justice of their court. But a year afterward he resigned; the office had become irksome. Subsequently he wrote a little book in which he said:

"As a rule, men elected to the bench have established a reputation of being men of strong character and growing intelligence, and if they had remained off the bench they would have continued developing. But as soon as a man is elected to the office of judge, all growth seems to cease; and after years of experience on the bench, he not only has not grown, but he has deteriorated.

"Instead of the independence which comes from fighting life's battles, which develops greatness, the judge too often, unintentionally and unconsciously, becomes merely the expression of what is for the time the dominant influence of the land. This dominant pressure is like the pressure of the atmosphere. It envelops him, and is almost irresistible. It requires tremendous strength of character to rise above it and be guided solely by the pole-star of justice."

When he left the bench Altgeld declared in an interview that he was out of politics, that he felt he could do more for his fellow-men if he let politics alone, and he spoke of office-holders as a class notable for cowardice and futility. But in the following year, when he was urged from many sides to run for the governorship of Illinois on the Democratic ticket, he acquiesced. And for the first time in nearly forty years Illinois elected a Democratic administration.

In Chicago there was an actively organized demand for the eight-hour day. In every strike for several years it had been the practice of the police to "crack all heads in sight until no man was left to stand upon his feet, and then announce that quiet was restored and the strike broken." Every strike, regardless of origin or nature, says Browne, was considered as evidence in itself that its participants were out to oppose law and order.

All this reached a climax in 1886. In February the McCormick harvester plant declared a general lockout of its 1,400 employes. Mounted police there and elsewhere dispersed gatherings of workers, striking down men, women, children and onlooking shopkeepers with billies. On May 3 there was a bloody encounter between police and locked-out workers at the McCormick factory, several workers being killed and wounded.

Next day there was a protest meeting. Chicago's mayor, the elder Carter Harrison, attended. There was no disorder. As the gathering began to break up the mayor left. Immediately afterward Police Captain John Bonfield, notorious for having workers clubbed, appeared with reserves. Somebody threw a bomb. Seven policemen were killed and fifty-three were wounded.

Terror seized the city, engendered largely by the police and the newspapers. Eight men were picked for trial. They were convicted amid unprecedented hysteria, and seven were sentenced to be hanged. although there was not a scrap of evidence to connect any of them with the throwing of the bomb. One was sentenced to 15 years in prison. Later Governor Oglesby commuted the sentences of three to life imprisonment; one then committed suicide in jail; and five were hanged.

In pardoning Fielden, Schwab and Neebe, the three who had served seven years in prison, Altgeld pointed out that the case had been tried by jurors admittedly prejudiced, and especially picked because of their prejudices; that the State had never shown any connection between the men convicted and the thrower of the bomb; that the Haymarket riot was not the result of a conspiracy at all; that the fact that only one bomb was thrown indicated that the act was one of personal revenge in retaliation for police brutality; and that Judge Joseph E. Gary conducted the trial with malicious ferocity.

Then the storm broke. Altgeld had indicted the judge and the community for judicial murder. Against the governor now a fire of personal vituperation was turned which endured for years. And in the end they broke him, politically, financially, physically.

Throughout all the storm he kept his courage. Once when he was close to ruin (he had dealt in real estate and built the finest office building of its time, the Unity Building in Chicago), a bribe of $500,000 was offered to him by an agent of Charles Yerkes, traction magnate, who wanted certain monopoly bills passed; the money was actually put into the hands of one of his associates for him. But Altgeld refused the money and vetoed the bills.

He died in 1902. Thousands came in the rain to pay tribute where his body lay in the Chicago Public Library. And at the funeral services there were speeches by Jane Addams and by Altgeld's law partner, Clarence Darrow. Then the long silence began.

# A Kosher Revolution

(A Review by Card No. 794514)

A FRIEND of mine who knows something about these sort of things rang me up on the telephone and told me I had to go and see "The Beggar on Horseback," which is a sort of play that has come into Chicago. My friend couldn't say too much in its favor. "It's a fine piece of work," says he. "It's the story of the revolt of the middle class, a Kosher revolution. The capitailst press catches hell. It's a most sarcastic thing. You'll have to go and see it, and review it for the Pioneer."

So I did go to see it, and it was all that he said it was. It is the tale of one Neil McRae, a poverty stricken musical genius—there must be a hundred thousand like him. For his daily bread he has to do orchestration in jazz, which he loathes, and meanwhile the immortal symphony he was writing rather languishes. Nothing very original so far.

Enter the family Cady, Mr. Cady, big business (Lord knows there are too many like him), Mrs. Cady who loves hymns, Homer Cady the loungelizard, and Gladys Cady the jazzhound. The Cadys knew the McRaes before Mr. Cady got his first million, and for old times' sake they decide to buy up McRae. They've bought everything else worth having, and they are beginning to take up things second best—they'll take a chance on Neil.

Neil and his friend, a young doctor, and his sweetheart, about whom there is dispute as to whether she can play the piano or not, have all advised said Neil that if he doesn't find someone to subsidize him while he works on the symphony, he will go bugs. He's already so nervous that the doctor starts feeding him hop as soon as he sees him.

So—the obvious thing—the Cadys will subsidize him. Of course, there are impediments. First he has to marry Gladys, and then the old man says he has to quit music for a while and learn the ins and outs of the business, and then they elect themselves a board of critics to pass on his music.

Well, Neil proposes, and is accepted, and then sinks into a drugged sleep and sees things.

Neil imagines himself married to the tune of "Slippery Sue," or "Sweet Mamma," or something, me, I'm not well enough acquainted with music to tell which or what. It is a grand wedding, with kids selling the wedding guests chocolate bars and soda pop while the minister jazzes off the ceremony.

Then business, the "widget factory" of Mr. Cady, where you fill out thirty papers to requisition a pencil, and bribe the board of directors barefacedly, before the audience.

Then the aggravated Neil, finding the jazzhound tearing up his completed part of the symphony, kills out the Cady family with a paper knife.

This is the best part of the play. The reporters interview Neil, and within ten seconds the "Daily Morning-Evening," a burlesque newspaper, appears. It contains a whole front page spread about the Cady killing. The delicate irony of Messrs. Kaufmann and Connelly, authors of the play, and presumably of the "Daily Morning-Evening," is shown in this, that with a few unimportant exceptions, the murder is reported exactly as it happened on the stage. No capitalist paper would ever do that! The rest of the paper is pretty good too—consider the following item, which I clip at random:

### HAS MONEY ENOUGH; GIVES BIG BUSINESS TO EMPLOYES

Warren W. Warren, internationally celebrated as the Oilskin King, and head of Warren, Inc., a million-dollar corporation, threw a bombshell into business circles yesterday when he announced that his vast organization would hereafter be run exclusively by his employees. Beginning Jan. 1, Mr. Warren will make over his entire business to the men who have been working for him, and they will receive practically all profits.

"I have money enough," said Mr. Warren last night, at his home in Park Avenue, "so I am going to give my loyal employees a chance. After all, it is they who have made the business, so why should they not have an opportunity to share in the profits? For many years Warren, Inc., has been earning two million dollars a year. Under the management of my employees, who will work harder because they will be working for themselves, the profits should be at least five million.

"To be conservative, however, and to give my old workers a chance, I am fixing on four million as a fair figure, and every cent of profit over this amount will be divided among the employees. Hereafter the business will be theirs to do with as they wish. A board elected by the men will govern the business, and I will not interfere in any way except to decide things. If the men agree with me on important points they will have their way about everything."

Under the new management, Mr. Warren said, he would be able to reduce the number of his employees by ten per cent, and make many more widgets.

* * * *

There's the burlesque trial, not so good, and in the course of it, as part of the expert testimony, the Neil McRae composition, a pantomime entitled "A Kiss In Xanadu" which is dainty.

The verdict is against the kiss in Xanadu, and McRae is sentenced to serve life with other poets, artists, novelists, and assorted intellectuals, in the culture factory of capitalism. You see him grinding out music for "Goo-goo-googly" songs, while in the neighboring cell the greatest American novelist makes a new novel out of scraps from his last one. The last novel was called "Eternal Love." so this one's gotta be called "Love Eternal."

The capitalist class conducts a chant of victory in back of the cells, where Mr. Cady irrationally comes to life (does this imply that you can't kill the miserable skunk?) and cracks the whip over the artists. The chant goes something like this:

> We pay you—we pay you!
> You take our money and you'll live our way;
> We pay the piper, and we tell him what to play;
> We pay you—we pay you!

The rest of the play doesn't matter. There is no adequate solution of the problem of the intellectual, well skilled, highly sensitive proletarian, in this play.

I wonder whether there is a solution of his problems, in this generation? Each master class throughout history has built up a science and an

THE SUPPRESSION OF GENIUS

art, and there have been scientists and artists. Frequently, being exceptionally intelligent, and nervously overstrung individuals, they have accomplished some wonderful criticism. They have no solution of the problem, and usually are so thoroughly corrupted by their life, whether they revolt or not, that they resist revolution when it comes, and perish. The intelligentsia of the French kingdom did it—probably the Russian intellectuals do it, certainly most of the American artists and intellectuals will do it.

I have a friend who is one of the great mathematicians of America. He has his solution of the question, a solution for the scientists, rather than for the artists. Says he, "Let foreign wars continue, but we will organize the scientists, and keep them out. Let capital and labor fight to the death, we will organize the scientists in their own interests and keep them out of it. And then when our organization is ready, and the other classes are weakened by strife, we will exterminate them with poison, germs, electricity, and atomic explosions—the end shall strictly justify the means. We will save just enough of those with strong backs and weak minds to minister to our comforts, and after that it will be a good world to live in."

Well I don't know. But I think that the world will be saved by laborers, and not by the artists and scientists. I don't think these latter can overcome their present class affiliations and their individuality enough to strike for the dictatorship. Most of them will probably be so obstreperous when the revolution does come that they will have to be restrained in some way, and they will surely sabotage. But others will grow up, more in harmony with the new order, and at home in it, and their lives will be fine and free in a way that no artist can be free at present. If any of the cultured can see this, and at the risk of immediate discomfort, work towards it, they will have demonstrated themselves more useful to their class than my mathematical friend. And meanwhile we can shorten the agony of the rest by organizing labor.

# One of the Pall Bearers

(Continued from Page 16)

ertied class! How could he hope to combat it single-handed! To anyone but a fool such was impossible! Would he be tried and sentenced for murder—he, an innocent bystander? No. He was not an adept at the art of murder, he was not experienced in the science of robbery. He knew nothing about the use of arms and was frightened at the sight of blood. He was nothing but a working slave. All the training of a lifetime had rendered him incapable of doing such things! Such acts are committed by the scorpions—always deadly and poisonous—which breed under the dark, dank stone walls of capitalism's prisons, and who grow rank and strong on oppression and on the filth of poverty on the outside! But not he—not he—he does not want the money there beside him.

The bloody figure on the pavement moved, and startled him out of the terror of his immobility. He fled.

Finally in the early hours of the morning he arrived at his own dirty tenement. He crept upstairs and slid noiselessly into their housekeeping room.

"Is that you, dear?" asked his wife.

"Ssh! Yes. But don't light a light. You must say, if anyone asks you, that I have been here all night." And he sank down on the bed and related his experience.

"And when such crimes as that happen on our public streets at ten o'clock at night," he concluded, "it is a sign that capitalism is dying. Yes, Mary, capitalism is dying fast. The Revolution will soon be here."

"You didn't make any money, I suppose, did you?" she asked with a shade of hope in her voice. "No?, Well, I bet you are hungry, ain't you? You know, I made some stuff that's awful good. I found a dry loaf of bread in the box in the hall where we put old papers—guess Smiths put it there—he is working now—and it wasn't dirty at all—nothing there only papers and sweepings, you know. Well, I soaked it and chopped up that onion I had and fried it in some drippings I had in an old can. It tastes just like dressing! We saved you some. Don't you want it now? Oh, come on, it won't hurt to light the gas.—The meter is run out, but you can hold the skillet over the gas jet and it will warm all right. Oh, I forgot, we only have one match. Maybe we had better save it. We might need it. You don't think we will have a revolution before we can get another box, do you?"

He kissed her affectionately. "Maybe I can get a little of something to do tomorrow. God knows I am willing enough." And he struck the match and ate the food.

**NEXT MONTH: "NEMESIS," BY ADAM NOIR. A SEQUEL TO "ANNIE."**

# The Great Lakes Are Open Shop

(By LEN de CAUX)

**THE Great Lakes are Open Shop. The tentacles of the monster Steel Trust have stretched out over the waters that separate its mills from its mines, to crush the independence of the seaman, to reduce them to the same level of helplessness as its slaves on land. Operating through its subsidiary, the Pittsburgh Steamship Co., the trust controls the policy of the Lake Carriers' Association, which in its turn controls the bulk of the shipping on the Great Lakes. Let us see what the "Open Shop principle," under which the Lake Carriers' Association operates, means to the men who sail the Lakes.**

To hire out on the Lakes we must go to one of the Lake Carriers' Assembly Rooms. Nearly all the shipping is controlled by the L. C. A., and the officers have orders to hire only through the association's halls. We enter the hall, and the first thing we learn is that we shall have to buy our jobs. No one is hired who has not paid a dollar down for a membership book in the "Welfare Plan." We look in the book and find that the holder is entitled "to the use and all the privileges of any Seamen's Assembly Rooms of the L. C. A." He is assured "impartial justice . . . . under the Open Shop principle."

We join the forty or fifty men who are sitting on the benches or standing around in the bare, dirty hall. Unless shipping is unusually brisk there is no saying how long we may have to wait. By day we sit and wait hour after hour, afraid that if we leave the hall for a minute the telephone bell will ring and we'll miss a chance of shipping out. At night the floor will be covered with newspapers, and most of us, unable to afford a room, for it is dire necessity that drives us to seek a master, will stretch out our limbs on the hard floor and sleep as best we can, to wake up stiff and tired in the cold, grey morning.

"The birds of the air have nests and the beasts of the field have lairs, but the son of man hath not where to lay his head."—That is to say, if the son of man in question happens to be a worker in modern capitalist society and to be unemployed, the chances are that he will be driven out of the park at night by the cops, or else by the rain or drenching dew. He may have to take his choice between a boxcar and a jail. If he has a little money, the bedbugs in a filthy flophouse are worse company than the groaning, cursing, sweating or shivering sons of man who are crowded together on the floor of the Lake Carriers' hall.

As we wait and wait again for the master's voice to call, we become acquainted with our fellow slaves in the hall. Some of them have been here two or three weeks. They tell us how they have been passed up time and again, because the fink in charge of the hall had it in for them for one reason or another. But let us first wait and see for ourselves how the hiring is done, so that we can check up their stories from our own experience.

* * * *

Suddenly the bell rings. A rustle of expectation runs through the hall. The Fink enters an order in the book. He comes out of the office and walks slowly around the hall, looking us over. There is silence, as we wait for the great man's decision. He stops short in front of a fireman—"Let's see your book." He looks at the man's record (one of the privileges for which you pay a dollar is that of having the boss keep a record of your behavior on every job, so that if you show any independence you may know what to expect). The record of discharges seems to satisfy the Fink, and the man is shipped. Other firemen in the hall grumble awhile that they have been waiting far longer than he, and then they relapse into apathy.

Another long wait and the bell rings again. This time the Fink stands by the door and calls out, "I want a good, husky coal-passer." A dozen men jump to their feet, and a dozen hands reach for their books. The Fink picks out the huskiest man he can see, paying no attention to the complaints of the men who figure it's their "turn to be shipped." Time passes. We are wondering where the next meal is coming from, when the bell is heard again. "Is William White in the hall?" There is no response. The Fink waits at the window, until one of the waiting deckhands thinks he may have a chance and goes up to him. He gets the job, as the Fink cannot wait any longer for "William White".

So it goes on. When the next order comes, the Fink calls the names of two men who are waiting, and they are shipped immediately. He seems to have plenty of favorites. How much it costs to be his favorite is not known to those of us who are broke.

We look more closely now at some of the men who have been waiting longest. We begin to sympathize. There's Charley. He's a Limey and an old salt. He has seen a lot of the world. He has got used to rebuffs and hardships. But he's weatherbeaten now and growing old. His back is bent from hard work, and nearly all his energy seems to have been used up. The boss wants youth and muscle more than experience. Every time there is a call Charley gets to the front with his book, but every time the Fink brushes him contemptuously aside and picks a younger man.

Then there is "Big Slim." He is young enough, husky enough! He has an A B's ticket and the record in his discharge book of having worked the whole season through last year as wheelsman on the same boat. But he has been waiting three weeks to ship. He is broke now and willing to ship as

deckhand, on the first job of any kind that eomes along. But the Fink will not ship him. He tells him that there are only one or two good wheelsmen in the hall, and that he must have him on hand for the job, in ease a wheelsman is suddenly called for.

What is the big Swede fireman in the eorner saying? He has been waiting two weeks for a job, and has seen man after man ship out ahead of him. A long time ago, he says, he had a row with the Fink at this hall and tore up his book in front of him. Now he has a new book, but the Fink has not forgotten his face or his name, and passes him up each time.

* * * *

An argument has been raging for some time on the other side of the hall. It seems to center around Shorty, wheelsman and old-timer. Shorty is something of a sea-lawyer; he likes to lay down the law, and that's what he is doing now. "I tell you, the shipping commissioner isn't going to help you any. Why . . . . " Here he launches out into reminiseences about an old shipmate. This is the story of Tom's luck.

"Tom wasn't a Wobbly." Every time that Shorty has to mention the word "Wobbly" he lowers his voice, fearing that the Fink may hear him. "But I guess the skipper thought he was, on account of his kicking so much. Tom was always telling us what we ought to have. Anyway, the skipper had it in for him for some reason, and was always figuring how he could get back at him.

"We were anchored off South Chicago one afternoon. They wouldn't let us in to dock right away, so we had to drop the hook out in the lake. Tom wanted to go ashore, so he went up and asked the old man. 'Sure, go ahead' is what he said, according to Tom. So Tom went ashore in a launch.

"But while he was away, the skipper figured that now was the time to pay back old scores. He told the commissioner that a man had deserted before the boat was tied up in dock, and asked him what he ought to do. The commissioner told him that since the boat was not at 'safe anchorage' he had the right to hold all the 'deserter's' belongings and make him forfeit all the money that was coming to him.

"So when Tom hit the dock, the skipper would not let him go aboard. Tom never got back his clothes, and he lost nearly a month's wages that were coming to him."

* * * *

Such, then, is "impartial justice to the employes . . . . under the Open Shop principle." Such are the "privileges" which cost us a dollar a year! The worker's part in the "Hellfare Plan" is dearly bought. The dollar out of his pocket is the least he loses. He forfeits his organization, he forfeits all the benefits of unionism, he forfeits what little independence is possible to the wage worker under capitalism.

The Steel Trust octopus has the seamen of the Great Lakes in its strangling grip. The Hellfare Plan means blacklisting, it means discrimination, it means complete submission to the will of the employers. As for "open" shop, just let the Fink know that you are a good union man and see how open it is for you. At the mercy of the Fink when hiring out, at the mercy of the officers when hired, at the mercy of the boss at all times, the seamen know from bitter experience what it means to be unorganized. Only organization, only unionism can remedy this situation and abolish the Fink hall.

---

# Toilers Prepare

By HAROLD ALLINGER

HUNGER is stalking abroad in the land.
Why submit to starvation and not lift a hand?
Food there is plenty; the granaries are full,
Warehouses bursting with wheat and with wool,
We who created, 'tis ours to demand
When the toilers prepare.

Must men ever trail their pride in the dust,
Must maids ever yield love's dream to the lust
Of brutal oppressors? Must we crouch in fear?
They are robbing us now of all we hold dear.
Must we render them thanks for a rag and a crust?
Tyrants Beware!

Up through the Ages of Darkness we strained.
Of all we've created what have we gained?
Thrown on the scrap heap when aged or maimed.
Their dogs they will feed, though our babies must die
Wanting the care that our wages won't buy.
Will we thus submit to be tortured and shamed?
Oh! Toilers Prepare!

We toil through the dark, yet we long for the light.
Is there no sign in this terrible night
To point to the path that will lead us aright?
Oh! Follow the Three Stars, we cannot go wrong.
Alone we are helpless, together we're strong
And morning will dawn when the toilers unite.
Then tyrants beware!

Tyrants may torture and traitors betray,
Mobs ever waiting the toilers to slay,
While in dark dungeons our brothers decay.
Ye unorganized! Lend a hand in the strife.
Cowards! Will ye not even battle for life?
For shoulder to shoulder we'll soon win the day.
When the toilers prepare,
Then tyrants beware!

# Super Power

By "AUSSIE"

IN the New York Times of June 28 there appears an article dealing with the growth of super-power in the Northeastern states. It says: "Recommendations for the construction and development of great interconnected steam and hydro-electric power projects throughout the Northeastern section of the United States, estimated to make possible a saving of 50,000,000 tons of coal annually, lower the cost of producing electric power and extend the use of electricity generally to farm areas, are contained in a report made public today by the engineer subcommittee of the Northeastern Superpower Committee, headed by Herbert Hoover."

It is estimated that this scheme will be in operation in 1930 and that it will cover all the New England States and go as far south as Maryland and the District of Columbia and as far west as Pennsylvania.

This is only one of the many projects of a similar character being organized in the United States. Some are merely in the process of investigation, others are in the construction stage, and a comparatively few are operating. Already in the West they are tying-in an area which reaches from Oregon down to Arizona. Semi-feudal Dixie, the home of cheap labor and child labor, is developing another vast chain of hydro-electric energy, which is gradually shifting from a coal basis to that of water power.

### A Terrific Power

Super-power may be said to be the most important industrial factor in the United States. It will be many years before its full weight is felt, for it will revolutionize the whole country, in a more drastic manner than any social upheaval or war. Already it reflects itself in the slump in the soft coal industry, the two shifts a week in Southern Illinois, the miserable and intolerable outlook in the Pennsylvania soft coal districts, described vividly recently by James Maurer, President of the Pennsylvania State Federation of Labor. This is no seasonal slackness, no passing phase of the coal industry. It marks the end of an epoch in which Coal was king, in which factories, railroads, homes and hearths were its particular domain. Of course Coal will still remain as a giver of heat and a source of power, but it will merely be as an auxiliary to Super-power.

### Eliminating Waste—And Men

At present something like 17 per cent of the coal of the U. S. is burnt to haul the other 83 per cent to the place where it is burnt. That is going by the board. It is regarded nowadays in engineering circles as unmitigated waste. In fact, it is but a short step to the time when the burning of coal as coal for heat will be prohibited by legal enactment. Coal can be distilled. Under distillation processes coal becomes a wonderful source of hundreds of complex chemicals, dyes and phenols. Henry Ford, with his characteristic inquiring organization, is now taking a ton of coal which costs $2 at the pit mouth and which costs an additional $2 for haulage, and he is distilling it at his plant and turning it into $27 worth of coke and chemicals. Nothing goes to waste and the surroundings of the plant are as free from smoke and steam as the breast of the ocean. After he has extracted the chemicals and byproducts the residue he has left has still greater heating power and power producing quality than the original coal from the mines. And research chemistry is still only on the fringe of what coal contains, the future is still ripe with promise, with possibilities of gigantic forces to be utilized and harnessed. The chemist and engineer are striding into the foreground once occupied by the rainmakers, and the politicians.

Some of the changes that will be made will involve the following:

1. The establishment of powerhouses at the mines where the coal will be distilled, and the residue used for the production of power. This will eliminate the haulage and consumption of millions of tons of coal annually.

2. This power will not cost perceptibly more than that derived from large hydro stations such as Niagara and Hetch-Hetchy, on account of the by-products from the coal.

3. Huge transmission trunk lines to carry as high as 220,000 volts which will make transmission a very cheap process.

4. The establishment of what we might term "power reservoirs" to which all local generating stations flow and from which all producers are supplied. In Pennsylvania Governor Pinchot—one of the few politicians who are yet awake—foresees the electrification of overy farm, the electrification of trunk line railroads and a radical reduction in charges which will follow upon the integration of their system.

### Machine Made Revolution

All over the country a network is being established. It will triumph over old forms of industrialism and cause modifications in the laws, and change social relationships. We are on the verge of great events, as revolutionary in character as the invention of the spinning wheel, the first steamboat and the wireless telephone. The drudge of daily life, the menial tasks, the farm chores and a thousand and one drawbacks of our present civilization are to pass before the harnessed steeds of Niagara and the distilled black diamonds of Wyoming and Connellsville.

And where are we, the working class, bound? In 1930 the Northeastern project will eliminate 50,000,000 tons of coal annually. That means that 50,000 miners will lay down their picks and never go

(Continued on page 39)

# Breadline Fables

No. 1.—HE WORKED HIMSELF OUT OF WORK.

"'D'jeat?"

"No!"

"Well, eumon, I got foah bits. We'll both eat."

The preceding few words were exehanged between two migratory workers about nine a. m. of a July day in a Southern Oregon terminal. This was one of those years when the warehouses were filled to overflowing and vicious dogs were kept near baek yard gates to frighten away the more timid of the great army of the unemployed.

Perhaps three years of time were all that marked the difference in the ages of these two ex-producers. The interrogator had several more years of industrial experienee to his eredit and was given over to holding a more eheerful outlook on eircumstanees.

"Why so much crepe-hanging, Bo?"

"Well, I ean't find a job and I've been broke for two days."

"Say, didn't you know you can't work when there's no work to do?"

"No!"

"I've given up hope of finding work. What concerns me now is how ean I get something to eat. I worked for seven years and at the end of that time I was worse off than when I started beeause I was only given enough in wages to keep me in shape to get back on the job again the next day. So, howinhel cud I save anything? The plant shut down and I became a rambler. I have found many more ex-producers in the same boat. I was laying on my baek under the shade of a large oak tree one summer day and an idea came to me that the reason so many workers were on the bum was because they worked too long hours and too fast. Actually working themselves out of a job! I belonged to a union, but that union did not take any heed of how much we produced, but seemed to boast of how mueh they could do for the boss in a few hours and that they thought the boss was a fine fellow to give them a job. I also found out that nearly all the men on the bum were union men or at least they had held membership in a eraft union; often ealled graft union. When our union in St. Louis went out on strike the same brotherhood in New York worked overtime to fill the orders for the firm in St. Louis. This really defeated our efforts to improve our conditions and those of us who were more aetive beeame blacklisted after the strike was over and wherever we went some word had been sent ahead of us that we should not be employed beeause of our agitation.

"In appealing to the different unions of my eraft for help, I was met with a dumb reply. Then I learned that the international officials of my union were being bought by the manufaeturers, and that we did not have the power to unseat them. The result was that I dropped my membership in the union altogether. One night I was attraeted to a large erowd in the street intently listening to a man talking from a box.

"I joined the erowd and to my surprise this man was telling them just the ideas I had about eutting down the hours and slowing up on the job. I became rivetted to the spot in rapt attention as the speaker continued to pass out logieal ideas as a solution to this soeial problem of unemployment and poverty. He did advoeate unionism, but of a better brand than any I had ever before heard. He laid partieular emphasis on the need of solidarity among the workers and their recognizing that an injury to one worker is an injury to all workers. All of the workers in one industry would belong to one union and when a strike was ealled in one industry all of the workers in that industry would stop work and if need be all of the workers in all of the industries would lay down their tools to show their solidarity and make the strike so effective the boss would be foreed to give in.

"When the meeting was over I made inquiries among the erowd about the qualifications required of an applicant. They quiekly informed me that all wage workers were eligible to membership regardless of raee, sex, creed or color, that the form of organization was ruled from the membership and not from the offieials. As soon as I had the small amount required for initiation I became a member of this union and found myself among a group of workers fitting themselves through study and observation to handle the machinery of production and distribution and do away with an idle class who do no useful work."

"Say, that sounds good to me, Bill! Where is their headquarters? I want to line up the first chance I have. You sure have made things look brighter to me, and I hope some time I can help some other fellow!"

"'So long!"

*By The Editor*

## RICHES ON THE SEAS

NO capitalists are any better organized or any closer hooked up with the big financial rulers of the world than are the shipping interests. Morgan is almost as much a ship owner as he is a banker. Big business knows what is coming next, barring revolution, of course, and takes care to put its money where it can expect results will follow.

It is next to impossible to calculate the earnings of the ship owners of the world. The international character of their traffic, the possibilities for cheating, the connection with the government, through the necessity of governments to maintain a "naval marine" for time of war, the prevalence of subsidies in one form or another, all this makes it even more possible for the sea grafter to hide his gains than for the land grafter.

But we hold it for certain that the big lords of business would not sink their money in the sea. If they put it into ships, they are getting it back with increase. Consider these figures then, supplied by Lloyd's of London to the Statesmen's Yearbook. In 1923 the merchant steam tonnage of the world was 57,939,000, a gain, in spite of all destruction during the world war, of 15,425,000 or more than one-third over that of 1914.

There's money in boats. Here's the reason. The same authority states that in 1923 the foreign commerce of the United States amounted to $6,877,-847,674; that of Great Britain amounted to $880,-000,000,000; that of France was $3,152,305,000; and of Germany $2,543,775,000. Excluding the land traffic of Mexico and Canada with the U. S. A., and of France with Germany, the bulk of this enormous marketing is done by means of shipping. All of England's foreign commerce is carried on by ships. Don't you think that the owners of the ships get a rich profit from all this?

Does the ship owner do any of the work? He does not. It is the longshoremen, seamen, firemen, engineers and other workers on and around ships who carry this immense treasure back and forth across the seas. Theirs is the labor; to them belongs the profit—let them organize and take it.

## THE SLOW MAGELLANS

THE 'round-the-world fliers are in Chicago, and in all honor to them, they accomplished a noble feat. We know they were sent to advertise the navy at home and scare Morgan's debtors abroad, but the men who built the planes and those who flew them were skillful and bold. It is rightly that the world hails them as "The Swift Magellans."

Just the same, it is not well to exaggerate their importance. Aeroplane carriage will work for mail, though at that it is extremely expensive, the U. S. Postmaster General in his last report claiming that the airplane rate of eight cents per ounce does not pay expenses. Aeroplanes are speedy and efficient carriers of light weight, precious or perishable merchandise, where cost of operations do not count. Also, we do not know how soon they will be so improved that they can carry heavy freight, or better stated because more probable, we do not know how soon it will be before some other type of airship is invented, which will carry heavy freight.

But we workers cannot indulge in such speculations when it comes to organization. We must keep our heads out of the clouds, and see the situation as it is. The danger to the railroad workers and to the marine transport workers is not that they will be thrown out of their jobs by aeroplane carriage—at least not yet. That is not the immediate danger. For every ton of freight that is carrried by aeroplanes, a million is drawn by electric locomotives, or carried in ships equipped with Diesel engines. In either case, the amount of freight carried per man is enormously greater than the amount per man under the old system of steam locomotives on the railroads, and reciprocating engines on the ships. There is still the vast and overwhelming need of industrial unions, in the transport industry, both by land and by water. Railroad workers and seamen may not be as spectacular as the "Swift Magellans" of the air. But the goods of the world are carried by them, if not as fast as the 'round-the-world fliers can go, still in vastly greater quantity, and at that, much faster than the ships of the real historical Magellan could go. Railroad workers and seamen have economic control, even if they do not fill the front pages of the newspapers. Let us hope they will organize to use their control.

## THE CRIME COMMISSION

THE notorious Chicago Tribune has been agitating for a long time for an Illinois State Constabulary, modeled after the Pennsylvania system for state police, under which troops of Cossacks are stationed in all industrial and especially mining centers.

Now they are organizing to secure such a corps of gunmen. The new organization is to be known as a "Crime Commission" and is holding regular meetings, "making plans to combat murder in the city of Chicago."

The fact that the most important, and best known murder, that ever took place in the city of Chicago, was the slaying of the son of a retired pawnbroker by two degenerate sons of trust officials, does not cause the Tribune to change its tactics. This mouthpiece of big business is out for gunmen to use against workers.

## WHAT SHALL WE DO NOW?

By P. J. WELINDER

WHILE the aftermath of the war has brought about varying periods of prosperity and depression among the employing class, to us, the workers, it has meant one continous chain of increased suppression, unemployment and starvation.

The "centering of the management of the industries into fewer and fewer hands," as pointed out in our Preamble, as well as the concentration of capital into fewer hands and thereby a concentration of the economic power into the hands of a very small and very powerful plutocracy, is taking place very rapidly. The failure of our organization to gain ground at an equal rate with the concentration of capital leaves us comparatively weaker today than we were prior to the war.

It is true that a far greater number of the workers recognize the I. W. W. today as their most powerful weapon in the class struggle than a few years ago. We have gained a lot of confidence among the toiling masses, and we are on the verge of being respected,—perhaps also "respectable." But let us not forget that this is not entirely due to our own work.

In this time of such intensified struggle for existence, millions of toilers, who heretofore have enjoyed a rather steady employment, find themselves thrown on the slave-market and in search of a master. This causes them to speculate somewhat over the forces which caused the change and also to look somewhere for a remedy. It is only logical that the I. W. W., with its splendid record, should attract their attention. But numerous radical bodies have likewise attracted those new victims of the masters' growing hunger for profit. Thus we have several new political parties, leagues, "borers-from-within," independent unions, etc., most of whom are gaining their recruits more on account of the increased exploitation and unemployment than through their own propaganda. It is well for us to carefully consider whether our gain is solely the result of our educational work or whether a great part of those new members have joined us without having a clear conception of what the organization stands for or how it operates.

### A Serious Question

The question is certainly justified and well worth considering. The terrible pressure brought about by the rapid development of all mechanical devices on the industrial field, as well as the added strength gained by the employers through the perfection of their organizations, trusts and monopolies, has caused many to doubt the soundness of our program of direct action at the point of production. All too many are inclined to doubt their own ability—through their union operating directly on the job—to bring about the desired relief as well as to create a new social order that will give to the worker the full product of his toil. And just so long as great numbers of our membership fail to give their whole and undivided attention to their union on the job, just so long will we be unable to make any progress. The greatest task before us is to reawaken the interest in our union activity among our disinterested members and make them all active. How can we best accomplish this?

The employers concentrated action against us, their persecutions, blacklists and wage reductions, are something which the I. W. W. has predicted ever since its very inception. They should therefore prove no surprise to us, nor cause us to change tactics. Our whole existence has been one continuous preparation for just such a wholesale onslaught on the part of the master class. Nevertheless, we have changed tactics,—or perhaps ceased to use any tactics at all as we have ceased to be active. Instead of action on the job we make by-laws and resolutions, hold conferences and make speeches. Yet none of these devices will bring us a minute's shorter workday or even a coffee-and under our belt.

### But How To Educate?

We all agree that education is our main weapon in our fight, but we differ as to how to conduct our educational work. Yet it seems as though there ought to be unity on that point without much difficulty. The I. W. W. is an organization **on the job,** hence it follows that our educational program must concentrate on the job also. Our college is the job.

Our program is a program of **direct action.** Our education must also be "direct," or an education of practical experiences. In other words, only through our activity on the job do we gain and disseminate knowledge. The moment we cease to be active at the point of production, cease to dig in on the boss' profit, that moment we also cease our educational work, no matter how much ink and paper we might use in explaining our theories and no matter how many colleges or speakers we can maintain. Only in so far as our press, literature, speakers or college can stimulate to action are they of any value. They are all means to an end and not in themselves the final object of our efforts.

It is only waste of time and material to plead for unity of opinions, to censure each other's views, or to resolve all quarrels out of existence. Until such time as we get active again in the field, there will be no unity. But once we catch hold for the wrestling match with our master again we will all be so busily engaged that there will be no time for petty personal squabbles or for some individual pet scheme that otherwise pops up. When we, instead of searching high and low for some subject that

may interest all of us, have a merry fight on hand with our boss, the lumber baron, or the construction contractor, or some other employer, then there will soon be only one issue, one will and one desire, even though our opinions as to how to prosecute the strike may differ.

### No Watchful Waiting

In latter years an idea seems to have developed that we should wait to act until, we gathered more strength or else wait to act until we get some voting machinery in order and find out how many more will follow us. All told, we have adopted a program of "watchful waiting". This is the most harmful program we possibly could formulate. In the first case: our organization does not gain strength through waiting but through acting; in the second case: elaborate referendum schemes, when it comes to action, certainly are a poison among the migratory workers who constitute the majority in the I. W. W.

Really what reason is there for a group of workers on a job to wait for others to act with them if that particular job is lined up for action? Is it not a fact that on such a job, waiting will not strengthen us? Every day of waiting shows a number of the most rebellious elements leaving in disgust, or being discharged, until finally we find ourselves too weak to do anything. As a matter of fact, no labor organization has ever died on account of being too active; all have succumbed to the disease, **"inactivity"**.

The labor-turnover in those industries where we have any real strength is so great that even should we be on strike every two weeks we would hardly lose any time. As an illustration, that big job, the Natron Cutoff (Ore.), may well serve. In the camp where these lines are written the total turn-over of the whole working force (about 200 men) is hardly more than 30 days. According to very reliable information about conditions in the other 40 or 50 camps along the line, the turn-over is equally great. Whether we strike or not, we will be kept on the bum anyhow.

Let's get active again, fellow workers, that's our only solution! We certainly have a lot to fight for. Our eight-hour day is on the verge of being drawn out to nine hours, counting time walking out and in; our beds are getting dirty and insanitary; our board is growing rotten, and our pay is smaller. There are millions of unemployed who demand the **six-hour day,** and—first and last—there are hundreds of our most sincere and most devoted fellow workers in the penitentiaries.

### Go Forward Or Go Back

Surely we **must** get active or we will lose all we have gained in the past. We must bring loads of papers and literature to the camps and show the parasites that we are still alive and will no longer stand for their censorship. We **must** restore our papers to real live industral union propaganda and prepare for the still greater task that await sheets, and that can only be done by supplying them with news from the job;—yes, **Job News**—and demanding that it be published; get active on the job and let our press reflect our activity in its columns, that will induce others to act also.

There is only one way to get rid of politicians and philosophers and to prevent them from occupying us and laying claim to our time and our thoughts, and that is **action.** Let all the vote-hunters, schemers, philosophers and windjammers talk to the empty air and let us instead have a few rounds this Fall with our master. That alone will bring about unity in our ranks and restore our confidence in ourselves. Remember that now more than at any time in the past is the program of the I. W. W. correct. Direct action at the point of production is our only solution more so today than before, more so tomorrow than it is today. Therefore let us be active and prepared for the still greater tasks that await us, in the immediate future.

## THIS FREE COUNTRY

(By RUFUS P. HEATH)

THE United States is said to be a free country. Let us see whether or not this is true. First, we find that there are thousands of unemployed workers here, who no doubt would like to have a chance to work in order to earn a livelihood for themselves and their families. Due to the present unemployment situation, they are not permitted to do so.

Who is to blame? No one but those who work, the working class. You and I can't blame the boss if he wants us to work an hour or two extra each day, with the regular straight time rate of pay. That's business, and the boss is a business man. It is to his advantage to have us do extra work for no extra pay. It is our hard luck, so long as we are foolish enough to do it.

That is the trouble now, we were all working too long. The only way for us to regulate the unemployment situation, is to reduce the hours of labor from the present rate of eight, nine and ten, down to six. That would give some of the unemployed a chance to go to work.

The working class through its own ignorance is its own worst enemy. So let us try and educate ourselves, in the working class.

We work long hours for a mere pittance, and we can't buy back the necessities of life with our present day's wage. The result is that we fall victims of the vagrancy law, breadlines or some other misfortune.

As for the vagrancy law, it's great. It helps us to educate and organize the unorganized. If it wasn't for the vagrancy law, it would be much harder for us to educate and organize them than it is with the vagrancy law in force.

Under the present so-called **Free American Capitalist Society,** we are at liberty to work where work is obtainable, under such conditions as the boss is willing to grant us, which is very little, as we all know.

If you can obtain sufficient work to support yourself, that's all right, and if you can't, that's all right too, so far as the boss is concerned. For all he cares, you and your family can starve; he can't be bothered.

You and I worked too hard, too fast, and too many hours per day. We kept up with the modern machine, stacking up surplus commodities so fast that the boss soon got his warehouses full, and there was no market for the surplus products. I don't mean to insinuate that no one needs the products. No! No! What I mean is that the people throughout the country are not able to consume the products, financilly speaking; there are thousands of us who need them.

The warehouses being full of these surplus products, with no demand for them, is what causes the boss to lay off his employes, and shut down the industries, thus increasing the ever-growing Army of Unemployed.

The ones who work are the ones that are the support of the world. Labor creates all wealth; without labor nothing can exist. Yet labor, the support of the world, is the one who bears the brunt of the panic. We laborers are the ones who produce all of the good things of life. Yet, it is we that go hungry, ragged and homeless. Many of the workers have families to support. Many of their children are hungry, homeless and ragged. Yet they are the useful members of society.

On the other hand, the capitalist class exploits the working class, and when we try to improve our condition and secure a higher standard of living, the bosses put over criminal syndicalism laws, vagrancy laws and injunctions, and bluff us into submission with the capitalist courts.

At the same time, the church, theatre, capitalist press and radio are all used by the boss to keep our minds attracted and perhaps entertained while the bosses take the bread out of our mouths.

# Help! Help! Help!

WHERE are we at? The friends of the present system point to the "billions of savings bank deposits made by wage-earners." At the same time they denounce the extravagance of the working class!

Query: If we save so much as to win admiration, how can we be so extravagant as to justify condemnation? And if we are so extravagant as to call for condemnation, how can we save so much as to arouse admiration?

You answer him, Schmalz. He's schicker (drunk)!

* * *

Henry Ford says "two opposing systems" are at war in the Muscle Shoals struggle: his own and that of the water power trust. But Henry says that his is for service, while the other is for profit.

For a man who has only $271,618,688—a small part of his enormous profits—in his cash drawer, this is extremely disingenuous.

You tell him what I think of him, Schmalz. I can't; words fail me.

* * *

The Dearborn Independent says that "the damage done by the movies is not the **demoralizing** but the **dementalizing** of its patrons."

Nevertheless, people will insist on visiting the movies, without exception. Especially when they know that the movie state, California, is also sending workers to prison for organizing.

Cuss for me again, Schmalz. There's so much to indignate against that I am growing asthmatic and can only swear by proxy.

# Super Power

(Continued from page 34)

underground again. It means unemployment for mine managers, superintendents, clerks, firebosses, electricians—not a temporary layoff, but a definite final "goodbye" to the coal regions. It means the closing of special coal lines, miles of idle cars, coal burning locomotives on the scrap pile. It means bankrupted stockholders in coal companies, small business men without customers, parsons with penniless congregations. It means at this distance a very hopeless outlook for the proletariat, despite all the triumphs of technique and chemistry, the harnessing of water and the distillation of coal. New problems will arise for us that must be imperatively met by speedy action. The production of the economic needs of society, the food, clothes, shelter, and culture of the human race, becomes simplified, easier.

**We Must Hurry!**

We are in the heyday of industrialism. It strides forward leaving the race in its wake trying to figure out new ways, trying to solve the deluge of problems which are sure to come upon us.

If ever there was need for Industrial Unionism, it is today. This IS the time for intelligent workers to try and visualize what is coming upon our class, to plan against it and to meet it half way. It IS a revolution at our doors, not a revolution of the coup d'etat type, but a culmination of the triumph of the engineer and chemist over the resources of the earth. Such a world as we expect to see surely cannot mean a continuation of a dispossessed class and these mighty engines as the property of a few financially powerful men and their satellites.

# WOBBLES

## IN MORAL LOS ANGELES

Some bootleggers in Los Angeles pulled up in front of a dirty house and carried in forty cases of liquor. Upon emerging after completing the unloading, they found a stern looking police lieutenant inspecting their truck. There was not a chance to run, so they faced him.

"Now, look here," thundered the police official, "you are violating the law and you know it. You didn't park within four inches of the curb."

## WHAT IS LIFE?

(Translated from Swedish by A. Anderson)

What is our life? Yes, if only that I knew,
I would not the answer miss, and would enlighten you.
I have asked the learned to tell me what it be,
And in that matter equally as wise were they.
What is our life? It is that, one wants to know,
If I had thought dare to express, it is I trow
A certain way to live, that one applies
Which ceases in a certain way so soon one dies.

## IS THE BULLSCHOOL

He had mastered the art of public-speaking, as taught at a modern university, and was giving his first public address after his graduation.

"'The schoolwark is the housebull," he began, and stopped abashed at the tittering that followed his remarkable assertion.

"The schoolbull is the housewark—" he was groping blindly. He seized upon the water pitcher and drank deeply.

"The schoolhouse, my friends," triumphantly, "is the woolbark—" He fainted and they carried him out.

## A MANY SIDED VESSEL

"Son, what sort of a ship is this?"
"A Cruiser."
"Yeah? Where are you going?"
"For a cruise, sir."
"Who's going?"
"The crew, sir."
"'What does it run by?"
"It's crew, sir."
"? ? ? ? ? ? ? ?"

## WHAT'S HEARD

The rails are bad
The ties are worse.
All you can hear
Is "SAFETY FIRST."

## THE OWL

By MORTON KOMINERS

THE wise old owl sits in the branches
Watching human beings fight,
The cataclysmic avalanches,
Which destroy them by their might.

The owl does not for progress thunder,
Life he merely does behold;
Does he laugh when humans plunder,
Killing, maiming, searching gold?

Mortal, why this ceaseless hurry,
As you live your weary life,
Why the wishing and the worry,
Find you happiness in strife?

Consider now this wise old rooster,
Sitting in his forest tree,
He's not a Roaster or a Booster,
But he sees eternity.

## AN ASSET TO THE COUNTRY

"Why, you're only a foreigner," said the 100 percenter; "while I was born in this country."

"Vell," said the foreign-born Swede logger, "my Americanism might be yust as much to be proud of as yours, I tank! You came to dis country 'cause you couldn't help it. Aye came har 'cause aye vanted to. You come har naked. Aye come har with one pair pants, by Yimminy!"

And Our European Friends Are Wobbling On Along.

# As a Doctor Sees It

**On this page and the next are printed some short stories taken from an amazing book, "As A Doctor Sees It," written by Dr. Benzoin Liber, published by Thé Critic And Guide Company, New York. Price, $2.00.**

**The stories are reprinted by consent of the author and publishers. The doctor does not, nor indeed is it his function to, point out the permanent cure for this multitude of human ills which he finds in his daily practise. All that he is supposed to do is to administer such temporary alleviation to suffering as falls within the province of the medical profession. Dr. Liber has gone far enough and has diagnosed the real disease, the grand cause of most of the sickness and despondency, and false optimism, which is poverty. It is our function, as revolutionists, to cure the world of this disease.**

## MEAT AND FLESH

He is a cook in a very large restaurant. I had not seen him for a year. One of the fingers of the right hand is missing.—What is the matter? What happened to you?—Oh, this? It has been amputated. You see, it was caught in the grinder and was all crushed, mixed with the meat, you know.

## BILLS

A young woman.

—When my sickness began? I don't know. . . . But I can trace its beginnings after . . . coal bills and grocery bills. . . . Let me see. . . . It's this way. I did not have a quarter for the gas meter and had no gas, so I could not warm water for baby's bath. That was on March the third. I had no coal and it was very cold and I worried over my debt to the grocer. . . . My rent was also overdue. . . . But, doctor, excuse me for bothering you with these details. . . .

## NOT A SCAB

He has just arrived from South America and is ill and starved.—I could have had a job today, but . . . You see, I find an address in the paper; but when I go there, a few boys walk up and down in front of the shop. They call me and tell me there is a strike. Then I say, All right, you don't need to be afraid, I'll not scab. I never did and never will. I say, Goodbye, but they say, You are hungry, and take me to a lunchroom and pay for me and give me a few cents, too.

## HE MUST WORK

A man of forty.

—I am out of work for more than five months. My trade is slow. So I went to the Street Cleaning Department and told them I'd do anything. They had me examined and found I had varicose veins of the legs and they won't employ me. Isn't that awful? It's true I have pains; bad pains—that's why I come to you. But that isn't their business. I want to work—pains or no pains. What shall I do? And how about my kids?

Yes, what will he do?

## SHE MUST WORK

Husband and wife. He is the patient. Among other things I ask him what he eats. **She answers:**

—You know what poor people eat, the common stuff.

I insist and she blushes while she is telling me what he eats. The poor are often ashamed of their food as they are ashamed of their clothes.

After the examination my verdict is that he must stop working for awhile, if possible. She is jubilant:

—Didn't I tell you? Of course, you got to rest. I'll go to work now.

But, he is not easily beaten. He says:

—Come on, I'll work. Maybe I can work that pain right out of me.

## FEET AND BOXES

I examine the patient's legs, which are covered with ulcerations.—This is nothing, doctor. You know, I am a driver, and it often happens that the clerks, when they are in a hurry, throw boxes and packages on my feet, especially if there is no more room on the wagon. Of course, my shin-bones get hurt every day and are always sore. They never heal. But this is nothing and I would not have come to you for such a trifle. I meant to tell you that I have a cold.

## DANGEROUS THOUGHTS

I am called to a man with a nervous breakdown. In the course of our conversation he tells me, among other things:

—Years ago I used to read very much. I was a Socialist. I knew the Communist Manifesto by heart. I was a workingman and an idealist, and I was always happy. But the devil inspired me to change my opinions, and now . . . now . . . I have a shop with fifty workers. Unfortunately, I am doing good business. I think of nothing but my shop. If I can make something cheaper than my competitor I am glad. I am sinking deeper and deeper into the swamp. For five years I have not read a book. The people I meet are rough

and unlearned; they can sign big checks, but they know nothing except business.

He stopped, cried like a baby, and then continued:

—The other day I met a comrade of the good old days. When he pronounced the word Ibsen, I was moved to tears as at the sight of a dead friend who had become a love again. He left a book in my house by mistake. I read it, and—this is the result.

—Yes, doctor, says his wife, he is weeping and trembling ever since he read that terrible book. He cannot go to the shop.

—What book was it?

HE:—"Oh, it does not matter. It contained ideas, and, if I am to go on with my money-making business, I must not think."

## EMBARRASSMENT

I am not easily impressed. I have seen enough empty sleeves, empty trouser-legs and empty eye-sockets. But this patient embarrassed me. A one-armed, half-blind man who was earning a miserable living for his wife and child as a night watch and doing a few odd jobs in a factory. His lungs were tuberculous and he did not know it. It was a hard task to forbid him to stay indoors. Tell him to go to the country? How ridiculous and helpless I was! I felt ashamed.

—Where do you live?

—I live downtown among the workin' stiffs, that's where I hang out.

—What did you do until now?

—Nothin'. I went in to a doctor and he kind o' X-rayed me. But he said . . .

A fit of coughing.

—I don't cough because I cough as a cough. . .

And he could not explain.

I told him the truth, but he did not seem much concerned about himself.

—What'll I do with the kids? They're too small. And the wife is weak. What'll I do?

## GASSED

Why I don't get married, doctor? I cannot. I must support my brother who has been gassed at the front. He is unable to work yet, and he does not get enough from the government. And then, my old mother.

## ANOTHER WAR SUFFERER

He, too, has been in the trenches. Has not been injured physically. "Not a scratch," as he says. But his mind is abnormal. He has been gassed mentally, so to speak. He feels himself guilty of some imaginary gruesome crime, and calls himself "assassin." He has strange visions which do not let him sleep. When he hears a detonation from an auto he runs for cover, being convinced that it is a cannon hurling shells at him. All basements are trenches.

—I am an assassin, he whines, I am here to kill people. But I don't want to kill them, I don't want to!

## SABOTAGE

Many times I have had to deal with authorities. I have often been a witness before courts in accident cases and, although I was usually instrumental in winning my patients' trials, my memories of the days spent among the representatives of justice are very unpleasant. I have never been bored as much as there.

Nor do the police belong to my agreeable acquaintances. I love them when they regulate the street traffic and I adore them each time they save somebody from fire, in spite of the fact that they sometimes wake me up from a sweet and much needed sleep and bring me some wounded person to treat. I could have kissed the big, childish "cop" who was my only assistant when a girl in my neighborhood was attacked in the middle of the night, gagged and beaten senseless by some brutal ruffian who had jumped in through the window.

But I hate policemen when they take a hand in strikes. Then I usually get my share of work in dressing the victims of their hard, heavy, stout clubs. I was in a hostile mood when a broad-shouldered, tall young man stepped into my office.

He was a candidate for the job of policeman. He had to be examined physically and the hearing of one of his ears was defective. He wanted me to do something to improve his hearing for one day. He said that he had a good "pull" and that one of the bigger "bugs" among the examiners was in his sleeve too . . . . "You know . . . ." Which meant that he had bribed him.

I had a moment of revolt. I felt offended and was going to show him the door, as my record in this respect was as clean as life would permit it. But I remembered what the police had done to some poor wretches the day before and I chuckled with delight. I had an opportunity to take a little revenge on the system and I could not let it slip by.

An artificial drum did the trick.

And now I see him often in uniform lazying on his beat.

## NO END

—I have seen you about five years ago.

—Yes.

—What is your occupation?

—Still pressing vests. I guess I'll have to do that my whole life. My job is never done. Sometimes I think I'm getting crazy. It's so monotonous, so uninteresting, so . . .

## THE END

I have been called too late. I find her dead. Her face looks like old bronze covered with greenish "patina." Her knees are drawn up to her chin. She may be mistaken for a mummy.

Her shop colleague tells me her story, which is very plain and common: She has worked her whole life in shops and factories.—And now it is the end.

# Sea Power

(Continued from page 6)

higher man about two feet astern of the man below, and two feet higher, on nine inch seats. Each man could put his feet on a foot rest on the seat in front of him. One hand had to be held at a peculiar angle, awkward at first, in order to avoid bumping the neighbor with the oar. Rowers were literally "packed like sardines in a box," and the maximum power was given to the ship—or so they thought at that time.

### Standardized Product

The Athenians (the greatest of the Greek naval powers, reaching their height in the fifth century B. C.) put out from their ship yards a standardized galley. (See how capitalistic practices such as standardization naturally apply to shipping.) The length of this ship (trireme) was 128 feet exclusive of a ten foot ram. The breadth at the water line was fourteen feet, the extreme breadth was eighteen feet, exclusive of a two foot gangplank which ran lengthwise of the ship, all around, over the oars, and was used for fighting. This trireme carried a regular crew of 174 rowers, ten marines, and twenty seamen. She couldn't carry much cargo.

The ships of the Romans and of the Carthaginians who succeeded the Athenian Greeks as naval powers were about the same as the Greek vessels, except for a tendency (afterwards abandoned) to use ships of four and five banks of oars.

After the destruction of Carthage by Rome, the latter's need for ocean commerce decreased, and the state became a great landlord and serf empire, drifting slowly toward feudalism. Shipping declined, and boats were made smaller instead of larger.

In fact, they started all over again, after the downfall of Rome, and the Mediterranean people made a discovery. They found that if they used one bank of oars instead of several, and put four or five men to each oar, they economized space even more than the trireme did, and got more power per oar. All medieval galleys are distinguished from the ancient galleys by this, that the ancients went on the theory of "one man, one oar," and the later shipmen introduced social or co-operative labor, even into the rowing of a single oar.

### The Civilizing Compass

Then the great discovery was made—or rather, there was a discovery combined with an evolution and development of two old discoveries. The compass was introduced into general use. We call this a discovery, because, though it is undoubtedly true that the Chinese had a compass long before it appeared in the West, there is no evidence that the western compass came from the East, and in any event, its widespread use, very suddenly, seems to be characteristic of a real discovery.

It is hard to overestimate the importance to the history of mankind of this single event, and its immediate quickening effect on all other inventions was almost miraculous. The compass appeared about 1100, and in 1115 the first three-masted sailing ship was launched, at Venice, the first of a type which soon developed into the historic galleass and into the "great round ship," and the galleon—all sail ship, not galleys, though the galleass has sweeps for occasional use.

**THE GALLEON**

**The First Ship Really Designed For Ocean Traffic. No Oars At All.**

The connection between this improvement of ships and the compass is easy to see. With the compass, a course can be laid out and steered out of sight of land. Navigators in the Mediterranean could steer by stars, before this, though they usually did not, for fear of clouds and storms. But in the northern waters of the Atlantic, to which Venetian and Genoan ships after this regularly sailed, and in which native shipping increased the storms and fogs were a constant risk, and little commerce was possible before the compass. Such Viking traffic in galleys as had been there was not merchant traffic; at the best it was colonization; at the usual worst it was murder and robbery. Ocean trade was made possible by the compass, direct voyaging was made possible by it, with a great shortening of the trade routes. The art of navigation immediately developed, the

sextant came into use, and the building of larger ships, using sails as their prime source of power, big enough to be relatively safe from pirate galleys, was the step that followed immediately. The galley was still used for war until the general employment of cannon about 1450 gave the big sailing ship with its heavy broadside of 24 and 42 pounders an advantage over the necessarily smaller row boat.

### Some Factory System

The big sailing vessel stimulated ocean exploration; the discovery of the route around Africa, and of the Americas, hurried along a change in human aaffirs that had already got well under way. Money was to be made by merchant adventuring; there was for the first time a world market; all the arts and crafts were stimulated; manufacture developed rapidly in the towns; new materials were brought back from the near East by crusaders (ferried over there on Venetian ships); and this manufactured stuff, as well as the spices of the Orient, was carried by sea. A capitalist class developed, and their source of wealth was the sea, first of all. They invested their hordes of capital in factories, even before machinery was invented. The assembling of large numbers of workers in the same shop developed division of labor, and the machine came to do the now mechanical processes of weaving, spinning, etc. The world turned capitalist, and one invention followed another. The old deadly routine through which all the civilizations from Egypt to Rome had gone, was broken.

The countries which turned capitalist first were those which were best adapted for shipping. The Italian cities were too far out of the ocean lanes to compete with the Portuguese.

The Portuguese were not able to defend themselves on the land side from Spain. Spain itself, being a big agricultural country, and nearly continental at that, failed to carry on her sea power very long. One reason was that her colonies were primarily sources of precious metals, and not of useful products. The wealth that comes from gold and silver mines is a very unstable foundation for national greatness. The mines work out.

The German cities came almost to winning the great prize The group of several hundred cities called the "Hanseatic League" was developing capitalism in Germany over night. But the Hanseatic League had as its chief source of revenue the trade in herring, which they caught in the North and Baltic seas. For some reason, the herring, about 1400, all left the waters easily reached by the ships of the Hansa and went to English and Dutch waters. Amsterdam was "founded on the herring."

### Some "Primitive Accumulation"

Holland turned bourgeois pretty fast. The "Beggars of the Sea," Dutch ship owners, smuggling, engaging in piracy, landing and plundering at times

**FIGHTING FOR THE CARRYING TRADE**
**Dutch Ships At the Time Holland's Merchant and Military Sea Power Was Highest. Better And Faster Than the Galleon.**

on hostile coasts, trading East Indian spices, silks, perfumes, to Spain at the very time their country was fighting a war of life and death with the Spanish government, taking revenge for the hanging of Dutch protestants by cheating Spanish Catholics, laid the foundation of the sea power of Holland. The country was a natural harbor, with water communication with the interior.

But England, even better situated, based her commercial ascendency on the textile trade (for which the British isles could supply both flax and wool) and in which the use of machinery for manufacture was introduced before it came to any other industry. Capitalism by 1680 had so firm a hold in Western Europe that national ascendency depended rather on manufacturing advantages than on commercial. In the end, England won supreme control of the sea, commercially, and militarily. Her control was riveted tighter by the change to steam power (invented in America in the early 19th century—the Cleremont sailed in 1807) and by the use of steel ships (common by 1870). England's one disadvantage had been the necessity of importing "naval stores." Now she made whatever was needed in her iron foundries.

It may be noted here that as the first lunge of capitalism for power, in the later middle ages was accompanied by, and probably caused by, the change from the oar and sail to the sail alone as the chief motive power of ships, so the change from small scale bourgeois production to large scale, monopolistic production was accompanied by, and to some considerable extent caused by, the change in ocean going ships from the sail to steam as the chief motive power.

BRIGANTINES

A Favorite Type of Sailing Vessel During the Nineteenth Century When English Merchants Controlled the Seas.

## SECTION III—SEA POWER FOR WORKERS

Enough has now been said to give an inkling of what sea power is, and of its importance to the capitalist class. It was the chief factor in the formation of capitalism, such as it was, in ancient times. It was the chief factor, if not the only factor, that brought on the renaissance of crafts, and introduced the latest period of invention, leading to the industrial revolution, and modern capitalism. Capitalism implies trade, and for long centuries, trade was principally ocean trade. The more progressive countries of the world were those which depended most largely on ocean trade. Any power which could cut off the right or the ability of these countries to trade, could destroy them.

Naturally, when in group struggles between capitalists, one national group finds itself in command of the seas, it not only can ruthlessly cut off all trade of its opponent, but it also is able to sever communications in a miitary sense; it can isolate those positions of its enemies' forces as are on separate islands, or continents, and overwhelm them one at a time with superior numbers. Unless there is land communication between the rival groups of capitalists, the one with greatest sea power can choose the time and place of battle, or can avoid battle altogether if it wishes.

A few examples may be instructive. The Phoenician empire of trade was brought under control of the Persians when they were able to organize Greek city navies enough to conquer the hitherto nearly impregnable city of Tyre. Tyre was safe, except from the sea, and had a short time before this (577-590 B. C.) resisted a thirteen-year siege by the Great Nebuchadnezzar, head of the most powerful armed force of his time, but a land force.

The most famous conflict of the Romans, their three wars with Carthage (264-146 B. C.) was a victory for the strongest sea power, though that power was "artificial." In the second Punic war, Hannibal, operating from Spain as a base, would have certainly conquered the Italian peninsula if he could have used the sea ways for his transportation. He lost half his army by the long, perilous trip around by land through the Alps, and nearly won then. The reason he did not was because the Romans, using water transportation, since they were in control of the Mediterranean and had beaten the Carthaginian fleet, landed armies in Spain, and cut Hannibal's communications.

### Navy Wins for England

Similarly, in the Napoleonic wars, the most important national struggles before the last great war, France was beaten largely by the English control of the sea. The routes of communication between France itself and the French colonies were cut by the British navy, and the colonies became so useless to Napoleon that he sold the most important of them to neutral countries.

Napoleon was beaten largely because the English could not be reached by his armies as long as the English channel was ocupied by English fleets. Napoleon's hopes of building up a great fleet that

would beat Nelson and open up a way for invasion of England, were dashed to pieces at Trafalgar (1805).

In the Napoleonic wars, Napoleon must be considered as representing the business men of France, for whom his government was peculiarly suitable. (The Code Napoleon has been called the best set of commercial laws ever written.) The business interests of France stood squarely behind him, until British blockades began to hurt, and the possibility of destroying their chief commercial rivals, the British, became more and more remote. Then they abandoned him, and he fell. But Britain and her capitalists retained the mastery of the seas, and the French capitalists have had to be in second place, or lower, ever since.

There is no longer any doubt, we take it, as to "who won the world war."

### The Blockade Kills

The strangling effect of the allied navy was irresistible. The commercial blockade was thus made prominent as the most terrible weapon of modern warfare. It had been used before, with good results (for the victors) by the North against the South in the American civil war, and also, of course, by the British against Napoleon. But its usefulness (to the victors) has increased immensely since 1864, and still more since 1914. Modern civilization has resulted, in every commercial country, in a population too large for simple agriculture to support. There is a complicated, intricate, delicately adjusted extractive, manufacturing, and commercial apparatus, depending on foreign trade for disposal of the surplus value, and also for certain very important raw materials. For instance, in the world war, German industry was wrecked because it was unable to get oil and rubber, two necessities for their factories. The machinery of production wore out, the people starved, the armies were beaten, for lack of "morale," and lack of fats. The one hope German capitalism had of winning was superior naval power, based on a new weapon, the submarine, and that failed.

As for the future, even the submarine uses oil, and half the battle for oil fields is a fight for control of the sea, through control of the fuel that gives control of the sea. No one knows what will happen, but there will probably be at least one great war, between capitalist nations, for control of the Pacific. Probably there will be another war for control of the Atlantic. Now, as in the time of Greece and Tyre, control of the sea ways is control of the rich to colonize, and trade. There is also the terrible new weapon, the blockade, and there is the necessity of disposing of surplus value; if any capitalist country finds its foreign markets cut off, from now on, it shall perish.

### Invincible Sea Power

Now we begin to see some of the possibilities of sea power. And since sea power is, principally in these days, the power to declare and enforce blockades, it follows that any force that can stop the ships from moving can exert sea power. It does not matter whether the ships lie in harbor because their owners fear hostile gunfire, or because the firemen will not make steam, the longshoremen will not move cargo, or the seamen perform their functions. In fact, the latter blockade is likely to prove even more damaging than the first, because the mere inaction of large numbers of workers cannot be relied upon—they will talk, they will agitate, and other sections of the proletariat can be influenced.

The sea power of the workers on and around the ships consists, not only then in their ability to tie up the ships, as terrible a disaster as this must be to capitalism, if it is thoroughly and properly carried out, but in their ability to propagate dangerous ideas—dangerous to capitalism. The seaman goes everywhere—his outlook is world wide,—his acquaintance with many countries and many languages gives him an international, cosmopolitan character and point of view hard to equal in any other industry.

When it comes to international labor movements, and they all have their international aspect these days, with Judge Gary and the Fascisti, and Morgan buying up German industry, the seaman's point of view is extremely valuable. Travel has broadened him, he has fewer fetishes, fewer romantic notions; he knows the hard facts, in all their relation to each other.

DON'T BE A DEAD ONE!

# A Talk With the Reader

Let's have a quiet understanding. The Editorial staff of Industrial Pioneer feels that this magazine has been doing fairly well, but we are not satisfied. We are running on a basis of ten thousand copies an issue. At that rate, selling each copy for 15 cents with return privileges or 12½ cents without, we can put out this sort of a magazine—48 pages, two color cover, illustrated by about 20 new cuts.

Now we want to improve. We want to get closer to the industries. At present we think we are getting a lot of good stuff, volunteered, but it is obviously the work of a very few men, and however well they know their industry, they can not avoid the limitations that are inherent in the fact that they see only a small corner of it, that part where they are.

What we must do, if we are to give the working class of America the new, accurate, and exhaustive industrial articles they need, is to have some one on the ground, whenever and wherever industrial struggles loom up. At present we are using volunteer correspondents, and we have more real industrial information than any other magazine in the world. But with more funds, to send correspondents, traveling to the centers of industrial strife, where they can get a look at the situation with their own trained eyes, and write it up with their practised pens, we could make this Industrial Pioneer ever so much more interesting.

We ought to have 64 pages, instead of a cramped 48, and we ought to have hundreds of photographs of industry, wage slavery, class-war, photographed on the spot by our own men. We ought to have at least half a dozen more departments. We should have, especially, a regular monthly review of the more important events of the month—and it should be illustrated. We need experts in charge of departments on wage rates, and unemployment, we need charts on the movemnt of migratory workers, the rise and fall of production, the effect of strikes on wages and production, and the introduction of inventions, and their effects on the workers.

We need expert observers, workers, but trained to see and trained to write, residing abroad in the more industrialized foreign countries, and in steady correspondence with us.

All these things are for the future. We can't do more than we are doing, with the circulation we have. Make our circulation twenty thousand and we can have some of these improvements. Make it 50,000 and we can carry out the whole program outlined above. Does 50,000 seem too extravagant a thing to ask for? There are thirty million wage slaves in the United States alone.

We're not complaining—we're merely pointing out to you, Fellow Workers, what can be done, with a little more support. Have you got your subscription to Industrial Pioneer yet? Your bundle order? Your book of sub blanks?

DENVER IWW HALL

Don't Be A Dead One! Be Alive, Like These Guys!

# THE CITY

By MELVILLE KRAMER.

Sphinx like the city stands amidst the great
Deserts of plenty, like a harlot stands,
Singing a tune of love that cloaks her hate,
And beckoning mankind with outstretched hands;
Fair maidens flock into each cabaret,
In dress and in demeanor gross and bold,
They drink and dance by night and sleep by day,
And write their lives in characters of gold.

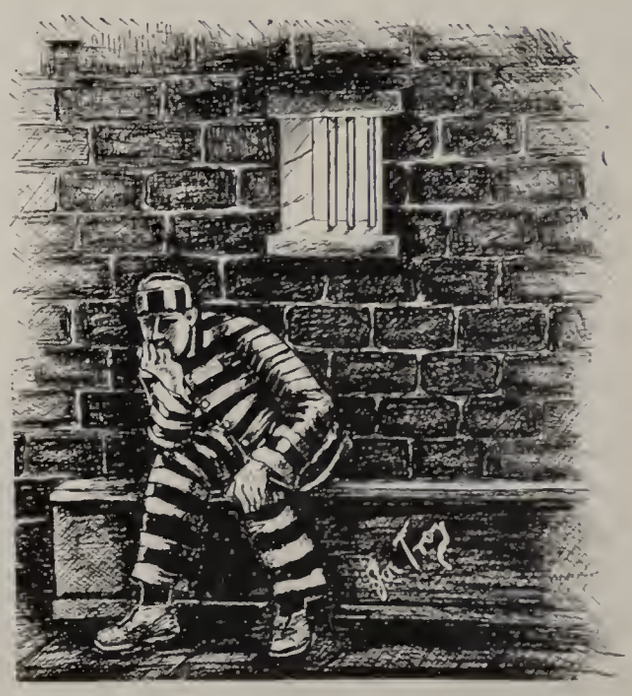
Within the city's bounds some millions slave,
Some millions that would otherwise be free,
So that her parasites may court the grave,
And waste their lives in rank debauchery,
And thus before the ravages of lust,
The gilded Sphinx becomes a mass of rust.

# THE ACID TEST

WORKERS OF THE WORLD! Don't you know that the owning and employing class of the whole wide world is living on your labor, the surplus value you create and do not get? Don't you know that in order to protect its right to this robbery, the capitalist class is engaged night and day, winter, spring, summer and autumn in crushing the first plain signs of rebellion on the part of the laboring masses? Don't you realize that the hope of the exploited many lies in organization so that the strength of one shall be multiplied by the strength of millions, and all shall be invincible?

If you know all this, why do you not rush in innumerable masses to the support of labor unions wherever the master class is trying to stamp them out?

Don't you know that in California the mere existence of one labor union, the Industrial Workers of the World, is illegal? Don't you realize that if the shipowners combine, and the Sugar Pine Association can crush this organization through form of law, they will crush all unions?



It is true that the I. W. W. is an industrial union—it is true that because of the efficiency of its organization the I. W. W. is dangerous to capitalism—but do you think a tamer union would be safer?

The boss hates labor organization. We claim that the California Criminal Syndicalism Law and the Busick Injunction are the Acid Tests of Labor's right to organize into labor unions.

One hundred members of the I. W. W. have stood the Acid Test—they are in California prisons for violation of the Criminal Syndicalism Law. Hundreds of workers are arrested and threatened with prison for violating the Busick Injunction. They have stood the Acid Test.

We need help. We need thousands of workers to go to Southern California this winter, and violate the Busick Injunction — we need a mass repudiation of the Injunction and the Criminal Syndicalism persecution by the hosts of Labor. It is the Acid Test of Labor's right to organize. It is the Acid Test of your sincerity as a class-conscious workingman.

## San Pedro is the Acid Test—
## Can You Stand It?

# LABOR--THE CREATOR

Nature presented man with free air and sunshine, water, earth, some herbs, flowers, trees, minerals, etc., and nothing else but his fellow animals. The only reason man is not a half ape, catching bugs for dinner in the day-time, and shivering nakedly through the night, is because he has labored—created things. He has created houses, clothes, fire, implements, and machinery. The great cities, the work shops, and the apartment houses, the schools, the laboratories, the factories, the bridges, ships, railroad tracks, and flying machines—all the innumerable useful structures, are man-made—created by Labor. All should belong to Labor. Our heritage is everything we have made, and everything our fathers have made. He who labors not, deserves nothing.

"All the world that's owned by idle drones, is ours and ours alone.
"We have laid the wide foundations; built it skywards, stone by stone.
"It is ours, not to slave in, but to master and to own,
"While the Union makes us strong."

# PREAMBLE

## OF THE INDUSTRIAL WORKERS OF THE WORLD

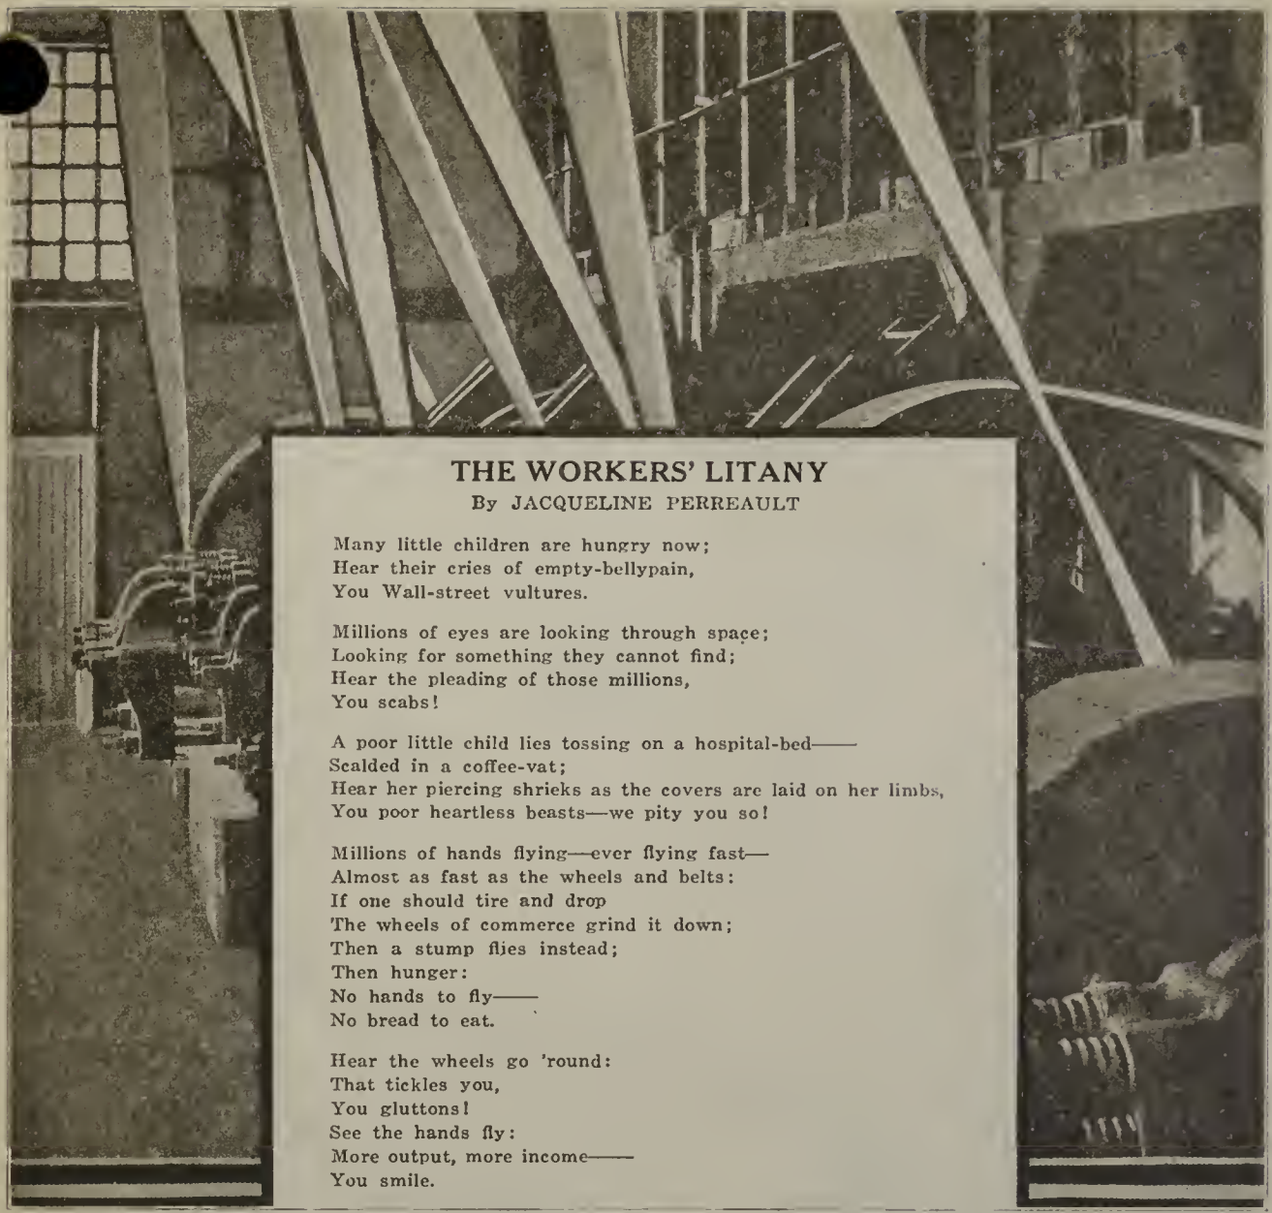
The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system." It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.



# THE WORKERS' LITANY

By JACQUELINE PERREAULT

Many little children are hungry now;
Hear their cries of empty-bellypain,
You Wall-street vultures.

Millions of eyes are looking through space;
Looking for something they cannot find;
Hear the pleading of those millions,
You scabs!

A poor little child lies tossing on a hospital-bed——
Scalded in a coffee-vat;
Hear her piercing shrieks as the covers are laid on her limbs,
You poor heartless beasts—we pity you so!

Millions of hands flying—ever flying fast—
Almost as fast as the wheels and belts:
If one should tire and drop
The wheels of commerce grind it down;
Then a stump flies instead;
Then hunger:
No hands to fly——
No bread to eat.

Hear the wheels go 'round:
That tickles you,
You gluttons!
See the hands fly:
More output, more income——
You smile.

Hear the small bones in the little foreigners' fingers
Being crushed——
"No, they cannot be heard——"
You cannot hear them——
The roar of the wheels is louder . . .
But I. who have a heart, can hear them.

* * *

May the feverish breath of the dying child be wafted to you
at your dinner today——
Till it nauseates,
And your bulging paunches heave in and out in convulsions
of agony.

May the cries of babes who suck at dry breasts reach your
ears——
So that you cannot enjoy the voice of your beloved ticker.

May the eyes of the host of understanding ones pierce
through to your souls—
If you have souls.

May the millions of flying hands tear at your brain——
So that you cannot sleep——
Or dream of the figures forever mounting
On the left side of your bankbook.

Your machine has crushed these milions——
You are setting it yourself——
It has no heart or soul——
No sense of justice;
It is stronger than you——
It will get you too.

While the armored hand of labor hammers incessautly
at your heart——
The clear voice of labor continuously cries——
Through your fault——
Through your fault——
Through your most selfish fault——

It is stronger than you——
It will get you too.
And then . . .
Ha ha!

"Tramp, tramp, tramp, keep on a' tramping
That's the best thing you can do"

# Oil, the Magician!

By GEORGE WILLIAMS

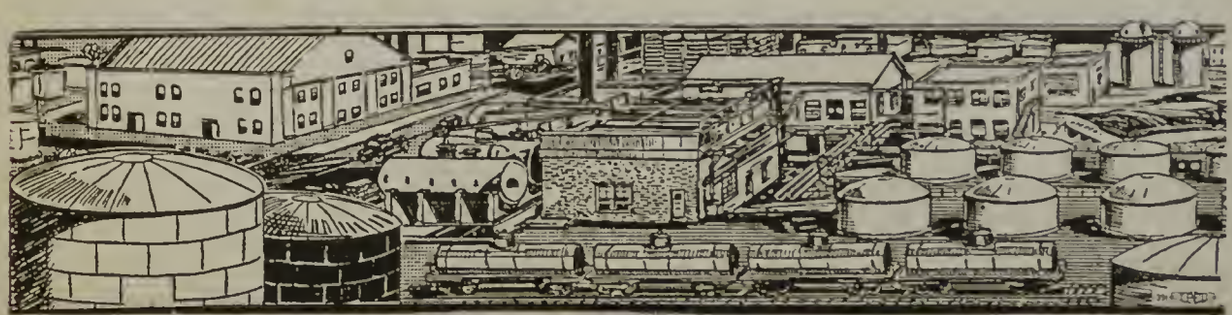
**OIL, the Magician! Oil, the transposer of political power; the elixir of progress. Oil, the liquid gold that has transformed paupers into plutocrats and plutocrats into financial wrecks. Without oil the combustion engine would have never been discovered, and without the gas engine or motor we would still be using horses, and air travel would still be confined to the birds. The development of oil and its by-products has revolutionized and accelerated industrial progress. Oil has diverted political affairs into new and strange courses. Nations that were weak in the days when Coal was king, show a surprising reinvigoration of new life with the discovery of oil within their national boundaries, and those nations once dominant because of coal deposits are evincing signs of decay. Politically, the future of any nation from now on will depend on its supply of oil.**

One of the lessons of the world war was the importance of oil. The Germans were crushed by a preponderance of oil supply—nothing else. Battleships motivated by oil fuel are so much superior to those that burn coal that there is no comparison. Coal-burning naval units are as useless as Chinese junks. Oil is king, politically speaking. King Coal is dead.

It is an axiom that political power is but a reflex of economic power, and oil being the basis of all political power today, it naturally follows that oil is of equally vital importance in the economic field.

The history of the world is marked off into eras of Stone, Bronze, Iron, Steel, Coal—and, finally' Oil, all marking the economic progress of man. The first tribe that utilized stone for protection and aggression became dominant over other tribes less equipped. Iron, malleable into articles of commerce and war, created other dominant nations. Steel, superior to iron, again threw the advantage, temporarily, in other directions. Coal, making steam possible, shifted the balance of power again, and now Oil as a superior fuel and article of commerce is arranging a still different balance of power.

The great conquerors of political history were only symbols of better equipped armies. Rome conquered the world because of an economic advantage—metal and ships against stones and clubs. Rome is ancient history and only her memory remains. Her once tribute nations are now dominant. All through history the rise and fall of nations can always be traced to the development of new discoveries in methods and materials. Just as surely as malleable metals were superior to stones and



clubs as means of protection and aggression, just so surely did the nation using the metals become dominant over the nation using stones and clubs. The nation that first developed steam-propelled warships and engines of production became dominant by sheer force of economic advantage.

To contemplate oil in its relation to the industrial life of modern civilization is to realize that the magic of the fabled magicians was empty chatter. Oil has the greatest utility value of anything known to chemistry. It furnishes power and heats the homes. Its medicinal properties are of the highest value. It harmonizes with every need of man, even to destroying parasitic insects. It is man's greatest asset. Used for political purposes, oil destroys humanity like flies—as in wars. Used in the sciences of industry, oil smooths the troublous pursuits of life. The paradox is the creation of capitalism.

### Social Power

Oil represents power—and it IS power of vast potentialities to whoever controls it. The Standard Oil companies are the most powerful aggregations of capital in the world, proving thereby the economic supremacy of oil. Strangely enough labor unions have made little progress in the oil industry. And yet, were the oil workers organized, the very economic importance of oil would make such an organization the most powerful in the world; as powerful as oil itself, since labor produces that wonderful commodity.

Few people realize the vital necessity of oil. Every large city in these United States would be paralyzed almost immediately if the supply of oil were stopped. Transportation over the entire country would be seriously hindered if not altogether stopped. The old visions of social general strikes pale in insignificance when compared with the effects that could easily materialize from an oil famine.

What would be the power of the oil workers organized into an industrial union can only be imagined. The 150,000 wage workers engaged in the production of oil outside of the refineries, banded together and having clear conceptions of their position in the scheme of social relations, would be the most powerful aggregation of labor in the world. It would be powerful not because of numbers nor from any particular skill that is embodied in oil production, but from the fact that oil in its particular use in the industrial life of the country is vitally important.

### Not Merely Numbers

The strength of labor unions does not always lie in numbers, but in the commodity around which they are organized. Indeed, numbers might be a handicap under certain circumstances. The United Mine Workers, for instance, suffer from a handicap of numbers both while on strike and on the job. The coal miners average about three-fifths yearly employment or less. In other words, there are two-fifths more miners than are necessary to supply

PIONEERING—(A Prospect Hole)

the normal demand for coal. In only a few districts do the coal miners work full time. This means that the preponderance of miners are perpetually on the ragged edge of poverty, and on the calling of a strike they become immediately dependent on strike relief for sustenance. The misery and intense suffering of striking coal miners is proverbial; it is horrible and yet inevitable for various reasons, viz: too many mines, and most important of all, coal has a substitute, or rather, substitutes, which are actually displacing coal. These substitutes are oil and electricity. Thus it is that in every national coal miners' strike it is big odds that they will lose. Perhaps they little realize what they are up against, but the fact of the matter is that treacherous leaders have not everything to do with their misfortunes.

### Organizing For Control

The philosophy of Industrial Unionism is more than the mere organization of workers as such. It involves more truly and perhaps to a higher degree the control of those commodities which are vital—the key commodities or raw material. It is the importance of a commodity that adds to the power of a labor organization. Labor organized industrially, plus the importance and necessity of oil, would therefore constitute a labor combination that would be impregnable.

What coal miners are facing is the superior economic utility of oil and the declining importance of coal as a source of power and heat.

Let us see if this is true. In the census of 1920 the statisticians reported that coal mining was the most important mining industry (which included petroleum) in the United States. Four years later in 1923-24 the oil industry had exceeded the coal industry in importance by 20 per cent in total value of products, and surprising to relate only one-half as many wage earners are employed in the production of oil as in the production of coal.

Geologists are now convinced that the discovery of oil deposits has only commenced. No one can tell just

A WOBBLY PILOT APPEALS FOR WRANGEL AND CLINE, FORD AND SUHR

The airplane is the product of the gasoline motor. No other fuel or type of engine could have concentrated the necessary power into the limits of bulk and weight which the airplane provides. Without petroleum, the air fleets of the world would be useless. It is an encouraging sight to see the pilots and mechanics who fly the planes turning to the IWW.

how much oil is below the surface. However, judging from frequent discoveries of oil deposits there is no doubt that vast resources of oil are yet to be discovered. An increase in the supply of oil will mean an increase in its use. Oil can now be transported swiftly and efficiently through pipe lines to any part of the country at a small part of the cost that it takes to transport coal. Six thousand miles of pipe lines now intersect the country and oil is flowing through these arteries at the rate of 30,000 gallons in each 24 hours. The distribution of oil is easy and invisible. It requires no more effort than turning on a water faucet. The manual labor of shoveling coal is eliminated. It is clean and there is no waste.

### Transport Workers Hit

Super-power engineers are now busy on plans to eliminate the transportation of coal and develop super-power by burning coal at the mines to generate electricity and send heat and power over the wires. Projects of this kind are actually being being constructed in various parts of the country.

The coal miners' union is fighting this scheme but it is a useless effort. The development of super-power portends the most gigantic displacement of labor that has yet taken place. Right at this very day in the bituminous fields of Illinois and Kentucky 80 per cent of the miners are idle five days per week. Oil and super-power are responsible for much of this idleness Thousands of coal miners are leaving the coal areas because of a persistent loss of time. In 10 years from now it is probable that only half as much coal will be transported on railroads as is now the case. This means a decrease in either the working time of the miners now employed, or a decrease in numbers.

### Substitutes

Oil is a substitute for coal, but coal is not a substitute for oil. The uses of coal are limited, the utility of oil is unlimited. The products and by-products of oil range from fuel to face powder, including gases, all kinds of light and heavy oils, solvents, medicinal salves, creams and ointments, candy oils, asphalts, carbons, fertilizers, rubber making, compositions, soaps, drugs and hosts of others. The uses to which oil is being applied are increasing daily. Even the advantage that oil has over coal in being transported would be great enough to disqualify coal. But oil has a labor-saving quality that measures its real value. It generates steam better than coal and the output of oil is increasing to such an extent throughout the world that it only awaits the time when the manufacturing units of industry can change over from coal to oil use. With the increase of oil consumption in the industries will come a decrease in the general need for coal. Coal will largely disappear as a transportable commodity and be consumed at the mines as fuel for superpower. And this means that the once powerful coal miners' union will find itself supplanted by a more powerful oil workers' union.

Now what is obvious regarding coal is obviously the reverse in oil. Perhaps some time in the future oil will be supplanted by some other discovery. Today, however, oil is supreme, and those who have an eye for power are wisely congregating around oil—all those but labor; and labor, as usual, stumbles in its various directions, blind as the proverbial bat, and as aimless as a herd of cattle, seeking the road, always crossing but never following it.

### The Scramble

If each individual oil worker could realize the terrific struggle that is going on among the large capitalist groups of the world for the control of oil production and, in realizing the extent of that struggle, also understand the vital necessity of oil, every oil worker would immediately scramble to become organized. But, alas, but a few of them see beyond that circle of hours that marks starting and quitting time. And precious time passes for the oil workers with each day. Precious time in that the oil kings are not losing one minute in solidifying, consolidating and trustifying their positions. They know oil for what it is—WEALTH and POWER. All that the average oil worker sees in oil is a greenish black and disagreeably greasy fluid in the production of which he makes wages.

It is the general habit, especially among some

workers, to regard the possession of wealth and power as equivalent to super-intelligence. The Rockefellers, for example, symbolize the height of wealth and power in the oil industry, and some even go so far in their idolatry of their wealth as to assert that but for the Rockefellers there would have been no oil industry as we know it today. In other words, the production of oil or any of the other important commodities, is created by a metaphysical process known only to an enlightened few. The capitalist philosophy says in effect—without the Rockefellers and Sinclairs there would be no oil, or without Gary there would be no steel, or with no Guggenheims we would be without copper. Other capitalists of lesser fame build towns all by themselves, or dig mines. Every commodity has a capitalist as its patron saint. The great mass of common folk are but humans for whom these capitalist saints plan and create.

### Where the Richest Man Got His

Of course, the intelligent workers can see that oil made the Rockefellers and the rest of the oil kings, and that the extent of their wealth was determined by the social need for oil. Oil, like the deposits of metal and coal, has been in the earth for countless ages. Primitive man perhaps knew of the existence of oil, but could not at his stage of economic development utilize it. Man went through ages of development, from stone to bronze, to copper, to iron, to steel, learned about steam, about electricity. All the sciences, chemistry, metallurgy, mechanics, engineering, etc., had to be mastered before oil could be properly appraised and used. Thus the development of oil is more than merely sinking wells and bringing it to the surface. Its development belongs as much to the past as to today. Oil went through natural processes extending through countless ages. The development of social knowledge was also a requisite. All the myriad toilers and thinkers of the past had their share in the development of oil. Thus oil is a heritage of the past. It belongs, speaking in a proprietary sense, to no one person or persons; it belongs to society because only collective society can utilize it, only collective society could develop it.

### Labor Did It

The wealth of the oil kings is possible only because of the economic necessity of oil. The oil kings did not make the oil. Rather it was oil that made the oil kings. It takes labor to bring oil to the surface, and oil being of no use underground, it can properly be said that the labor that brings the oil to the surface is the real source of the wealth that flows into the coffers of the oil kings.

Comparison of the values of petroleum products with the wages received by the workers shows that the workers in the oil industry are exploited to the extent of 90 percent. In other words, for every 10 dollars of oil wealth produced, the worker receives $1. The census of 1920 gives the production in 1919 of petroleum, for the whole country as 350,112,253 barrels. The yearly production in 1923 was nearly 700 million barrels. In 1924 the production will probably figure close to 800 million barrels.

These figures of crude oil production tell only a small part of the story of oil production. Refining oil is an intricate and wonderful process. Perhaps more than a million people are involved in the transformation of crude oil into useful by-products and their distribution. The gasoline taken from oil is of itself an enormous undertaking and is a source of incalculable wealth. But another, and perhaps larger, industry is growing on the foundation of oil. The Diesel engine has been improved to such an extent that it is rapidly displacing steam-driven engines. Water works and power stations are finding in the new type of Diesel engines a more efficient means of developing power. This new type of engine will revolutionize the development of power to a vast extent and incidentally displace a large percentage of the labor now necessary.

(CONCLUDED NEXT MONTH)

---

ANATOLE FRANCE, *by Steinlen*

**Yes, Anatole France is dead, and the world has lost a great man. Jacques Anatole Thibault (his real name) was born on April 16, 1844. His father was a poor Paris bookseller, a former soldier who had been nicknamed "Pere France," from which the famous author derived his pseudonym.**

**It was the peculiar province of Anatole France to see through capitalist society, and with the most pointed and whimsical satire, reduce all its hypocrisies to absurdities. It was Anatole France who smashed in one keen sentence the pompous declaration that "all men are equal before the law," by stating it concretely, thus: "All are equal before the law; rich and poor alike are equally forbidden to beg their bread in the public streets, and alike forbidden to sleep under the bridges." And that is a fair sample of the type of his humor, gentle, but critical. In addition to his ability for complicated satire as in "Penguin Island" and "The Revolt of the Angels," Anatole France was able to rise to magnificent heights of passion as in "The Red Lily," and descend to broad and genial even if somewhat philosophical sympathy, as in his autobiographical stories of childhood. A marvelous, many-sided man, and a radical.**

The Little Bourgeois Are Doing All They Can.

# Business Successes from Small Beginnings

BY W. H. SYKES

**Syndicate Article Writer Answered By Merchant Who Has Succeeded—Points Out That Opportunities Are Scarcer Now Than 40 years Ago—Favors Co-operative Industry By One Big Union of Workers Instead of Concentrated Industry For The Benefit of A Few—Would Join Same But Is Ineligible.**

THERE is appearing in the capitalist press, "a series of short syndicate articles on business successes from small beginnings," written by one Edward Mott Woolley. These articles are intended to prove that the U. S. A. is still the land of opportunity, despite the large industrial enterprises, with their comparatively few stockholders and armies of paid employees.

Recently, Woolley wrote a letter to W. H. Sykes, proprietor of Sykes' Store Co., Leonardville, Kansas, as one who had made a mercantile success, requesting material for another article in this deceptive series. Sykes' answer is a truthful, straightforward one. In it he points out the present lack of opportunity as compared with opportunities 40 years ago. He also comes out boldly for co-operative industry by the workers organized in one big union.

**His letter follows in full:—**

Edward Mott Woolley,
Passaic, New Jersey.
Dear Sir:—

On May 10th we received a request from you for information on our business career that would enable you to write a 500 word narrative on business successes from small beginnings. You state these stories are being used in such newspapers as the Boston Post, Chicago News, and others. The purpose you also state is to show young men that opportunity exists everywhere today in the United States as it always has. We have neglected replying as we hardly knew just how and what to say.

While it is very fine to be played up in public print as a success we do not believe that opportun-

ity does exist now as it did in 1880 when I commenced business. All lines of business are being concentrated into fewer hands under our modern industrial system by labor and capital. We find there is a monopoly of the means of production by a few so that individual operation is very difficult. We find the few have controlled the means of production by high financing, watered stocks, control of politics and other means.

Under the present profit system the middle class has declined a hundred per cent in the United States since I commenced business. While I have been able to go from the lower well up into the middle class and am known as one of the oldest and most successful merchants in northern Kansas, I cannot assist you in producing what would be to me a false article that you might be able to sell to the capitalist press. We wish that you could have this letter printed but doubt very much if you could get a ten cent piece for the same.

As we look back over our business career we do not feel altogether proud that we have been able to crush a number of small competitors in order to build our success. We believe that the small store keeper in common with other individually operated industries is fast giving way to the large corporations such as mail order houses and chain stores.

We have during the 40 years at several different times been in competition with co-operative stores which so far have largely been failures. However, we believe they have a place in society and that ultimately they will succeed and be the greatest good for the greatest number.

Co-operative stores should have trained managers who are competent to manage and handle a business.

**Co-operative industry by and for the workers is the message we would like to spread, and elimination of us capitalists and the system by which we receive half and give labor half.**

The present overproduction or underconsumption is brought about by that system, as the half we capitalists receive has accumulated until we are forced to close the factories to dispose of our surplus; while the workers who have been using their half from day to day and week to week have no surplus accumulated so that they can afford to remain idle.

**In fact, it appears that we have entered upon the greatest industrial depression in the history of our country and that the coming winter will be very disastrous for the workers as well as many small capitalists.**

We are surrounded by very prosperous farming country. We have also seen the land advanced from ten to one hundred dollars an acre and in a measure our store has developed with the country. We believe our community consists of nearly 90 per cent middle class people, and were this percentage general over the entire country we should not complain of our present order of society. However, we find the average p[illegible]centage of those in the middle class in the Uni[illegible]ed States stands at less than 35 per cent while the lower class has increased from 20 to 60 per cent during our business life.

Should you desire to write up the history of our business we should wish to have you state our opinion of the game as outlined above.

We might state that we take no credit in renouncing the present order of society and industry as we have done nothing to bring about the change we believe should be made. We have spoken to some of the high school students in our town and have told them that on the general average of the country and as we saw conditions their chances of success in securing an American standard of living and home were not as good as were ours 40 years ago. Hence you see we could not be true to our honest belief in assisting you to prepare an article for the Boston Post, Chicago Daily News and others for the purpose of showing young men that opportunity exists everywhere today in the United States as it always has.

**As a remedy we believe in the slogan of Workers of the World Unite, or in the forming of a One Big Union in which any honest worker by hand or brain, of any race, of any breed, of any color is eligible to membership. Such an organization is in existence but the undersigned is denied admittance so long as we conduct the present business as it has been in the past and is today being carried on.**

In case you are able to bring this message as outlined into publicity we shall feel that it would be of a thousand times more value to the public than the one for which you have asked.

Another objection we might state we have to our business is the fact that it develops nothing of human brotherhood. It is a game of doing the other fellow or he will do you. Do you realize the jealousy and hatred that a successful merchant must encounter from his neighbors? Do you realize how far from pleasant living in such a competitive world becomes? We find our press, our schools and all our educational means are being used to perpetuate the present, to me, unsatisfactory and unjust system.

The sort of syndicate articles on business successes from small beginnings you are writing, for which you find a ready sale, are proof of the above. I would much prefer as a legacy to my children and children's children a co-operative business world than the competitive one through which I have passed, even though I have been able to beat the game. If you cannot sell this letter I shall attempt to donate it to the Industrial Pioneer or some other working class paper. Trusting we may have a line in reply at least, I remain.

Yours truly,

**W. H. Sykes.**

The First Step Towards A Strike In Paterson, N. J. The cycle of life begins for the silk-worm. This picture shows moths, laying eggs on pieces of paper, in Japan. The girls are working to keep the eggs from being placed too many in one place, and they roll up and store away the papers that have been covered with eggs.

# Silk—a Class Issue

By 向警予

THEY SAY, though no one knows for sure, as it happened a very long time ago, that once an Empress of China, and all the court ladies of the whole Court of Heaven spent long days and longer nights feeding and cleaning silk worms, picking over cocoons, and realing, winding, throwing and weaving silk. The legend is, in fact, that the Empress Si Ling, wife of the Yellow Emperor (Hoang Ti—the semi-mythical being who invented most of what the Chinese use), herself invented silk culture. Moreover, she is said to have invented the loom for weaving silk.

Now it is doubtful whether the empresses either invented silk culture or actually practiced it much, but plenty of women of lesser rank and probably more worth, have tended silk worms, and handled their silk. In fact, silk culture is still, all over the world, almost entirely a women's trade, and therefore a low paid trade. Probably the invention of the loom and the art of cultivating silk worms was ascribed to Si Ling, a woman, because of this fact, whereas crafts and industries which men practice were supposed to have been invented by Hoang Ti, her husband.

One thing is certain, the very oldest Chinese books speak of women engaged in this particular textile industry, and prescribe minute and

specific directions for the treatment of the silk at all stages of its growth and manufacture. Already, in the earliest recorded time, a great deal of religious theory had clustered about the various processes, showing their great age. The processes described in the Chinese classics have changed very little during the centuries. Silk, especially the production of raw silk, is still an industry in which skill and patience count for very much, and the machinery in use is quite simple.

And another thing is equally certain, that now, as formerly, silk is **the** class fabric. Ever since the empresses ceased to labor at it (if they ever did), the lowest paid and hardest working women toilers have made the silk worm comfortable, and have cared for the silk, and done all the work connected with its manufacture to the point where it is ready to adorn the human frame. And of this silk, not one of the workers has ever received for her personal adornment one yard of it even; it goes, all of it, every bit, to the use and pleasure of the ruling, master class.

### The History of Sericulture

Silk having originated in China, the Chinese tried to keep it there. They preserved the methods of feeding and changing the worms as secret as possible, and actually circulated false stories throughout the rest of the world to confuse the barbarians and keep down competition. Aristotle and Pliny, Virgil and Dionysius, issued statements about its origin which show that they knew of the fabric, but had very wrong ideas as to how it was produced. Even in the neighboring countries in the Orient, silk culture spread slowly and with difficulty. It reached Japan through Korea, and there was a temple erected in Setsu province, in Japan, to four Chinese girls who came over to instruct the Japanese court ladies in plain and figured weaving (women again, and noble ladies). The use of native silks started in Japan about 350 A. D., long after its use among the upper classes of China was common.

There is another pretty story about the smuggling of silk worm eggs and mulberry seeds into India, concealed in the hair of a princess, who had married an Indian prince. How they kept the eggs fresh while the mulberry tree was growing, is not explained by the old romancers, but it is probably true that silk culture did come overland to India from China about 300 A. D., maybe three thousand years after it was common in China. From India it spread through Persia. References in Sanskrit texts to silk much earlier than this date do not seem to prove the existence of an Indian silk culture, though they indicate that silk was not used in India before it was produced there.

### For the Wealthy Only

The Roman emperors tried at first to stop the use of silk. Their stoic philosophy, and later their Christianity, taught them that too soft a garment was effeminate, and they were, some of them, determined that their slaves should never grow soft and lazy.

However, the richer people were all that were able to buy silk, which was usually sold at, literally, weight in gold. So finally the Emperor Justin (and this story seems to have some basis in fact) seeing that there was good money to be made in the trade, and finding that the merchants were closing down their establishments rather than pay the heavy taxes he had placed upon them, as well as the maximum price at which he ordered them to sell their product ($23 per pound), took over the silk trade. Having embarked on the nefarious business, he was determined to get what profit he could, and sent two Persian monks to China to steal eggs. The monks had already told him that they knew how to raise the worms and reel the silk.

The monks got away with the silk worm eggs by concealing them in hollow canes, which the Chinese guards forbore to break, because of the apparently holy demeanor and reverend aspect of the monks. This was not to be the last time that the Chinese have suffered from their own too gentle treatment of missionaries who come among them.

Anyway, about 550 the Byzantians were raising silk worms and reeling and weaving silk, and from Constantinople the industry spread into all southern Europe. In 1146 the king of Sicily, Roger by name, fought with the Greeks and being partially victorious carried off as prisoners certain silk raisers and weavers to his own land, where he colonized them and worked them. The Venetians, by the same means, captured Greeks skilled in the art, and set up a silk manufacturing business in their town, about 1203. By 1300 there were several thousand persons engaged in sericulture in Florence, and then it spread gradually through France. It was never successful in England or Germany on account of climatic difficulties. But there is still a great deal of silk worm growing in northern Italy and France. Italian silk is of a very fine quality.

### The Process Itself

Silk reeling machinery is of European invention, and is a comparatively simple adaptation and application of power to the original hand turned reel, invented by the Chinese.

**Ancient China—Gathering Mulberry Leaves**

FEEDING THE SILK WORMS—JAPAN

Before the silk can be reeled, the worm must be cared for. The silk eggs, called **graine** in Europe, are very small, and are laid on papers by the silk worm moths. One ounce of eggs will hatch into worms that will make about fifteen pounds of silk. Before they make any silk, they eat 1362 pounds of mulberry leaf. The leaf of the white mulberry is the best. The papers with the eggs on them are hatched in an incubator, or by being covered with manure, or by being kept warm with cloths which are wrapped around the human body. The worms are forced to crawl through small holes in papers to scratch off the egg shells. Then they are fed. They eat tremendously. Frequently they have to be transferred to fresh trays, where they are placed farther apart. All of this is hand work, and very delicate work, as the worms are tender. The leaves have to be dried, as moisture is fatal to the worms, and chopped. Four times the silk worm loses its appetite, changes its skin and then starts eating again. About the end of its first month of life, it stops eating, raises its head, and signifies a wish to climb. The silk worm tender then has to place a little trellis for it to ascend. At this time it is about three or three and a half inches long. It attaches itself to a straw on the trellis, and for three days engages in spinning silk. The silk is a gummy substance, secreted in large glands, and exuded through two holes in the head. The worm weaves its cocoon around itself by revolving its head continuously until it is covered with silk.

A few days after the cocoon is formed, the silk grower picks out those intended to serve for brood purposes, and kills the worms in the rest by heating them.

**Present Silk Culture of China**

A great deal of China's silk is woven and used at home, usually on primitive cottage machinery, hand looms, etc., but this ancient home of the silk industry still provides most of the world outside of the United States with its supply of raw silk. China has been exporting for manufacture in other countries only since 1850. Before that time, silk cloth was exported. Twenty-seven per cent of the world's supply of raw silk is from China. Raw silk is the most important export from China, more important than the next four highest exports put together.

Steam filatures (mills for reeling silk from the cocoons) are centered around Canton, especially at Shun Tak, about thirty miles from Canton, where there are 180 filatures, each employing from 300 to 500 girls; and around Shanghai, particularly in the towns on the shores of Lake Tai Ho, where the big battles are being fought now; and away in the interior at Hankow; and at Hangchow, Soochow, Chefoo, Sanshui, and Chinkiang (you can look them up on the map if you are interested).

All this, again, is hand work.

The cocoons are then usually sold to a filature, or winding factory. Here there are long rows of reels, made usually of wood, turning by some sort of power, and set in rows of, usually, 36 reels. Opposite each reel is a steam heated basin of water in which the cocoons are immersed. Girls pick the outside shreds of silk away with brushes, or they are removed by mechanical brushes, and then they pick up from each cocoon the infinitesimally small thread of silk by its outer end, and stick it on the threads of other cocoons. The combined thread runs through fine holes in glass beads or the glass rims of the

water basins, and onto the reel. The work is very trying on the eyes and the patience, and it requires skill. The silk strand made up from two to twenty of the fine threads from as many cocoons is the raw silk of commerce.

The very best silk in the world, the finest, whitest, and softest, comes from the Kiang Su province, in the very center of the region where the civil war now rages.

### Japan Supplies America

Japan has a monopoly of the American market. The mills of Paterson, now closed by a strike, throw the silk capitalists of Japan into a cold fit when they cut off their orders, for not only do the Japanese monopolize the American market for raw silk, but America is their only customer. Some day they will want to make American capitalists buy silk in greater quantities, and will want to own the American mills, which are their market. Similarly, some day, the American capitalists who own the mills are going to insist on having control of the Japanese filatures, so as to insure themselves the kind of silk they want, when they want it, and with the profit going to themselves. Not a little of the present hatred between America and Japan arises over this economic clash. American and Japanese workers will yet die on the battlefield to decide which group of capitalists shall take over the whole industry.

The Yokohama silk exchange is another sore point at issue between the two national groups of capitalists. This is the only silk exchange in the world, and is conducted exactly as the New York Stock Exchange is run, or the Chicago wheat pit, except that the aristocratic traditions of politeness affect even the newly rich of Japan and the American buyers, and reduce somewhat the outward exhibitions of greed that would otherwise be shown. There is the same "legitimate" transacting, the Japanese silk filature capitalist selling, at the highest price he can get, his raw silk to the American weaving mills at the lowest price **they** can get. But though capitalism is young in Japan, it is acquiring all the vices of even the senile American bourgeoisie, and the most reckless gambling goes on in the Yokahama exchange, coupled with attempts to corner the market, with a resulting disarrangement of silk prices, and interference with the profits of American capitalists—which does not add to the comity of nations.

You must not think for a moment that the silk industry in Japan is a small one. About one-third of the industrial workers in that country are the women and girls who reel silk, and there are millions caring for the worms in little peasants' cottages. More than one-third of the entire agricultural population, some 2,000,000 households, do nothing but raise mulberry trees, and pick leaves for the silk worm to eat. Over 1,000,000 acres (and Japan is a small country) are devoted to mulberry raising. The exportation of silk from Japan in 1922 was 792,488,446 yen, much the largest export of the country, more than twice as much as cotton, the next largest export. Oh, yes, the silk industry of Japan is a rich prize—and therefore a cause for war.

Of course, industrial workers need only to stop for a moment and think, that the workers in the filatures are women and girls, to see that they are probably pretty badly exploited. Woman and child labor is always cheap labor.

### Women Slaves in New Nippon

Worse than anything else is the recruiting and contract system utilized by the masters of industry in Japan. The country is just out of the feudal system, and the working classes, entering upon factory life somewhat under the recent feudal teachings of loyalty to master, worship of the government (in fact, the Emperor is a god) and disabilities of women and children, who, under the family system had no rights at all, are not equipped to fight capitalism even as much as Europeans and Americans are. The young girls of peasants are practically sold to the padrones by their fathers, and are carried off in gangs, and again practically sold to the factories. Like the slaves of old, they live in barracks around the working places, and they are not allowed, in many cases, to quit their jobs until the contracts have expired.

There are government regulations designed to preserve the health of the working classes, and in general, these regulations are obeyed. Two classes sometimes struggle, and sometimes co-operate for governmental power in Japan, the ancient military caste, supposed to be abolished, but in reality transferred into a class of office holders, particularly holders of army and navy and police offices, and the newly rich, powerful but despised, capitalists. Their interests clash in the matter of ruthless exploitation of the girls. The capitalists would like to work them to death, as the rising English capitalist class worked poor children to death in their cotton mills, and as the American capitalist class still works children into decrepitude and idiocy. But the bureaucratic land-owning, militaristic clique has other uses for them. They want them to be brood mothers of a sturdy assortment of cannon fodder, to be expended on the battlefields that will have to be fought over before the dream of Japanese Asiatic hegemony and territorial expansion can be materialized.

### Some Americans Worse Off

As a result of this clash of interests, the new government factory regulations forbid the working of children under the age of fourteen, prohibit longer hours than eleven for women and for children under the age of sixteen, provide for two rest days per month for women and children under the age of sixteen and four rest days a month for women and children doing night work. Children and women must also have an hour's rest in the middle of any shift longer than ten hours, and women and children under the age of sixteen must not be made to work between the hours of 10 p. m. and 5 a. m.

The standards of living are not so bad as commonly supposed. The wage is about half that received

When The Worms Are Ready To Spin Silk They Are Placed On Straw Trellises

in American low grade factory work, but on the other hand cost of living is about half also. Food is much cheaper, rents are much cheaper, and the expenditure for clothing is relatively higher. This fact is admitted in foreign countries, both explicitly and tacitly. The Johns Hopkins University Studies in Historical and Political Science Series (V. 36) states explicitly:

"The common belief that the standard of living in Japan is very much lower than in the United States is not scientifically proved. Probably it is a misconception."

And of course, the mere fact that silk after being reeled is sent to America for weaving is pretty nearly complete proof that weaving is cheaper in America than in Japan, and that the exploitation of American silk weavers in New Jersey, and eastern Pennsylvania, is greater than the exploitation of labor in Japan, wherever machinery can be used, as in weaving. Semi-hand labor, requiring particular skill, such as reeling, is still cheaper in Japan. There is undoubtedly a drift towards harder times in Japan—even as in America and Europe.

### The Factory System in China

The workers' problems, and the situation in which they find themselves are somewhat different in China from what they are anywhere else in the world. In the first place, China never went through the feudal period in modern times. China's feudal period, unlike Japan's, was a long time ago. It broke down, and under the drive of craft guilds, Imperial armics, local village economy, and the class of literati, there was a reversion to primitive communism ideally and socially, and firm establishment of the handicrafts system in industry. The Chinese family, which has most of the aspects of one of Morgan's male gens, and certainly developed out of the female gens, is still quite strong in China. Families, in the larger sense of those having a common family name, maintain their organization, their ancestral temples, and are like little governments. Not so small, either, because there are only one hundrd family names, and something between 350,000,000 and 400,000,000 Chinese to be divided among them.

The localities, which are somewhat synonymous with the families, have their own life, and tend to their own affairs in quite a communal way. There is care for the sick by the family, and a kind of family public spirit.

The whole community runs on very little money, prices are very low except where the factory system has broken in; hours were not so bad, nor the standards of living so very low, until the factory system and other deranging influences were brought into China. Of course, there was no progress, all social and industrial life had reached a sort of balance of forces, nothing new happened.

Now into this communal, guild, handicraft life comes suddenly the machine, steam power for turning silk reels, coal and iron mining machinery, railroads, etc., a system designed to run, and forced by foreign commerce to run, on a much larger supply of money, a closely integrated society, with a capitalist employing class in addition to the original merchant and handicraft classes, and with masses of homeless, wandering laborers, cut loose from family ties.

Since the work of women and children under the family system had been largely domestic, the modern sik filature and cotton mill raises havoc with everything in the old system. The meek women, one time slaves of husbands but mistresses of homes, go to the mills and get wages on which they nearly starve to death, but also get a good deal of freedom along with the wages, and become quite flapperish, sit in restaurants smoking cigarettes, and in the opinion of the older Chinese, generally disgrace their families.

Conditions in the mills are very bad. There is no bureaucratic class with interests at variance with those of the new capitalist class. The workers are left alone, without even the dangerous support of militarists. There are certain labor laws, adopted by the central government, which prescribe no work for boys under ten or girls under twelve, only eight hours work for boys under seventeen and girls under eighteen, no work for children after 8 p. m., or before 4 a. m., wages at least once a month, etc. But these don't mean much, for they cannot be and are not enforced. In China the capitalists run the government, except for the district around Canton, where the labor unions have much influence with the government of Sun Yat Sen and the capitalists are organizing a fascisti militia to oppose it.

In the silk filatures of Shanghai, the normal workday is fourteen and a half hours. The workers frequently never leave the mills, but sleep on the floor on bedding spread down after their shift is over, and rolled up and stacked in the corners when morning comes. There are 56 filatures in Shanghai

district with 60,000 women workers in them. Last year the daily wage ranged from forty to fifteen cents, Mexican, a day (depending on what sort of work), and it must be remembered that prices are going up in the coast regions of China. It is possible by staying at work the whole month to get a bonus of $1.50, but absence of even one hour would prevent the worker from receiving the bonus.

If the Chinese lack the paternal care of military rulers, however, they have had training in organization. They are great people for forming companies, clubs, guilds, associations, etc., and this is probably the result of their handicraft society. The same sort of tendencies were present in Europe during the handicraft period there.

So the women workers organized an industrial union of silk workers, and put in demands, in 1922, for the ten-hour day, five cents per day increase in wages, and an unconditional bonus. On August 6, with banners and placards, 20,000 women silk workers paraded through the streets of Shanghai and established picket lines. The foreign residents of Shanghai, including all the American and European capitalists, rushed to the defense of the Chinese capitalists. All Chinese strikers who strayed into the foreign settlement were promptly arrested and sentenced by mixed courts to long prison terms for "inciting workers to strike." The bosses, who are strongly organized into the "Silk and Cocoon Guild" (of master craftsmen), won the strike. But organization persisted among the workers, is growing now, and will undoubtedly lead to another attempt to raise wages and lower hours very soon.

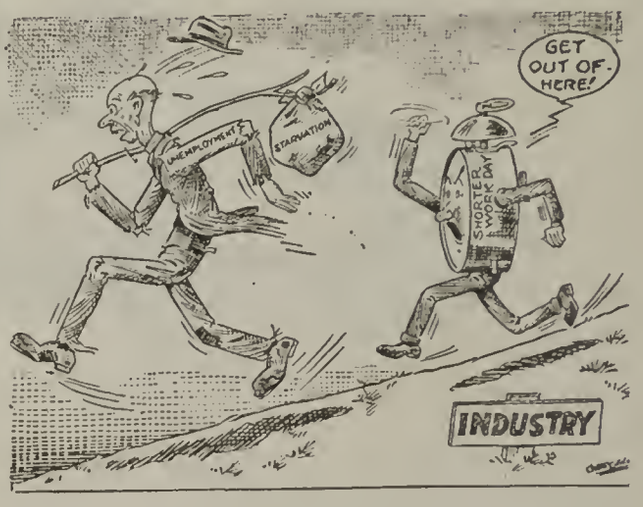
The present war now going on in China is a struggle between capitalist foreign countries, using mercenary troops, and still more mercenary Chinese generals to give them control of China's markets and China's raw materials, not the least of which is silk. General Wu Pei Fu, with his tributaries, various tu chuns (civil and military governors of provinces), most important of which is the tu chun of Kiang Su province, is trying to establish a dictatorship over all China. If he succeeds, by destroying the dictatorship of General Chang Tso Lin of Manchuria and the labor government of Kwang Tung province (capital at Canton), America will come in for the exploitation of China, and will take over the silk supplies along with other loot.

The striking silk workers of China and the striking silk workers of Paterson, N. J., are fighting the same master—international capitalism. The same methods will win in both cases. And the Japanese women workers will waken too. The human worms will turn, and the empresses of the world will have to go to work in earnest.

# Battlefields of Paterson

**Paterson, New Jersey, is where the silk mills are. A strike of the silk weavers has been in progress there for more than two months. It is a long drawn out battle, with the silk weavers standing firm, and scabs hard to get, because of the peculiar skill required in silk mills. The mills of Paterson weave what is known as "broad silk" on modified Jacquard looms, and their work is quite different from the weaving of wool or cotton goods, or even the weaving of silk ribbons.**

**The strike was brought about by the determination of the silk companies to cut down on their working force and save expenses by greater exploitation of the workers. They planned to make one weaver tend three or four looms instead of two looms, which is hard enough work in itself. The workers** are demanding a reduction of hours from twelve or fourteen, as is usual in the busy season, down to eight hours. They are demanding bigger pay, too. All this silk work is somewhat seasonal, and unemployment is prevalent during a large part of the year. Weavers average weekly, during the year, about $20.



### Not the First

This strike is nothing new. Paterson is a battleground of the class war. It is a strictly industrial town, built near waterfalls which furnish electric power to the mills, and is a considerable railroad center, as the New York, Susquehanna & Western, the Delaware, Lackawanna & Western, and the Erie railroads all converge here. It has large machine shops, locomotive shops, and iron goods factories. But these activities are overshadowed by its textile factories; they make linens, carpets, velvets, woolen and cotton goods. But these fabrics are of small importance compared with the extremely important silk manufacturing of the town. It is absolutely the biggest producer of silk fabrics and sewing silks in the United States, and the United States is a great producer of such things.

One side issue, the silk dye works alone, employs 5,000 "hands." About ten thousand weavers and loom tenders of one sort or another are employed in the busy season in the silk mills of Paterson. The famous Cheney Silk Co. mills are here, but there are also plenty of smaller ones.

This strike is largely led by workers who got their training in the I. W. W. strike of 1913, an epoch making event, and one of the first really industrial strikes in the textile world.

### "Opium of the People"

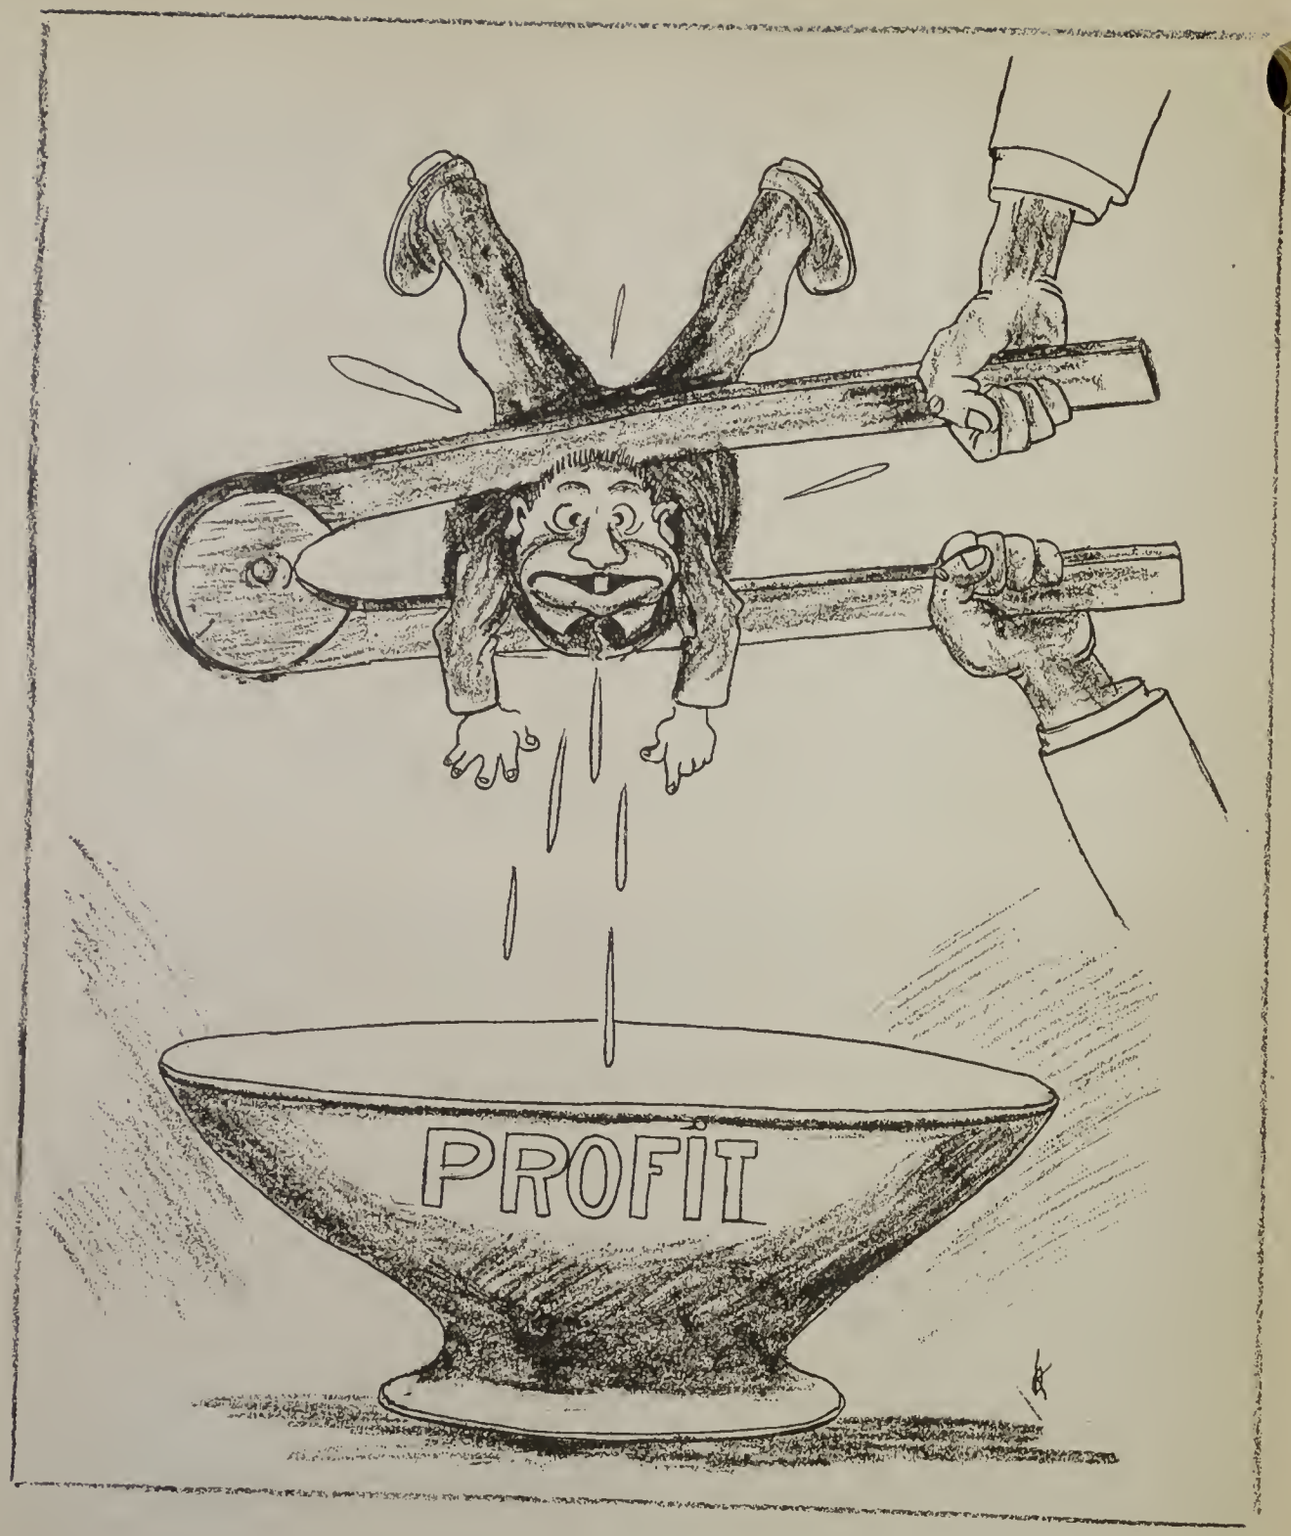
It was a battle in which about twenty thousand men and women faced the organized capitalist class, its flunkies on the "Call" and the "Press," and its preachers. This is no mere rhetoric. The preachers of every denomination in Paterson, simultaneously, preached sermons against the strike, urged the workers to scab, pleaded with the wives and daughters of the strikers, (women are sometimes more religious than men) to get their husbands back on the job, and simultaneously declared that not low wages, but drink, was the curse of the workingman.

The 1913 strike started in mid winter, in January. It spread from Paterson through all the towns around, and was conducted with mass picketing, large mass meetings, until these were broken up by the police. There were hundreds of arrests, and indeed, most of the time the jail was kept crowded with strikers who "battleshipped" enthusiastically.

### "Singing Jail Birds"

Incredible as it may seem, it is said that some of the strikers were able to continue singing I. W. W. songs without ceasing, in Paterson jail, for two days and nights. The I. W. W. stepped in after a spontaneous strike had been started, and with its message of solidarity and its organizing ability, kept up the spirit and the activity of the pickets until a partial victory was wrung from the most unwilling bosses.

Paterson has been, and is, and must continue to be a battlefield of the class war, as long as capitalism endures. With the factory system so well developed, and with the class lines so sharply drawn, it is impossible for class feeling not to develop. Class solidarity, in spite of many defeats, and difficulties, continues to exist in Paterson. The day will come, clearly foreshadowed even in 1913, and never quite lost sight of since, when all the textile workers of Paterson, not just the weavers, and all the textile workers of America, and of the world too, for that matter, will be united in one big union, and on that day, the long series of battles in Paterson, and many other textile towns, will be won—by the workers.



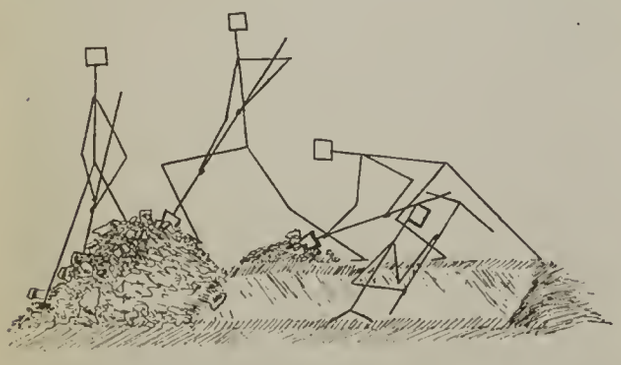
## Social Forces

This is how the unorganized workingman gets pinched. In his lonely dignity and helplessness, he is caught between the powerful lever of low wages below him, and crushed up against the equally strong lever of high prices for commodities he needs to live upon. As a result, he is caught, and is absolutely unable to help himself, as long as he remains a poor lonely individual, in the grip of social forces a thousand times stronger than himself. The only thing for him to do is to take advantage of the power of labor organization, a social force which he can use for himself.

# The Social Forces

By
JOHN CANNAVAN

**This Article Was Started In The October Number Of The Industrial Pioneer, Copies Of Which May Be Obtained By Writing To 1001 West Madison Street, Chicago.**



"We say involuntary servitude, except as a punishment for crime, has been abolished, yet men are compelled to work by the threat of economic distress, in most cases quite as effectively as by means of the slave-driver's whip."

**—Ely's Outlines of Economics.**

## CHAPTER II.

### CLASS INTERESTS

THE class division in capitalist society is an economic fact with such obvious consequences that it were sheer folly to deny or to disregard it. To wilfully deny, or to recklessly ignore it will not affect it; will not alter it or cause it to disappear. It will still remain the great outstanding fact, disturbing and menacing capitalist society.

That some of the workers are unable to see, or unwilling to admit the reality of the class struggle, no more dispels it than does the ostrich cause the hunter to disappear by burying its head in the sand. The conception that the employing class and the working class have common interests is denied by the every-day experiences of the workers. Even when the workers accept the doctrine that there is identity of interest between the capitalists and the wage laborers, there is a feeling of doubt about its truthfulness even while acknowledgement is being made. The "freedom" of the wage-workers does not admit of free expression by them. To voice opinions that run counter to the employer's interest is deemed a valid reason for dismissal or refusal to employ. So we find the "free laborer" woefully lacking in independence. He subscribes to doctrines in which he does not believe, either by concurrence or pretense, in accepting them without protest.

**Hypocrisy**

No one, who works in industry as a wage laborer, really believes that such an identity of interest has any place in fact; nor do the capitalists believe it. It is to the interest of the capitalists that the workers believe it, so it is only a consistent and courteous deference that they themselves pretend a profound belief in this theory. But from the earliest days of the capitalist regime the capitalists have taken precautions to prepare against the day when the fallacy of this conception will be exposed and their dominance ended.

Madison, as long ago as 1787, warned against the danger from the propertyless, thereby admitting a conflict of interests, when he said: "In future times a great majority of the people will not only be with-

out land but without any other sort of property. These will combine under the influence of their common situation; in which case, the rights of property and the public liberty will not be secure in their hands, or, which is more probable, they will become the tools of opulence and ambition; in which case there will be equal danger on another side."

Fear of recognition by the workers that a class struggle rages in human society has ever been present with the capitalist class. Its members and apologists have made the most of the freedom which the workers are alleged to enjoy, but, like Madison, they have no misconception in this regard. The workers have been flattered into a feeling of freedom that is without substance or reality. The "freedom" of the workers in capitalist society disguises a more abject slavery than has ever enthralled the serving class in any former society. It is the enslavement of one class by another class—the working class by the employing class. The chattel slave had his individual master, who felt toward him, as property, a sense of responsibility. If his slavery was undisguised, his qualification as property secured for him consideration that is denied his descendant, the wage slave, in capitalist society.

### Slave of None, or of Many?

The serf had his baron or seigneur. He was permanently attached to the soil, and if the slave character of his position was unmistakeable and the process of his exploitation clear, nevertheless, his master felt some responsibility for him and had, at least, an interest in his physical well-being. The serf also had a definite and assured location and status.

But it is otherwise with the "free" wage worker. He is a slave to no one in particular. No one has any responsibility for him. His location is not fixed and his status is not assured. The "freedom" of the "free laborer" is a necessary and prerequisite condition for his successful enslavement. His labor power is his own and he is "free" to dispose of it unhindered by any outside restraining force. It is the one and only thing he has to sell. This is the limit of his freedom—he is free to sell his labor power. But he must sell it; it is the only way by which he can live. The existence of capitalism is predicated upon the existence of a class which is free to sell its labor power; moreover, it must be a class which is likewise free of every means by which it would be enabled to employ its labor power for its own purposes and in its own way. The wage workers—the proletariat—are the necessary element. The wage working element is "free" of all power to obtain a livelihood, except by selling its labor power to the capitalist class.

But, as the workers are at liberty to leave an employer, when so minded, and thus to indulge a sense of personal freedom, they are slow to perceive that the individual, as a member of a class occupying a slave position, is himself a slave. For, while the worker may quit an unsatisfactory employment, he is condemned, in capitalist society, under the pain of want and suffering, to seek another employ[illegible]. That is, unlike the chattel slave, he is not the sl[illegible] of any particular capitalist but is enslaved by th[illegible] capitalist class. For, in selling his labor power by the hour, he is, in fact, selling himself on the installment plan. His "right" to life is as empty as a beggar's purse, without the right to the means of life—the opportunity to use his productive power to sustain himself. These are owned by the capitalist class.

### Freedom for All or None

That the wage worker is a slave by virtue of being a member of a slave class means that he cannot attain his own freedom until the class to which he belongs is, as a class, emancipated. Only when the slave character of the working class is removed will there be freedom for its members.

The effort of the capitalist class is directed to perpetuating the present arrangement, of which its members are the beneficiaries. The working class, in an instinctive manner, is seeking to resist the encroachments of the capitalist class, which it finds irksome and oppressive. It is, however, unused to thinking and acting as a class. The class conscious among the workers are striving to make their fellows acquainted with their true position in society, and to inspire them with the spirit to break the bonds of their slavery and win economic freedom for themselves. This is the class struggle—the battle between **the masters to maintain and the workers to change the present arrangement.** This is what justifies the statement that "the employing class and the working class have nothing in common."

The everyday life in industry is shot through with proof that the employers and the workers have nothing in common. At every point of contact, evidence is forthcoming to prove that, so far from having a common interest, antagonism consistently inheres in their relationship. The employers favor long hours—the workers desire shorter hours. A demand for shorter hours by the workers invites a fight from the boss. An avowed intention by the employer to increase the length of the working day precipitates a clash with the working force. A demand for a wage raise by the workers, or the announcement of a wage cut by the employers, is the occasion of an industrial disturbance. An improvement in sanitation, or something else, when demanded by the workers, is denied by the boss, and is settled only after a scrap, as a general thing. The employer wants more work, and the worker wants less exhaustive effort in the working place. Improved means of production benefit the employer and throw many workers into idleness. Those at work produce more and receive less, really and relatively. **There is no point at which employer and wage worker meet that they do not act as opponents.** So far from everything in common, **they have nothing in common.** "The employing class and the working class have nothing in common," is truth, self-evident, undeniable truth.

**The exploitation of the working class by the em-**

ploying class is the particularly important feature of capitalist society for us to observe. That some of the workers are indueed, or misled, by the capitalist class, by being given a share of the booty—to which they themselves also eontribute—to stand in opposition to the big majority of the working class, does not gainsay the truth of this contention. Nor does the dualistic character, in which some elements among the workers figure, deny the class struggle. When, for instanee, the farmers protest against the dominant forms of capitalist ownership, they make their elaim to consideration as productive factors, but when hiring a farm hand they act as does a capitalist. They feel toward a capitalist as does a worker, and toward the workers as does a capitalist.

### The Proletariat First

With the development of capitalist property to higher and more powerful forms, the class line in society becomes increasingly distinct and unmistakeable. The propertyless wage workers, being the greatest sufferers from advancing capitalism, have neeessarily been the first to engage in conflict with the capitalist forces. And if, in the confusion of a disunited and unorganized force, they have inflicted damage upon some other working class element, it is because the injured element has mistakenly engaged the proletarian hostility by aligning itself with the capitalist forces.

As "liberal opinion" grows, in response to working class efforts, the fighting forces of capitalism thin out and their morale grows weaker. The clearer the lines upon which the workers fight, as a proletarian element, the surer they are to advance, and to consolidate their gains.

Recognition of the line drawn between economic mastery and economic independence is dimmed by influences which the capitalist class controls. The idea that every man is master of his own destiny, and that his position in industry and society is a reflex of his own will and talents, is still held in total disregard of the facts that contradict it and this offers something of a real stumbling block to recogntion of the class struggle by the workers. That idea is dying hard, but it is dying. It has received too many hard knocks to survive much longer.

The environment of the supervising staff, in its social, intellectual and cultural aspects, makes for a readiness on its part to identify itself with the capitalist class. Its life conditions are favorable, so favorable, that it is doubtful whether any change now desired, or contemplated by the militants among the wage workers, would immediately improve it. Indeed, this element is inclined to fear, when it contemplates movements of the rank and file in industry, that instead of being improved, its lot might become less comfortable. So long as the movements of the rank and file do not assume proportions that offer a prospect of success, this section of the workers will cleave to the capitalist fleshpots and fight the balance of the workers. While the class war is being waged guerilla fashion, as by the A. F. L and other unions in the craft system, the repressive forces of capitalism will be led by this element. The working class interest, at present represented by the militant proletariat, and only by them, must expect to encounter opposition from this and every other element outside of its own immediate economic sphere—the manual workers in the industries.

### The Enemy Within

The proletariat must, as well, contend against influences operating within its own ranks and directed and controlled by these worker-managers, etc., and the division-breeding "labor" organizations that weaken labor. As it succeeds in this, it develops unity until, finally, it will be able to engage and defeat the combined forces of capitalism, which are only formidable by the strength drawn from the working class. The defection and treason of these capitalist controlled workers, however, do not offer an insuperable barrier. They are even unconscious, and for the most part, unwilling abetters of proletarian revolution, by having so arranged industry, for the capitalists, that it is most conveniently disposed for the workers to take over and operate in the interest of society. All that is necessary is to remove the character of capital from the machinery of production, by removing the capitalists as owners. This elimination of capitalist control depends only upon the organized consciousness of the working class. All the other factors necessary are already present. When such organization is effected, the regime of capitalist domination ends without the necessity of a moment's delay in industrial operation, or the slightest inconvenience to society.

Until that day is reached there will be nothing in common between employer and wage worker but war.

The morrow of that day will dawn upon an industry in which the relationship of strife will have ceased to exist; when those who operate industry will own industry, and production will not be hampered or embarrassed by antagonisms due to anti-social factors invested with power to disturb it.

---

**FOOT NOTE:** The illusion engendered by a qualified and restricted personal freedom in the capitalist enslavement of the working class serves to veil the most disastrous of all the consequences resulting from it—unemployment, those periods during which many, and ever increasing numbers, of the workers find it impossible to secure jobs and are, therefore, cut off from the means of life. While the worker is free to quit his employment whenever he is not saisfied with the pay, hours and conditions, he is not free to remain working whenever the state of employment becomes unsatisfactory to him. His exercise of the right to quit prepares him for a denial of his right to work, without which he has no right to life.

**"There can be no peace so long as hunger and want are found among the millions of the working people and the few who make up the employing class have all the good things of life."—I. W. W. Preamble.**

(TO BE CONTINUED)

# A Page of Proletarian Verse

By LAURA TANE

## ECONOMICS

She does not wait
At night
For some lover
To count the stars
With her or watch
The jagged teeth
Of the sea
Catch a golden
Beach-garment.
She never saw
A pink orchard
With blossoms melting
Into fruit
Or felt a nightwind
Tossing her
Into the arms
Of a hungry forest.

No
In the motley drippings
Of a hot grease-world
She waits and waits
Upon the hungry crowd
And serves them
Ham and eggs and chops
And when they go
Her smile is measured
By tiny stars
And silver moons
Lying beneath
The sky-white plate.

I saw a shower
Of blossoms fall
From her orchard
Of smiles
When a corpulent beast
Finished his dinner
And left a patch of green
Beneath the sky-white plate.

## BOSS

He is a decaying pumpkin in a rosy field.
Of redwood is the elegant office
And round and yellow his senile head.
Prim and straight I sit taking dictation.
My hair lies in dark peaceful folds,
My fingernails cut in pink foreignness to grime.
"Yes, sir." "No, sir." inhabit my speech.
But yet I am one of the masses
A black vicious beetle
Which will someday inject
The black cancer of class war
Into the rosy field of the office
To suck and destroy the essence of decrepit pumpkins.

## SOLDIERS

Here they come!
Faces born out of the gutter
Muscles stained with the veins of proletarian kin
Aye, well-clad are they
In cloth made by breastless women
Seared by fires burning out of the eyes of hunger.
Why do the soldiers' hands hide
Beneath the gun-hilt, the shadow-creases of the march?
Are they afraid that in the sun
They may suddenly gleam with blood?
Here, soldier,
We offer you salvation!
The pure white towel of the revolution
To wipe your hands.

# Solidarity in the Argentine

By MARINO

**THIS is the story of the organization of the marine transport industry in the Argentine Republic, and it is to be hoped that American labor can profit from their experiences and be inspired by the splendid fighting ability and the audacious militancy of the men in these Argentine unions. But the lesson of solidarity is even greater than these other two, and in solidarity, and realization of its absolute necessity, and its greater importance than mere organization or paper differences, the Argentine marine transport unions lead the way.**

**Up until 1915 there was little unionism, though the Federacion Obrera Maritima (Federation of Marine Workers) had been formed in 1910.**

The last part of the year 1914 was almost the worst the union ever had; jobs were extremely scarce, as the ships were tied up to avoid capture at sea, and the union strength dwindled to not more than a few hundred seamen and a few others. Crews took turns working, and there were hard times in general.

However, about 1916 business began to pick up. The allies bought whatever ships they could, and there was a huge demand for crews. The union saw its opportunity, and recruited extensively.

Nor was this all. This sale of ships, even river boats, to the allied powers brought about a union of the captains, mates, and engineers with ratings under the Argentine law. These men did not join the Federacion Obrera Maritima (called usually the "F. O. M.") but they realized that a union they must have, as the allies were taking their jobs, by buying the ships out from under them and putting their own officers on board. Therefore they organized the Federacion de Oficiales de la Marina Mercante (Federation of Officers of the Merchant Marine) to include all deep water captains, mates, river captains, naval engineers in general, pilots, wireless operators, and pursers. The F. O. M., it might be noted, is a real industrial union, but includes the workers only, none of the higher bosses; it takes in deck crews, firemen, steward's department employees, barge and tow captains and engineers, all arranged in four sections.

### Then They Grew

Between these two unions, and illustrating the commonsense attitude of the marine transport workers of Argentina, a pact, or treaty, was made. Everybody agreed not to work in or on ships that had not a union crew from the captain on down, and both unions agreed not to work in ports that did not have organized labor.

The two organizations grew immediately, and formed sections up and down the Argentine coast, and up and down the great river system of the Platte and its tributaries. The more important local headquarters were in San Pedro, Campana, Rosario, Santa Fe, Bella Vista, Corientes, Concordia, Barranquera, Las Palmas, Posadas, Conception del Uruguay, and Bahia Blanca (outside of Buenos Aires, of course, which is the biggest city and the main headquarters of both unions).

From the very first the union maintained a strict solidarity with any other workers who were in conflict with the boss. They were at war with the whole capitalist world. Any foreign ship that came into port with any sort of labor trouble on board was boycotted. Among the ships so treated at one time or another was the Martha Washington, of the U. S. A. One of the officers had shot a member of the unorganized crew. When the longshoremen saw that the officer was not being punished, they declared a boycott, and held the Martha Washington at the dock for two solid months. All the authorities and especially the American minister tried to help her master and owners, but could not.

### Real Power

The unions were so powerful that if delegates went on board any ship, foreign or domestic, and were put off by the captain or any other officer, they used to serve a formal notice upon the captain of the ship, notifying him that he had been declared unfair to organized labor and that before he could load or discharge or get tug boat service, he would have to obtain a clearance from the F. O. M. hall. Captains who tried to work cargo with their crews, or who got scabs, did not find themselves hindered by pickets—the grip of the unions on the tug boats was so unbreakable that they let the offending captain go ahead and load, and then before he could get a tug to pull him away from the wharf, he had to go down to the union hall and turn over a sum equal to the full wages of longshoremen during the time his crew was working cargo.

It might be mentoined here that the F. O. M. and the officers' union made little or no attempt, however, actually to organize the crews of ships of non-Argentine registry, and took little interest in them except in time of labor disputes on board, until the M. T. W. of the I. W. W. appealed to them for aid, which was cheerfully granted.

In 1920 the unions were on strike for fourteen months against the biggest company of all, the Mihanovich line, an English shipping trust. About two months after winning this strike, they had to go out on general strike against all the companies to better their conditions and wages, and this struggle they won in less than ten days.

### Still Ready to Fight

After this strike was over, one of the ships was sent to load at the River Platte Flour Mills, where a boycott was still on, established by the F. O. M. The crew of course refused to go, and all the ship owners declared a general lockout. They tried to bribe the officers' union, with promises of better treatment, to break solidarity between the officers and the crews. The Federacion de Oficiales de la Marina Mercante did not take the bribe and the struggle went on fast and furious until the government had assumed the management of all the shipping, recognized the union, and gave it the right to boycott any cargo or ship they thought unfair. After a few months the ship owners agreed to give in and took back their property. During all this time, the ships were run by union men under the management of the government.

In 1921 the capitalist class of Argentina was in grave danger of complete overthrow. There was something like a revolution as a result of violence in the big metal workers' strike, and about half the police and part of the regular army joined the strikers. Many were killed in open warfare. The capitalist class, after a week of desultory battle in Buenos Aires, induced General Luiz Dillapiana to disregard President Irigoyen entirely and declare himself dictator, order all military forces to concentrate in the city, and smash the strike. These tactics were successful in wrecking most of the Argentine unions, but not the F. O. M. which never surrendered, though in the succeeding period of Fascist reaction it lost a great deal of its membership, most of its halls and places of meeting.

The Argentine Fascisti call themselves the "Patriotic League" and they did their best to kill all active and militant members of the unions and wreck organization in general. The F. O. M. branch in Concepcion del Uruguay was raided, the building burned down, and some of the members killed and some thrown in jail; same thing happened to the branch in Las Palmas, Chaco, where six union men got shot.

The union at once struck back with a boycott. This was peculiarly effective because Concepcion del Uruguay lies in the river island province of Entrerios, with communciation to the mainland by boat and ferry alone. When the F. O. M. stopped cargo shipments to the province of Entrerios, the capitalists shifted to the railroad for service. Then the unions sent their delegates into the yards at the loading ends of the ferries, and refused to carry on the ferry any cars marked for the boycotted town. One day one of the most prominent Fascisti came along on a passenger train, and was recognized by the delegates. The train was not permitted on the ferry until this fellow got off.

### A Real Issue

This policy of boycotting even passengers was more than the government could stand, and they tried all sorts of schemes to smash the F. O. M. The ferries were taken over by the state, and naval officers put in charge of them, with naval crews under them. Then the railroad unions refused to move cars up to the ferry terminals. Finally the government had to compromise with both unions.

However, in spite of its gallant and effective resistance, the union was so badly weakened by Fas-

cisti tactics that it had to reduce its militancy, and l not engage in any serious struggle until the new d-age pension law was passed. This law provided for retirement of all workers after a certain period, and a payment to them of pensions to be taken out of a fund created partly by taxes on the employers and partly by a five per cent tax on wages.

**They Saw Through It**

The workers protested against this scheme to exploit them doubly in the name of a pension, and went on general strike. This strike lasted until the government announced that the law would be suspended for a few months until some corrections could be made in it.

That strike gave the ship owners a chance that they had been looking for during many years. The officers on the ships were in favor of the law. The crews were not. The ship owners played upon the difference of opinion between the federations and got them to fight one another so that both could be smashed.

The officers were in favor of the law because they had a good pension to retire under, and could easily spare the five per cent from their wages, which was demanded by the law. On the other hand, the seamen were not easily able to spare from their wages any sum, even five percent, and would have, on retirement, a very small pension.

The entire officers' federation, on the eve of the general strike against the law, met, and notified the ship owners that they would stand by the law, and would take out any ships for which crews were provided. Some of the captains and mates actually sailed with scab crews, but the rest realized their mistake, and held a second meeting, at which it was decided to maintain solidarity with the seamen, and the ship owners were again notified, this time that only ships on which full union crews were employed would be taken out. About this time the strike was ended by the government's decision to reconsider for a few months.

However, less than a month after the ending of this strike, the deep water captains and mates branch of this officers' union broke away from the rest, and notified the employers that they would take out any ships, if their rights to select their own crews were guaranteed.

This decision provoked a conflict which still rages, with, lately, the workers getting the best of it. A strike started immediately, with boycott of all the ships and lines to which they belonged, if they still employed captains who scabbed, or were working in violation of their pact of solidarity with the F. O. M.

**Lots of Reserve Strength**

For about a month the F. O. M. considered itself strong enough to boycott and paralyze any ship it wished and declared unfair only ships trading with the southern part of the country (Patagonia) and all the ships under the Argentine flag of the Hamburg American line, and all the German ships.

The strike was going along all right; the ship owners were trying to get beach combers to take out the ships, and were not getting any tugboats to bring in any of the ships in conflict. German ships with passengers on board were kept for days at anchor outside of the river because of no tugboats to go out and get them in. The government for a while used navy tugboats to help the companies.

Then the government got very hostile and started to call in the tugboat captains and engineers and threaten them with loss of tickets. Some were arrested. A military cordon was established all around the water front. The life and liberty of those employed on the ships was unsafe. This decided the F. O. M. to declare a general strike as a protest against the partiality of the government. From twelve to fifteen thousand men are on strike, a strike of all marine transport workers against all employers.

The ferries are paralyzed, and the railroads badly affected. Mail and cargo with river ports are held up, if there is no rail connection. The strike committee of both federations decided to disregard absolutely any call from the office of the captain of the port or the minister of marine as a punishment for their brutality. The president of the republic has called the strike committees to settle the strike and has given orders in the meantime to take over the main lines affected and manage them under the direct control of the government. The strike committee has asked for the resignations of the minister of marine, of the captain general of all the ports, and of the port captain of Buenos Aires. This must be done before they will call off the general strike, and maintain only a partial strike against the ships which are manned by scabs.

**The Government Beaten**

The very latest account, which arrives as this is written, is to the effect that the government has declared that hereafter it will preserve neutrality, and has begged the unions to go back to the partial strike. They have so far rfeused to do so, partially no doubt because the offending minister and other officials have not yet been cashiered, and partially because the strike is " getting the goods." The companies are being terribly damaged, the port is absolutely blockaded, from the inside, and the strikers stand as solid as one man.

If we consider that only twelve to fifteen thousand workers, organized industrially, are able thus to cripple all the industries of the country, and make the government compromise with them, how would it be if an industrial country like the United States had its industrial workers organized 100 per cent?

# NEMESIS

By ADAM [illegible]

THE newspaper story that Annie Blythe died by her own hand to escape arrest and punishment as a "Red" received slight credence in the ranks of the I. W. W. Known as the fiance of Jim Burton, a confessed spy and gunman, they regarded her as a creature of similar character.

If she really was dead, it was probably due to a love quarrel. Most likely the story was a bit of camouflage to conceal her departure for new fields in which to ply the trade of agent-provocateur and stoolpigeon.

George Radcliffe, of course, knew that Annie, disguised as Billy La Mar, had fought the good fight and made the supreme sacrifice for the cause of Labor and the I. W. W., but she had pledged him to silence and his almost fanatical respect for her slightest wish sealed his lips.

George's mind was badly clouded. He never had been able to distinguish between right and wrong, as taught and practiced by those around him. His adherence to the I. W. W., although sincere and whole-hearted, was purely instinctive. He knew nothing of revolutionary principles, and less than nothing of the ethics of modern industrial warfare. Just why working men should be beaten and maimed and killed and never retaliate in kind was beyond his comprehension. About all he did know, clearly, was that he had loved and honored Annie above all else in life, and that she was gone, and that a certain human fiend known as Jim Burton was to be held responsible.

George was a timid soul. Thoughts of courts and jails filled him with dismay. He had not engaged in physical combat since childhood. Nevertheles, there rapidly formed in his darkened brain a fixed determination to avenge Annie. He would hunt out Jim Burton and exact a life for a life—only, all the lives of all the gunmen in the world would not, in his opinion, balance the score.

Quite deliberately, he began training for his Nemesian role. To accustom himself to hard knocks and contact with brutes, he undertook the sale of Wobbly papers in a proscribed part of town and was beautifully clubbed by a policeman and thrown in jail. Next day he experienced what was to him the novelty of a police court trial.

After that, for quite a while, he "made the can" about every third night. He could seldom see out of more than one eye at a time, and strips of court plaster, criss-crossed on face and neck and scalp, became a regular habit. He screamed and howled at every fresh encounter, but he learned the game, and he learned to fight. The police got to calling him "The Weeping Wildcat."

What was more to his purpose, he bought a long-barreled, thirty-eight caliber revolver and several boxes of cartridges. On days when he could see pretty well, he would hop on an interurban car, get off at a quiet place in the woods and practice shooting. In time he became an expert.

* * * *

His whereabouts becoming known through the published account of Annie's death, Jim Burton was arrested, taken back to Lumberton and given the choice of standing trial for obtaining money by false pretense or resuming the duties of Commercial Club deputy. Naturally, he chose the latter course.

But it was not the happy, unrestrained orgy of former days. All good citizens seemed to be rallying to the support of the I. W. W., and the deputies had to proceed with caution. Great mass meetings were being held, in which preachers and other influential citizens boldly voiced their indignation, and they dared not break a single head. Jim found but little use for his famous club, and welcomed the opportunity, which soon arrived, to exchange it for a high-power rifle.

Handbills were widely circulated announcing that on the afternoon of a certain Sunday the I.W.W. would hold an open-air meeting on one of the principal corners in Lumberton. And stoolpigeons informed the Commercial Club that Wobblies in the Big Town had chartered a steamboat and would attend, three hundred strong. Not daring to openly oppose the popular will, but determined at any cost to prevent the landing of the Wobbly crusaders, the Commercial Club worked under cover of darkness.

At an early hour, while law-abiding citizens took their Sunday morning nap, five hundred deputies, armed with repeating rifles, shotguns and heavy revolvers, assembled in the Commercial Club building and breakfasted there behind drawn window-shades and locked doors. At one o'clock in the afternoon, when a telephone message warned them of the approach of the Wobbly boat, they broke cover and marched rapidly, by way of a deserted side street, to the dock where it would land.

Arrived at the dock, most of the deputies concealed themselves in the passenger waiting-room, office, and freight sheds. Sacks of potatoes, bales of hay, etc., were piled against the walls to serve as breastworks. Boards were pried off to make loop-holes or openings through which to fire. To repel assault from angry citizens, should such a contingency arise, a strong party was massed behind a baricade of trucks and automobiles thrown across the land end of the dock. Also, a goodly number of expert riflemen were posted on another dock about a hundred yards to the south, from which an effective cross-fire could be delivered.

The trap was set. The spider awaited the fly.

* * * *

At I. W. W. headquarters in The Big Town it was decided that no weapon of any kind would be permitted on the boat, and a squad of expert "friskers" was stationed at the gang-plank to search each passenger before he went aboard. George Radcliffe was the only person who succeeded in evading this guard, and it is doubtful if any other really wished to evade it. In any event, there were no other weapons on the boat, and none were discovered by the "frisking party."

Stacking together a number of Wobbly papers, George, with a sharp chisel, morticed a hole through the center of the stack large enough to contain his revolver and a box of cartridges. Placing several uncut papers on top and bottom, he formed a receptacle similar in principle to those perforated

**THE AUTHOR SAYS:**

**"The enclosed MSS, "Nemesis," is written as a sort of sequel or follow-up for "Annie." Any person familiar with the episode of the Verona at Everett, Washington, will at once understand what it is all about. In fact, much of the matter is "lifted" verbatim from Walker Smith's "The Everett Massacre." AND NONE OF IT IS EXAGGERATED BEYOND SWORN TESTIMONY GIVEN AT THE TRIAL, except the number killed.**

**As November 5th is the anniversary of that terrible scene, I venture to think that "Nemesis" will be quite appropriate for the November Pioneer.**

cards sometimes used to transport coin through the mails. Outwardly, it appeared to be an ordinary bundle of literature and aroused no suspicion.

It was a gay and festive crowd that swarmed aboard the Wobbly boat. Laughter and jest were on the lips of men, and songs of the One Big Union rang out across the sparkling waters and echoed from the green-clad hills.

Laughter and jest and song were all around him but George Radcliffe did not participate. Big with his grim purpose, sensing instinctively that this day was the end of the world for him, he sat on the upper deck, near the smokestack, solemn visaged and silent.

As the boat swung up to the dock, the men began to sing "Hold the fort, for we are coming." From a hillside overlooking the scene, thousands of Lumberton citizens welcomed them with cheer after cheer. Momentarilly aroused by this fraternal demonstration, George climbed the few steps to the top of the pilot-house and waved a greeting to those on shore.

After the bowline had been made fast and the wharfinger had retired, the sheriff stepped out onto the open dock, alone. Hitching his holster around in front and grasping his revolver butt, ready for instant action, he held up his left hand and called to the men on board: "Who is your leader?"

Immediately and in unison, from practically every passenger, came the reply: "We're all leaders."

"Well, you can't land here!" shricked the sheriff, as he drew his gun and waved it about.

"The hell we can't." shouted the men, as they surged toward the partly unshipped gang-plank.

From his elevated position, George espied, peering from the door behind the sheriff, the booze-soddened face of Jim Burton. Recognition was mutual and instantaneous, and each must have read his doom in the face of the other, for there was a sharp report and a spurt of flame from the doorway and George crumpled down and tumbled to the deck from whence he had climbed.

Quickly, as though the first shot had been a signal, and with a sound of countless fire-crackers exploding in a barrel, there leaped through the improvised loop-holes a sheet of flame, and a storm of bullets swept the decks and drummed and crashed against and through the sides of the boat.

Literally mowed down, men fell in great heaps. Wildly seeking cover, those not too badly hurt or tangled to move surged to the starboard side, causing the boat to list to such a degree that nothing but the taut bowline saved it from capsizing.

The press of men against the starboard rail was so great that it gave way and scores slipped from the up-tilted deck. There, struggling frantically in water churned to a foam by bullets from guns on the shore-end of the dock and on the dock to the south, they sank from sight, one by one, to be dragged by the undertow far out to an undiscoverable grave.

For ten long and awful minutes the rattling, deadly hail—augmented now and again by bursts from repeating shotguns in the hands of scab-herding volunteers—poured into that writhing, screaming mass of humanity.

When a bullet zipped past his head, and another tore a spoke from the steering wheel beneath his hand, the captain deserted his post to baricade himself behind the safe and remain there until the slaughter was ended.

One lad who had climbed part way up the flag-pole to greet his supposed friends on shore crashed lifeless to the deck, his bullet-torn body acting as a shield for other who lay prostrate there.

One fellow worker seized the rail preparatory to jumping overboard, but seeing the men being shot while in the water he drew back. While doing this, a bullet pierced his hip, another went through his spine, and a third tore away his kneecap.

One slipped over the starboard side in an effort to gain the lower deck, and a bullet fired from the south dock ranged through his back from left to right just as a friend, also wounded, pulled him in through a hole torn in the canvas windshield.

A rebel girl was shot through the heart, and as she fell to the deck another bullet shattered the woodwork and drove a sliver clear through the skull of the infant at her breast.

But few of the men were able to extricate themselves from the position into which they were thrown when the boat listed. Near the top of one heap lay a young Jewish college graduate, and as he struggled to regain his footing a bullet tore off the whole back part of his head, his blood and brains splashing down on those who lay beneath.

One boy in a brown mackinaw did struggle free, and with blood spurting from a dozen wounds and a scream of agony on his lips, leaped over the side and sank forever beneath the leaden deluge poured from the south dock, his watery grave briefly marked by a few scarlet ripples.

"Hold me up, fellow workers." called one lad as he was fatally stricken, "I want to finish the song." Then, above the din of gunfire, the curses of the deputies and the screams of the wounded, the final verse of "Hold the Fort" rang out in defiance of industrial tyranny; and with the termination of the words "Cheer, my comrades, cheer!" the bright red death-foam flecked the lips of the brave singer, from now on forever silent.

So great was the slaughter that, in addition to the untold number carried out by the undertow and the great mass of tangled bodies carried back to The Big Town on the blood-soaked decks and the fifty or more buried at sea from a launch at night, more than twenty bodies were found next morning washed up on the beach.

The bullet fired by Jim Burton shattered George's left thigh. The wound pained terribly and bled profusely but he did not at once lose

THE I. W. W. DEAD
(An Actual Photograph Of Those Killed In The Everett Massacre)

conseiousness. Dragging himself to his bundle of papers by the smokestaek, he tore it open and seized his preeious revolver and box of cartridges. Reaining the top of the pilot-house, after what seemed to him an hour of torturesome struggle, he sprawled upon its flat roof and began to demonstrate in grim earnest the wonderful skill aequired through long hours of pistol praetiee. He did not fire rapidly nor at random; at the end of the terrible ten minutes he had not yet fired a dozen shots; but it is mighty satisfying to be able to report that every shot scored a hit.

Bullet after bullet tore its way through his flesh, but he took no heed. The one thing that worried him was that he eould not again catch sight of Jim Burton. Several times he sat bolt upright in hopes that the increased field of vision might include a glimpse of his enemy.

At last there came a time when he could no longer pull the trigger. His whole hand and arm seemed paralysed. His fingers relaxed and the revolver fell at the feet of young Jack Craig.

Picking up the gun, Jaek made his way to the engine room and compelled the engineer, on pain of instant death, to back the boat away from the dock. With no pilot at the wheel, the propeller churned madly backward for a moment, the bowline snapped, and the boat drifted free.

It seemed to George that he was slipping backward into a dark pit. With his last flicker of nervous energy he spasmodically grasped the edge of the pilot-house and drew himself forward. At that moment the bowline parted and the sudden jerk threw him outboard. Striking a pile of bodies jammed between the pilot-house and the port rail of the upper deck, he slid to the edge and dropped over the side.

* * * *

Down—down—down. There was a roaring in his ears and lights flashed before his eyes. Pains as from a thousand red-hot knives stabbed his lungs:

—A girl was singing; a little girl, about ten years old, with two long braids of golden hair hanging down her back. He thought it was Jessie, his sister, but when she turned he saw it was Annie—Annie Blythe.

—They sat on a log by the side of the road and talked. She asked him about Jim Burton. "Why, yes," said George, "I aimed to fetch him along, but the bells commenced ringing and I had to hurry. I'll go get him this minute. I'll—"

* * * *

Strong hands grasped his collar and wrist and dragged him far up on the beaeh under the doek. They were not friendly hands, for they covered him with a pile of boards and rubbish and went away.

About seven p. m. a launeh stuttered up under the dock and they put him aboard. The boat was crammed with dead and wounded men, and the crew consisted of five Commereial Club deputies.

When a eouple of miles off shore, the launeh stopped and the deputies began to unload. One by one, the victims were dragged out. Heavy weights were wired to their ankles and they were thrown overboard.

George was eonseious, and could hear and understand what was taking plaee. Eventually it came to his turn. He lay in an awkward position and it was necessary for a deputy to lift him clear of the low rail. He opened his eyes and saw that the deputy who held him was Jim Burton.

Quiek as a flash, his arms went about Jim's neek and tightened there in a hug that could never relax. There was a tumble and a splash. Just before the waters elosed above them, those in the boat heard a voice exelaim: **"Annie girl, I've got him this time! Damn his soul!"**

## FATEFUL NOVEMBER

NOVEMBER is a month that brings a thrill to every member of the I. W. W. It was on November 19, 1915, that the gunmen of the metal mining pirates of the state of Utah shot Joe Hill to death. They were prison guards that did the shooting, but the guards and the prison itself, and all the other agencies of capitalism in Utah are owned by the mining magnates, so on them the guilt lies closest and heaviest.

It was on November 5, 1916, that the Verona and the Calista set out on their voyage from Seattle to the bullet spouting wharf at Everett, the place of of death for many workers, and some vigilantes.

It was on November 11, 1919, that the American Legion mob attacked the I. W. W. hall in Centralia, and was met by the heroic resistance of Wesley Everest, and perhaps of others. They killed Wesley Everest, but they lost some men killed themselves, and illegal raids by private and unauthorized parties on I. W. W. halls became unpopular immediately, and continued so until they were revived in San Pedro

The I. W. W. remembers these bloody days of November, and considers them glorious. In this issue of the Industrial Pioneer, the I. W. W. honors Joe Hill, and his immortal farewell words, "Don't mourn, organize!" The I. W. W. honors the heroes of Everett—trapped and outnumbered, they gave a good account of themselves.

The I. W. W. will never forget brave Wesley Everest, fighting for moral and industrial and legal rights, refusing tamely to submit to the smashing of his union hall, and defending himself and others, when the sworn officers of the law admitted his right to defense, but refused to defend him.

---

## NO REFINEMENT FOR ROBOTS

THE school system is supposed to be the bulwark of the republic, and, up to now, it has been certainly a bulwark to capitalism. The little children marched the goose step and swallowed the pills of prejudice and patriotism without any objection from them or their parents. And in general, capitalism considered money spent on "education" to be well spent, and in the interests of public order, their order.

Something is happening now, though just why is not so clear. The capitalist class is sabotaging education. We have before us a statement by the teachers' unions of Chicago, which is a protest against the proposal of the Czaristic superintendent of schools here to fire about a thousand teachers, cut down the hours slightly, use a two-shift-a-day system, use the "platoon" or factory system of instruction, and abolish a part of the medical inspection of children.

The excuse given for all of this curtailment in effective education is "poverty," "no money in the school fund." The teachers counter this by figures to prove that forty billion dollars' worth of property in Chicago escapes taxation altogether, while only four bilion dollars' worth of property is taxed.

Well, that is another problem. What we are interested in is: why is it that these capitalists do not raise the money? If they felt it necessary to maintain schools, they could raise the cash some other way than by taxation. Or they would submit to an infinitesimal tax on the forty billion dollars' worth now escaping taxation.

Does this phenomenon mean that the capitalist class, in its second or third generation, is so degenerate that it can no longer act in its own interest? Or does it mean that capitalism has decided that there is danger in even such slight education as it has been affording the children of the proletariat, and that it has decided to cut down on that?

---

## NINE MILLION WOMEN

THERE are nine million women workers in American industries, if we consider as industry such things as the schools, and office work for mercantile establishments. But a comparatively small number of these millions work at relatively pleasant work of this sort. The problem of work for women is the problem of the girl clerk in the department store, the one who toils all day in the steam laden air of the laundry, of the widow who goes out at night, to feed her small children by scrubbing the marble floors of rich men's offices.

And most of all it is the problem of labelers, inspectors, and machine feeders, doing routine work for long hours a day in factories.

By the 1920 census, 1,060,858 boys and girls between ten and fifteen years of age are tabulated as "child laborers" employed in factories, mines, quarries, agricultural work, and trade, in the United States.

Rents in American homes have increased on an average 85 per cent in the last ten years, according to the National Industrial Conference Board, an employers' organization. The report shows that in spite of decreases in some items of the family budget the rent bill has continued to increase. In the 12 months ended March 15, 1924, rents showed an average advance of 9 per cent.

Invariably women's wages are lower than men's wages, and continually tend to drag down men's wages. Invariably the woman worker is unorganized. These two things are cause and effect. Organize the woman worker in industry, and her condition will be as good as any man's Organize both men and women, and take the industry.

## RIGHTS WE HAVE NOT

By R. HEATH

IN **C-a-l-i-f-o-r-n-i-a,** the land of **earthquakes, fleas, hoof-and-mouth disease, jails and degeneracy,** it is a crime, punishable by a prison term of one to fourteen years, for workers to try to improve their conditions and enjoy the rights guaranteed by the **United States Constitution.** The California state criminal syndicalism law and the famous Busick injunction are in direct violation of the following clauses of the **United States Constitution:**

**Article Number One:**

Religious Establishment Prohibited; freedom of Speech, of the Press, and of Petition:

Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances.

**Article Number Four:**

Right of Search and Seizure Regulated:

The right of the people to be secure in their persons, houses and effects, against unreasonable searches and seizures, shall not be violated, and no warrants shall issue but on probable cause, supported by oath affirmation, and particularly describing the place to be searched, and the person or things to be seized.

**Article Number Seven:**

Right of Trial by Jury!

In suits at common law, where the value in controversy shall excede twenty dollars, the right of trial by jury shall be preserved, and no fact tried by a jury shall be otherwise re-examined in any court in the United States than according to the rules of the common law.

**Article Number Eight:**

Excessive Bail or Fines and Cruel Punishments

Excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

* * *

You will notice that the Constitution guarantees the citizens of the United States the right of free speech, free press and peaceable assemblages.

We of the I.W.W. are deprived of these rights by the criminal syndicalism law. Membership in the I.W.W. is even in violation of this unconstitutional law. They arrest our news agents for selling our papers and other publications, which are all **second class mail matter,** and therefore have equal rights to be sold wherever any of the daily capitalist papers are sold, according to the Constitution. They raid our halls, where we are peaceably assembled, when we are holding peaceable entertainments, and take our members out and beat them up, tar and feather them, jail them, and scald little innocent children with redhot grease. They raid private homes and search and seize our members without warrants, thus making them insecure in their persons and houses.

Now they arrest our members and charge them with the violation of the Busick injunction, which subjects us to six months in jail, without trial. Last but not least, they arrest our members and impose excessive fines upon them, and set the bail at an unreasonable sum, and inflict cruel and unusual punishments upon them.

Now doesn't that prove, and show you just where and how the state of California breaks, and violates each of the four clauses of the United States Constitution heretofore mentioned? I think that it does. All who believe in freedom, liberty and justice, **boycott products** raised, produced or manufactured in the state of **California,** until such time as they are willing to grant us the privileges guaranteed by the **United States Constitution.**

Join the IWW and fight for the freedom of your class—The Working Class.

---

## FEAR VERSUS ORGANIZATION

"FEAR," says an editorial writer in a recent issue of a San Francisco newspaper, "rules the world. Tyrants ruled by rear and religions represent 99 per cent fear and 1 per cent hope."

All of which is true. Indeed, so apparent is the control of mankind through fear that we need but to watch our every day actions and note how fear of something will decide our every move, except, —and herein lies the secret of the advance of the human race—where education has overcome the monster fear, for the two are indeed bitter enemies.

The advance of the working class from chattel slavery to the present day wage slavery has been a series of conquests over fear through education. In fact, the workers have a twofold struggle in combating fear, for they must not only conquer their own fear, which is based upon the ignorance of their own strength, but they must combat a master class whose rule depends upon the ignorance of the slave. The fear of the workers becoming educated will drive this master class to the most desperate acts of cruelty that they can conceive to prevent the workers becoming educated to their own power.

History abounds with illustrations of the above. The Romans crucified over 1100 slaves after the Spartacan revolution, and left these slaves nailed to the crosses alongside the road (the Appian Way) to put fear into the remaining slaves. This terrible deed was really caused by the fear of some future slave rebellion. All through history, tyrants

(Continued on Page 33)

# "To Broncho Buster Flynn"

## THE LAST THING JOE HILL EVER WROTE

TUNE: "YANKEE DOODLE"

With a kind greeting, From Joe Hill

I.

I got your picture, Buster dear,
A-riding on a pony,
Your pony is a real one too—
You wouldn't have a 'phoney'.

CHORUS:

Buster Flynn he sure is game,
His eyes are full of luster,
I think we'd better change his name,
And call him—"Bronco Buster."

II.

When you grow up to be a man
Be always "rough and ready,"
But never brag about it, though,
Like windy "Bull-Moose Teddy."

III.

And by and by you'll ride out west,
Like cowboys that you've read of;
But don't fall off your pony, dear,
And break your little head off.

**"FELLOW WORKER:—In answer to your inquiry, "Buster" Flynn was about seven years old when Joe Hill died. One day, coming from the park in New York, there was a man with a pony, and he put Buster on the pony's back and took his picture. Buster sent the picture to Joe Hill, and it was one of the last of his treasures. Joe wrote the little song and sent it to Buster a few days before he was shot. With it was a sketch of a typical Western scene with a cowboy on a broncho.—T. FLYNN."**

# Joe Hill

By
Ralph Chaplin

High head and back unbending—rebel "true blue",
Into the night unending; why was it you?
Heart that was quick with song, torn with their lead;
Life that was young and strong, shattered and dead.
Singer of manly songs, laughter and tears;
Singer of Labor's wrongs, joys, hopes and fears.
Though you were one of us, what could we do?
Joe, there were none of us needed like you.
We gave, however small, what life could give;
We would have given all that you might live.
Your death you held as naught, slander and shame;
We from the awful thought shrank as from flame.
Each of us held his breath, tense with despair;
You who were close to Death seemed not to care.
White-handed loathsome Power, knowing no pause,
Sinking in Labor's flower murderous claws.
Boastful, with leering eyes—blood-dripping jaws . . .
Accurst be the cowardice hidden in laws!
Utah has drained your blood; white hands are wet;
We of the "surging flood" NEVER FORGET!
Our songster! have your laws now had their fill?
Know ye, his songs and Cause ye cannot kill.
High head and back unbending—such men are few,
Into the night unending; why was it you?

# Sammy

By MARY HOPE

SAMMY was one of ten black brothers living on the other side of a wide green hill. On one side was Sammy's house, crouching like a frightened animal waiting for the lash, and on the other side were many houses, as white as their owners, with frail nasturtiums in the windows and curtains like frosted ice. These people were not rich but most of them had automobiles and a few had girl servants coming in for a day or two weekly, and there were always music and laughing people around the house. Sammy had one picture of all of them—golden-haired ladies with beautiful long hands to play the piano, whose voices when they spoke to their children were like kisses.

Sammy was sixteen and he had several younger brothers and two older. His mother was dead but his father was an industrious chief of his little tribe and kept his children lean and black in the sun of their labor. Sammy had always worked in the cranberry fields. During the strawberry and blueberry season he was engaged in filling boxes to deliver to the nice white houses over the hill.

In the summer of our story, Sammy was working mornings in the blueberry patch; in the afternoon he was delivering neat boxes of berries to the hill-people. This was not such a dull job as it might seem for Sammy had a voice that was a dark gem beautifully constructed to fit into the hollow spread of cranberry bog and blueberry patch. He sang as many songs as he filled boxes and his voice was quite as luscious as the berries, low-toned, a young quiver in it, leaving the air vibrant with rich echoes.

On this day the noon sun spelled the finish to Sammy's labor, and after eating his lunch he prepared boxes of berries for their journey over the hill. He sang on the road, kicking the dust before him, his toes black fishes in the ripple of the yellow sand. When he reached the other side of the hill, he surveyed the spread of fine houses with their flower gardens and flocks of blonde children playing in the sun, and it seemed to him as if the trees bristled their branches in anger as did the moustaches of their owners, when they saw this cheery, broad-shouldered colored boy coming down the hill to remind them that their nearest hill neighbor was a black one, possessive of land and inclined to arrogant pretensions, behaving slightly in the manner of human beings. It was not fresh knowledge to Sammy that his family was a sore spot for the hill-people. Part of it had been analyzed by his father, who had been approached by a real estate company and offered a price for his land. He refused. This was really the main substance of their prejudice, for Sammy's house was built on rich soil and the neighborhood was exclusive, rendering the land a value easily utilized . . . if only there were no black warts on their fine blonde visages. But there are instruments to remove such blemishes. . . .

At house after house Sammy left boxes of berries. He reached the end of a street and placed the berries on the cleanswept back piazza. He was leaving but a voice stopped him.

"I know your name: Sammy."

She was a tiny morsel of goldenness, golden skin, eyes like melted stars and hair made out of a cap of buttercups. She was tall to the reach of Sammy's hips, and her voice made Sammy think that inside the pink sea shells he had found on the beach were such lovely elves as this creature.

Sammy gave her one of his smiles, a flash of lightning in a dark sky, discovered her name was Louise and turned to go. It was part of a culture ingrained in Sammy for many years, not to look too much nor speak too much to these snowy creatures who inhabited the clean-shaven lawn of the white people. She ran to the edge of the lawn, kissed her hand to him and ran up the opposite road.

Sammy had read a beautiful story and seen a beautiful picture in the image of this charming little girl. He wondered how long it would take for her to understand her innate superiority to him and how quickly the flying kiss would become the silent curse, a contempt measured by a cold apathy—unless he passed beyond the barrier and ah! what ugly whips her pale clean hands could hold, those strong whips of father and brother, the prison, the gallows, the burning stake. Across the swamps had come stories rich with the blood of Sammy's people, but because he was young he believed the murdered niggers had been thieves and criminals and it was kinder to himself to believe so. But the time was coming when he would learn a lesson wrought out of his own dark skin and blood.

Back across the hill went Sammy in time for the perpetual supper of pork rind, bread, milk and berries. In the doorway, the cow droused, flies thick on her belly, and on the rough, splintered floor of the shack were stray nests of hens and geese. There were no curtains in the windows, a rough bed was slung across the kitchen floor, eggshells scattered in the dust, cobwebs formed a misty ladder to the ceiling. But the room was thick wth the ruddy evening light, and in the corners were silver and brown cat-in-nine tails gathered from the swamp. For all their crude hunger, the grime and sweat of their ten black faces, their volubility of coarse phrases, the brothers of Sammy looked happy and their eyes were heavy with peace. Sometimes in the evening, an ambition infested them and they washed dishes. But the backyard garden was a constant urge to plant, weed or harrow and this evening also commanded the boys to trail into the garden.

Later on, the pale red mists of the cranberry bogs darkened, a few stars came out. Most of the boys were smoking and Sammy was lying in the grass, face upturned to the stars. It was a quiet

night to sleep in the open with a comradely wind; soon the brothers would be lying by Sammy's side, a sparse blanket shared by couples.

The evening drowsed on in the absolute silence. But down the yellow sand road, a clatter of noise sounded, the buzz of an automobile. Tourist, perhaps; the sleepers did not stir. But a voice cut into their sleep like a knife.

"Git up, you niggers, and tell us something you know."

They stood in a little circle facing the moonlight and it was clear that there were five or six men with a couple of young boys by their side. One of them wore a black suit and his mouth was shaded by a dark moustache; to Sammy, he looked like the deacon. The others were clean-shaven with hats slouched over their eyes. They were not dressed like hill-people. And in back of one of them, dangled a rope.

"Where's Sam?"

Sammy threw off his blanket and wiped the sweat from his face. He strolled over to them with heat mounting in strong waves. But outwardly he was calm. A mistake somewhere. . . .

They came nearer and instinctivcly Sammy moved backward. One of them pointed with a finger, "Where's the Raynor baby? Where's Louise? What you done with that kid, you damn nigger."

Sammy could not bring words out of his throat but his whole body was a passionate protest. The cords on his neck wound like little black snakes and the moonlight shivered across his naked breast.

"I doan know. I doan know what you-all talking about . . . ," he muttered, the words twisting in incoherency. He gave a swift glance into the dark path to the woods and one of the men walked back of him. There was a flashing of grins at this move.

"These kids saw her going down the road with you this afternoon."

He was swift in his pleading now.

"No, no, sir. You-all doan mean me. I doan know that kid. I ain't been thar."

"Been where?" The shadow of the tallest of them moved toward him blackly. "Where you been, nigger?"

Sammy moved backward, a tendency to crouch and run seized him. But they were close to him now, twisting his wrist and a rope lashed the calves of his legs.

The edge of the woods formed innumerable black pine doors; above it the path of the horizon was shot red with arrows sailing into the darkening blue.

They moved towards the woods, the writhing body of young Sammy between them. The sight of the blueblackness of the forest, the sound of curses and the heavy breathing about him, the sob-rent voices of his brothers breaking into the echo-haven of the bogs, stunned Sammy; he fell over stumps of trees and he was wet with hot sweat, heavy with the burden of his throbbing heart. . . . Poor, innocent Sammy, the lesson of the white man was being wrought out of his bleeding bones, his accursed dark flesh and only the soft-blowing wind and the moans of his people mingled kindly with his mute horror.

But they did not go into the pine forest. In the open field leading to the woods, stood a tree ,widespread with branches, barren of leaves, twisted into a million gnarled growths. Over this a rope sailed. An old story in Negro communities occurred, a story so common that it is scarcely more to them than a white plague touching one of them or a bleak wind uprooting part of their stolid vegetation . . . .

Time has grown since the telling of this story and the people on the other side of the hill are no longer burdened with the shame of black neighbors. A real estate agent bought the land from Sammy's father, who submitted gladly to their price.

They built white houses on the drained patch of bog and the rooted blueberry bushes; on the vegetable patch grow bright flowers. Sammy's father moved away. There was no longer a livelihood for him in this lonely territory of whites; the people locked their doors at his appearance and children pointed their fingers at him and ran away.

Only one thing tells the newcomers the story of their hill as they sit on their porch on the summer evenings. Their white starched babies gurgle under a tree, one of whose branches is bent by the strength of a young Negro's neck.

And little Louise, golden elf, returned to her house the day after the hanging. She had been visiting her grandmother.

## FEAR VERSUS ORGANIZATION

(Continued from Page 29)

have become more tyrannical when they felt their power waning.

In California today the employers and business interests are banding themselves together through the fear that some day the workers will become educated and unseat them from their position of power. They know full well that their position rests upon the amount of fear that they can instil into the minds of the people, hence they use all the means at their command to circulate stories destined to make the citizens of this state fear the I. W. W. Stories of burning haystacks, poisoning food supplies, destroying the home, etc.

However, since the I. W. W. has been busily educating the workers as to the falsity of these claims, and since as a consequence the I. W. W. is no longer looked upon as an organization to be feared except by brutal exploiters of labor, this same master class resorts to the same methods as the tyrants of all ages when they have felt their power waning: namely, the use of physical force and violence to frighten the rebels themselves. What else can explain the tarring and feathering of working men or the beating and scalding of little children? What other reason can be given for putting workers in the penitentiary merely for the crime of organizing their fellow workers, unless it is the fear that the employers have of such an organization?

## A FARMER WOULD A-WOOING GO

**A rural announcement from northwest Canada is to the effect that Louis Kon, employment agent, is looking for "a nice refined lady, who can slop the pigs, play the organ, make hay and not waste in cooking. James Kling wants her for a wife."**

THE QUESTION

Curly Locks, Curly Locks, will you be mine?
You'll first do the cooking, then fodder the swine.
You'll sit in the parlor, the organ to play,
Then hike to the pasture to help with the hay.

THE ANSWER

Nervy Locks, Nervy Locks, nix I'll be thine.
Do your own cooking, and slop your own swine.
Play your own organ, and pitch your own hay—
Seek not a wife, but a harem. Good day!

—wIw—

## ALL PORE CRITTERS NOW

In the days of chattel slavery in the South a plantation owner had a slave by the name of Rastus. He was a good slave; his master had paid $500 for him. On the plantation was a building with a high steeple. The master was going to town one day and calling Rastus over said to him: "Rastus, I'm going to town and I want you to shingle that steeple. If that steeple isn't shingled when I come back I'm going to give you a good horsewhipping.

Rastus looked at the steeple but it was too high for him to climb. The master came back from town, looked at the steeple, got his black-snake whip and called Rastus over.

"Rastus, what have you got to say for yourself?"

"Massa, you done paid $500 for me didn't yo? There's a po' white trash carpenter living across the road you can hire for $2 a day; if he falls off o' dat steeple yo lose nothing. If I falls off you lose $500."

"You're right, Rastus," says the master, "go and get yourself another ham and tomorrow you can have a holiday in town."

....But now we're all "po' white trash."

## IS THIS C. S.?

**Scene:** Big town with a murder trial on. A witness is called, same being a big Swede.

Attorney for the defense: "You say that you were an eye-witness of the murder?"

"Yah."

"Now let's see, how far were you from the affair?"

" 'Bout mile."

"What! You say you saw the whole thing and still you were a whole mile away? Explain to the jury how you saw this affair when you were a mile away."

**Answer:** "Vell, ay don't care damn for dis trial no-how."

—wIw—

## HOME LIFE IN U. S. A.

A woman rushed excitedly to the house of a neighbor. She knocked once very nervously, but there was no reply. A second knock produced no answer. Presently the window above was thrown open and a woman's face appeared.

The woman below looked up, and explained hurriedly, "Mrs. Jones, your husband's been sentenced to jail for a month."

"Oh, dear me, Mrs. Smith," replied the other, "how you did frighten me! I thought it was the man after the rent again!"

—wIw—

## IN AND OUT

An inmate of Leavenworth penitentiary recently received a call from the warden who said:

"I understand you got in prison on account of a glowing mining prospectus."

"Yes," admitted the gentlemanly prisoner, "I was quite optimistic."

"Well," continued the warden, "the governor wants a report on conditions in this prison. I want you to write it."

## "SHADOW LANE FARM"

**In which the writer—after an absence of many years—returns to his native heath.**

By CARD 758118

I'm back in old Ulster at work with my spade,
Now I think it's the last place that God ever made.
All I can do is to look up at the trees
And swamps where we sink in mud up to our knees.
I'm as lonesome as cats and my only pastime
Is to sit down and write some darn foolish rhyme.
I look out the door and see nothing but grass
In dear old Esopus where time cannot pass.

Some fool once wrote of the joy and the charm
Of the bright happy days he had spent on the farm,
How in boyhood he'd rambled in forest and dell
Chasing chipmunks and raising particular—well . .
How the songs of the bullfrogs he'd love to admire
But "Ed" was a composite of varlet and liar,
And he'd never wrote that if his childhood he'd passed
In dear old Esopus full of green apple-sass.

Well regards to the bunch and don't take this too sad
For it's many a laugh and a joke we have had,
But I'd give fifty dollars if I had the dough
Just to meet Edwin Markham and his "Man with the Hoe."

For since I've been a boy and I lived around here,
Gone are the days of old Beverwick beer.
The people 'round here are a queer lot of "mugs,"
I've got to get back with the rest of the "bugs."
For in those Catskill mountains we'd have you to know
When his wife chased him out and he'd no place to go,
Then for twenty long years in the rain and the snow,
Slept old Rip Van Winkle, our original Hobo.

## "WHO'S THE HOOSIER NOW!"

"'Who's the Hoosier now!'
Hollered John on a crimpy night
To the bunch that lay in the reefers
Trying to keep warm by candle light.

There's lots of useful suckers,
The jungles are full of guys
Who listen to honest John Farmer
As he lies—and lies—and lies.
They fall for the Tale of the Chuck and the Flop,
Take a ride with John in his flivver;
Then go out and sleep with that horse of John's,
And eat up his sow-belly and liver.

—Jay Bee Griffin.

## A SYMPLE-THETIC LAY

By JIM SEYMOUR

Her dad had glommed his millionth bean
And kept her stuffed for fair;
He ragged her like a redlight queen,
With sparkers in her hair;
He hired a well trained female ape
To mix his dolly's booze
And taxiderm her Paris shape
While John Sun piped her snooze.

Her days were long as Texas sheets
And bulging with ennui,
And so between her heavy eats
She plugged for charitee;
She threw her foot around the slums,
And on her blubbered knee
She tamped the brats that scoffed on crumbs
And fed them sympathee.

One day while gabbing at a kid
She puff-puffed, "Oh dear me!
The poor child fainted, yes he did;
He has my sympathee.
Oh me, oh my, oh such a shock!
'Tis so my good work fails."
Then officed up a public doc
To skid him on the rails.

The sawbones rambled to the dump
And slanted at the lad,
Then heard about the oozy lump
Of sugared symp he'd had.
"The young 'un's starved," he said to She;
"That slushy dope ain't jake.
You might have kept your sympathee,
The blame stuff didn't take."

## THE GREAT LIFE

Says Helen Keller: "I am inclined to think that life is great. Its trials and triumphs are all romance if we will have it so. The old order is passing away and a new order is coming in, and the change will be for the better, for the power of love will bring a new day out of the darkness." We hope the blind girl sees well in this case.

**Ah, Love, couldst Thou and I with Fate conspire**
**To grasp this sorry scheme of things, entire,**
**And shatter it to bits!**
**And then, remould it nearer to the Heart's Desire!**

**—Omar Khayyam.**

James Pierpont Morgan, he
Was as worried as he could be:
"Got the world by the tail and pullin' down hill,
"But the **Wobs**—
**"Pull back,"** says old J. P.

# Martha

By JAMES ROHN

**Dedicated to Justice, that often, like Providence, "works in ways mysterious its wonders to perform."**

## PART ONE

THREE hundred and more humans, typical of the riff-raff and odds and ends of our variegated society, pressed to the iron chain that stretched across the south end of the recreation tank, or in common parlance, the bull pen. The thirtieth minute after eleven o'clock in the morning and the thirtieth after three in the afternoon had for generations witnessed the same scene. The eagerness manifested by this mass of caged humanity to return to their black painted steel crypts has been to me ever unexplainable, unless it can be ascribed to a psychological revolt against the wearisome monotony of slouching up and down a dingy high-walled corridor. Certainly the noon-day meal soon to be served did not hasten their footsteps. The gong sounded (the gong was the jail guard's big brass key striking an iron stanchion). Somebody dropped one end of the chain and the mob, stumbling over it, climbed the one, two and three flights of stairs, disintegrating on the way as one by one the prisoners of the old Cook County jail slipped into their respective cells.

I was always one of the last to ascend the three flights to the fourth gallery, the jail guard informed me (and for the past few weeks his charge was true). I had undertaken the task, good or bad, of concerning myself with affairs other than my own, in particular, the affairs and welfare, if this latter word can be correctly used in a matter so ghastly and devoid of welfare, of my cell-mate.

He was a Rumanian Jew, and old, seventy-five years the newspapers said, good and old, to estimate by the corrugated, yellow parchment skin and snow-white locks that hung almost to his stooped shoulders. The doddering amble and the semi-vacant orbs, through which they say the soul gazes out upon the world, told their tale of a life lived and death soon to come. The first time I thought of that I shuddered—sombre fatality; death soon to come. He did not have a chance. The hangman's noose—or would a less harsh fate permit him to die in the straw bunk of a black-painted cell? Would the hangman, subject to the scriptural curse, earn his bread in the sweat of his brow, or would the last spark of a fast fading life flicker first? The gallows tree would win, I opined, as I aided the old fellow up the stairs; the forces of the law were hurrying this murder case to its prophesied end, lest death should cheat justice of its pound of flesh.

A crime wave was sweeping the city; the sensational press had its readers terrorized with tales, daily told, of crime horrors. Punishment, swift and merciless, was the sure cure it recommended to stop further depredations by the underworld upon society at large.

Here was the case ideal—the culprit caught, if not in the act, then just after the killing, still in the house, yes, even in the room, sitting on a chair beside the dead, and with the red stained knife at his feet. Children of the neighborhood, looking in the window, were the first to witness the sad tableau and had scurried away to tell their parents who in turn notified the police. When the latter arrived he was still sitting beside the dead wife, hands clasped and body swaying as though in agony. Repeated questioning since then about the crime had elicited no information, nothing had come from his lips save the soft repeated pleading, wailing cry of "Martha." Martha was the dead woman.

The blatant-mouthed assistant prosecutor in charge of the case had already found him guilty in

the newspapers and was jubilant over the prospects of promotion. The trial judge was stern and cold in his published statements on crime in general and thereby indicated what his attitude would be in the trial to come. The public, he soliloquized, would surely vote at the next election for a servant so upright and unafraid. The police congratulated one another and the newspapers did homage to themselves, while even the criminal element could read of the prospective trial and hanging with satisfaction, knowing that a satiated public would forget them for a time.

And so it was that all rejoiced—all but the old man who heeded not what was going on around him and whose days were spent in mourning for the dead. Even in the stillness of the night he called to the woman whom he loved, "Martha! Martha!"

We were locked up together twenty hours of every twenty-four and gradually, as his mind partially recovered from the shock caused by the tragic death of his wife, the old man told me of his youth, at times recalling scenes of years ago when he and she were young serfs in the foot-hills of far away Wallachia. Born in slavery they were freed from that bondage in 1864 when Rumania emancipated its serfs, though the newly acquired freedom proved to be a blessing not without some perils to those freed serfs of Jewish lineage. This, too, barred them from sharing in the free land allotments made to the other liberated serfs, so, unable to remain as tillers of the soil they migrated first to the nearby village of Cozia on the River Olt, where they were married, and then slowly westward through Austria and into the newly formed German Empire. Here in surroundings not unlike those in which Jesus was born, Martha gave birth to their first child. A manger sufficed for a cradle and, like a great lantern hung in the sky, a silvery moon lighted the way of another soul to this vale of tears.

On their journeying they heard of the wonderful fairyland America and decided to leave the home of their fathers that their children might not fall heirs to the persecutions and poverty that had marked their race in Europe. Time passed before enough money had been saved from their scant and vicarious earnings to enable them to take passage for the shores of the golden land to the west. Another child was born meanwhile, contributing to the family expense and the family joy. This expense delayed their departure until 1870 when they bought steerage passage to New York City.

While America failed to measure up to expectations it was an improvement over existence in the eastern countries of Europe where life and death were but the matter of political intrigue, religious bigotry and a king's whim.

In New York City they established their first real home though it was but two small rooms on a side street in a tenement district peopled chiefly by German and Austrian immigrants. Through the good offices of a Foreign Relief Association the old man had obtained work as a waiter in a beer garden restaurant. Piece work sewing done at home by Martha aided the family exchequer and increased a slowly accumulating little hoard that, hidden away at the bottom of the baby's crib, was to ward against rainy days.

The rainy days came (as rainy days always do). Both children died and another was born during the panic year of '73. The shop where sewing had been obtained closed its doors and the restaurant job was held only at the cost of a reduction in wages. The year rolled on and by, and with the passage of winter factories and shops re-opened and wages climbed to their former level.

The third child made up for the loss of the first two and upon it was bestowed the love and care that only grief laden men and women can give to their last born. But care and kindness cannot hold a life if fate decrees otherwise and hardly had they ceased to mourn for those that were dead when the third child passed away. Later they learned that the insanitary methods of the mid-wife who functioned when the last born was ushered into this world had made Martha barren.

Saddened by scenes that seemed always to recall their sorrows they again migrated to start life anew.

Westward they wandered, working wherever work was obtainable, until they reached Chicago. The packing plants, then just developing, gave him work for thirty years until he could no longer keep up with the younger men around him. Dismissal came and was followed by years of search for another and a lighter job. As the days fled, hope departed; his hair was too gray and his step too slow to lure a prospective employer away from the more youthful and stronger applicants for work.

Long years of unemployment had depleted their modest savings from the thirty years' work in the packing house. The little plot of ground and the frame cottage the old man had erected on it where they had lived these thirty years had been mortgaged until the banker refused to advance them any more money on it (and, in fact, and this is a timely digression, while the old man was in jail it was sold under the hammer and realized, over and above what the banker claimed, a sum that just covered funeral expenses for Martha).

And so, bit by bit, he told his past to me and through it all not an unkind word for the dead; just a great tenderness that graduated into what was almost worship. During the long comfortless weeks we celled together he expressed no remorse for a deed done—only regret that Martha was forever gone.

When our conversation turned from those early years he became hazy and incoherent even on matters that in his lifetime must have loomed large compared to the boyhood trivialities often remembered. Just a slight reference to the cause of his plight was sufficient to dissipate, for the time, recollections of the past and plunge him anew into profound misery. In moments such as these he was conscious only of the loss of his Martha and then his mind, impoverished by old age, would become almost blank, though still he whispered the one word "Martha."

## PART TWO

Day after day we paced around the oval ring formed in the bull pen by the outcasts of all lands. Acquaintances are soon made and sometimes an old friend is met in this grotesque promenade; every day new faces appear and old faces disappear—perhaps forever. One can choose one's company here. A burglar if you will, a bank cashier or a pick-pocket. A hardened sinner, one who hails from a half dozen penitentiaries, or a beginner with but a reform school record behind him to be ashamed of or to boast about. He who would associate with honest men may do that too—witnesses on serious cases and others falsely accused. Sometimes, as with myself, a street speaker without adequate finance for bail is held for a few weeks until justice, in some way too deep for ordinary comprehension and therefore understood only by the authorities, is appeased; then the unlucky orator is liberated, usually without a trial as it is impossible to get a jury to convict him.

Here it was I made an acquaintanceship the memory of which is writ large as a brilliant illustration of the ways of mice and men. And be it remembered, if he whom I write about sinned, that he too was sinned against, and who shall cast the first stone? I will, when I have cause to refer to him, do so by the nick-name bestowed upon him in the old Cook County jail, the "Kid."

He was nineteen or twenty years old and the charm of youth radiating with the boyish smile seemed to rival the few small sunbeams that managed to steal through the dirty windows and between the blackened bars in an appeal to those who were less calloused to the seamy side and more susceptible to the bright side of life.

The first time I saw him he was drying a handkerchief on an almost cold radiator near a wall where others had gathered for the same purpose. A light for a cigarette was the cause of my stopping and with the aid of a few casual remarks a conversation developed. He was being held on a minor charge (that ended in acquittal). He disliked the surroundings but the ideas and people he met here were new and in a small degree fascinated him. One person in particular seemed to have that power of attraction, a highway robber I guessed by his talk with a "record" as his credential to an elevated social standing in the jail community. Various cases on trial and pending were discussed with much knowingness by the group that used this radiator as a gathering place during recreation hours. Mistakes in crime execution and legal jockeying before trial were pointed out by the initiated. Here, too, one interested in the subject could gain ideas as to the most appropriate crime under given conditions and the methods and weapon best calculated to produce desired results.

The Kid was always an interested listener to these conversations and to me it was evident that his education was progressing at a nice rate despite my talks to him along other and contrary lines. One especialy disconcerting point on criminal ethics appeared. Twice a week on visiting days a girl of sixteen or seventeen years called to visit the Kid. She brought food and fruit and articles of wearing apparel for him.

I saw her once through the double steel screening that separates the prisoners from those who visit them. She stood almost opposite me, pretty and demure; her big blue eyes were dimmed with tears by the brutality of the situation.

In one of my first semi-confidential talks with the Kid I divined that he had marriage in mind. But day by day the ideas of work and home became hazy and distant until finally, as he listened to tales of sudden acquisition of great wealth through criminal ways, it had been suggested to him that the correct thing to do would be to break the girl in to working on the street for him—a source of steady income when other business was dull. At first this thought had been revolting and he had repelled it in anger, but in this school of crime good intentions fade and are soon forgotten and replaced by intentions not so good. The Kid, as I said, was learning fast.

I must acknowledge the digression of this chapter, and, to use legal terms, plead as extenuating circumstances, first—my liking for the Kid. His personality, unsophisticated, pleased and won all with whom he came in contact; the charm of youth in the sordid setting of the old Cook County jail was greater by its very contrast to the setting. Second, —my regret upon noting the changing psychology; day by day the smile of frankness faded and a look of worldly wiseness stealthily crept into its place; a barrier that I could neither break nor penetrate had grown between us, he was no longer one of the innocents caught in this grist mill of justice. Third, —the horror of the end.

## PART THREE

A trial date for the old man had been set, and the judge, having indulged in a splash of rhetoric anent the generosity of the state, appointed a lawyer to defend him as, so far as could be ascertained, he had no funds of his own. The setting of the trial date came as a shock to me though it was but a matter of routine. It marked a definite step toward what to me was an unholy end for I believed the old man to be innocent of the crime; his grief bore no trace of guile or repentance to destroy my faith in him.

No one else seemed to doubt his guilt or if in the heart of this great city any did, they kept it to themselves. At least no one called to make inquiries or suggestions or even pass the time of day except the Moody Bible Institute people, who twice on every Sunday came to tell us how bad we were and how good they were. Days followed one another in soul stunning monotony without incident or diversion to relieve the mental pressure and pain that silence and lonliness inflict. They say that men go mad here.

The old man paid but little attention to the legal phases of his case as one by one, like so many grave-

diggers, they were paraded past him. He concerned himself with Martha and the past. An occasional pipe of tobacco afforded him his only solace through the gloomy twenty hours a day we spent in our cell.

At last the day of trial came. He had been notified the day before to be ready to appear in court and with what little aid I could give was as tidy as it was possible to make him. He was confused; the unusual preparations had stirred his mind, and his wonderment increased when the lawyer came to the cell door in a last endeavor to obtain a rational statement that would explain his presence at the body of the dead and clear him of the charge of murder. The lawyer's morning call before the court convened was strange, and by his questioning I could see that he was in a quandary as to how to proceed.

His early visit gained him nothing, however, as his client was unable to concentrate his mind even for a few minutes. Then the jail guard marched him off, hurrying his shuffling footsteps across the iron bridge that leads from the cells to the court rooms. As he departed I believe the idea was dawning in the old man's shattered intellect that he was going to join his Martha.

The trial occupied but little time. By noon of the first day a jury had been selected and this was all the news I could get until the following morning, for I refrained from questioning the old man when he was brought back to our cell in the evening, as it was patent that he was physically weary and wanted only rest. Outwardly, at least, he was in no way moved or impressed by the day's proceedings.

The morning newspapers sold in the jail gave what appeared to be a fair account of the trial as far as it had gone. The opening statements by opposing counsel were brief. Then the neighborhood witnesses were called by the prosecution and testified that as far as they were aware the defendant had always been of sound mind and though they had never known the old couple to quarrel, still they knew but very little about their personal affairs and domestic life. All, including the children and police, told with what in some other instance might be considered laudable dramatic endeavor, of the room scene already narrated. Throughout the session the blood stained knife was featured to a shuddering jury and so ended the account of the first day.

Reports of the second day were no more encouraging. The old man was placed on the witness stand by his counsel with the frantic hope of an eleventh hour statement that would establish his innocence and stem the tide that was setting strong against them, but due, the prosecution pointed out to the jury, to surly stubbornness, the old man had failed to answer any of the questions asked, and the jurors nodded in understanding disapproval of that "stubbornness." An alienist was sworn for the defense. He testified that the defendant was a mental wreck, though under cross-examination he admitted that it was impossible to state his mental condition at the time the crime was committed; and that in the past he knew of a number of instances where imbecility and insanity had been skillfully feigned.

The summing up of evidence occupied the forenoon of the third day. Here our lawyer (I was so in sympathy with the old man that I regarded his attorney as ours) presented the best defense possible.

Seventy-five years is about that time in life when the average man enters his dotage. Dotage, the lawyer explained, is the slowing down of cerebration; imbecility the complete arrestation. Emotions of long tenure cease, as the brain slows down, to be emotions and become habits of mind, in other words mental furniture. Suppose, gentle reader, you should do something that I know you are incapable of doing, hate someone. Hate in your youth with good cause, and for the same reason or others, continue that hate until you live to the ripe old age that I hope wou will live to. Then, dotage intervening, memory will in degree fail, and though you may be no longer conscious of reasons for hating you will still be susceptible to the customary nervous reactions whenever the object of your past hate envisions itself upon you; enmity or friendship will exist though the reasons for enmity or friendship are no longer apparent to you.

Not a quarrel, our lawyer argued, did the evidence show, between the old man and Martha in their forty years of residence in the neighborhood, while on the contrary, many manifestations of affection between the old couple had been sworn to even by witnesses for the prosecution. Hence the old man's attitude of love and kindness was not a wind-tossed vagary, but a fixity of life-long duration and stability and not to be temporarily overcome by a gust of passion that the brain was not attuned to develop.

Finally, the defendant had reached that stage of life where the brain could no longer be stirred to the passionate pitch that such a crime would necessitate and therefore the crime was to the defendant a psychological impossibility. The defense had concluded its case.

The prosecution opened its summing up with fearful invective against the old man and closed with an impassioned plea for a verdict of guilty in the first degree and a sentence of capital punishment. "Hang, the old man must," thundered the prosecuting attorney, "if the people are to be safe in their beds at night; if crime is to be checked and justice vindicated."

The judge instructed the jury which then retired to deliberate. Its deliberations were short; a verdict was soon reached and as they marched back into the court room the news spread that the finding was what the prosecution had asked—guilty in the first degree, coupled with a recommendation for capital punishment.

The members of the jury, solemn faced and sour, as I imagine our good Puritan ancestors were whenever they condemned a witch to the stake, filed into the jury box, and the court room became hushed as the judge ordered the defendant to stand to hear the verdict read. The defendant did not move nor did he betray by word or sign that he had heard the

order of the court. Impatiently a court attache reached to the old man's shoulder and shook him, but receiving no response pushed his head back from the position it had sunk to with his chin resting on his chest. As the head moved back the lower jaw dropped, so that the jury and others around the judge's desk could see by the fast glazing eyes and convulsed features that not only was the old man dead but that he had died in agony.

Physicians, who afterwards examined the body, stated that he had died of a functional disturbance of the heart. Medical science has it that in a person laboring under great emotional stress, stress great enough to cause blood to flow to the heart faster than that organ can pump it out along its ordained course, and especially if the valvular action of the heart is weak or irregular as it usually is in old age, the blood will on rare occasions cause a rupture or break in the walls of an artery in the heart and instantaneous death results. Our scientific friends call it Arterirrhexis. To the rest of the world it is a broken heart.

It is my fancy to think that as the court attache moved the old man's head back, thus allowing the jaw to drop and the lips to part, the lips then, for the last time, murmured the one word "Martha."

I do not know what disposition was made of the body. Probably the old man is at rest in the potter's field. Mother Earth, they say, is kind to her children when at last we go to her for the long sleep that knows no dawn. Just sleep—sans dreams, sans sorrows, sans all but sleep.

## PART FOUR

Time has elapsed since the tragedy, the outstanding points of which I have herein sincerely tried to record.

My difficulty with the sovereign state of Illinois had been adjusted shortly after the old man's trial and upon release I decided to visit the scene of the tragedy, so I made my way to the little three-room cottage where they had lived. Built on a small lot that in the front and on one side showed traces of having been a flower garden but at the time of my visit was given over to weeds, it was about as dilapidated as the old man himself.

Unoccupied for months, the windows had been broken by children or removed by some of the more thrifty neighbors. The front door had but the lower hinge, now almost wrenched off, as its sole and rather dubious connection with the rest of the tumble down structure that for so many years it had protected from the wind and rain. It was leaning awry against the inner wall that was also bent and out of plumb. The furniture had been removed. No pictures were on the walls; no flowers from the garden of the other days were in vases to greet the glance of a friend. Not even a carpet, that had it existed must have been faded and worn, was there to hide the blood stain on the floor.

I hastened away though I regretted going; it seemed almost hallowed ground dedicated by years of love and labor to an end that all men strive for—a happy old age—an end that is not attained by all. Let us hope, gentle reader, that you and I will be more fortunate than the old man.

From the cottage I proceeded to the local grocery store, usually a center of gossip and information, intent on fathoming the mystery of the murder. The grocer's wife was in attendance and, perhaps, with some assistance from me, conceived the idea that I was a newspaper reporter. Visions of free publicity for the store and possibly her picture on the back page of a paper opened her heart and her mouth.

I will not further tire those who read my tale by repeating all the gossip the grocer's wife favored me with. Surely we are not here interested in the "goings on" of Mary Jane, nor do we care, aside from abstract morality, just who owes (and how much) the good grocer; and if the saintly Rev. Somebody is suspected of having sampled one of his flock's home brew, that suspicion need not interrupt the thread of this narrative.

We are concerned only with facts bearing on Martha's death so I will present our conversation at the store bare of any extraneous matter.

Shorn of interesting if not germane neighborhood notes it revealed the following: not more than an hour prior to the discovery of the crime Martha had been in the store and made a few small purchases. She tendered a twenty dollar bill (the last, it appears, that the banker would advance them) in payment, and received eighteen or nineteen dollars change. A man, a stranger, was in the store at the time and saw the change as it was counted out to Martha. He purchased tobacco and left the store directly after Martha.

That is all the pertinent information I could gather but it was enough. Recalling newspaper statements of the murder it will be remembered that no money was found either on the dead or in the house. The old man had been searched but the search revealed but a few pennies. Someone, then, must have taken the money and that someone must have entered the house after Martha and committed the murder to effect the robbery and then hurried away before the old man's entry; and he, the old man, being overcome with grief upon seeing the body of his wife, must have sunk down in the chair beside her, his mental powers destroyed by the sudden shock.

## CONCLUSION

As previously implied, the Kid had been restored to liberty after a trial and acquittal. Our paths in life had not crossed again since our release so I could but speculate as to whither his footsteps would stray and what his final attitude was to the girl who had placed her faith in him, until, one day, I read of him in the newspapers.

Bold black headlines told whoever read that another bandit had been killed while attempting a pay-roll robbery.

About twenty years old, brown hair, gray eyes; all identification points given in the papers so corresponded and the name was his.

A morbid curiosity to view the body moved me to go up to the morgue. An attendant there ushered me into the room where the corpse lay on a marble slab. A sheet used for covering the body had been pulled down to the waist line, permitting those present to see the bluish black spot over the heart where a bullet had crashed out his life.

A number of people were gathered there around the lifeless clay, the clay that society had mismoulded and then broken, all strangers to me but one, and that one I had last seen through the double steel screening in the old Cook County jail. It was the Kid's girl, but changed, changed as the street only can change a woman. Now the paint on her cheeks was garishly conspicuous as, no doubt, she intended it to be, and it told her story—evident it was that the old Cook County jail could, like the ogres of our childhood fairy tales, reach out and destroy others than those that rotted in its belly. And she, as I watched her, glanced in an appraising way at the several men who were in the room—even over the naked body of her dead lover she had an eye for business. In this way the justice of our capitalist society is achieved.

And this is the end of my story. The trial judge was re-elected by an admiring constituency; the assistant prosecuting attorney gained his desired promotion, and the newspapers are still enthusiastic about themselves, though the fact of the persistency of crime might embarrass a less noble brigade; while the readers of the newspapers, when browsing through the able editorials and still abler advertisements, congratulate themselves upon having them for champions.

**THE END.**

# Breadline Fables

### No. 2—HIS LAST DIME AND BROTHERLY LOVE

By MARINER

THERE is a thing very much like a balloon which rises gently into the air until it is out of the reach of the person when the person digs into his pocket and draws out an empty hand. That is the price of the almighty doughnut. Perhaps this is only the stretching of one's imagination! Yes, what does a person do when the doughnut is out of reach, and the lowering of it beyond possibility?

You would say: "If a person was occupied at useful labor, perhaps, he would have no fear of existing on doughnuts." A truer statement can hardly be made. Nevertheless, it works both ways!

A few years ago, after the aforementioned doughnut rose out of reach, I took on some useful labor. I secured a job on the S. S. "Admiral Watson." She came into the Queen City from Alaskan waters the day before. As I have stated, you will suppose I was without visible means of support. Which is true.

The ships engaged in the Alaska service do not feed their crews while in their home port. An extra allowance of fifty cents per meal is granted them.

But to go on, it was Friday afternoon when I secured the job, and I went to work the same night. All that day no food of any kind touched my lips. I worked Saturday and Sunday, too; no food. A job, and no way of obtaining food!

In consequence, I ventured toward the skid road. Many others were engaged in the same game, "putting the bum on every neatly dressed person who passed by!" Thus competition existed. As an habitual "bum" I have never met with success. It seemed to me, that Sunday night, as though I was being forced into a continued fast whether I liked it or not. One well-known writer claims the starvation cure to be good for those who care to indulge in it. But when a person is simply hungry, what good will the "cures" do him? The organ of my body known as "stomach" not only reacted upon my mind but the "darn" thing was also in the way of my backbone.

I strolled back and forth; up and down the skid road. Finally, I encountered old Boomer. Like myself he was an expert scribbler. But our scribblings never brought forth more than a "coffee and". Boomer had a broad smile on his face, the first I had seen in a long while.

"Well, Mariner," he spoke up, "I hear you've landed a master".

"Quite true, Boomer, quite true," I replied. "But the master isn't worrying me just now!"

So I sprung the sad news on him. "Boomer, when do we eat?"

He dug into his pockets and drew out a thin dime. Tears came into his eyes as he spoke. "I rustled this dime this morning. Let's get a 'coffee and', and divide it between us."

We went into a Jap restaurant and ordered our beloved, lifesaving "coffee and". Boomer drank the coffee and I ate the doughnuts.

The following day the "Admiral Watson" sailed. No further fear existed in my mind of not eating. At the first port of call north I remembered Boomer via the postal route, for brotherly love existed between us when we parted with his last dime.

# Education As a Social and Class Problem

By T. KEKKONEN

**IN every society, where social relations are developed, the question of education arises. In primitive societies practically all advice to the younger generation is given by the leaders or old men and women of the tribe. In more advanced societies education is more or less a specialized social institution.**

**In the present industrial age education forms a very important part of social life. So important is our school system for present society that we cannot conceive of this society without it. Many are those who believe that our educational institution is more important than all other existing institutions.**

### Education and Revolutionary Workers

With revolutionary workers an education is now, and will be in the future, a paramount issue. It is so now because in many cases our present-day labor is without even a preliminary, but sorely needed, education from the schools that are conducted by society. This is largely true as far as those are concerned who emigrated to the United States from other countries. In the future, working class education is more important in view of the necessary revolutionary change that is expected to take place in the control of the means of production and distribution. In this case particularly the working class should have an educational system of its own kind. And when such a situation is nearing us, it will not do to ask, "Are you ready?" When a revolutionary situation arises, then the working class must be ready to cope with it, or to pay the penalty, which is failure.

### I. W. W. and Its Educational Program

The I. W. W. as an organization has adopted many times an educational program. Realizing the necessity of education in the labor movement, it planned systematic campaigns to educate its membership as well as to extend the influence of the organization through education outside of the organization. Eight years ago the I. W. W. passed a first resolution in its general convention to obtain connection with the Work People's College at Duluth, Minnesota, for the benefit of its members. However, through the persistent persecution of the American capitalist class against the members of the I. W. W. and the organization as a whole, it was practically six years later, or in the year 1923, that the organization directly took charge of the school to such an extent as to place its own teacher in it.

### What Is the Work People's College?

Undoubtedly there are many members in the I. W. W. asking, "What is the Work Peoples College?" Briefly told, the history of this college is similar to that of the American working class, which is largely emigrated here from various other countries. This particular school was first founded by religious reformers. The first revolution over the school was made when the political socialist movement had taken strong hold among Finnish workers in America, and thus this college was taken over and the program of the school was changed accordingly. When the split came in the Socialist Party of the United States, the Work People's College was left to those who were inclined toward industrial unionism. Thus the offer was made to the I. W. W. to co-operate with this college to maintain its education.

The next school year, opening on November 15, being the third year in which the I. W. W. co-operates with the school, sees the Work People's College known throughout the membership of the I. W. W. It is interesting to note the enthusiasm displayed by the members of the organization toward this problem of education. This attempt by the members of the I. W. W. to secure systematic education is giving more hope than anything else at this time. We must emphasize **this time** for the reason that although we are nearing, perhaps rapidly, an industrial revolution, nevertheless, the revolutionary situation in America is not here now. With this fact in view, it is high time for industrial workers to secure education, the **right kind** of education, to be ready when a revolutionary situation shall arise.

Some political groups have charged us with being counter-revolutionary because we told the facts about the economic situation in the United States. Now everybody, knowing the least of the economic situation in America, knows that the revolutionary situation is not here now. Let us understand our position more clearly in the future, and for this we must use all our efforts on educational lines.

### Best School For Workers

The Work People's College is now in a better position to serve American labor than it ever has been before. Last year the school was modernized with a city water system. On the financial side, which has been many times a burden for the institution, things are now also cleared up. Early in the summer the Finnish members, who were heretofore the backbone of the school, collected ten thousand dollars for the payment of a mortgage loan, and thus that embarrassment will not hinder any more the real function of the institution.

Best, and most interesting, however, is the fact that now the I. W. W. as an organization is also in the best position to fill the faculty with most capable teachers and lecturers. Let every class-conscious fellow worker try to direct his or her way to the Work People's College and transfer class-consciousness to class knowledge, for in this way we make ourselves better and more fitting to **construct the new society within the shell of the old.**

For further information write to the Work People's College, Box 39, Morgan Park, Duluth, Minn.

# A New Sun Worshipper

By MARY HOPE

SOME of the ehoicest huts of Bradley had eellars in which the foreigners kept thiek peppered rolls of bologna and gray-stockinged cheeses and kegs of wine built to the roof of the eellar. Even the most wretehed of familics possessed a small portion of these products of the European belly-culture. Rajov, a steel worker, lived in a house whieh was baek of a dump from whieh a perennial mist sailed like a wave of smoke through the windows. A few yards the other side freight ears were harbored in the millyards, where all green growths and eourageous blossoms were crushed beneath the weight of countless-shaped steel boulders. Rajov's roof, eold and blaek, had waited a long time for a kind shower of sunlight, but with the years, the mill-ehimneys grew higher and higher, spitting their fumes vieiously and keeping the sun from Rajov's roof. In his cellar, Rajov kept not eheese or bologna or wine, but a real human being, an old man whose head was growing toward the ground on aeeount of the low roof of his underground dwelling plaee.

The neighbors were not eurious and did not bother about the old man; there were many queer things in the little steel city and the watehfulness of the great maehines they tended kept them from prying into eaeh other's affairs. Day in and day out the old man stayed in his eellar and never onee was he seen to come out of his hole and stand in open light.

Something happened in Bradley during the time when the mill-people were wrapped in a great black heat. The mills were enormous boilers, sizzling forth long russet streams of sweat whieh melted into the slack and the millions of gassy substanees. The smoke of the mills formed thiek elouds hiding the sun, and the walls of the mills made a barrier strong as a forest against the wind. Maehine-tenders were absorbed and eollapsed by the heat; children were pale flowers whose rosy vitality was being sueked up by the hungry lips of the sweltering eity; lonely patches of grass were of a shrunken yellowness from laek of a eool rain or the reviving slap of the wind. Heat ran like a beast through the eity, fastening savage teeth upon the population and any breath of life. Yet in this world of heat there was no elear view of the sun whose golden throat was elutched within the blaek bands of smoke and soot.

But the something that happened in Bradley was not the death wrought out of the sunless, heat-slaughtering walls of the steel eity. It was a desire that eame out of the red hearts of men and like a strong wind it tore off the roof of their apathy and whispered one word: **Strike!**

This one word beeame a mighty roar that shook the gates of the mills open and sent long files of sooty men streaming into the street, hats in hands, and with smiles that seemed to have emanated from their muscles, waiting and glad for this rest—the first sinee the mills were built. The bells stopped blowing, the roars of the machines were silent, the ooze of smoke trailed into the elimbing vine of slaek, settled into little nests and did not move for lack of steam to blow it further. Empty, mute, lonely, the dark monster of the steel mills lay slain by the daggers of the workers' red manhood.

During the night the mills were quiet, not a stream of soot sailed out of the throats of the chimneys and no man passed by the elosed gates. Aeross the faee of a strange moon some birds flew quiekly, afraid of the dark eity they had never before seen.

And in the Rajov eellar, the old man heard the word eome through the crevices of the kitehen floor: **Strike.** In his clay-hole he slept that night, and dreams he had lost in a seabound foreign land returned to him; in the morning he rubbed his museles and ehuekled as though something beautiful had happened to him.

Rajov and his wife looked up in astonishment at the sight of the old man elimbing the eellar steps. He saluted them and went outdoors. Far across the arrogant tops of the factories had eome a wind during the night, a sweeping pilgrim, and with great breaths had eleaned the roofs and streets and wiped the faees of the flowers until they shone like tiny sunsets. Far above the old man's head shone the sun. Children playing in the gutters paused and whispered to eaeh other that the old man was praying, for there he stood, his hair blowing in the glad wind, his faee uplifted to the sky and on his lips a prayer, "The sun. The sun."

**Mary Hope, the author of the above has written an artistic and sympathetic biography of Rosa Sacco, wife of Nicola Sacco of the Sacco and Vanzetti case. It was intended to have this sketch appear in the November issue of the Industrial Pioneer, but circumstances over which we have no control have compelled its postponement until a later date. The Sacco-Vanzetti case will be very much in the public eye for the next few months, owing to the decision of Judge Thayer of Massachusetts to disregard the evidence of prosecution perjury and attempt to rush these two workers to the electric chair. A subscription to Industrial Pioneer will insure your getting the issue in which "The Story of Rosa Sacco" is printed.**

# Nobody Loves a Fat Man

By JIM SEYMOUR

ONCE upon a time there was a man who was very fat. He was festooned with layers of blubber that began directly under the eyes and increased geometrically in size to a point below politeness, as though he were a mannikin built of varisized auto tires. His eyes were the eyes of a hog and his snout was one that would make a farmer itch to put a ring in it. His whole general appearance was that of a hog, but the scientists of his day knew that his brain was only partly porcine. It had not yet developed to a stage where he could claim intellectual equality with the hog; besides, the development, infinitely slight though it was, seemed to be along the lines followed by the brain of the fox in the remote past. In short, the fat man was cunning, but not intelligent; not even intelligent enough to know the difference between the two.

And be it known that in the fat man's day there were many others similarly built, though to a lesser degree. They were just as stupid as the fat man, but not so cunning; and they were just as greedy as the fat man, but their respect for the fat man's greater cunning prevented their even trying to nose into his wallow. So it was that their snouts were not so well covered with filth, and often what filth did adhere to them was encrusted and cracked and ready to fall off. This caused them to feel that they were cleaner than the fat man, and oftentimes to glory in the thought, but it never deterred them from their incessant attempts to smear their noses with fresh filth when the fat man wasn't looking. True, the fat man was so fat that his eyes were nearly closed and he never would have noticed their rooting but for the fact that they always squealed on one another and attracted his attention.

One day while the fat man was waddling around, sniffing and grunting and looking for more swill, perhaps longing instinctively for some exceptionally filthy tidbit, he wandered to the edge of a swamp that to one of any other species would have been nauseating, so vile was the smell arising therefrom.

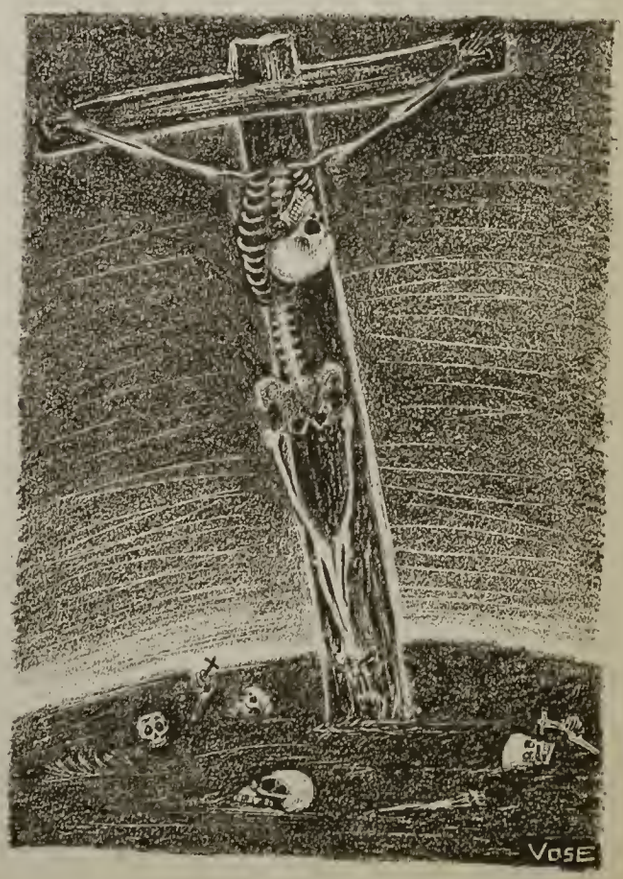
"Ugh, ugh," said the fat man, "this looks like good pickin'. Whee-e-e! just smell the aromy of that muck further out."

He called for his retainers to advise him how best to get out there, but the retainers had wandered off in search of a tidbit for themselves. They had discovered the decaying carcass of a coyote, and being very hungry they did not hear the fat man's calls. Otherwise, as every psychologist knows, they would have scampered pell-mell to the fat man, to advise him in earnest whines and to growl and snap at each other the while.

So the fat man, much as he resented being compelled to exert himself, gathered a few layers of fat in each hand and jumped for a tuft of grass standing in the slimy water. He landed all right, but the grass was not stable. It tipped forward and the fat man slipped into the muck. This was just where he had wanted to be; but very soon he discovered that it was hardly the place for a fat man, for underneath the muck was some quicksand, and already the fat man's feet were imbedded and he was slowly sinking more and more. He squealed loudly for his bodyguards and they, having finished their banquet, came running. They approached as near as their courage would permit and pulled him this way and that, but with each pull he sank deeper. And the sand, working in between the layers of fat, tickled him so that he shook violently and sank deeper and deeper. His valiant rescuers then noticed that he had sunk so far that his pockets were covered by the quicksand and it would be impossible for him to put his hands into them. They accordingly held a very brief pow-wow and trotted away, leaving him to his fate.

As the shades of night closed over the noisome morass the muck closed over the top of the fat man's head; the moon peeped from behind a cloud and smiled contentedly, and a wise old owl fluttered into a tree, winked at the moon and said, "Who, who?"

**MORAL: If you are unprincipled, beware of your kind.**



RELIGION.

INDUSTRIAL PIONEE

# The Wobs Are Psyched Again

A BOOK REVIEW By CARD No. 794514

THE I. W. W. has endured many attacks by psychologists. First the social psychologists of the McDougall type blamed us for having "mob spirit," accused us of surrendering our individuality to the "mob mind," and intimated that we were highly suggestible personages. After that came the Freudians, who said McDougall was all wrong, and they converted our old friend Carlton Parker, and he decided that we were all suffering from "complexes." Now the behaviorists are knocking spots out of Freud because his "genius is painfully narrow," and they too are beginning to battle the I. W. W.

All of this should not prevent us from learning something from the psychologists if we can.

Floyd Henry Allport of the University of South Carolina has written a most readable book on the subject of social psychology, and still maintains that he is a behaviorist. In this he is assuming a somewhat heretical stand, according to the older behaviorists, who were disposed to assert that there wasn't any such thing as social psychology.

The reason for their attitude is understandable when one considers the basis of their theory, and the origin of it. It is essentially a reaction against the dreamy, mystical, introspective methods of still older schools which seemed to some of the more scientifically minded investigators to be getting nowhere. These latter started, a few years ago, to demand accurate, and if possible, experimental measurements and comparison of human behavior, leaving out of consideration, for the present at least, all such immeasurable things as consciousness, will power, etc. This method developed a mass of fact, from which a working hypothesis was formed to the effect that all human action and thought was to be explained as a result of material stimuli upon the body, which set in motion certain automatic responses, as mechanical as pressing a button and making a bell ring.

As a beginning, in behaviorist books, this one not excepted, we are treated to a discussion of nerves and nerve tissue. All nerves are made up of nerve cells, which are branched. They lie closely enough together so that the branches of one nearly touch the branches of others. If some stimulus is applied to one of these branches, so arranged that it can be stimulated by pressure, light, sound waves, temperature, or the secretions of the body itself, a wave of some sort, electrical or chemical, passes along the tissue of the nerve cell until it comes to the ends of the other branches of that cell. Then it has to cross a minute space, called a synapse, after which it continues through another cell, to set in motion some part of the body, as a response. Feeling and emotion do not cause this passage of the nervous current nor do they cause the reaction of the body; they accompany it, or not, depending on other circumstances. Even if they accompany it, they sometimes are not felt even, until the action is started, or perhaps until it is completed. It is as though they were by-products of the action.

On the other hand, they are implicated in the next reaction, and serve perhaps to intensify reactions, though some behaviorists would deny even that. Many if not all emotions are the accompaniments of secretions of internal glands of the body, and seem to be caused by them. But the glands act in response to physical stimuli.

The experimental evidence of the laboratories seems to prove most of this. The theoretical part is the ascribing to the synapses of peculiar and important powers. Behaviorist theory must stand or fall on the correctness of their guess as to the ability of the synapses to resist the conductivity of the nervous impulse (this prevents overstimulation, and permits selection of impulses); to change their own conductivity, as a result of repeatedly conducting the same sort of stimulus, (this is the way habits are formed, and learning accomplished); to correlate numerous incoming nervous impulses, and send them out along one outgoing nerve, and vice versa (this permits complicated reflexes); and to permit the impulse to pass in one direction only (without which, presumably, there would be a high state of disorganization.)

If the synapsis can do all this, then the behaviorist can explain every-

Introverts And Extroverts?

thing else, including thought, which is simply a rapid implicit (not overt) trial and error learning, the trials being stimulated by slight efforts in the direction of every possible reaction to the stimulus, each of which is inhibited, or stopped, by great resistance of the synapses which have not habitually acted ni that direction, until the path of least resistance is found, through the synapses which previous experiences have "educated," or reduced the resistance of, and the man acts, as we say, logically. Some thought is consciously of this type. All thought depends on previous experience, with its education of the nervous system, which is, essentially, a weakening of the resistance in certain synapses, and an increase of the resistance in others.

**"Prepotency"**

The behaviorists allow us mighty little instinct. Man, they think, is born with certain "prepotent" tracks through the wilderness of his synapses, and these are extremely vague and general in nature; they may be called, "starting and withdrawing," "rejecting," "struggling," "hunger reactions," "sensitive zone reactions," and "sex reactions." Some of these do not develop until after the child has been born some considerable time. Contrary to the Freudians this behaviorist will argue that sex does not develop until the age of puberty, and that the theory of infantile sexuality, almost a basis of psycho-analysis, is false, "sensitive zone reactions" accounting for the facts which Freud observed in infants and thought were sexual.

Education, learning, environment, account for all modifications and "broadening" of these fundamental reactions. The theory of conditioned response explains much of the complexity which the human reactions show after some training. In a few words, a conditioned response is a reaction which the body makes to a stimulus not originally sufficient to cause such a reaction. The reason for the reaction is that this slight stimulus has always, or usually, accompanied a bigger stimulus, and the synapses have a reduced resistance for both of them. Thus the baby learns at the slight stimulus of the word "hot" to avoid any object to which that word is applied, if he has previously touched objects which are actually hot, and heard the word "hot" applied to them.

It is these conditioned responses, of which there are an immense number of possible combinations of stimuli, including the tones of voice, catch words, phrases, facial changes, bodily postures, as well as more overt movements and acts, that make not only learning, but social learning, possible, or, in other words, make a social psychology possible. The newer behaviorists regard the nervous syste of the individuals as necessary for psychology, a right, but recognize that crowds and all sorts of other combinations of people are part of the individual's environment---as much so as other sources of stimuli.

This opens up the subject of drives, ambitions, rivalries, leadership, suggestion, organization, submission, newspapers, the state, unions, riots, war, patriotism, schools, the family, fads, fancies, styles, advertising, salesmanship, and many other things dependent on social relationship. There is much that is stimulating to thought, and some that can be accepted uncritically, perhaps, though a radical will always have a lingering doubt as to whether or not Mr. Allport might be guessing at some of this nearly as badly as he guessed at the ideas and slogans of the I. W. W. There are some terrible errors, in the parts we know most about, and they detract from our faith in those parts we know little about. This is a wrong attitude on our part, for experts in one field of knowledge are always butting into other fields where they know little, and assuming there authority they do not possess. Allport's errors in sociology do not prevent him from being a good psychologist.

**God—On Probation**

The behavioristic theory, with its emphasis on the necessity of the nervous system, and its minute inspection of the human body, finding in it all necessary explanations of the supposedly "mental" or "spiritual" acts of mankind, should be a complete antidote to religion, the idea of the soul, spirits, spooks, ghosts, gods, angels, etc. Allport is able to make out a case for religion, but only as a means of escape, for "introverted" people, those who follow what he has previously, in this same book, condemned as a most unsuccessful method of overcoming personal deficiencies, namely, imagining that they are relieved. The sinful or the defective introvert can lay his shortcomings on Jesus, and be loved by him, all in fantasy. And Allport advocates this; well, we all have our inconsistent moments.

**"Soak The Reds!"**

There isn't the same excuse for the author's repeated attempt to explain away the radical. Listen to this:

"Uncompensated attitudes of inferiority in regard to poverty and obscurity are reflected in the tendency toward political and philosophical radicalism. Here again the cry is against the injustice of the environment, but this time it is an unfair political and economic regime which has robbed the individual of success. Differences of ability are overlooked and all men are considered equal in merit and deserved reward. From this axiom, it is deduced that, since some achieve more wealth and power than others, there must be a basic injustice in the social order. Inferiority within the individual is obscured by this rationalization. . . . . The type is too familiar to require illustration."

Perhaps the type is too familiar to Allport to equire illustration, but it is wholly a newspaper ype. If Allport had taken the trouble to read any soeialist, anarehist, or I. W. W. literature, he would have found that none of these main braneh es of radiealism hold any such views about "equality." That doetrine is written into the Declaration of Independenee, the Freneh constitutions, and sundry other highly respectable and conservative doeuments. No one believes it any more, and least of all the radieals. What the radicals want, is the full net product of their labor, be it mueh or little. Even those who wish to take it socially, that is, in a form of distributive eommunism, readily admit that one person will ereate more than another.

### Doesn't Sound Natural

But Allport doesn't know anything about radieals anyhow. Listen again: "A leaflet was recently eirculated by the I. W. W. headquarters deseribing twenty-nine ways in whieh their members had been unjustly perseeuted. Referenees are frequent in these groups to their 'eeonomic oppressors,' and to their 'beloved leaders' who are languishing in prison through the injustiee of a eapitalist regime."

Those groups of radieals which believe in leaders at all never refer to them as "beloved." The attitude of radicals to their fellow workers in prison is exactly that of an army which has lost some of its men in battle. They are to be recaptured; it is part of the struggle. Allport's evident unfamiliarity with radieal theories and attitudes has led him again into ridieulous misstatement.

And onee more: "The Bolshevist believes in sending bombs through the mail because . . . . " Whatever else the Bolshevist does or does not believe, there is an extensive pre-revolutionary literature made up of arguments between the Bolsheviki, who did **not** believe in sending bombs through the mail, with the soeialist revolutionaries of the left, who did so believe. Merely Allport making another exhibition of ignoranee about all sorts of radicalism.

### Peaceful Rioting

His knowledge of radiealism is on a par with his knowledge of English history. What are you going to do with a man who says, "Thus in England, a peaeeful class system has existed for generations, while in Ameriea . . . . " And he says this right in the faee of peasant revolts, "Great Rebellions" (of the bourgeoisie against the nobles), "Glorious Revolutions," maehine smashing riots, Chartist riots, and the present arming of the British Faseisti against the labor unions!

What are you going to say to a man who stops his diseussion of soeial psychology to boost the League of Nations as the agent of peaee—in spite of the faets that all the countries in the League are even now arming against eaeh other, and the whole League is arming against Ameriea?

On what eommon ground can you meet a fellow like Allport who thinks that "overspeeulation" and "too great an extension of eredit" lay the foundation of a panie, and brings about depression—that old, disearded theory!

But for all that, he admits that some soeial wrongs are objeetive. If he eould be eonvinced of the Marxian theory of surplus value, he might admit that some radieals, at least, fall into the group of inventors, whieh he praises highly. There are sueh people as soeial inventors. He might admit that the bulk of the individuals in radical movements are men who see a little farther than some, and are fighting for their class, even as the present masters of industry eame into power, by fighting for their class, against the nobles.

And we, on our part, will do well to remember that some "radicals" are really not radieals in our interpretation of the word, but in Allport's, and we will save ourselves a lot of trouble by watching them. Every movement has its "lunatie fringe," and if Allport helps us to realize this, we forgive him his insults, even his ignoranee.

Behaviorism does destroy the foundation for that aneient but stil persistent argument against radiealism: "You can't change human nature." Man, according to the behaviorists, is not a bundle of eternal instinets, but a mass of conditioned responses, whieh are learned, and are therefore socially changeable.

---

**STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912,**

**Of The Industrial Pioneer, publisbed once a month at Chicago, Ill., for October 1st, 1924.**

State of Illinois ) ss.
County of Cook )

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Frank Gallagher, who having been duly sworn according to law, deposes and says that he is the Business Manager of the Industrial Pioneer, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management, etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are:

Name of Publisher: Industrial Workers of the World, 1001 W. Madison St., Chicago, Ill.

Name of Editor: Vern Smith, 1001 W. Madison St., Chicago, Illinois.

Managing Editor: Vern Smith, 1001 W. Madison St., Chicago, Ill.

Business Manager: Frank Gallagher, 1001 W. Madison St., Chicago, Ill.

2. That the owners are: Industrial Workers of the World, 1001 W. Madison St., Chicago, Ill.; Tom Doyle, Sec.-Treas., 1001 W. Madison St., Chicago, Ill.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

F. J. GALLAGHER,
Business Manager.

Sworn to and subscribed before me this 23rd day of September, 1924. EMIL HORWEEN, Notary Public.
[SEAL] (My commission expires Jan. 24, 1928.)

# INDUSTRIAL PIONEER

# INDUSTRIAL SOLIDARITY

## *Read These Popular Labor Papers, You Don't Know the Labor Movement Unless You Do It.*

INDUSTRIAL PIONEER is the I. W. W. monthly magazine, published by the General Executive Board of the I. W. W.. It contains poetry, fiction, and cartoons — proletarian culture. It contains timely articles on the industries, and on organization technique and method. It takes as its field the whole world of labor, American and abroad. The cover is printed in colors, the size is handy, the printing is excellent—always makes a good appearance and sells well. Get some and try it.

INDUSTRIAL SOLIDARITY is the I. W. W. once-a-week newspaper, published by the General Executive Board of the I. W. W. It contains all the very latest news on I. W. W. organization and activities, discussions on tactics and efficiency of propaganda, interesting cartoons, official notices of the I. W. W. Carries all the Defense News Service articles, announces all the leaflets and pamphlets of the organization, carries an article a week by the original I. W. W. columnist, T-bone Slim. Always fresh, always new, always interesting.

Subscription rates for either publication are $2 per year, $1 for six months, 50c. for three months. Industrial Solidarity sells for five cents a copy, or three cents a copy in bundle orders. Industrial Pioneer sells for 20 cents a copy, or 12 cents in bundle orders with return privileges, 12 cents without return privileges. Address: 1001 West Madison St., Chicago, Ill.

# The Vanguard of Capitalism

TRADING POST AND TIMBER CRUISERS IN CANADA

## *Labor Must be as Aggressive as Capital*

Capital, even in these days of its decadence, is restless, expansive, lustful of new conquests. Capital is like an old and faded harlot, ever anxious and longing for victory over youthful virginity. The emissaries of capitalism go out all over the world, prying, investigating, appraising, and claiming the raw materials of commerce, and the markets of primitive peoples. The exploiters march into the noble forest, and lay it waste, without a thought for the future generation. They scour the world, spoiling, and making wars for spoil. From the Arctic Circle with its gold, seal-skins and whale-bone, to the islands of the South Seas, where the native is cheated of his pearls, copra and tropical woods, go the active spirits of capital, working night and day to swell the money bags of their masters who rot at home.

Labor can meet this mad energy only by equally great energy. Labor can defeat this destructive looting of the treasure boxes of the universe, only by rallying at once, to stand on guard before them. Organized labor demands that the world be placed in its safe-keeping, for the protection of this and all future generations—but Labor must struggle to take it from the fat hands that hold it now and crack the whip over all workers.

Be Ready, Workers! Join The Revolutionary I. W. W., The Advance Guard Of Labor!

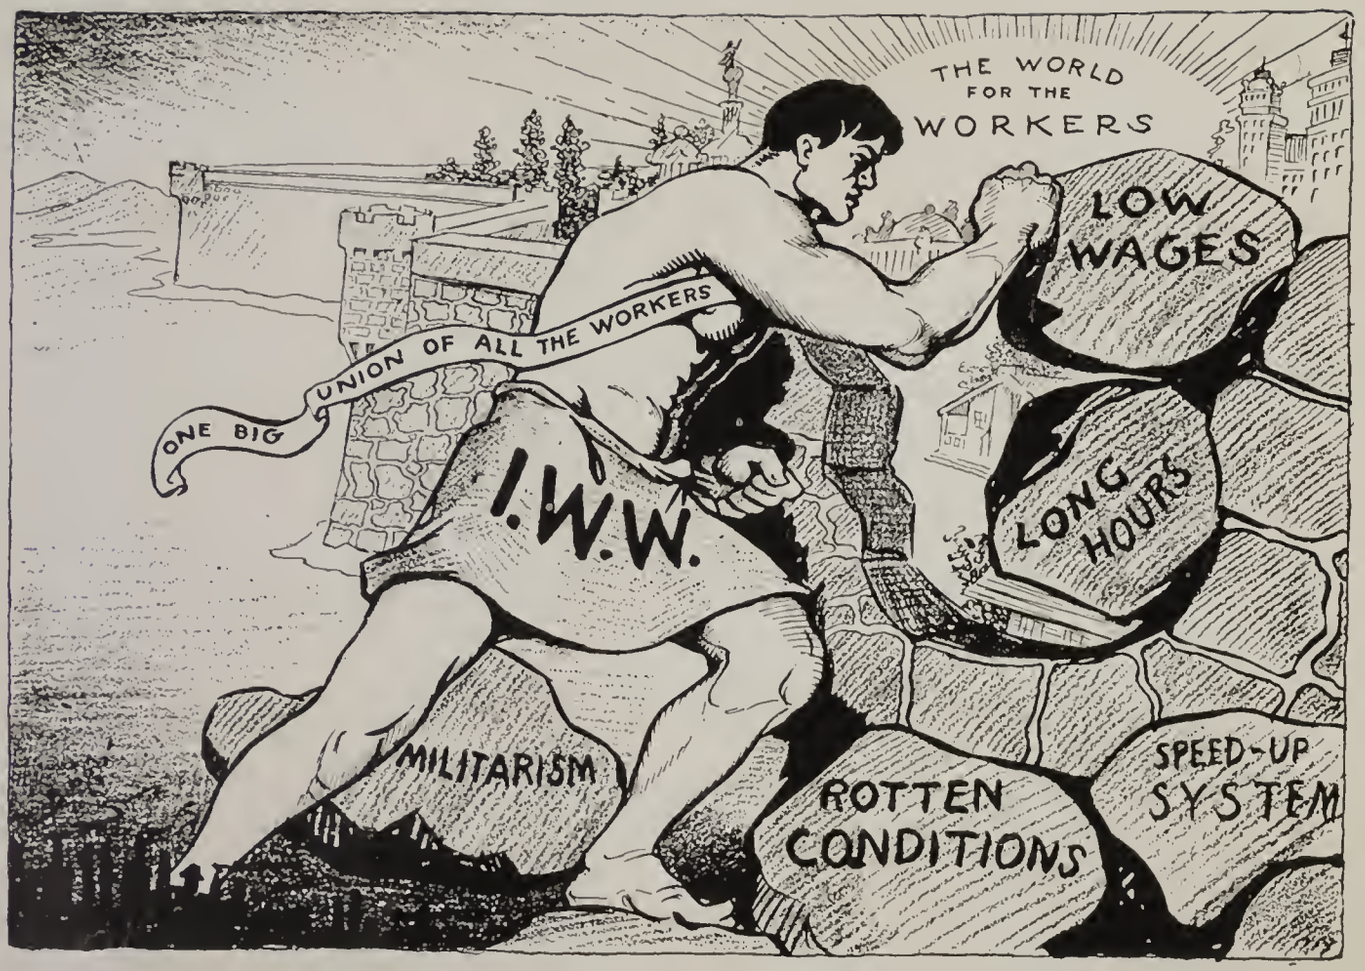
## *CHRISTMAS IN THE U. S. A.*

"Peace on Earth - Good Will Towards Men"



# Preamble of the Industrial Workers of the World

THE working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system".

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# A Wobbly's Birthday

By MIKE GOLD
**(By Permission of The Plebs)**

OTHERS got tired, others lost hope and shut their mouths or started little garages and grocery stores, found harbors of peace,
Others sold out, turned respectable labor leader, or politician or foreman,
But Big Joe never shut his mouth, or turned respectable.
He was loyal; the enemy nailed him to a hundred crosses, they strangled him in a hundred prisons,
They spattered his body and soul with their machine-gun fire of lies, beating and persecutions,
His quieter friends thought Joe was wasting his life, his wife grew discouraged, his children became Americanized and left him,
But Big Joe Connolly could never desert the labor movement,
The cords of birth still held him to his mother.

They tried to make a foreman of him once, but he turned them down.
And once a silly District Attorney tried to buy Joe, but Joe laughed at him in the prison.
And once they tried to frame him with a woman but he laughed at the woman.
And once they tried to lynch him, they strung him up and let him down, but they never made him show the yellow,
The cords of birth still bound him to his mother.

He never knew why he was loyal, or why he would rather die than desert the labor movement.
And thinkers would argue with him, and try to understand his passion, but he could not explain it to them.
He could not explain that his mother had given him birth on the stormy sea of poverty,
Where strong men had wept, knowing the bitter fate before the child,
But his mother's faith shone like a light on a rock,
And she bred him to manhood, despite the black midnights and steep waves of poverty,
And the cords of birth still bound him to his mother.

Her back was twisted and bent with many loads, her hands scarred by a thousand labors.
She was small, weak, kind, but dark and terrible as a jaguar at times;
She sewed, swept, cooked, she never rested,
She took in washing, she stole wood and coal from the railroad yards in winter.
When her man was killed, she did not despair, but went on fighting,
And Big Joe loved her, and never forgot her after she died,
The years went by, jail-sentences, discords, strikes, defeats, spies, fighting, thirty-five years of tragedy and hope in the labor movement,
And the cords of birth still bound him to his mother.

Big Joe Connolly is fifty years old today,
And it is thirty-five years since he entered the labor movement.
And the workers have brought a horse-shoe of blood-red roses to the union hall,
And they present it to Joe, who blushes behind his big grey moustache like a schoolboy,
And they shake his hand, punching him and hugging him like huge brother bears, showing him their rough love,
The pretty young girls kiss him, and the big, slow, kind mothers in shawls smile as they clasp his hand,
The children climb his knees and grab his arms for affection,
And someone makes a rough speech, built of honest words like bricks,
And Joe answers in a torrent of words, like logs pouring down a Maine river,
And the workers listen with tears in their eyes, glad that he will be loyal to the grave,
And glad that the cords of birth still bind him to his mother.

## Some Aspects of Present-Day Negro Slavery

The "Big House"

### SECTION I. THE WHITE TERROR

**FIRST of all, there is a negro problem, a race problem. It is a miserable nuisance. More than that, it is a crime and leads to crime. That would not be so bad, if it were not for the human suffering, terrible and unforgivable human misery and cruelty, involved. You will hardly be able to read the newspaper for a single day without some evidence of the more spectacular sort of pain and terror being impressed upon you. Some negro is lynched, or nearly lynched, or has his house burned, or is ejected from a white restaurant, or whipped or threatened with burning at the stake, every day, in the United States of America. This is merely the surface of the thing. This is the part that is "news." Down underneath, in drab, perhaps uninteresting ways, there must be running a broad current of horror, fear, cruelty, misery, subjection. It stands to reason that there is far more actual pain inflicted on a far greater number of people in this every-day subjection and repression, than in the (relatively) few actual cases of mob violence that come to the front and get into the newspapers. Only a personal investigation, and a careful one, could get at the matter; you would not ordinarily find the intimate sorrows thrown at you.**

In 1921, as many a reader will remember, there was a period of unemployment throughout the whole of America. Having no job, and a little saved up wages, I felt the urge to travel through the Old South, which I knew was, industrially, fifty years behind the times, and see what last century looked like, and what they were doing to the negroes anyway.

The negroes live in the South. About ninety percent of them live in the states known as "The Old South," Kentucky, Tennessee, Mississippi, Louisiana, Alabama, Georgia, South and North Carolina, and Virginia.

My trip took me on foot, really on foot, no railroads, and very few "lifts," from New Orleans north along the new highway to Meridian, Miss., from there eastward over well travelled roads to Montgomery, Ala., and from there to Atlanta, Ga., Columbia, S. C., Greensboro, N. C., and Richmond, Va. This is a pretty fair cross section of the South, except that it omits the rice swamps of the Atlantic coast and the sugar cane section of

the Gulf coast. It does take in the timber country of Louisiana and Mississippi, where the cypress logs come from, and the cotton district of Alabama and Georgia, and the tobacco country of the Carolinas and of Virginia. And these are the main industries of the South.

Now it would be quite impossible to give you an adequate idea of the situation by describing this route, day by day. Generalizations are dull. Probably the easiest way to get an impression, or a general idea of the situation, is to pick out illustrative incidents, some of them so illuminating, that like flashes of light on a photographic plate they stick, they change something chemically, and they leave their picture behind them forever.

* * *

The first of these flashes was in New Orleans. There I met a girl, the daughter of an old French family, that had fought through the American Revolutionary war, and lost good blood, and fought again through the Civil War, and lost most of the family, and had been ruined by losing, as all the "best people" of the South did lose, "that species of property known as slaves." She trotted me around to all the parish socials, and took me to Easter services in St. Patricks, where you can see a statue of the good saint that was brought from Rome. He has a fence all around him, to prevent too many affectionate embraces from too religious Catholics. (New Orleans is all Catholic). But there is a hole in the fence, through which the saintly toe projects, for people to kiss. They have already worn away the toe-nail with their kisses. But this is a digression, and shows merely the hold of superstition on the "best people" of that part of the South.

In other parts of the South they horsewhip Catholics out of town, and would as soon kiss St. Patrick's toe as the devil, but there they have other superstitions.

Now to show the position of the negro. One day I came to see this young lady, and the negro maid went up to announce me. I had called at that house perhaps a dozen times, and the negro girl probably knew of but one word with which to designate such persistence. I heard her say, loud enough to sound down the old carved staircase to me, sitting below, "Miss Cam-meel, yo' beau's heah."

I'm sure she meant no disrespect. But she certainly learned that there are things about the affairs of young white ladies that the colored race may **not** take cognizance of. There was the sound of a loud blow, and then the sound of other blows, and heavy breathing from the exertion of applying them, suppressed weeping and threats, and orders to be silent. I don't know what the maid was beaten **with**, but when I saw her face with the marks still upon it the next day, I can vouch for the fact that she was beaten thoroughly.

Meanwhile, my lady came down, quite smiling and collected, though just a little bit apprehensive

Locomotion In The South

as to whether I might not have heard the remark about "beaus." After a careful question or two, she proved to herself, as she thought, that she was safe on that point, and then she passed the whole affair off with an excuse for her flushed cheeks. She had been forced, she said, to "put that black girl in her place," and it had "upset her." She didn't object to my knowing she beat the black girl, as long as I didn't know why.

* * *

North of New Orleans, near the Mississippi border, a genial person picked me up in his buggy. Yes, down there they have lots of horses and buggies. There are automobiles too, but a good many of those belong to northern tourists. Your Southerner sticks to his good old nag and the four-wheeled buggy. This man said he was a doctor, whether horse or man he did not specify, and I delicately avoided asking. I led the conversation onto the negro question, and my host declared it didn't exist. "We got 'em sca'hed," he explained. "Yo got to keep 'em sca'hed." That's the way the Ku (he pronounced it "Q") Klux Klan wuhks. Plays on the supi'stitions of the stoopid niggahs. I 'clare, yo'd be suhprised how supistitious a niggah is—any niggah.

"Yo' see that tree ovah theah—that dead one? That's wheah we hanged Mary Liza. Mary Liza had some trebble with the she'iff. Ouah last she'iff was jus' one of the boys, and he sho' was fond of his niggah wenches, aluz chasin' 'em. Mary Liza put on airs—too doggone pahticulah fo' a wench. Altogetheh too pahticulah.

"Anyway, she stuck him one day—killed him with a butchah knife, and we had to hang heuh, Yeh, we hanged heuh on that tree.

"Well, this is what Ah was sayin'. One day Ah come by heah with my black boy, Jim. Ah says to Jim, 'Jim, if youah brave, yo' can uhn a quatah, easy.' Ah don' nevah pay Jim mo'n about two dollahs a week, so a quatah looked good to Jim, an' he said he was puhpahed fo' anything.

"So Ah says, 'Now Jim, that white spot theah undah that limb on the groun' is the last piece of eath that Mary Liza evah teched on live, an'

(Continued on page 41.)

# Textiles–First Capitalized and Most Capitalized

By INDUSTRIAL PIONEER SPECIAL CORRESPONDENT

IF you want an illustration of the latest developments of capitalism, just come to the textile towns of New England. There you will find another industrial revolution going on, and with it a financial evolution, that are making for enormous changes in this historic industry.

The Draper automatic loom is coming in rapidly, displacing skilled workers and enlarging the army of the unemployed. And great company mergers, engineered largely by banking interests, are centralizing the power of the owning class. Coupled with this is the movement of the industry towards the South, the new super-companies transferring much of the work to the fields of cheaper production in the Carolinas, Georgia, Alabama, Texas and Kentucky.

The writer recently visited the leading cotton and wool centers in Rhode Island, Massachusetts and New Hampshire. Everywhere he found a condition of misery that is probably not paralleled in any major industry outside of bituminous coal mining. Half the cotton workers and nearly half the wool workers are continuously unemployed and most of the rest are on a part-time basis. The average wage, even at full time, is only $20, or thirty-odd percent less than that of the average worker in other industries.

Before discussing the tangled union situation which is largely responsible for the pitiful condition of the textile operatives, let us take up some of the industrial changes that are victimizing the workers:

The Spirit Of The Whole Textile And Garment Industry

The comparatively small number of workers required to operate the great spinning and weaving rooms strikes a visitor to any of the giant cotton mills of such typical textile towns as Lawrence and Lowell, Massachusetts, or Manchester, New Hampshire. Where before the war there was one operative to every six or eight looms in the weaving rooms one now finds the workers widely separated. From sixty to forty whirring looms are now found to each weaver. The ratio of machinery to worker is widening every month as the newer automatic looms come in.

### Demotion Or Discharge

Skilled weavers who lose their old jobs are kept as helpers in some cases. An experiment is now being conducted in the Pacific Mills, a $20,000,000 cotton corporation in Lawrence, whereby one weaver is operating 72 looms, with three assistants. The weaver who is making this test demonstration is paid a wage which is extraordinary for his trade. He is getting $30 a week. His three assistants, former skilled weavers, get about half that.

In the spinning rooms new machinery is rapidly reducing the number of workers needed to produce a given amount of thread and yarn. With the changes in technique craft skill is being eliminated. For instance, the mule spinners, a once well-organized part of the craft union councils in the industry, are disappearing. New Bedford, which clings to older methods of production than some of the other towns, has one of the few mule spinners' locals still remaining.

Financial consolidation is taking place rapidly. In the last three years as many great mergers have been effected. Take the case of the Amoskeag Manufacturing corporation, which runs the town of Manchester, with its 14,000 mill operatives. This is an old company and many workers still think it is a Manchester company. But recently it was taken over by Kidder, Peabody & Co., the largest banking corporation in New England, with headquarters in Boston. The same company runs the great American Felt company, one of whose subsidiaries is the Roxbury Carpet company, which is now fighting a strike by the United Textile Workers. It also stretches its arm into other industries and a glimpse at Moody's Manual of Corporations will show the reader that it is the boss of the Waltham Watch company, where 3,000 watch workers are on strike against a wage reduction. The bankers who are taking over more and more of industry from the old "captains of industry" are concerned only with dividends. The wage reduction just posted at Manchester and the Roxbury and Waltham strikes are in line with the policy of the new control.

### North and South Compete?

Go a little further south, into Rhode Island, and you will find the old-fashioned, independent manufacturer disappearing. In the Blackstone Valley, in the northern half of this tiny industrial state, the Manville-Jenckes company, a new $39,000,000 cotton cloth concern, leads the field. Its mills beat the other plants to it, by putting a ten percent cut through two months before the election. The Manville-Jenckes company also has big plants in the Carolinas. It plays the slaves in Dixie off against the Rhode Island workers.

Again in the southern half of Rhode Island, in the Pawtuxet Valley, a great cotton mill consolidation has taken place. The B. B. & R. Knight company, with more than a half million spindles, was taken over by the Consolidated Textile Corporation, with large interests in six southern states. Still later the bond holders of the Consolidated assumed control. The bond holders are a group of big banks, chief of which is Chase National of New York City. In keeping with the bankers' psychology, a 12½ percent wage reduction is announced for two Knight mills that are reopening. All the Knight mills had been closed since April while the market was being supplied from the South. There are 19 Knight mills in all in Rhode Island and Massachusetts. The new wage rates are expected to apply to each of them as fast as they reopen, unless the workers organize resistance.

Of interest to I. W. W. readers is the name of William M. Wood, of Lawrence strike and dynamite plot infamy. Income tax reports show Wood splitting more than a half million dollars with his Uncle Sam. Wood did not take all his profits from the American Woolen company. He had his finger in other textile pies. He is chairman of the board of directors for both the Knight and Consolidated companies and on the board of directors of smaller concerns.

Many textile companies are still outside of these combinations. Particularly in the old cotton milling towns of Fall River and New Bedford is ownership still largely in the hands of the local families. But the trend towards consolidation is rapid. Fall River mills have not been getting much trade lately. More than two-thirds of its spindles are idle. The day of the independent operator seems to be passing.

### Ever Notice This?

The bosses are organizing more: the workers less. That is the unfortunate situation. The feeble and confused state of textile unionism is a disgrace to the American working class. This is not a pleasant admission to make, but facts had better be faced or we will never get anywhere.

Let us take up a half dozen of the leading textile centers and look them over from the standpoint of organization. Begin at the north with the great company-controlled town of Manchester, N. H. Here is the United Textile Workers, with just about enough members to hold a charter. It led the 1922 strike and may lead another movement, but all it has today is a small nucleus. Besides it there is the new company union that has voted for the ten per cent wage cut.

### Historic Lawrence

Take Lawrence, historic battleground. We all know about the great Lawrence strike of 1912, which the I. W. W. won—against the mighty American Woolen company. Today there are some wobblies in the town but no I. W. W. organization. We still remember the 1919 Lawrence strike led by the Amalgamated Textile Workers' Union. No Amalgamated organization is in Lawrence today. Again in 1922 the One Big Union furnished the leadership for most of the Lawrence strikers in the successful fight against a proposed wage cut. The One Big Union has closed its office in Lawrence, though some O. B. U.ites are still there. Small organizations of the United Textile Workers' Union and the American Federation of Textile Operatives—a still more conservative union—remain, but they are very small.

Lowell, first of all New England textile cities to use modern power-driven machinery; scene of early union efforts in the forties; battleground in 1912 of the striking I. W. W.—Lowell has just one local office, that of the loom fixers' local, affiliated with the United Textile Workers' union. This

DRIVEN OUT BY MACHINERY

The highways and byways are cluttered with old horses, displaced by motor trucks. The parks of New England are full of old, skilled men, driven out by the automatic loom. Capitalism cares no more for the one than for the other. They can both starve. Only organization can save the men. Only men secure themselves have time to think of the beasts.

union may have sixty members. There are mills where it hasn't a single member in good standing.

Fall River, with its 4,000,000 spindles, and its neighbor cotton city of New Bedford, have proportionately more union members than the others, but the card carrier is in a minority even in these cities. Their union is the American Federation of Textile Operatives, very conservative and non-militant. While the United Textile Workers, the One Big Union and the Amalgamated Textile Workers were tying up other textile centers in 1922, the American Federation of Textile Operatives kept their mills running at Fall River and New Bedford. It is true that they supplied several thousand dollars to strikers in other places, but they made infinitely more profits for their owners as a survey of the 25 and 50 per cent stock dividends of that year will show. The A. F. T. O. has been losing members during the industrial depression.

Down in Rhode Island the United Textile Workers' union has enough members in the Blackstone Valley to stay on the map, but it has not risked a battle to restore the wage cuts in the Manville-Jenckes mills. It fought through the 1922 strike, but it has a bad record in strikebreaking in strikes led by other organizations, and the distrust which the radical workers feel for it is one of its most serious sources of weakness.

Last summer the I. W. W. had two good mass meetings. There were a thousand workers at one. But here again, though there is interest in the I. W. W., there is no I. W. W. organization.

In the smaller Pawtuxet Valley the Amalgamated has one energetic local but only a small minority of the workers are enrolled. It may, however, be able to lead a second fight here; its leadership in the 1922 strike was militant.

Two years ago another independent industrial union, the Amalgamated Textile Workers' Council, was organized. It claims 1,500 members in woolen mills in Rhode Island and Massachusetts, and led a small strike this fall.

### Few And Divided

In considering all these unions it must be understood that less than ten per cent, probably less than five per cent, of the textile workers are enrolled. And this tiny majority is split among a set of rival unions, competing with each other, and often carrying on an energetic warfare against each other, rather than against the employers.

A movement for unity has been going on for several years under the leadership of the dyed-in-the-wool conservative American Federation of Textile Operatives, which feels its own weakness. None of the radical unions are in this movement, and the United Textile Workers' union of the A. F. of L. throws cold water on it. So far, however, it is the only unity movement of any success.

A way must be found! Who will find it? There are Wobblies in New England who say that the I. W. W. will again rise to the position of influence it held after the Lawrence strike.

# As a Working Girl Takes a Slant

ANONYMOUS

## ARE THE "COMMON WORKING GIRLS" WAKING?

**This article comes from no radical. The feeling throughout is one of hatred for intolerable conditions, born of observation. It is the rebel spirit that speaks, not the educated, class-conscious unionist. But is not this a first step? Would not women who feel like this one be ready for our propaganda?**

**I AM a laborer, therefore I am unintelligent, dumb, inclined to be vicious, and were it not for the good corporation for which I work, the consensus is that I would be in jail—such are the low tendencies of a working girl.**

**The shop I toil in has everything for the uplift of the down-trodden working woman. To begin with, there is the Savings and Investment Fund, to teach us to save. Marvelous! If we save we will not be paupers. That is what Mr. Boris, the head of the personnel department told us, and he must know. We pay five dollars a pay day into the Savings Fund. Our pay day is every fifteen days. When we pay five dollars a pay day in for five years our money doubles! We are rich! Provision against old age is assured us!**

But it is a strange thing that not a person has ever been with the corporation long enough to double his or her money. They lay you off for several months, when you are in the Savings Fund four years or more. When you go back to work, you begin all over again on the Savings Fund, for when you are laid off you are given every cent you invested, and no more. Interest? Who said anything about interest?

The trouble with these working girls is that they are positively dumb! They do not want to learn! That is what Mr. Holst said, and he ought to know. He is head of the Welfare Department. He says we imitate the rich; we wear silk stockings, fur coats, hand-made hats. We do. We earn them. So, is it any of his business how we dress?

"Young Dave," is what we fondly term the manager's son. Some day Young Dave will be the manager, and he will be no good! He is a pretty boy, ultra-fashionable as to dress, and has three cars. He takes us girls out to roadhouses, dances, dinners. I went with him once—to a dinner. I wore a dinner gown, and had my hair marcelled. Next day I was laid off—indefinitely. His dad and mother were eating with a party near our table and spotted Young Dave with a working girl. After three weeks I was taken back. Our corporation is just.

I sew in the cushion department of an automobile plant. There are thirty girls in this department. Some noons a "Y" worker comes and teaches us to play games, for the poor working girl must be shown. Again a city welfare worker comes through and stops to sympathize with us. We are, according to the head of the corporation welfare department, "poor, scurvy working girls."

I went one morning to the welfare department to see about withdrawing from the Savings Fund. I had over three hundred dollars since my second start, and with it I meant to purchase a fur coat. Mr. Holst was not at work at that hour—almost ten. I sat down to wait. He entered from another entrance and asked his secretary what was wanted of him. She said: "Joan Fair is here to cash her Savings certificates."

"Another of those scurvy working girls!" he said. "Show her in."

When I stood before him he sniveled and said smilingly: "What can I do for you, my dear? It is a pleasure to help you girls out."

We have also a woman welfare worker. When first she came she was said and led by Mr. Holst. We girls got hold of her and pepped her up. She is about thirty-five and a regular thoroughbred. She was long on baths, healthful lunches, ventilation and plain dressing for us when first she came. We soon cured her and plainly demonstrated to her that even though we do labor for a living we like nice things, and we are not really vicious; also that we take a bath when we feel like it, and if the night is cold enough to freeze a brass monkey, we do not open the windows.

Most of the girls in our room are intelligent. All are good workers. Some are real high class and other take university extension courses. They all hold that if the firm paid us a better scale of wages welfare workers would be unnecessary. They pay us as low as they dare and then hire people to tell us how to eke out a small wage!

The office workers scorn us. They are typists, file clerks, accountants. We are laborers. The welfare considers us their specimens. They educate us to spend little. Then they make a report relative to this and their work for the day is done. They eat good food, attend good shows, read good books, wear good clothes, live in modern houses, drive their own cars. But the "scurvy working

(Continued on Page 30)

# A Perspective of Tonopah, Nevada

By CARD NO. X-112357

**Tonopah, Nev., October 28, 1924.**

**This article was read at the M. M. W. I. U. No. 210 regular business meeting, Sunday evening, October 26, 1924, at Tonopah, Nev. Motion made and carried that article be sent for publication to Industrial Pioneer (and other papers.—Ed.) Signed by Tonopah Branch, M. M. W. I. U. No. 210.**

## Data on Conditions in Camp and Mine

A SILVER mining camp is Tonopah. Here the "white metal" is mined, milled and refined into bullion bars, before being shipped by express to the Selby Smelter or perhaps the mint, at San Francisco.

Tonopah is a typical desert town in southwestern Nevada—hot, dry and dusty in the summer time, windy and bitterly cold during winter months. Temperatures range from 100 degrees on hot days to 10 degrees below zero on cold ones. Altitude is 6,100 feet; annual rainfall about 6 inches; not a tree—not a stream; just a rocky, sagebrush, cacti basin on the west slope of the ridge, with stony hills and peaks surrounding the town.

About 4,000 people inhabit this mining camp. Approximately 600 men work in the mines and mills. Other workers are employed by coal and lumber yards, garages, oil companies, in stores, etc. A few find work with the water, light, telephone and sewer companies. Tonopah has two daily papers with their staffs, politicians as usual; also school teachers and educators earn a livelihood by training the youngsters in the grammar and high schools. "Main street" for four blocks is one continuous row of "business houses." Many of these are soft drink (?) places and clubs. There is a casino in the lower end of town whose furnishings and amusements are second to none in the west. The nightly "cabaret life" is a magnet in drawing the workers, to buy drinks and dance with the girls who work upon a "percentage basis." The "Line," where many men and women complete the picture, is in this vicinity and is common to nearly all mining camps. The accompanying photos will help the reader to a clearer perspective of Tonopah and its environs.

### Born by Accident

This camp was founded in 1901 after a fortuitous discovery of a rich silver ledge outcropping on the hillside east of town. A burro's slowness was instrumental in helping the prospector discover the white metal. The missile picked up to throw at the domesticated dumb slave was extra heavy, and proved to be a silver specimen from the ledge that erosion had loosened.

Tonopah's early boom days were typical of frontier mining life—rag and tin houses—hardships and privations. Travel and transportation were by

stage coaches and wagons. The first orc was haulcd a distance of sixty miles to the railroad. High grade orc was necessary to pay the costs of primitive mining and transportation. Two of the old leather spring stage coaches repose in a yard at the foot of Main street. Some present-day residents rode into this arid pioneer town in these vehicles.

Two broad-gauge railroads now serve this desert section—one from the south, connecting with the main line of the Santa Fe at Ludow, Calif., the other from the north, leaving the Southern Pacific trunk line at Hazen, Nev. A dusty, stifling ride is encountered from Los Angeles to Tonopah via Ludow on a hot summer day, desert a-plenty, for 275 milcs north of Ludow, past Shoshone, Death Valley and Beatty and on and on farther north.

Economic pressure must have been great to force men to brave this vast descrt, suffer hardships and prospect in search of rare metals and minerals that, if found, might make them more secure in life.

It isn't romance, nor is it the beauties of thc desert that lure (?) men to these isolated spots. Some there arc who sing and write about the wonders of desert greasewood and its aroma, of silvery moons and enchanted, starry, silent dcsert nights, but miners and prospectors usually have different perspectives from poets. Those who see romance and laurels in the mining industry have never drilled footage in the grinding, choking terror of the mine; they have never experienced a mine fire, a cave-in or a flood.

### Economic Determinism

It is economic determinism that forces men and their families to take up abode in these "out of the way places" on a dry desert. The early pioneer was governed by the same urge. The struggle for existence makes species migrate in search of greener fields, more favorable spots where competition is not so keen and subsistence is assured. That is why the emigrants crossed the plain to California, to Nevada, to the Comstock, to Tonopah and elsewhere. Thc "Big Wide West" was the path of least resistance to escape the carly factory exploitation system. (Eulogists of the Trail Blazers, take note!)

The concentration of mining wealth has gone on apace here in Tonopah the same as in other communities. The prospectors and miners of Butte, Montana, once owned "the richest hill in the world," but now the Anaconda Copper Company claims it. They have dispossessed the pioneer owncrs. Thcy dominate the state of Montana—exploit the great natural copper resources and the workers by the wage system of cxploitation.

The mining companies of Tonopah have acres and acres of mining claims. The ore deposits are striking toward the west of the district and a rush has been made to locate and filc on claims out on this big flat territory that was considered outside of the ore regions.

Hundreds of the populace have located and filed on claims. It is their "birthright" to have access to Mother Earth. But how does their "birthright" slip from them? "The History of Great American Fortunes," by Gustav Myers (Kerr Pub. Co., Chicago) tells how the land and natural resources were stolen by fraud and graft, as instanced in the huge railroad land grants, timber steals, oil and mineral frauds, etc.

These recent claim filcrs cannot compete with the established silver mining companics. The populace on the average can't sink modern mine shafts, but must sell their "birthrights" to the corporations for a few hundred dollars. These mining companies will then extract the mineral wealth by using the locators as their wage slaves.

Some system, isn't it, in this great land of opportunity, where everybody is supposed to have a chance, where honest effort fills the cornucopia, thc symbol of plenty?

### Machine Ousts Prospector

The prospectors arc vanishing. No longer can a windlass compete with a modern mine hoist. Private ownership of the means of life has been concentratcd to such a degree that the few own all while the many have empty hands.

This is the machine age of production. Capitalism is on the stage now and is playing its final acts before the curtain drops on the social drama of "Dog Eat Dog."

The present economic system is sick and needs constant bolstering to keep the structure from crashing to the ground; it has no equilibrium. The profit system is a contradiction; it robs and beats instead of assisting and providing.

The total production record of Tonopah mines is high. Nearly 7,000,000 tons have been dug from its wonderful veins. A deposit now being mined in the Victor shaft of the Tonopah Extension Mining Company (which is the largest producer) has a width of 110 feet and 600 feet long, of a good grade of silver ore. Last month a record shipment of bullion was made—the stated value being $234,000 for one month's production. The

TONOPAH—WHERE MINERS LIVE

JUST WAITING FOR "T. B."

total production values of the district amount to the huge sum of $130,000,000.

The Rotary Club of Tonopah has cast about for a suitable slogan to advertise this great silver mining camp and offers a cash prize for the best one submitted. A truthful slogan, one that would give facts, is no doubt sought for. I suggest this slogan: "Tonopah, the producer of white metal—and the white plague."

### One Dusty Hell

Miners of wide experience declare these mines to be the worst of all to work in, being hot and dusty, temperatures as high as 120 degrees, with humidity near the saturation point. In these "hot boxes" men work with just overalls and shoes on, and these get soaked with sweat in a few minutes. Until recently drilling with air machines (the stopers—"widow makers") was done without using water to prevent dust. The cuttings from this rock are sharp and glass-like. They stick to the tissue of the workers' lungs and cause a wasting away process known as the "miners' consumption."

In some cases it takes only a few months of this kind of work and these kinds of conditions to sap the miners' vitality to such an extent that if they do not get out of these mines and find work that is not injurious to the lungs they are soon planted out in the "boneyard"—the local cemetery where hundreds of workers' bodies are buried.

The water connections to drill machines and the use of hollow drill steel for water to reach the dust at the drill bit is not a total success; considerable mud and water is spattered over the machine miner and rheumatism is contracted. Again, the hole in the drill steel gets plugged up for various reasons, and the cuttings are dry and dusty.

The dust evil is far from being solved. The stopes and drifts are laden with dust and air currents keep it in motion. The mines are still claiming their toll of lives and the underground workers show visible effects of this dust scourge. Nor does it end with the miners; the population of Tonopah breathes the dust laden winds that carry back the dry mill tailings that are spread out over the flats below the town. Reports of government doctors state that a high percentage of the residents in Tonopah are afflicted with consumption. All this is a manifestation of civilization—of modern silver mining processes! Efficiency engineers direct these enterprises—well, anyway, lots of bullion is shipped!

### Swiftly to the Grave

The speed-up is used here. One man on a Leymer machine is required to drill a certain footage or break so much "muck", excuses for failing do not suffice—a time check is given the worker who would dare slow down. Where miners have better conditions and something to say in regard to work perfor-

med, two men on a machine is the rule instead of only one as in Tonopah's mines.

The general working conditions in these great (?) silver mines and mills are at a low ebb. Men are underground for eight and a half hours; lunch is eaten in the stopes and drifts; ventilation and sanitation in the mines and on the surface need immediate attention, for these conditions cause industrial disease and a high death rate.

The surface drys and locker rooms are stifling with foul odors from sweaty garments and modern flush toilets should replace the open filthy "out houses" around these shafts. Some mines have no change rooms—no shower baths—not a sign of a sanitary toilet.

Workers come out of these hot, foul mines and go to their rooms or homes, where a bathroom or other modern conveniences are rare. Tonopah is not a camp noted for sanitary conditions, and what there is comes high in cost; barber shop baths 50c—haircutting, 75c—shaves, 35c—the domestic water rate is three and a quarter cents per gallon. The water supply is pumped in from Rye Patch, a distance of fourteen miles north of Tonopah. A service charge of $2.50 per month for residences and more for business places is made by the sewer and drainage company. Sewage is dumped below town a short distance, making a foul place at that point—no treatment plant here.

Coal is shipped in from Utah and is only $20.00 per ton—cord wood $18.00. Necessary articles are high priced—desert food prices. Rents for modern houses are $30.00 per month—shacks, $10.00 to $20.00. Bootlegging is rampant in this camp, as it is in all the states of the country. Federal prohis make an occasional raid—confiscate a "still" or two—then booze prices soar.

### Fighting Effects

The dry raiders are "chasing a will-o'-the-wisp"—are in a vain pursuit. It's only fools who dabble with effects of things; common sense and experience prove that to eliminate an evil or solve a problem the cause or the root of the evil must be attacked. That job is left for the workers; it is they who will clean up the mining camps—make them fit places in which to live and work, where they will not have to drink moonshine in order to tolerate almost unbearable conditions.

To meet this high cost of existence in Tonopah the following wage scale prevails: miners and timbermen, $5.75; muckers and helpers, $5.25; hoisting engineers and blacksmiths, $6.00 per 8 hour shift; surface labor is as low as $5.00, while shaft work is highest at $6.75 per day.

The labor turnover is high, due to the hardships. Some workers stick and are willing slaves—their reward is the "miners' con" and ultimate death. The camp has many an old miner whose usefulness has passed and who is now thrown on the scrap heap, just like a discarded rock crusher, a worn out sinker pump, or a dilapidated mine cage.

When will slow industrial disease be compensated for the same as swift industrial accidents? The latter is covered by the state compensation while the former receives no attention—yet workers' vitality is ruined on the fields of industry.

Workers of Tonopah—you must fight your own battles. Nothing is ever given to you gratuitously—the conditions you now work under (as bad as they are) were fought for by the miners and other workers of yesterday—the recent strikes and demands of 1919-20-21 should be experiences of value to you—there is urgent need for further progress.

### Join The I. W. W.

The next progressive step for the workers in the mining industry is toward establishing the 6 hour day. It is imperative, not only in one industry, but in all.

The advancing machine processes, the standardization and simplification trend, are carrying on production with fewer and fewer hands and at the same time increasing the output of commodities. The shorter work day is the only logical remedy for unemployment and depression, and it is likewise a remedy to alleviate the dust evil and speed up in these mines and mills.

Is future history to record them as servile workers—enslaved and degraded? Or, on the contrary, will they shine as guideposts for future progress?

This article is an honest, truthful perspective, a vista or view, with data on conditions in this desert camp.

Exaggeration has not entered in the least; indeed, the picture could be more plainly drawn by citing specific instances of which there are many, but limit of space forbids that.

The mining companies and their tools are arrayed against the workers' progress. Manifestations of the class struggle are always apparent. The progressive worker—the educator—the agitator—is not wanted on the jobs. The bosses attempt to weed them out, but as long as working conditions are rotten and wage slavery exists, there will always be agitation and radicals!

May the time soon come when the workers will not permit their vanguard to be jailed and imprisoned or sent down the hill because of education and agitation, but will rally 'round every class-conscious rebel worker and proclaim that **"An injury to one is an injury to all."**

For we have a glowing dream
Of how fair the world would seem
When each man can live his life secure and free;
When the earth is owned by labor
And there's joy and plenty then
In the Commonwealth of Toil that is to be.

**It is the policy of Industrial Pioneer to get as many articles like this as possible. The fellow workers in Tonopah have done very well indeed. Next issue we are promised several good articles on the general construction industry. We also hope to have a review of the latest strikes in the Northwest in the field of general construction. All general construction workers who wish to get something in the January magazine are especially invited to write in. Make it a General Construction Workers' issue!**

WHY DON'T WE EVER HEAR OF AN ELECTROCUTION LIKE THIS?

# The Grafters of Los Angeles

(By HARRY FISHER)

**LOS ANGELES, Calif.—"Shakeup in County Charities Board. Names Withheld; Action Declared Result of Neglect of Duty.**

**"One employe of the county charities commission was suspended and another resigned as the result of an official investigation which was said to have uncovered evidence of misuse of public office for private gain.**

**"While there may be dismissals, there will be no arrests or prosecution.**

**"This announcement was made by W. H. Holland, superintendent of the charity department, who refused, however, to reveal their names."—LOS ANGELES HERALD, October 21, 1924.**

THE above is in substance the story of the latest scandal in official circles of the city that has arrested and imprisoned more members of the I. W. W. than any six other cities in America.

We have told in the columns of I. W. W. papers about the marihuana industry, of the opium-growing industry, and the correspondence school for instruction in the manufacture and marketing of fortified wines and ten-year-old whiskey.

We have shown that official investigation disclosed the existence and thriving business of these industries in Los Angeles. We intimated at the time that these "infant industries" were operated by enterprising Los Angeles business men and that possibly this, in a measure, accounted for the systematic arrest and persecution of the I. W. W., which organization closed the bootlegging joints of Portland, that the police were unable or unwilling to close.

### Sweet Charity

But we did not think a county that spent so many thousands of dollars to convict members of the I. W. W. of criminal syndicalism and to sentence them to twenty-eight years in state's prison, would use its **charities fund** to pay bootleggers' fines. Now we are convinced.

Here is the proof. Let us say first, by way of introduction, that the school authorities objected when they learned that school children, thirteen to fifteen years of age, formed a considerable part of the trade in the illicit traffic. When the newspapers got the story, traps were set, and in one week half a dozen establishments were found where booze was sold to children at six dollars a quart.

One fellow, a shoemaker, admitted his guilt and offered the detectives all the money he had, which he said was seventy-two dollars, and the remainder of his stock of contraband, if they would not take him to jail.

So he is now also charged with attempted bribery. In this connection it might be well to mention that about four months ago, in Pasadena, a suburb of Los Angeles, a truck driver who was the fiance of a minister's daughter and who made his home with the preacher, was arrested for bootlegging and sentenced to several hundred dollars fine and six months in jail. After a few days someone paid fifty dollars and the judge remitted the jail sentence. The preacher's daughter said she loved the boy and the preacher took him back under his roof. Whether he was able to do a more lucrative business after this publicity, or who paid the rest of the fine, if it ever was paid, the writer does not presume to know. If the Los Angeles County Charities bureau paid the fine, it was not reported.

### Excellent Teamwork

But this week somebody squealed and two of the charity officials were disconnected. Here is how it worked: John Doe is fined ninety dollars or ninety days. If he has the ninety simoleons he is liberated at once. But some of the parvenu vendors of hootch plead poverty and choose the ninety days. It must be assumed that the prisoner has a family depending on him for support. So here is a case for charity, and if a public charity is to function as such, it must extend charity to the needy dependents. But the Los Angeles County charities were nothing if not practical. After thirty days they philosophically reasoned that it cost two dollars a day to feed the family, while the prisoner is fed in jail and has still sixty days remaining. To feed the family will cost twice sixty dollars, whereas sixty dollars would pay the fine. So, as practical financiers, they decide they will pay the prisoner's fine and thereby save the county sixty dollars. Strictly a business proposition, as it were.

But evidently the superintendent was not taken into the partnership and the most recent deal fell through. What makes this particularly interesting at this time is the fact that in the past ninety days no less than eighty arrests were made of members of the I. W. W. charged with violating the "Busick Injunction," which prescribes membership in, as well as all activity for, that organization in California.

The injunction was resorted to, after it became evident that juries refused to convict on the criminal syndicalism charge.

### Where Charity Fails

Men have been in jail, or rather in a stockade, for varying terms of from ten days to three months without trial. Sometimes they are turned loose before trial, but since they invariably demand a trial, it is the exception rather than the rule, when one receives a five, ten or thirty-day sentence. Most of the cases are dismissed outright, only to be rearrested, when another period of waiting for a trial is only a repetition of preceding experience.

HE DIED FOR MORGAN.

# Making a War

By "VERSUS"

WAGING war is sometimes called a science, sometimes an art. And one time it was both. But here as everywhere else in modern affairs the machine has come in and craft skill has gone out. The old style professional soldier is no more, and any mutt is snatched by a draft board, flung into a training camp, given six or eight months' intensive military training, and adjudged sufficiently fattened for the slaughter. War is no longer a science, except for the general staff at the top, and not even an art any more, except for the field officers. For the ordinary workman, who makes up the rank and file of the army, war is a machine process. He goes forth as an individual, operating machine guns, or artillery, flame-throwers, or poison gas apparatus, tanks or tank guns, and is killed or wounded according to the laws of chance and the supply of ammunition on the other side, without much regard to whether he is personally skilful, courageous, or what not.

There is one thing about war, however, which is still both an art and a science. That is the business of making war, not waging war, but creating it. We have a great opportunity to observe this fine art going on at the present time.

The countries which are going to fight are the United States and Japan. It is not certain just when, though we know it will be soon, and any discriminating person can tell why. The reason for war between the two edges of the Pacific Ocean is that both nations need the markets of China, the last big, open market for cheap manufactured goods left in existence.

There are some other reasons, one of which is Japan's expanding population, needing territory in which to plant colonies that will not be cut off from the motherland. And still another reason is the desire of both countries to control the extremely profitable silk trade.

### The Little Guy Isn't Ready

If the capitalists of Japan and of America were about equally matched in wealth, and had at their command equally numerous and reliable units of cannon fodder, the fight would be on at present. This, however, is not true. Japan is much inferior in economic strength, and somewhat inferior in man power. Her superior position, next door to the market for which both countries struggle, is not of sufficient importance to offset her other disadvantages. She must, then, find allies. To whom

shall she go for aid? Naturally, to the economic helots of the United States, in Europe. The Dawes plan brought war much nearer in the Pacific.

The Dawes plan was a method for taking a mortgage upon Europe and placing the deed to the industries of Europe in the keeping of Morgan & Co., of New York. Grim economic necessity drove the European capitalists to this undignified position, and they are going to look with favor on any armed force that will come along, like a knight rescuing damsels, and save them from the American financial octopus.

### Two Ancient Enemies

Though not all of them. French capital is thoroughly united with Japanese capital in many enterprises besides this one. France will go all the way with Japan. But England is divided against herself. The same reasons that force the French capitalists to line up against America would also force the English capitalists to line up with Japan against the United States. In fact, England until very recently had a treaty of offense and defense with Japan. That treaty has been abrogated, and that for the very reason that England is worrying now as to which side she shall take in the new (the word is a jest of Fate) **Pacific** battlefield. England has colonies, with which by means of a sort of discriminatory tariff, something like the old German Zollverein, she is trying to do for herself what the Zollvercin did for Germany, namely, rivet half independent territories closer together, and lay a foundation for true, centralized Empire. But the colonies are developing industries of their own, and they are competing with Japan. Especially do they dread the Japanese immigration scheme. Australia, New Zealand, Canada, Newfoundland, may not agree to entering the war on the side of France and Japan, if the United States fights Japan.

Sir Auckland Geddes, master diplomat of the master class of Great Britain, recently used very plain language to a gathering of his peers at Westminster Hall, London. "The British dominions that look out on the Pacfiic," he said, "feel that in Washington there is an instinctive understanding of their difficulties which, when they come to London, they have to explain laboriously in Downing street."

The speaker seemed to surprise some in the audience with the remark that when the dominions look to the mother country and find no satisfactory understanding, "they are apt to look to Washington, and Washington, with inviting eyes, will look back at them."

The far-flung British Empire, Sir Auckland said, has yielded the leadership of the world in many respects, to the compact empire of the United States. He cited the Washington arms conference as an example.

And of course there is plenty of cause for disagreement between France and England, over German trade, and German mines, African territory, etc.

This leaves the line-up, France and Japan, with Italy as a probable aid, versus United States, the British Colonies, with England herself as a most unreliable ally of the United States.

### Morgan-Rockefeller Lose

The first skirmish of great importance was the consent which the League of Nations gave to Japan to fight the United States on the immigration question, without making formal enemies of the whole League. Score one for the Japanese capitalists!

The second step towards war was the battle of the puppet generals in north China. Chang Tso Lin is pro-Japanese, and Wu Pei Fu is pro-English and American. Japanese gold bribed away one of Wu's best generals, and Wu Pei Fu was soundly thrashed, though not entirely wiped out. Score two for the Japanese capitalists!

What the next test of strength will be, we do not know. But aren't things proceeding just as they did before the Great War of 1914-18? In that situation, there was a hurried groping about for allies, on the part of the two principal antagonists. There was a treaty, the Triple Alliance, which did not represent the new alignment any better than the Japanese-English treaty does now, and which was abrogated in effect if not in due form when the war broke out. And there was also the battle of the puppet generals, when the Balkans, with French sympathy, French aid, and Schneider-Creusot artillery beat the Turks, who had German staff officers, German sympathy, and Krupp guns. Once more the puppets fought; this time Russian and French Serbia gathered together a gang and trounced Austrian and German Bulgaria. That was shortly before the world war broke out. Germany, seeing her allies whipped, and the iron ring closing about her, slashed at it with the sword.

Will not the same thing happen now? Japan is winning the game of allies. Japan is winning the game of puppet generals. Japan is sitting next door to the Chinese markets. If the United States capitalists do not attack Japan, she will triumph. Will they not attack? A capitalist is a capitalist, whether German or American—and he will fight until the last common worker is dead before he will tamely submit to other capitalists running off with the market, and the source of raw materials.

### Fight Just Starting

The great war of 1914-18 was preceded by a terrific deluge of propaganda. This was necessary to make the proletariat and the farmers willing to bear the burden of taxation required for preparation for war, and to make the workers ready to fight in a quarrel that really does not concern them. Alarmist reports play a great part in this. Your statesmen, and particularly your military leaders, represent that your country lies open and undefended. They plead with you for just a few more battleships, just a few more trained officers. Here is Rear Admiral Fiske, doing his stuff at the service of flags," at the Church of the Heavenly Rest, in New York City.

ANTI-JAPANESE PROPAGANDA
(Cartoon from a Capitalist Paper, Showing Some Possibilities of Future Wars.)

"Certain nations are becoming stronger militarily, while we are becoming effeminized," said Admiral Fiske. "We can see, for instance, that in Japan the people are sternly repressing all tendency to luxury, and that a nation wide movement, almost feverish in intensity, is acting to aggrandize its air force, even working women and little boys and girls contributing their mites. We, on the contrary, are becoming more and more addicted to luxury and pleasure, while gaudy fashion shops almost monopolize our grandest avenue."

The ZR-3, if it had come on a mission of destruction, could have done a billion dollars of damage in an hour, said the admiral.

Admiral Fiske argued that competition among nations, while often leading to war, was also the stimulus of progress, and that "from this last it would be illogical to expect human beings could escape". He said the United States was surrounded by virile, ambitious and intelligent but poor nations, and mentioned Germany, Russia, and Japan. These countries, he said, "cannot justly be blamed" if they envy America's wealth.

"They realize that we have obtained it largely by means of war, and they can hardly be blamed if they say to themselves that they can get from us what we have, because they are more skilled in war," continued the admiral.

Admiral Fiske didn't say anything about our (that is, our capitalists') coveting the goods of other peoples, but he admitted in his last statement about our securing it largely by war, that we were probably no better than we should be.

**"Navy Day"**

Then consider the mass of inspired editorials that strutted and clanked their way through the pages of all our leading conservative dailies on "Navy Day," just passed. Here is a fair sample, from the Chicago Tribune:

"Britain's new program of fifty-two treaty cruisers (up to 10,000 tons), Japan's twenty-eight cruiser program, and the ten cruiser program of the United States are evidence enough of America's indifference to her naval needs. Japan's program of twenty-five cruising submarines to America's six is further evidence. America needs twenty-one more cruisers aggregating 209,965 tons to reach the 5-5-3 ratio of the Washington conference. Thirty-six cruising submarines aggregating 43,247 tons are needed.

"The next war probably will be a naval war on the Pacific. It will be a war of cruisers and airplanes. Two German cruisers acting alone destroyed 200,000 tons of British shipping in the last war. One hundred British ships were required to catch them. In the next war will be raids and savage thrusts at the great coast towns and the Panama canal. Fast cruisers will be needed desperately.

"The eighteen American battleships are built for twenty-one knots speed. Six Japanese battleships have a speed of twenty-three knots. Great Britain has one squadron of twenty-five knots, one of twenty-three knots, one of twenty-one knots. Our guns are outranged by Britain and Japan. The battleships Florida, Utah, Arkansas, and Wyoming are almost out of commission. They are coal burners with poor boilers. There is no money to repair them."

Lots of worries about the navy. More ships wanted, in spite of the 5-5-3 ratio. In spite of the round the world air flight. In spite of the Shenandoah and the ZR-3. In spite of Lewisite, and other poisonous compounds. In spite of all these, still more armament is needed!

Doesn't it remind you of "Preparedness Day" and its sequel?

Hear the echo from Australia:

SYDNEY, Australia, Nov. 13.—Prime Minister S. M. Bruce in a speech on defense problems strong-

ly repudiates the league of nations as being the reason why Australia has abandoned preparedness. Speaking at Orange, New South Wales, he said the league was too weak to enforce peace, and therefore it was useless to argue that the day had arrived when Australia might dispense with its defense system.

"The commonwealth navy should not be a mere mosquito fleet," Mr. Bruce asserted. "An attack on Australia will come from a raiding expedition under an escort of fast, modern cruisers. If those cruisers can be met by ships of equal power and speed an effective measure in defense will be established.

"The federal government had this in mind when it recently decided to build two 10,000 ton vessels armed with eight inch guns.

"The Singapore base is imperative to the security of the commonwealth and instead of contributing to warfare would be a factor in the promotion of world disarmament. Whether the British government proceeds with its work on the base or not Australia's duty is clear—it must maintain a relative defensive strength. If Australia strips itself of that strength there is no argument against an invader and white Australia is only a name."

And in regard to the Singapore naval base, this is what one of the most widely circulated and most capitalistic of American daily newspapers has to say:

"Britain, said Sir Percy Scott just before his death, cannot take a fleet to the orient adequate to defeat Japan. The same might be said with less certainty but with much truth in regard to the United States. The inevitable inference follows that Britain and the United States must cooperate in the western Pacific. The white powers in the Pacific must stand together.

"The key to the situation at this time is Singapore. With Hongkong, China, and Pearl Harbor, Hawaii, with Australia, New Zealand and Singapore well defended, ships of the Anglo-Saxon powers can operate with relative freedom from attack.

"Singapore hangs like a tuft on the tail of Asia down into tropical seas. It is the end of the Malay peninsula. It is three degrees from the equator and controls the channels of the shallow seas south of the great continent. Singapore is British. Before long it will be more British.

"With Conservatives returned to British rule the naval base at Singapore will no doubt be revived. A home for British battleships is needed in the east, if British power in the orient is to be maintained. Singapore was chosen several years ago. Later it was abandoned by the Labor ministry. Now, with the fall of McDonald, it will come back.

"British defeat at Coronel led the ministry during the war to consider the establishment of a base at Singapore. At the Paris conference it was decided to increase its fortifications.

"Singapore is a good place for a base. With Baldwin back, and maybe our dear Curzon, also Winston Churchill and fellow Conservatives, it is more than likely that Singapore will straightway be a base for British ships. Churchill already has come out for resumption of the Singapore project.

"That is good for America. The Tories never loved America too much, but their eastern policy usually helps out anyhow. The time may come when British and American ships will base together in Singapore as they once did in Ireland and Scapa Flow."

Yes, war is on the way. And all that will stop it is the overthrow of capitalism. Nothing else will be of the slightest avail. The thin piping voice of pacifism will be drowned out, as once before, in the war drums' rumble. The only thing that will save millions from dying again, and soon, is working class revolutionary action.

——wIw——

# Longview

By "BOOMER"

TO one who has eyes to see, and can analyze that which is seen, Longview, Washington, affords many sights. It is the stronghold of Industrial Feudalism, and the Long Bell Lumber company reigns supreme.

This company has revolutionized the production of lumber, not only in method of the actual sawing of lumber, but in many other lines of activity as well. It is estimated that of every dollar paid in wages by Long Bell, seventy cents come back to them.

The company also has supervision over the schools in their town, and own the picture theatres. Of course it is camouflage, interlocking directors. The mercantile establishments are run the same way.

The Columbia Mercantile company is only another name for Long Bell.

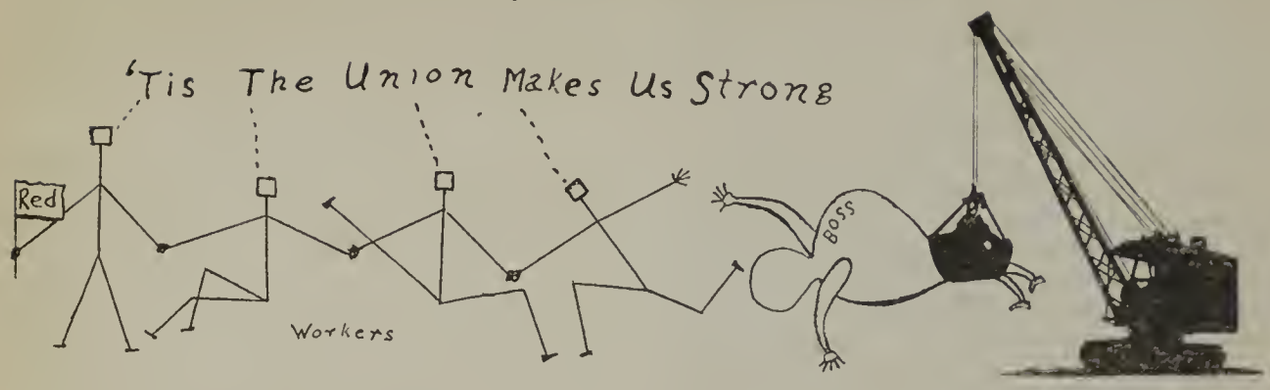
There are several score of neat little cottages at Longview. People passing there are led to believe that the sawmill employes live in them. Some do. The chief engineers, electricians, chief clerks, etc. But farther over towards Kelso is "Shanty Town," old shacks, cabins, tents, etc.—there is where most of the married employes working in the mill live.

Wages in the mill are $3.60 up, with very few ups. Just what prices are charged at the company-owned stores one can only surmise. But I was charged fifteen cents for one can of Tuxedo smoking tobacco, and when I informed the clerk that Tuxedo sold for 12 cents, he replied, "Not in Longview."

To obtain employment in the mill, one has to use the diplomacy of a Japanese minister extraordinary. To hold it one has to—well, many come but few stay. To remark that the rain is WET is sufficient cause for immediate discharge. All in all, Longview furnishes material for many educational articles, but as I am kept busy rustling jobs so I can eat occasionally, the readers will have to wait.

# The Social Forces

By JOHN CANNAVAN



## CHAPTER III.

### CLASS WAR

WHILE statistics are readily available, it would serve no good purpose to burden these pages with tables to prove what is of such common knowledge that it needs no corroboration—hunger and want are found, at all times, among the millions of the working people.

Very recently, and as a result of hunger and want, a conflict of nationwide proportions was waged in the coal industry; war threatened in the transportation industry. We have had a strike of the workmen in the railroad shop crafts with more than 400,000 shopmen involved; the textile industry is in the throes of industrial revolt; the building workers of Chicago and a dozen other cities are involved in disputes with the employers; the memory of the steel strike is still fresh; the packing industry has not recovered from the country-wide strike of a few years ago; the oil workers in California, the marine workers on both coasts, the lumber workers in several states, the printing trades, all over the nation there prevails and has prevailed a condition which goes to prove that there can be no peace between the employing class and the working class. Everywhere economic distress, or the fear of it, drives the workers to accept the gage of battle thrown down to them.

#### Work or Fight

The coal mine workers fought for an opportunity to live, for a small measure of security for themselves and their families. Despite the claims of the capitalist propagandists, the demands made by the mine workers were not extravagant. They were modest. These men, who go down into the dark of the underground and, at the risk of health, life and limb, wrest from its stony grip food for a nation's industries and comfort for a nation's homes, surely render a service that entitles them to food and comforts in keeping with the advancement of modern civilization. And, so far as the miners are concerned, there will not be permanent peace in the coal industry until there is permanent security for them.

So it is, also, with the workers in the transportation industry. They too, render indispensable service to society. They constitute one of the strongest factors in the social guarantee of security, yet they are themselves condemned to insecurity and to experience want. Where there is want there is not and cannot be peace. Economic insecurity is a common disturber of peace.

At a recent hearing by the United States Railroad Labor Board, the wives and children of railroad employees were brought before the tribunal to make the humanitarian appeal that no further wage cuts be considered, as they were already compelled to exist below a decent living standard upon the wages which the railroad corporations now propose to reduce. The women and children were poorly dressed and showed signs of malnutrition.*

Men and women, bearing the responsibilities of parenthoood, may endure these conditions without being at all resigned. They may observe the outward forms of legal peace, but in their hearts there burns the fire of resentment that threatens the social peace. Their fortitude is not to be mistaken for resignation. Theirs is an unvoiced resentment which has not yet found the means for its expression. Momentarily they preserve the peace, as do the conquered, under a coercion with which they have not yet fashioned the weapon to cope. The hope is ever with them that an end must come, and the means will be found to realize that hope. Peace there is not, and cannot be, for the material out of which peace is made—security—does not prevail among the workers.

---

* The manuscript for this pamphlet was completed while the Railroad Labor Board was conducting a hearing, to which the railroad craft unions brought several of the families of railroad workmen, as living evidence that another wage cut would add to the want and misery which these workers and their families were then undergoing.

The Railroad Labor Board, a "public" body was not influenced by this human evidence that spoke so eloquently and pathetically of denial and distress. The wage cut demanded by the railroads was authorized by the Railroad Labor Board.

The shopmen's strike (1922) was precipitated by this action. But strangely enough the president of the organization which had supplied the greater number of the human "exhibits"—Mr. Grable of the Maintenance of Way Employees—refused to sanction the participation of his union in the shopmen's strike. He has since been appointed to the Railroad Labor Board—as a labor member.

### The Peace of Defeat

Throughout the length and breadth of capitalism there is only such peace between the classes as the victor imposes upon the vanquished. As long as forces of repression can be recruited by the capitalist class there will be the appearance of peace over considerable portions of society, but only the appearance, for the ferment of discontent, fed by hunger and want, and the sense of insecurity and uncertainty among the millions, is working everywhere and all the time. Peace, a dictated peace, is the wish of the capitalist class, but it is not the fact of our time, nor was it of any time in the past. Always there have been revolts—many of them crushed with a ruthlessness that would put the harshest tyrannies of old world history to shame—but the spirit of the workers has not been crushed. Every year, yes, every month, some portion of the working class submits evidence that the spirit of freedom still lives in labor.

Tyrants have always and unfailingly dictated a last decree. Even the very forces of repression, which the capitalists employ, and upon which, in the final analysis they must rely, to maintain their rule, are nearly one hundred per cent disappointed wage workers, whose sense of "duty" must be constantly on the alert" to suppress their natural sympathy with the element from which they spring and with whose experience and reactions they are familiar. A sympathetic wave might change them in a moment from the forces of repression to the vanguard of revolt. Peace in capitalist society is the dream of a fool, or the preachment of a rogue.

More than 6,000,000 bread-winners in the United States were involuntarily unemployed during the winter of 1921-22. This means that approximately 25,000,000 persons out of our population (estimated 110,000,000)—one of every five persons—were denied their supposedly "inalienable right to life, liberty and the pursuit of happiness".

### Soup and Salvation

When in our cities signs that are indicative of a decaying society hang without comment, what fool dares to take comfort from an illusive idea of peace. Here are some signs displayed this winter in Chicago: "Free lunch for the unemployed—12-2"; "Free bread and soup at 4 p. m. Women and Children Only"; "God is Love. No Free Lunch Today". These are not by any means all, but surely they are sufficient. These are not guarantees of peace. They are assurances that there is no peace.

Every city, town and hamlet contributes a quota to the ever-swelling ranks of the unemployed army. Little children—surely through no fault of theirs—upon whom no responsibility can be laid, equally with their parents, share and suffer the deprivations that result from unemployment. Stunted and dwarfed physically, mentally and morally, these little ones, members of future society, are denied opportunity to prepare themselves for the responsibility that the years will compel them to bear. And men speak of peace! The fathers and mothers, who contemplate the denials to which their children are subjected, are not peacefully inclined. Nor would they be worthy humans if they were.

### The Peace of the Dead

In the congested tenements of the larger cities, where cupboards are normally bare, and where clothing is scarce and thin; in the fetid gloom of the overcrowded lodging houses, where poverty-stricken workers drag their lean and hungry bodies for shelter from the biting, winter night's cold; in the homes of mechanics and laborers, which the long spell of idleness, unsought and undesired, has filled with the chill of poverty; in the roadside "jungle" where veterans of the "war for democracy" shiver,—bonusless and helpless in their idle misery, and ponder the rewards showered upon the nurses of "war babies". The men whose bodies prolonged capitalism's life tenure in the Argonne, and other bloody fields, are penniless, foodless and shelterless vagabonds.—Peace! How can there be peace? Peace under such conditions would be the peace of the dead in spirit, dead in ambition, dead to every sense of right, of justice, of responsibility. There is no peace. And because there is not, there is yet hope for the world and its workers.

The farmer, that man of peace par-excellence, stripped of his crops as cleanly as though he had never grown a bushel, is not peacefully disposed. Like the wage worker's his insecurity is irksome, and what irks does not induce to peace. The miners, the railroaders, the building workers, the oil workers, the textile workers, the marine workers, the slaves of steel, in every industry, in every locality, the workers want the peace that comes with security. Anything short of that means only a truce, with a renewal of hostilities at its termination. Everywhere in the capitalist world it is war to the knife and knife to the hilt, economically.

An organized capitalist class strives to impose its will upon society. It is opposed by a disorganized working class, which, from the reasoning inspired by its defeats, will eventually learn to organize itself correctly and press forward to ultimate and complete victory.

The hundreds of thousands in New York and Chicago, hungry and unprovided for, with the idle millions of others all over the country, emphatically deny the claim that there is peace. There has never been peace since the advent of capitalism. There never will be peace until another social system has been substituted for capitalism.

TO BE CONTINUED.

# Columbia

By VERA MÖLLER

When ancient tyrants sought to strike most dire
Horror and dread into the hearts of foes,
They found a fate for captives worse than fire,
Than crucifixion, torture's fiercest throes;
They bound a living captive to the dead,
They bound him to the dead man, face to face,
And left him smoth'ring there, till life had fled,
As if the corpse held him in foul embrace.
Who would not pray for tools to crush and wrench
His body, ere he gasped away his breath
Choking and strangling in the carrion stench?
And this land has chained herself to death;
For what is evil save corruption, what
Corruption, save decaying flesh to breed
Poisons, the loathsome things that breed in rot!
Columbia is bound by chains of greed
To many a corpse, for where the masters kill
Beneath her laws, why there a corpse remains
Whose dragging weight delays her progress still,
Whose poison spread in air creeps to her veins.
Manhood is slain where men are crushed by toil,
Body and soul in factory and mill,
Or where the masters' gold bribes slaves to soil
Their hands with evil while they work his will.
Childhood is murdered in the factory's hell
Where childish slaves grow wizened, dwarfed and old,
And womanhood is slain where women sell,
Goaded by want, their purity for gold.
And decency is slain wherever men
Are herded close like beasts in filth and slime,
Where Nature's instincts curbed in some foul den
React in darkness, many a loathsome crime.
Humanity is slain, where prisons rise
With lime-strewn dungeons, where the red whips fall.
Close to Columbia's feet each victim lies;

PRAYER WON'T HELP—DEEDS ARE REQUIRED.

With fleshless jaws they mock her, one and all;
And shall she stand as in a living tomb?
Then who shall free her from her self-made chains,
The masters' greed, before it brings her doom?
What force shall bring fresh vigor to her veins?
The workers' hands alone can set her free,
For they alone have grasped the sword of truth;
And she shall stand in that bright day to be,
Reborn through Freedom to a glorious youth.

# Rime of a Proletar Boy

By ENDRE ADY

(Translated by William A. Drake)

My father works from morn till night,
  Toiling his life away;
There is no better man than he,
  Search for him where you may.

My father's coat is frayed and worn,
  Mine new, but when I show
That I shall soon be grown a man,
  His old eyes seem to glow.

My father's masters are the rich,
  Whose taunts his spirit grieve;
But he brings with him hope and cheer
  When he comes home at eve.

My father is a valiant man:
  He spends his strength for us;
He bends his pride, but not for gold
  Is he most covetous.

My father is a sad, poor man,
  And were it not for me
And for my hopes he'd flee this vast
  And weary comedy.

And did my father say the word,
  The mighty rich would quake;
And there would be increased those few
  Who joy in life can take.

My father works and sweats and stints,
  Though strongest of them all;
He is more mighty than the king
  Of those who hold him thrall!

## WE ARE HITTING BACK

TWO big strikes in the field of General Construction Workers' Industrial Union No. 310 of the I. W. W., and one big strike in the lumber woods around Whitefish, are the proper answer to the boss, when he gets the notion that any old kind of conditions and any old sort of wages will do.

Each of these construction strikes has hit the California persecution a good blow, by demanding that no California products be used in the camps and that the class-war prisoners be released. If the working class were completely organized, so that all work could stop when a strike was necessary, the persecution of labor would drop altogether.

So would the exploitation of labor.

——wIw——

## A FAIR CONSUMPTIVE FLUSH

WHO ever heard such a lot about prosperity, now! Every form of capitalist propaganda is turned over to the Wall Street bulls, apparently. Every newspaper recites fresh advances in the stock market, fresh sales of iron and steel goods, fresh increases in the price of wheat.

True, closer inspection shows little ground for some of this shouting. The sales, while frequent, and frequently reported, are not big. Rails are being bought, but not in such quantity as to put the steel slaves back to work in any considerable numbers. Some of those who were working half time are now working full time, and there is a little more pressure from the bosses, to speed up.

The stock market advances, but no more than it has done many times, in the heat of an economic crisis. When industry looks shakey, certain kinds of stocks, which normally pay little dividends, are sought after by investors, because of their very conservatism. These stocks are those with a lot of plant, collateral, behind them, and they are considered by investors a harbor of refuge. This is even more true of bonds, secured by mortgage. The rise, slight rise, too, in price of these securities is nothing to justify such enthusiasm.

If grain prices went up, it is the world's misfortune. Crop failures in Europe are partially responsible, and that means starvation for some one. Wheat gambling in Chicago is partially responsible, and that means further concentration of wealth—no more money for the farmer, and no more men put to work. It means less consumption, not that the American working man will buy less bread, but that he will now have to spend more money for the same amount of bread, and will not have as much to spend for other things.

The building boom is slowly sinking into quietude. There will be some trouble about unemployment in the building trades before long.

The textile industry does not show much activity and such mills as are opening are doing so on a reduced force, and a reduced wage per man.

In fact, there is every indication that the period of continuous economic crisis into which Capitalism has fallen is not going to be improved very much or for very long. All this celebration about returning prosperity is like a tubercular patient congratulating himself on his rosy cheeks. There is a gorgeous flush on the face of things, but it doesn't mean anything good.

——wIw——

## SICK OLD CALIFORNIA

NOT all diseases are at present preventible. But modern medicine boasts truly of one thing, that no plague is possible again, if ordinary care be observed. Civilization has advanced to that point, at least. The old epidemics of cholera, smallpox, and the black death, are not to be feared, if ordinary, well understood, scientific opposition is made to them.

Thus by Aristotelian logic we prove that California is still in the dark ages. Every place must either be civilized or uncivilized. Plagues are impossible in civilization. There is a plague in California. Therefore California is uncivilized.

The matter goes farther. There is not merely one plague, there are half a dozen, in California. The capitalist press of Chicago still carries cold little news items about the spread of smallpox—a very deadly sort of smallpox—throughout the state of California. Well, smallpox, since the days of Jenner, has been an easily controlled disease. An epidemic of it was supposed until very recently to be absolutely unthinkable. All you have to do is to vaccinate the people, and they either do not get it at all, or have it in a mild and harmless form. Yet there are between eight thousand and nine thousand cases of smallpox in California, as this is being written, and they are of the very worst sort, the malignant variety.

The hoof-and-mouth disease we all know about. It affects primarily cattle, but people can get it. Just now it is appearing again, after they thought they got rid of it.

Hoof-and-mouth disease, at least in people, is a filth disease, caused by dirt getting into the food. The germs cling to the dirt.

Bubonic or Pneumonic Plague is a disease which cannot spread without the aid of rats and fleas, both of which pests demand as a prerequisite for their propagation dirt, ignorance and poverty among humans.

Typhoid epidemics are still slowly burning themselves out in several parts of California; there have been an unusual number of typhoid cases in

(Continued on Page 36)

## THE INDIGNITY OF LABOR

By ROBERT GRAYSON

DO you remember Jack London's child slave, a marvel of efficiency in a speed-up factory? I mean the lad who finally quit his dear boss forever, walking away from drudgery and respectable society out into the green fields. He was "The Apostate."

To love that lad has been easy for me, since he is my twin soul—his flesh and my spirit—for in my heart wells up a great, abiding apostasy, the physical part of me still going into the industrial arena to win bread for my burdensome body.

So much twaddle has been said about work being dignified and such rot, even by radicals, who should know better, that it would be a breach of duty to remain silent any longer. A dissenting voice is needed to utter the sentiments we all hold for this work game.

Most of us have our hatreds. My own deepest loathing is reached with regard to those ugly and universal tasks that we slaves perform under penalty of death. It is, indeed, a fearful injunction that requires an alternative so supreme as its sole and inseparable impulse. There is nothing more degrading, nothing more painful, nothing more worthy of being shunned than work.

Let us resort to no pretending otherwise, just because the enemies watch and listen. We do not want their approval. We can be perfectly frank and declare that we hate work just as much as they do, and with better judgment, as we know the dirty thing better.

May no unsophisticated reader urge the fruits of work as extenuating circumstances, or reason for acquittal, as we try this miserable culprit before the bar of our prejudices against forced effort. Science promises to minimize the aching hours of labor performance. We revolutionaries see in a larger number of workers, i. e., all the race, and not one submerged class, a reduction of individual punishment.

If the goal is not away from work, then why not return to the more laborious productive methods of the past? No, we have a right to be lazy. It is more than this, our very bones house the marrow of laziness. This healthful estate should not be a peculiar possession of the rich. We must destroy the bourgeois monopoly of laziness, extending to the entire mass of driven, outraged, outcast robots its beneficent culture.

Work is a vile necessity. As civilization really comes into its own this curse must rob fewer and fewer hours from the lives of men.

——wIw——

**The evil of silencing the expression of an opinion is, that it is robbing the human race.—Mill.**

## CRAFT UNIONS AS A CAPITALIST SEES THEM

By W. H. SIKES

(Author, "Business Successes From Small Beginnings," Published in November Industrial Pioneer)

AS a small capitalist I will state for the benefit of the workers that so long as we can keep you divided into many different trade unions we are "sitting pretty" and can beat you at your own game.

Take for example the shopmen's strike in the rail industry with 16 or more craft unions. They lacked power to put it over and lost. On appealing for assistance from the trainmen they were informed that they were not comrades and must look out for themselves.

Three young men we had given employment to went into the rail shops during the strike. Recently they told me of the union the shop required them to join. This union, fostered and controlled by the railroad officers, is of course a movement intended to cripple the power of the workers.

Yes, Mr. Worker, just keep on supporting your craft union and voting with the political parties that are controlled by the trusts and **we are all right.** Above all, don't read and support the labor press. You might get wise to our game. It would not be respectable anyway to belong to the I. W. W. They are said to burn wheat fields, (though to be honest I live in Kansas and never knew of one set on fire by I. W. W. or anyone else).

I am a little ashamed that some of our fellows have raided and mobbed the I. W. W. halls, especially shoving the children into scalding coffee at San Pedro lately. But then, not many of our good people know about this and we don't think they will find it out. Stay with Sam Gompers and we are all right.

——wIw——

## SHORT POINTERS

(By A Fellow Worker)

By too much complaining you reveal your weakness—action is what is needed—change conditions that are bad.

By talking you give out something—see to it that those who receive what you have given out are getting something worth while.

By working hard and fast, you make profits easy.

By recruiting a new member for the organization, you accomplish a part of the historic mission of the working class.

By urging all workers to strike against rotten conditions, you are showing them the advantages of rebellion.

# The Sixteenth General Convention

By P. J. WELINDER
(Chairman of the Convention)

This article is an attempt at an interpretation of the I. W. W. Convention of 1924, the line up of force within it, the motives at work, and the economic situations back of the delegates of various industrial unions, which caused them to take the positions they did. Undoubtedly various other interpretations are held by other delegates and by spectators. It might be interesting to hear from some of them.

IT is doubtful if a convention has ever been held that has been considered worthy of publicity and has not been described as "the most important convention ever held in the history of the organization." As this, the Sixteenth General Convention of the I. W. W., happens to be the first convention I have attended, and the first one I ever attempted to deal with in the form of publicity, I ought to be permitted to start out in the time-honored manner.

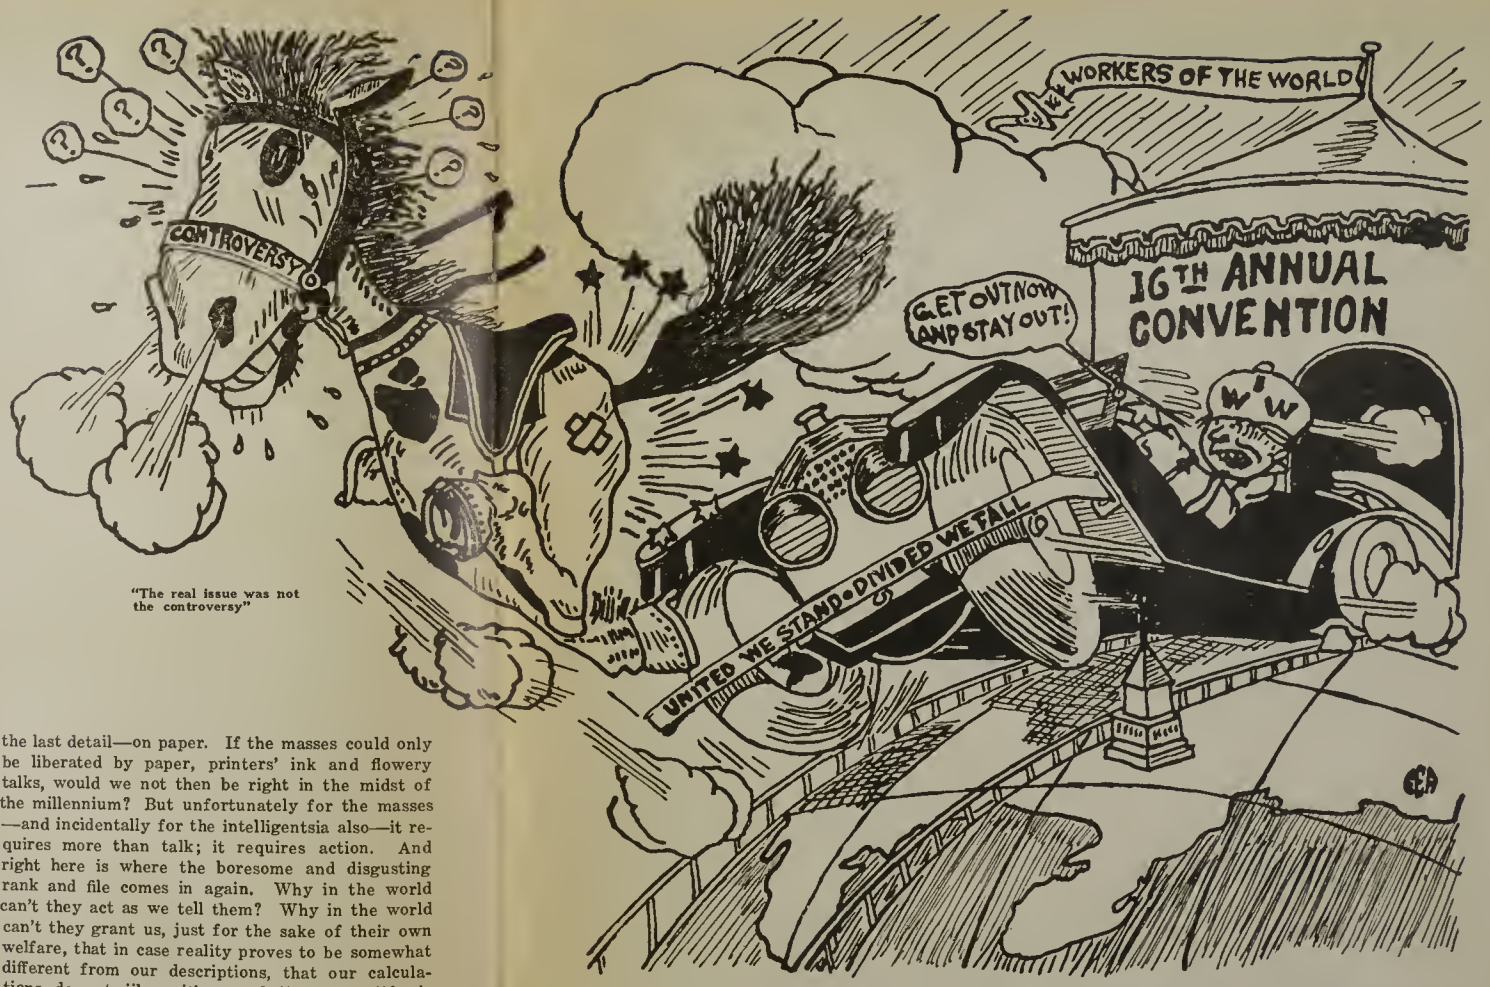
If the importance of this convention can be disputed, there is no one who can deny the fact that it lasted longer than any previous convention held by the organization. Also it cannot be denied that the many questions presented to the convention proved to be of such an importance that they taxed the working ability of the delegates to the limit.

### A Rank and File Convention

Now, of course, our critical friends will smile and tell us: "This doesn't say much as to the important or complicated nature of the problems at hand, but rather indicates the inability of the delegates in handling these problems," and we might grant them their contention. However, no matter how much disregard they may have for the rank and file as to its intelligence and ability to direct a working class movement such as the I. W. W., this much must be admitted: that the rank and file holds the finances and decides whether funds shall be available or not for the program outlined. We can curse or condemn or ridicule "the ignorant masses" all we please, but nevertheless we have to go to them when it comes to getting the means by which to realize our "intelligent," "logical," "sensible" and "scientific" (heavy on the "scientific") program.

### Economic Power of Rank and File

Not only is the rank and file the real ruler when it comes to the finances, but also when it comes to realizing our valuable programs—programs which we have so painstakingly planned and calculated to the last detail—on paper. If the masses could only be liberated by paper, printers' ink and flowery talks, would we not then be right in the midst of the millennium? But unfortunately for the masses —and incidentally for the intelligentsia also—it requires more than talk; it requires action. And right here is where the boresome and disgusting rank and file comes in again. Why in the world can't they act as we tell them? Why in the world can't they grant us, just for the sake of their own welfare, that in case reality proves to be somewhat different from our descriptions, that our calculations do not jibe with actual life; that life is wrong and we are right, and just do as we say? But no; all that these confounded masses do is to take life as it is offered them and attempt to make the most of it, and all our merciful philanthropy is only so much waste. Yes, they even laugh at our mental martyrdom and almost tell us to go to some rather unsatisfactory climate.



"The real issue was not the controversy"

### Don't Oversimplify

In the multitudes of "popular" treatises that have been written and are constantly being written, that which we call life is explained in such simple and plain terms that anyone can grasp it at a glance. It is no more complicated than a simple problem of mathematics, as in adding two and two together. Yes, by the very latest methods, and the modern form of specialization on this field, our social problems can be "logically deduced" and the solution arrived at as easily as a grocery man can compute our debt on a Burrough's adding machine. It can all be done by "canned brains" just as we are getting used to "canned music" and machine-made drama and art in general.

The only trouble in this case is that life refuses constantly to be canned, preserved or sterilized. Yes, it even strenuously opposes all attempts at evaporation and constantly insists upon a program of expansion and recomposition. Hence the many complications in our work.

To a close observer this convention certainly offered a great amount of material for study. No matter what may be said about the convention as a whole, this much can be claimed for it: it was composed entirely of workingmen, wage workers, if you please. And furthermore, although the gathering was not very large numerically, it certainly was representative. There were men from every industry, from the cities as well as from the fields and forests, from the mines and from the seas. There was the stationary worker, the so-called "homeguard" and there was also the migratory element of all shades. And each and all of them had their particular problems confronting them and sought to find a solution for them.

One would think that a classification of the workers into two main groups such as the migratory workers and the homeguards would be sufficient when dealing with our social questions, and theoretically it might be. At least it has the ad-

vantage of simplifying the question—on paper. But again, the actual conditions do not permit such a short cut, hence we might as well abandon it at once.

### The 110 Boys

Among the migratory element we have first to note the agricultural workers. They undoubtedly come into a group of their own. They are the industrial nomads and are rapidly developing a psychology corresponding to their present environment. While the construction worker or the logger at least can name a certain state as his home, the agricultural worker has to take in not only the whole U. S. A., but the whole North American continent as his address when asked for such information.

Viewing the delegation from the Agricultural Workers' Industrial Union No. 110, one could not help but think of Lewis Morgan's "Ancient Society." Those sturdy tribes of the aborigines, described by him, who refused to sacrifice their inherited and unbridled freedom for the blessings of our modern civilization, and whose nature so revolted against the bondage of capitalism that they committed race suicide rather than submit, seem to be reproduced in our modern agricultural proletariat of today. To them it is not a question of theories and of empty dreams or far-fetched speculations; to them it is a question of practical results. They know their prairie and their orchards and cotton fields; they also know exactly the financial situation of their boss, John Farmer. They know that before long he will be one of their numbers, tramping the highways and byways in search of a master, with the whole wide world as his home. They know all this from practical experience, and no amount of philosophy can ever tear down these naked facts.

Farmer John also begins to realize this unpleasant fact, and as a result he begins to fall in line with them. He can already visualize his future, not as a **retired** farmer in some snug and comfortable dwelling, but as a **tired** farmer without a farm, in a shaky "Tin Lizzie" hunting for a camping ground for himself and his family. Thus the class lines become more and more distinct.

### The 120 Group

The logger, on the contrary, is operating in a somewhat different environment. His harvest season is of a longer duration. The grain harvest on a field may last a few days only, but the "timber harvest" out on the mountainsides on the Pacific slope will last for many years, yes, for generations. The development of the transportation facilities have made the logging camps entirely different from what they were only a few short years ago. The families are invading the logging camps; we find schools, reading rooms, clubrooms, moving picture shows, electric light, water systems and sanitary facilities in modern logging camps just as we have them in the cities. If you ask a logger where he comes from he will tell you, "From Puget Sound," "Columbia River," "Coos Bay," etc. Ask a harvest hand, and he will tell you, "I take in the harvest." This last answer explains all; he doesn't know where he really comes from, neither where he will go.

Then we have the city worker, the one with a family and a little collection of household goods so necessary for him and his family. To tell this man to adopt the tactics of the harvest hands or the loggers is useless. Imagine for a moment that we offered the 65,000 slaves of Ford as a solution to their troubles, that they walk off the job and leave it for good in case Henry will not be decent! Would it not be a sight to see 65,000 workers with families starting out all at once in search for a Promised Land?

All these elements were represented in our convention. All of them were imbued with the same principles: Solidarity, One Big Union of all the workers. To solve this problem requires more than revolutionary phrases and philosophy. It requires actual knowledge of all these facts and practical experience in dealing with these problems.

### Not So Much the Controversy

The real issue in this convention was not the so much talked about controversy in headquarters. That is merely a temporary quarrel between individuals which will easily be overcome. The real issue was, and is, and will be for many conventions to come, the questions of centralized power and rank and file rule. The ultra-migratory elements were strongest in favor of centralization, and naturally so. It is only logical that they fail to grasp the real need for local rank and file expression. Why, when they look around them they find that all their fellow workers are really of the same opinion as they are themselves. When they cast their vote for or against a question they knew that they truly represented the great majority of their constituency. The similarity in their environment has established a greater uniformity in their ranks as to opinions than in any other group of workers.

It may be argued that here as elsewhere we find as great a variation in intellect and keenness as in any other group of men, and that is true. But they all look upon life from the same point of view. Place a number of men from all walks of life at the same point of observation, and it is a cinch that one will see farther than another and observe details overlooked by the others. But they will all be looking at the same object somewhat in the same way.

Among the city workers, on the contrary, we will find many different viewpoints. There are those engaged in industries which are yet more or less in a stage of individual ownership and operation and there are those engaged in industries almost completely trustified. There are the modern factories with specialization carried to the limit, and there are the out-of-date shops with diversified occupations. To them rank and file rule means something else than it does to the uniform type of the agricultural industry.

### A Deeper Aspect

Perhaps, if we go deeper into the question, it is really not so much a question of centralized power versus rank and file rule as still more the failure of the masses to grasp the difference between centralized power and centralized control over such power. I doubt if there was one delegate, or that there is one member, who doesn't acknowledge the necessity of centralized action, and it goes without saying that to secure it there must also be a centralized power to command such action.

How to so arrange our organization affairs that this power to act will always remain firmly in the hands of the membership is really the whole question.

In our discussions of problems arising out of this all-important question, our visitors and "friends" who always tender their valuable advice free of charge found themselves in a worse dilemma than the delegates themselves. The correspondent for the Daily Worker was especially embarrassed. The pictures he dew of the various delegates were certainly amusing. One day he found a delegate "truly revolutionary," next day he discovered that the same delegate was all "haywire." But we must give him credit for sticking to the job. Only one day he missed us. But we excused him gladly as the happenings of that day were enough to make any Simon-pure revolutionist dizzy. It was on the memorable November 4, 1924, when W. Z. Foster missed the presidency of the United States by a narrow margin of only 20 million votes.

We must admit that such a thing as true democracy within the ranks of labor, or anywhere else in society, can never be obtained under the capitalistic form of society, or any form of society that carries with it private ownership of the means of production. Yet we must admit, on the other hand, that until the workers are able to manage their own affairs they will never be free. To delegate the power of our organization, without a strict control over the use of such power, either to the delegates or officials means death to the organization. It will mean the desertion of all the fundamental ideals and principles upon which the organization is based and for which it is functioning.

Arguments in favor of disregarding the membership and depriving them of what is not only their right but their duty, to decide through a referendum or other equally representative medium their own affairs, should never be entertained. Such arguments are always based upon the same contentions: the failure of the masses to express themselves, and their failure to act correctly. Neither of them are any arguments at all.

### The Right to Be Wrong

Grant for the sake of argument that both are correct. What right has any man to decide for me if I want to decide the question myself? So long as there is one single member who demands to be heard on a question he must also be heard if we expect him to act. Only if we are willing to do the act required alone have we any right to decide alone. But so long as we appeal to the masses to assist in the actual work required we must grant them the right to decide the question also. And unless we succeed in interesting them so that they are willing to decide in a matter, we will never interest them enough to act on the same.

As to the mistakes of the masses nothing need be said. For hundreds of years the slaves have paid royally to the politicians and to "leaders" for making mistakes for them, and making nothing but mistakes, except so far as the individual well-being of the leader is concerned. They ought to be allowed to make their own mistakes if they choose to do it. Besides, I am firmly convinced that the masses will learn of their mistakes when making them themselves, while not even empowered officials learn anything from their mistakes for which the slaves have paid so terrible a price.

Yes, there is also the argument popping up of the necessity to act quickly, to make a short cut to paradise, whether the masses want it or not. It is as timeworn as it is foolish.

We are told that if we don't run to safety under the guidance of the intellectuals the whole darn capitalist society will come tumbling down on our back. Yet every time we try to escape the danger we find so many obstacles in the road which our leaders fail to remove that we never reach the much promised salvation. The only one who gets saved is usually the savior himself, and he does it by crawling into some hole barely large enough to shield him.

### For Emancipation

It might take generations and centuries before the workers as a class are free, in the full sense of the word. And not only the workers but mankind as a whole. But until the task is performed we have not reached the end of the class struggle. Again we will reaffirm our Preamble. We are not in the fight for a petty temporary gain. We are not in the class struggle as a factor seeking the rulership over subject classes. We are in the fight to the bitter end for the emancipation of our class.

That end can only be obtained by the long and toilsome work of educating the masses, of stimulating them to action in their own behalf, of making them self-determining human beings and not merely will-less slaves who obediently follow the voice or the lead of either appointed or elected governors or leaders.

The Sixteenth General Convention of the I. W. W. will prove itself most valuable to the masses by the fact that it voiced uncompromisingly its trust in the masses themselves; that it did not attempt to strip the members and prospective members of the organziation of their power. It reaffirmed our full confidence in our membership to solve its own problems satisfactorily to a sound progress along the lines laid down in our Preamble, and it is a cinch that the participants in this convention as well as the membership at large will soon realize the wisdom of such policy.

# The Revolution to the Front!

By FRED MANN
(Delegate to the Convention)

## Class Conscious Revolutionary Spirit Prevails—Reactionary Forces Receive Sound Drubbing—Principles Enunciated in the Preamble Have Taken Firm Root.

**THE sixteenth annual convention of the I. W. W. has acquitted itself creditably in its perusal of the internal affairs of the organization and the decisions that were made. The work of the convention shows that the great bulk of the delegates were not only Industrial Unionists but Revolutionists as well. The work of the convention can not be separated from the opinions that the membership holds. Telegrams and letters from all over the country expressed the devotion of the membership to the revolutionary principles that have stood the test of Capitalist persecution and the members' confidence in the convention and its ability to further the progress of the I. W. W.**

### International Affiliation

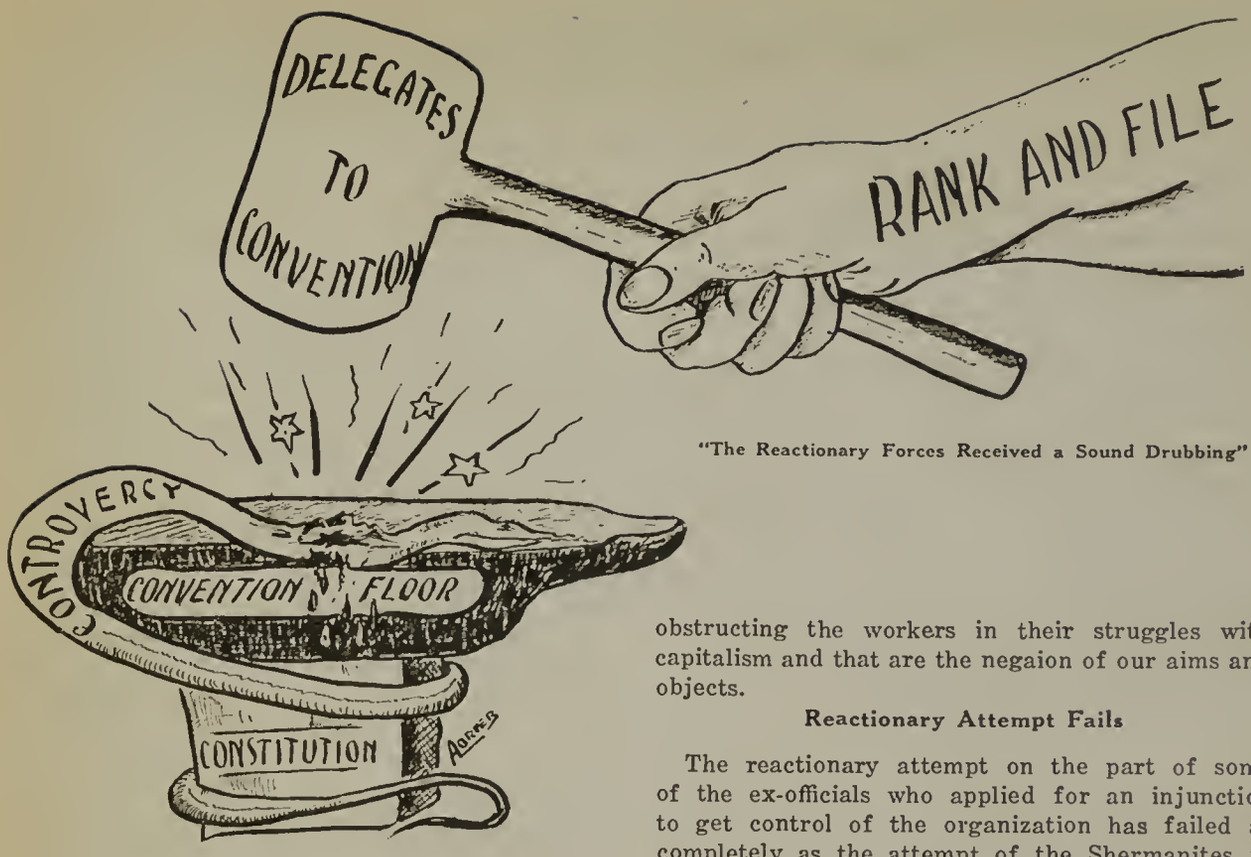
As usual the Red Trade Union International made its yearly appeal to the convention for recognition and the request for affiliation. The delegates affirmed the stand taken previously that the I. W. W. is an economic organization world-wide in scope and cannot have its policies controlled or dictated by any other organization.

To the surprise of many delegates it was announced that there are sixteen foreign administrations of the I. W. W. now in existence. Some of them are as yet unchartered, but have adopted the preamble and constitution of their American fellow workers. Requests from Germany, Australia and Sweden for charters were received. An urgent call from Czecho-Slovakia was read appealing to the I. W. W. to map out ways and means of establishing an administration there. A motion was passed by a unanimous vote to send a representative to Czecho-Slovakia who can speak the language and is acquainted with local conditions, to start them off in the right direction. The Convention instructed the incoming General Executive Board to work in conjunction with the Marine Transport Workers in calling a Congress of all the I. W. W. administrations. This is of great significance, as it will be for the first time that the I. W. W. will meet with representatives from all over the world. The Marine Transport Workers at this time have branches in every important port in the world. The I. W. W. is not nationalistic in its organization, as this action clearly shows, for this Congress it is hoped once and for all time will settle the question of international affiliation. It is the first real attempt to bring together the world's I. W. W. forces for a common assault on capitalism. The real workers' revolutionary Industrial International is in the making.

### The Future Policy

Ever since 1917 the I. W. W. has been on the defensive in its literature and propaganda as a whole. Because of the war with its hysteria and persecution and the strict surveillance of the Palmers and Daughertys of the Department of Justice, and on the advice of many of our attorneys who at that time were defending our fellow workers in the courts, our literature was modified to be "within the letter of the law" of War Espionage Acts, Criminal Anarchy and Criminal Syndicalism statutes. This process has been going on until it has become a pernicious belief with some of the elements in the organization. The fact is that the I. W. W. never did advocate any wilful destruction of property or injury to person or persons. The I. W. W. at no time gave any space in its literature to vehement assertions that the government must be captured or any part thereof. The I. W. W. did then, as it does now, advocate the capture of the industries by the workers through a well organized, disciplined Industrial Organization. It was on account of the principles of the I. W. W. and its program of organizing the working class that the master class became alarmed. Using the war hysteria as a means to an end, wholesale arrests were ordered, and many of our best members were kangarooed and sent to prison, sentences ranging from one to twenty-eight years.

This has been going on for years, is still going on and will continue so long as the I. W. W. adheres to its original cause based on its Preamble. In many states laws were passed prohibiting this or that, injunctions were issued enjoining the I. W. W. from organizing the workers. Through these trying war days our literature has not been consistent with our fundamental principles—here and there changes were effected, until we were faced with a clean-cut issue. Shall we continue along this uncertain course of education, and little by little submerge under the pressure of capitalist persecution? Or shall we take up where we left off before the war and pronounce our principles in uncolored words with no middle ground, no beating about the bush and without a single deviation from our preamble? Shall we put out our literature to meet with the approval of district attorneys? This policy is suicidal from a revolutionary point of view. The master class would have us on the run and keep us there. Whenever



"The Reactionary Forces Received a Sound Drubbing"

**the I. W. W. becomes active and shows signs of success, there and then the master class orders the state legislatures to pass laws, the judges to enforce them, and the sheriffs and gunmen to make the arrests.** Juries are **picked** and our literature misinterpreted to them (of course it makes very little difference, since the juries are bought and paid for). In patriotic fashion the press brands us "with the attempt to overthrow the government," and the millions of workers who have not as yet acquainted themselves with the true aims of the I. W. W. believe it to be true. From everywhere a cry of denunciation is heard. The I. W. W. can answer this in one way only—by broadcasting through the entire world its true aims and objects—to expose the entire well organized attempt of the capitalist class to wipe every vestige of working class organization out of existence and, in short, to acquaint the working class with the true nature of the class war, the causes underlying this struggle and their final solution.

The Convention discussed all these points at length and out of these discussions the following points of policy were adopted: that the Preamble was reaffirmed, that the class war is a grim reality, that mobilization of the workers on the industrial field for the overthrow of capitalism should be urged and advocated with more aggressiveness than ever before, that injunctions forbidding workers from organizing be disregarded, that the future policy of the I. W. W. be to disregard any laws, injunctions and decrees that have the purpose of obstructing the workers in their struggles with capitalism and that are the negaion of our aims and objects.

### Reactionary Attempt Fails

The reactionary attempt on the part of some of the ex-officials who applied for an injunction to get control of the organization has failed as completely as the attempt of the Shermanites in 1906. It is unnecessary to go into long detail in the matter. Suffice it to say that some time last year a conspiracy was hatched to place the organization in the hands of very questionable elements, and for no reason to warrant such action, an injunction was applied for in the Master's court. The usual cry of Rank and File was used by these **traitorous** splitters as a smoke screen for their hideous underhanded acts. They claimed that as soon as the Rank and File met in Convention they would lay their grievances before them and would be willing to abide by their decision. The Convention was two months off. In that period separate headquarters were set up and streams of propaganda were put out dealing with their so-called grievances. Lies and lies were circulated, causing dissension and disintegration within the ranks of the membership. Investigation committees from all over the country came to Chicago with the hope that some settlement could be effected and the organization be saved from the disgrace and dishonor it would endure in a capitalist court. But all attempts were brought to naught. Finally the Convention met. From all over the country telegrams and letters poured in expressing the confidence of the membership in the Convention. But the injunctionites under the leadership of James Rowan refused to recognize the Convention. All general officials were suspended; the entire executive board was deposed pending an investigation. Committee after committee was sent to Rowan & Co., asking them to withdraw the injunction and leave the convention, the representatives of the membership, to decide who is right instead of a

Master in Chancery appointed by a capitalist court. This they refused. After a thorough perusal of the controversy it was disclosed that their action in tying up the funds of the General Defensc Committee and depriving the men on trial of proper dcfcnsc and relief was uncalled for, as an auditing committee appointed from among the delegates found thc books in A-No. 1 shape. The books of the general organization were likewise in good condition, and the lies that were circulated about gunmen being in control of General Headquarters were just so much hot air.

That there was an attempt to split the organization and perhaps (who knows?) to deliver it into the hands of the master class, can be best ascertained by the testimony of J. A. Griffith, who turned "state's evidence" and laid bare the plot of his fellow conspirators. Under severe cross-examination that lasted a whole day it was disclosed that the injunctionites were preparing "to go it alone," as it were. Griffith admitted that Rowan and Buchwald were preparing the minds of their dupes to the point where a split would be justified. Then came the report of the auditing committee elected by the Convention. It was clearly proven that I. U. 440 officials were incapable and inefficient men and that the money of the membership was not paid out for incurred bills—but spent on taxicab rides, Pullman sleepers and boodle to further their intrigues.

After days of investigation the convention expelled Rowan and his gang, this to be ratified by referendum.

All the general officials were suspended permanently. This suspension was necessary in order to cleanse the organization. Not that the administration of Doyle, Fisher and Morris committed some crime, but because of the very fact that they were the point of attack it was considered wise and expedient. Temporary general officials were elected from the floor of the convention. The convention empowered the Lumber Workers and the Construction Workers' delegations to elect one from among each delegation to act as executive of his union. The Railroad Workers and the Metal and Machinery Workers are under the jurisdiction of the General Administration.

While this program of reorganization was being conducted, slimy propaganda was emanating from the splitters. They were calling upon the membership to line up with them and not recognize the convention. Their only points of issue were an attack upon the character of many of the delegates. All of their charges were fabrications.

They have been driven in the open and their propaganda clearly proves that their only cause is that of corruption and slime. The injunction is still pending and soon it will come up for final disposition before the labor-hating Judge Sullivan. The outcome, of course, is problematical, and no matter who is the victor in the court room the I. W. W. has suffered humiliation in the eyes of the world. The membership will of course vindicate the name of the organization by ratifying the expulsion of these traitors. This is a battle between the forces of progress and the tools of the master class in our own ranks. The working class must not have its confidence in the industrial movement dashed. We must oust the interests of capital from our ranks. Sherman tried this game in 1906 and failed, and so it will be written into the pages of history how the present splitters failed. The Class War suffers many setbacks, but the militants are never dcfeated.

——wIw——

## A WORKING GIRL TAKES A SLANT

(Continued from page 8)

woman" is ever to be meek, humble, poor, kowtowing to brains.

Old Dave cares no more for us than he would for an Airedale pup. Until Young Dave came to work at the shop we had a dark hole to work in and our foreman was unjust. Young Dave came in in 1916 and introduced modernity to his daddy.

My mother was ill two months ago. She was taken to the hospital for treatmcnt. I was in my locker a few days after mother had been removed to the hospital and I overheard the woman welfare worker say to Minna Arenson, the girl who works at the machine next to mine: "We must take up a collection for Miss Fair to help pay her mother's hospital bill."

"They got money," said Minna. "Joan's father is a railroad engineer. Her two sisters teach school and her brother is a bank cashier. They got a swell home."

"Then why does Joan work with common working girls?"

"Because she is common like us," answered Minna. "She ain't got no brains. I went to school with Joan. She can't learn and she tries awfully hard. She can do things with her hands but her brains are slow. She leads a Girl Scout Troop and—"

"A working girl a Scout leader!" gasped our welfare worker.

And so it is. We work in shops. Consequently we are dumb, ignorant, and full of evil tendencies. If an intelligcnt working woman refuses to do shop work and takes a minor clerical position, who will fill the industrial ranks?

More girls from good homes would go into industry if the personnel did not try to pick them up, do for them, educate them, and try to run their lives.

I make thirty-five dollars a week. I am good at this work. I am no good in books. I went to school for years and got nowhere. I wanted to be a milliner. My folks rebelled and I stayed home for two years. Then, in despcration, I took this job, made good, and stuck. Sometimes, when the brainy and all-good welfare workers try to patronize me, I think I will walk out, but I could not earn thirty-five dollars a week any other place in town, so I sit tight.

JOHN COMES HOME

# The Coming Freedom

A Dialogue

By PASQUALE RUSSO

PART I.

## IN THE MORNING

**(Two wage slaves meet as they go to their labors in Packing town).**

JOHN—(With a smile) Good morning, how are you Mike?

MIKE—I feel like hell, John. The landlord has raised my rent which means that the wife and kids will have less bread and butter.

JOHN—(Thoughtfully) Do not be ungrateful; thank the Lord for his many loving kindnesses.

MIKE—What kindnesses?

JOHN—At least one: that of giving you your daily bread.

MIKE—You are mistaken as to the source of my daily bread. It is not obtained from the Lord, but from my employer who in turn obtains it from the product of my toil. There is no relationship existing between my daily bread and the Lord

JOHN—(Dubiously) Infidel! Infidel!- Your arrogance will be punished in the hereafter.

MIKE—(After reflecting a moment) My concern now is not what may happen after my death but the very present pressing problem of feeding my children

JOHN—You blaspheme. Repent before it is too late. If you guide your actions by such thoughts,

at death you will be condemned to eternal torment in Hell.

MIKE—I take no stock in such dogmas. If there be a heaven, it must be on this earth and designed especially for the master class. They have all the good things of life. On the other hand, for the working class it is a Hell; they have neither comfort, convenience nor pleasure.

JOHN—(Excitedly) You speak as an anarchist. Are you a bolshevist or an I. W. W. agitator?

MIKE—(With some evidence of pride) I am an Internationalist, a class conscious workingman. I have no interests in common with the master class and I consider it my duty to carry the gospel of scientific Socialism into every shop, hoping thereby the workers will realize the immense value of that philosophy.

JOHN—Your statement makes it all clear. You are one of those foreign agitators going about creating class hatred.

MIKE—My aim is to educate the workers.

JOHN—(Very excitedly) If you do not like the way things are run in this country, why do you not go back to Soviet Russia?

MIKE—Evidently you misconstrue; I am an Internationalist, man of all countries, without allegiance to any.

JOHN—Then you are a renegade with neither religion nor country.

MIKE—(Emphatically) My sentiments are in accord with Thomas Paine's: "The world is my country, all mankind are my brethren; and I believe that religious duty consists in doing justice, loving mercy, and in an endeavor to make our fellow creatures happy."

JOHN—(Interrupting) Do you believe in social equality for Negroes; would you recognize them as brothers?

MIKE—Yes! They are my brothers and if need be I will fight by their side so that both they and I be emancipated.

JOHN—Uncle Joe, who by the way, has read the Chicago Tribune for the past twenty-five years, claims that the white man is mentally superior to the Negro, based on considerations of the size and weight of the brain.

MIKE—For the sake of common sense do not speak of the Chicago Tribune, which as you well know is decidedly biased and an avowed enemy of organized labor. If your uncle will continue reading the Tribune for an additional fifty years he will remain as ignorant as he evidently is now. But in reply to the theory of your Uncle Joe, I wish to call your attention to the findings of Prof. Beals. After a very painstaking and impartial investigation of a large number of Negro skulls, he came to the conclusion that they have a distinctive structural peculiarity, but that this difference does not indicate the intellectual inferiority of the Negro.

Dr. Alexander A. Goldenweiser wrote a book entitled, "Early Civilizations," and speaking about the unity of man demonstrated: "That the ape-like character of a Negro's jaws cannot be denied, but these very jaws are fitted out with a pair of lips that remove him as far from the animal as his jaws brings him near. For developed external lips are specifically a human trait, and in this particular the negro represents "man physical" more distinctly than any other race."

JOHN—Do you believe in the inter-marriage of white and negro workers?

MIKE—Yes, I do. It is quite out of the question for two races to live and work together without social intercourse and the frequent marriages that grow out of such a relationship. The two races have been intermingling their blood ever since the first slaves were brought to America and intermingling was indulged in during all the time of chattel salvery and even now after its abolition.

JOHN—Your statements are ridiculous and untrue! And, furthermore, your program is preposterous!

MIKE—Despite your opinion and despite all the laws framed, both races will fraternize matrimonially. According to so reliable an authority as William W. Gregg, a man who has devoted his life to study of the race question: "The mulatto percentage of the population in 1850 was only 11.2, in 1870 it was 12, in 1890 it was 15.2, by 1910 it had risen to 20.9 and it is now very probably much higher. The percentage of mulattoes in cities runs much higher, being for New York in 1910, 24.9, Boston 34.3, Washington 34,9, and Chicago 41.6. Such are the facts, John, whether you like it or not.

JOHN—Quote and say what you please. I dislike the negro, he is no good! In the Tribune of yesterday there was an editorial under the caption, "Rouge et Noir" in which it is advised that the negroes should not join the "reds," implying, of course, that "reds" are the enemies of society. While this advice is good, yet it is my opinion they will join the enemies and introduce a reign of terror in our country.

MIKE (Seriously)—John, you are evidently unaware that the Tribune is a tool of Big Business and as such inflames the workers' minds with race hatred, in order that they may be more successfully divided and controlled. Further, you fail to realize that the capitalists, as a class, fear the unity of the negro and white workers. By a union of the workers, white and black, we have the power to crush the despotic capitalistic class.

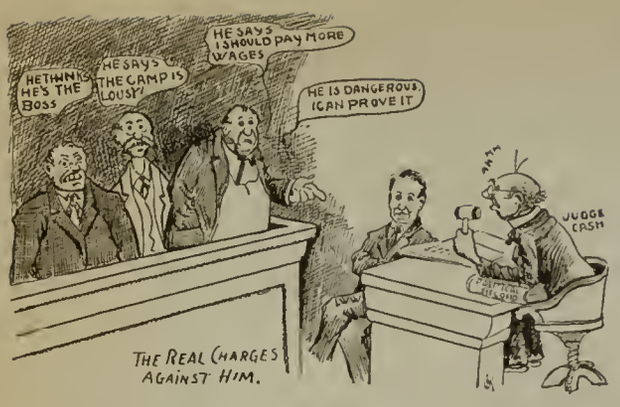
PART II.

## Lunch Hour

JOHN—Coming back to our conversation of this morning, I would like to ask why you insist on this class war when we as a people have the best government in the world?

MIKE—(Sarcastically) I admit we have a good government, the officials of which are all grafters.

JOHN—(Furiously) That is an untruth.



HE SAYS I SHOULD PAY MORE WAGES
HE SAYS THE CAMP IS LOUSY
HE IS DANGEROUS I CAN PROVE IT
JUDGE CASH
THE REAL CHARGES AGAINST HIM.

EVERY ONCE IN A WHILE FOR MIKE.

MIKE—Senator R. F. Pettigrew, in his book "Imperial Washington," tells the story boldly, truthfully and concludes: "The United States has already passed from republic to empire. We have a government of the thieves, for the thieves, by the thieves. It may be stated thus—a government of the corporations, for the corporations, by the corporations." In addition to this, Frank L. Vanderlip, following a $600,000 libel action stated: "Corruption has attacked the government at its very heart."

JOHN—It appears from these statements that both Senator Pettigrew and Frank Vanderlip are agents of the bolsheviki government and are trying in some manner to foster unrest in this country.

MIKE—Have you been reading the papers recently, especially in reference to the "oil scandal" in the Teapot Dome affair? If you read the items carefully, you will be compelled to conclude that the enemies of the American people are not the reds but the 100 percent pay-triots like Fall, Daugherty and William J. Burns, the last of whom was the Tsar of the Department of Justice.

JOHN—Right you are, Mike, there is some dishonesty in government affairs, but for this the capitalists are in no wise to blame. The people, in their collective capacity, are responsible; they elected the representatives.

MIKE—(Pessimistically) In this you are mistaken. The people do not elect their representatives. Elections, such as they are, are engineered by the money power.

JOHN—Well and good, but remember we have a wonderful document in the United States Constitution, which did and does permit liberty and freedom to all.

MIKE—The Constitution of which you speak is a scrap of paper, written on by lawyers and landowners. In the past it has served the master class well, and today is no less efficient. That document did not create a government of the people, but rather one of big business. The Constitution of 1787 was designed by a small class to further the interests of themselves. In regard to freedom, it is now a dead letter. Even now it is a crime to publicly read the United States Constitution.

JOHN—Such things could not possibly happen in the United States!

MIKE—They do not? Why, John, less than a year ago, Upton Sinclair was arrested in San Pedro, California, for reading the preamble to the Constitution, the document of which you have been speaking.

JOHN—Oh, yes! Upton Sinclair, muckraker and enemy of society; author of the Profits of Religion, Goslings and other bolsheviki books!

MIKE—Are you aware that Sinclair stood on Liberty Hill, in the land of the black hand, oranges and jails, protesting against the suppression of free speech and the persecution together with the prosecution of the membership of the I. W. W.?

JOHN—The I. W. W. should be exterminated! They are traitors to our country; preachers of violence and bloodshed.

MIKE—In one respect you are correct, the I. W. W. is disloyal to the master class, but their attitude toward the workers is one of sincerity. In regard to all these rumors of violence and bloodshed, you may rest assured that they are merely capitalist propaganda promulgated for the purpose of discrediting the organization.

JOHN—(Interrupting) Don't fool yourself, Mike, I wish to call your attention to the affair in Centralia, Washington, where with deliberation and in cold blood several American soldiers were slaughtered by the I. W. W.

MIKE—The facts of the Centralia affair are: the American soldiers were hired by the lumber barons of Washington to destroy both the property and lives of the I. W. W. They intended to wreck the union hall and hang several of the members. In defending themselves, the I. W. W. opened fire, killing a number of soldiers. In order that you may understand this matter, read "The Centralia Tragedy" by Ralph Chaplin.

JOHN—Chaplin, oh, yes! One of the traitors sentenced to 20 years at hard labor by the Honorable Judge Landis.

MIKE—Yes, it is true, Chaplin and many others at that time that opposed participation in the World War. The opposition of these men was based on the fact that all the industrial resources of the country are owned by the capitalist class and they as a class promote war. The members of the I. W. W. on trial were workers, and since neither they nor the workers obtained aught else but hardships from war, they, quite logically, opposed it. Should the time come when the workers take charge of the industries, the policy for which Chaplin and his fellows stood would be to reconstruct society, permitting each to do some useful work. whilst the resources of the world will be the property of all.

JOHN—Such a policy would do more harm than good. Should the workers capture society as

proposed by you, no doubt their first official act would be to kill all capitalists and preachers.

MIKE—In this you are mistaken. Our first official act would be, "'That all must work."

PART III.

**(The dialogue is continued as they return to their homes).**

JOHN—Referring to our conversation of the noon hour, I wish to ask: In case the preachers, lawyers, business men, and capitalists refuse to work, what then?

MIKE—(Resolutely) No work, no eat.

JOHN—Surely you would make some exceptions. Lawyers and business men, possibly, should be put to work, but you would not demand this of the preachers. They are the Lord's representatives on earth and should have leisure to study and preach his word.

MIKE—(Smiling) It is pleasant indeed, that you concede the necessity of lawyers and business men doing their share of the world's work, but consider more specifically the preacher. Under a worker's government he will possess the same right to preach as heretofore. He will in no wise be curtailed in that right. He may preach to his heart's content on Sunday, provided, of course, that he reports for work at the appointed hour Monday morning.

JOHN—What would result should Congress enact a law compelling every preacher to do useful work?

MIKE—(Laughingly) If the preachers should be put to work, for the first time in their lives they would be in a position to tell their listeners the truth, i. e., that the real hell is in this world for those who are exploited under the yoke of wage slavery. The useful employment of preachers would rid society of many parasites.

JOHN—During our conversation you have had much to say about the capitalists. Do you not know that the United States is the richest country in the world and this financial supremacy is due to the abilities of our capitalist class?

MIKE—You are mistaken, John. The wealth of this country has been produced by the workers although the capitalists have contrived to come into posssesion of it. Therefore, the workers own nothing at all.

JOHN—Surely, Mike, you are joking. Every one of our people enjoy the blessings of our prosperous condition.

MIKE—According to the report of the Industrial Commission for 1915, the distribution of wealth was as follows: The rich numbered two millions, each of whom owned on an average $42,000, making all told 84 billions of dollars. That is to say that 2 percent of the population owned 60 percent of the wealth. The middle class numbered 33 million persons, owning on an average about $1,500. The total wealth of this class was 49 billions of dollars. Thirty-three percent of the people owned 35 percent of the wealth. Of the poor there are 65 million persons, each of whom averages $107 or altogether 7 billion dollars. Sixty-five percent of the people of the United States own but 5 percent of the total wealth. Read the figures, the conclusion is plain.

JOHN—(Sadly) Yes, considering your figures, there are some injustices in the distribution of wealth, but they are modified and relieved by the very efficient work of the many institutions, all of which receive liberal donations from the capitalist class.

MIKE—In speaking of charity you overlook some obvious relations. During every sixteen minutes, in the United States, a worker is killed at his duty. At the very moment of his death he is engaged in producing a portion of the very wealth that is contributed to charitable organizations.

JOHN—Gompers, one of your own labor leaders, is a 100 percent loyal patriot and has for years fought the battles of organized labor; he does not talk as you do.

MIKE—Gompers, the supreme Emperor of the American Federation of Labor, is in truth one of the greatest enemies of organized labor in this country. He is a fakir and for the last forty years has been a tool of Wall Street. He has been instrumental, times without number, in the defeat of labor.

JOHN—During the war for Democracy, when our country was in danger, Gompers offered his services to the government and was of great assistance in the successful prosecution of the war. Had Gompers sided with the radical elements, the United States today would be under the domination of the reds, our avowed enemies.

MIKE—Wilson, under the influence of Morgan and other bankers, was forced to enter the European carnage in order to have the United States Treasury pay over $400,000,000 owed to American bankers by European governments. The workers had nothing to gain from this transaction nor from the war in general. But Gompers, as a lackey of the industrial lords, decided to offer his services, hoping thereby to make America a free country for Morgan, Sinclair, Doheny, Mellon, Guggenheim and other millionaires. Right you are when you say that Gompers aided the government in the prosecution of the war. How well it is realized that Sam Gompers was in a way the savior of the capitalist class.

JOHN—You may denounce the capitalist class all you wish, but there is one thing sure, and that is that we are living in a free country where justice is to be had equally by rich or poor.

MIKE—Under the capitalist regime there can be no justice for the workers. Let me call your attention to several very prominent incidents. During the late war the government was defrauded of millions of dollars by firms and individuals, all of whom have gone scott free. On

the other hand, we see thousands of workers in jail for no other crime than that of defending the rights of their own class. You may be proud of America, but I am frank to tell you I see little to take pride in. In the state of Massachusetts, Nicola Sacco and Bartolomeo Vanzetti are sentenced to die for being loyal to the working class. The authorities of Michigan have for some time past engineered frameups against the Workers' Party, C. E. Ruthenberg and William Z. Foster being the victims. Ralph Dolla, a man active in the steel strike, is now serving five years in Pennsylvania. In California, Tom Mooney and Warren K. Billings have been in a dungeon for seven years, victims of an infernal frameup, under the direction of the master class. Also, in that same state there are daily prosecutions and convictions of I. W. W. and other working class persons. In each case it is alleged that they have violated the Busick injunction or the criminal syndicalism law. Very recently in Chicago, Judge Sullivan issued an injunction against the Ladies Garment Workers using the sidewalks of the city for the purposes of picketing. Massachusetts, Pennsylvania, California, Illinois, Michigan, do you mean to say that they are lands of justice and freedom? Rather they are lands of frameups and lynchings.

JOHN—You are a reincarnated Benedict Arnold; a traitor to your country; you should hang your head in shame.

MIKE—If loyalty to the working class means that I am a traitor, then I am proud to be a traitor. However, all this is beside the mark. All the frameups and prosecutions will not delay the coming freedom. Even men with little discernment now know that the future belongs to the working class.

JOHN—What then will be the future of the working class without capitalists?

MIKE—The answer to your question is: In the course of history we have found it convenient to dispose of feudal barons and chattel slaves, and by the same token the workers can get along without capitalists.

JOHN—Won't there always be rich and poor?

MIKE—Poverty is a product of social conditions. It came as a result of our present diabolical system of exploitation of labor. With the passing of the capitalist mode of production, each person will receive the full product of his labor. Therefore, all those who labor will have sufficient means, thus abolishing poverty.

JOHN—In essence that is socialism and the abolition of private property.

MIKE—It will mean the abolition of all private ownership of the social means of production and distribution, but that only means those things which are collectively and socially used.

JOHN—You mean that I should divide my savings with some tramp!

MIKE—My words did not imply that. The theory of Socialism implies that the workers who produce all the wealth of the world should get the full value of their production.

JOHN—To inaugurate such a movement in America would be to introduce anarchy, bloodshed and terrorism.

MIKE—Your logic is weak. Instead we will have a very different country, it will be free of class domination, without hunger, poverty and jails and will be a country run for the benefit of all.

JOHN—Please explain, in somewhat simpler English, the aim of this workers' ownership of which you speak.

MIKE—Bishop Brown put it in a sentence: "Banish Gods from the skies and capitalists from the earth." This will free the workers from wage slavery and will transform this earth into a heaven for the working class. A world wherein there will be freedom, where none will go hungry, where each will love all. Such a society would in truth be the coming freedom, the brotherhood of man.

JOHN—I begin to comprehend the sense of your argument, and before going forward with you, may I ask, what should I and other workers do to further our emancipation?

MIKE—My answer is Organization! We must unite, organize into One Big Union. In fact, this is our historic mission. In order to succeed best in this undertaking, we must agitate and educate the workers—inculcate in them the philosophy of Scientific Socialism.

JOHN—I see more clearly now. In a sense my eyes are now open. Before meeting with you I lived in darkness, but now that you direct my attention to it, I begin to realize that capitalism is tyrannical. From now on, depend upon me as a rebel, one who will work night and day for the emancipation of the working class.

MIKE—Here, John, is the hand of comradeship, and may we two carry forward the gospel of Scientific and Revolutionary Socialism.

JOHN—Three cheers for the working class of the world!

MIKE—Long live the proletariat!

JOHN—Long live the coming freedom!

MIKE—Let us sing our anthem together:

**"Arise, ye prisoners of starvation,**
**Arise, ye wretched of the earth,**
**For Justice thunders condemnation;**
**A better world's in birth.**

**"No more tradition's chains shall bind us,**
**Arise, ye slaves; no more in thrall:**
**The earth shall rise on new foundations,**
**We have been naught, we shall be all."**

——wIw——

## INDOORS AND OUTDOORS

A case of lung tuberculosis. A young man. When I ask him about his past, he lifts his head, and his cloudy eyes glimmer. After a while he begins to smile and tells me the story of his adventurous life. Then he concludes with these words:—Yes, it is difficult to stay the whole day in a shop, together with so many other people, especially for a man like me. I was born on the water, in Europe, on a river boat, of which my father was the captain, and I was always out-of-doors, under the broad, blue sky, until a few years ago. Here in the shop I am suffocating. I cannot breathe. No, I cannot breathe—

And he has a fit of coughing.

—"As A Doctor Sees It."

# Sick Old California

(Continued from page 22.)

the "Golden State" recently. And typhoid fever is due to dirt. The germ has to be eaten, and can get into man's food only through contaminated water or milk supply, or by exposing the food to dust or to flies that have access to filth.

None of these diseases would be the least bit dangerous to humanity without dirt. Some of them even then can be stopped by inoculation.

But cleanliness costs money—it means that the wage must be high enough to pay laundry bills—to pay for a new shirt once in a while—to pay for decent housing conditions—and to afford leisure for the act of cleaning up. And the boss wants low wages and long hours on the job.

Wholesale vaccination against smallpox demands money, for the vaccination itself, and to convince certain religious and other fanatics that it is needed. The boss doesn't want to spend the money—and doesn't want to teach people scientific truths. Obscurantism, and romantic prejudice, and ignorance, he finds both cheaper and safer. If the worker learns too much he may become dangerous. It is significant that it is in California, home of freak religions, whose school system Upton Sinclair declares is run by the Black Hand, that these epidemics break forth.

It costs money in labor camps especially, to screen out the California plague of flies; it is cheaper, for the boss, to let the worker die of typhoid.

Yes, California is a great state. It is no more coincidence that the home of more plagues than they ever heard of in Egypt is also the home of the extreme in anti-labor legislation—the Busick Injunction and the Criminal Syndicalism law. Here you see the operation of cause and effect. The very suppression of Labor encourages disease. But the I. W. W. will clean up, yet.

No wonder he's fat—
He gets everything.

# Can the Leopard Change His Spots?

BOOK REVIEW By CALIF. PUBLICITY MAN

SOMEONE has said that history repeats itself. This can be proved by reading "THE LIFE OF JOHN BROWN," by Michael Gold. In comparing the records of the "Border Ruffians," the scoundrels who terrorized the Northern settlers in Kansas just previous to the Civil war, and the records of the "Respectables" who have terrorized the workers in San Pedro during the year of 1924, one senses a terrible sameness.

In order to understand the struggle between the pro-slavery element and the Abolitionists, one must understand something of the economic life of the country at that time. And to understand the struggle now going on in San Pedro, and for that matter all over the world, one must understand something of the economic life of today.

### Another Ancient Evil

Chattel slavery in America was an old and well entrenched custom. Its roots reached away back to 1619 when a Dutch sloop first landed its load of human freight on the shores of British America. It is only natural that the slave owners of the "chivalrous South" did not want to give up such a profitable business. They acted in accordance with the law of economic determinism, although they probably were not aware of it. And as the masters of all times have justified their brutality by moral platitudes, so the Bourbons of the Old South said that slavery was ordained by God, and that "it was an act of philanthropy to keep the Negro here as we keep our children in subjection for their own good."

Wage slavery is also an old and well established institution. It reaches back in various guises to the 13th century, but it did not become universal until the close of the 17th century, when the introduction of steam-driven machinery displaced the older mode of production. Wage slavery is very respectable. Some day, perhaps, men and women will learn to abhor wage slavery just as strongly as we abhor chattel slavery today. Some day it is possible that anyone who tries to enslave little children in the factories of the South and East, and in the vineyards of California will be looked upon as a brute. But as yet it is considered just and ethical to exploit the workers. In fact one is not reckoned among "our best people" unless he is an exploiter. It is only "radicals" who consider it is morally wrong for little children to be forced into the factories, mills and vineyards to produce wealth at the expense of their tiny, tired bodies.

### Puts Up Same Argument

The master of today justifies wage slavery much in the same manner as the Southern aristocracy justified chattel slavery. George F. Baer of the coal trust is quoted as declaring that:

"The rights and interests of the laboring man will be protected and cared for, not by labor and agitation, but by the Christian men whom God, in his infinite wisdom, has given control of the property interests of this country."

And to understand the other side of the picture one must understand something of the viewpoint of the members of the I. W. W. against whom all the recent attacks have been hurled. These men have been imprisoned, beaten, vilified, intimidated and murdered by the "respectables" who want to ride forever on the back of Labor, just as was the case of the Abolitionists and the slave-owning class. The struggle can be summed up briefly in the words of Abraham Lincoln:

"It is the eternal struggle between these two principles, right and wrong, throughout the world. They are the two principles that have stood face to face from the beginning of time. The one is the common right of Humanity, the other the divine right of kings. It is the same principle in whatever shape it develops itself. It is the same spirit that says, 'you toil and work and earn bread and I'll eat it'."

In San Pedro the shipping combine and their vassals rode rough-shod over the rights of the workers, and their retainers in public office winked at their actions, just as the "Border Ruffians" ignored the law and persecuted all who did not prescribe their doctrine of human slavery.

### A Perfect Parallel

Here are a few samples of the deeds of both. Read and compare them.

"Yet we will continue to tar and feather, drown, lynch and hang every white-livered Abolitionist who dares to pollute our soil," said a flamboyant editorial in the Squatter Sovereign, published in Atchison, Kansas.

The capitalist papers of San Pedro and Los Angeles openly instigate the "Respectables" to mob action and praise the action of the fiends who tortured little children and beat men and women.

Many acts of violence against the Abolitionists were perpetrated by the "Border Ruffians." One alone will be given.

Charles Dow, an anti-slavery advocate, was murdered by Franklin Coleman, a pro-slavery settler from Virginia. Nothing was done to bring Coleman to justice, but Jacob Branson who had lived with the murdered man was arrested and charged with having made threats to avenge the murder.

In San Pedro the I. W. W. hall was raided on June 14. Nine children were scalded with boiling coffee and hot grease; men and women were beaten and terrified; six men were tarred and feathered by the mob. One woman died as a result of the raid. Nothing was done towards apprehending and punishing the raiders, despite the fact that some of them were identified by eye-witnesses. On the other hand fresh arrests and persecution of the

I. W. W. members began immediately after the raid.

**Same Kind of Threats**

Threats were made against the Abolitionists almost daily. The following is a typical example:

"Sound the bugle of war over the length and breadth of the land, and leave not an Abolitionist in the territory to relate their treacherous and contaminating deeds. Strike your piercing rifle balls and your glittering steel to their black and poisonous hearts."

Read the following that was sent to the members of the I. W. W. in San Pedro after the raid:

"REDS, NOTICE!!

"You will move out of this town, or you will be blown out. Next time you are taken out your damn eyes will be torn out; that will mean that you won't be able to see to agitate, you dirty un-American dogs.

"You are done in San Pedro. Next time we come a-shooting. Damn such spawn as you and the women that bore you. Now you b—s hike!"

**Nothing New**

The slave-owning class is the same today as it was in the stirring days of John Brown and the Abolitionists. They still commit crimes against the oppressed and hide their blood-stained hands in the flag of the country. Anyone who does not prescribe their doctrine of slavery and exploitation is branded as an outlaw and traitor.

Yet today there are men who will not kneel at the feet of Mammon. There are John Browns and Wendell Phillipses and William Lloyd Garrisons of wage slavery as there were of chattel slavery. Nearly one hundred of them are in the "Twin Hells" of California. Others are in the stockade in Los Angeles. Still other are in Walla Walla, Boise, McAllister and the other prison camps of the masters for their unswerving loyalty to the working class. But the spirit of Liberty lives, and John Brown's soul goes marching on.

# In Regard to Psyching Wobs

(A Letter)

INDUSTRIAL PIONEER (Attention of Card No. 794514): You will be interested in learning that opinions stated in your review (in November Pioneer) of Floyd H. Allport's book, "Social Psychology," are confirmed by another reviewer writing in "The Journal of Philosophy," published by Ohio State University, Vol. XXI, No. 21, Oct. 9, 1924. Prof. A. B. Wolfe is the author of this review, and he says in part:

"The chapter (in "Social Psychology") on social adjustments likewise furnishes much food for thought, but also some matters on which question should be raised. The problem of adjustment is regarded as one conflict between the individual's socialized drives and his more primitive, unsocialized impulses. An old and familiar problem of morals is thus stated in new psychological terms. But the statement does not cover the whole problem of adjustment. The individual frequently has to face the problem of adjusting the conflict of two socialized drives. It is doubtful whether, as soon as we leave the field of child psychology and that of the defective and criminal, unsocialized drives play so important a part in the drama of conflict. To be sure, all psychological conflict may be traced back to the sub-foundation of prepotent reflexes and to repression or suppression somewhere, but a highly socialized drive may suffer repression just as truly as may a primitive impulse. . . . So, too, question may be raised as to the balance and validity of the doctrine which makes inferiority complexes the key to the explanation of the radical attitude. The author at this point very nearly involves himself in circular reasoning.

"In general it may be said that the last two chapters, on social adjustment and social behavior in relation to society, in which social psychology is brought to bear on sociological phenomena and problems, are less satisfactory than the rest of the book. Here the author becomes somewhat ecleetic and less critical. The mechanistie point of view is less clearly maintained. And the treatment is of a far more summary nature than the matter deserves."

Prof. Wolfe seems to be expressing, in guarded, polite, academic language, the conclusion of Card No. 794514, that Allport doesn't know anything about radicals, however fine a psychologist he may be. Allport has written a leaflet or pamphlet about the I. W. W., which I shall try to obtain for you.

One other point you might take notice of. Wolfe states that two highly socialized drives may clash, and that this may result in serious mal-adjustment, and may (presumably) result in open physical eombat, until the advocates of one or other of these be driven from the field. I can easily imagine that those who are mainly under the domination of such a drive as patriotism may clash violently with those whose main drive is elass solidarity. According to Behaviorist psychology, it would probably be discovered too, that these persons were dominated by their respective drives as a result of their early training, that is, by their environment. In that case, the open civil war in society would be preceded by a kind of mental civil war, in the individuals of the revolutionary class, while they fought out the issue between the patriotism taught them in school, and the new drive, learned from their actual daily life, and surroundings in the shops and about the workbench. This idea is not in any way different, except in phraseology, from that of economic determinism. **University Student.**

# How Masters Decay

**(A Dramatic Review By Card No. 794514)**

"WHITE CARGO," a three act play at the Cort, Chicago, is a melodramatic thing, but it is probably more truth than poetry at that.

I remember once sitting through about thirty lectures by Professor Bonn, of the Munich Handels Hochschule, one time assistant secretary of colonial affairs in the German Imperial government, and when I heard him, exchange professor at a certain American institution of learning. Bonn told his class (composed of the sons of capitalists and those who intended to become higher servants of capitalism) how to keep the heathen in subjection, especially the Africans.

Bonn quite frankly admitted that there was no logical reason why the native should work, from the native's point of view. The savage lived in a way, and had such wants and desires, that he could spend a large part of his time sleeping in the shade, or hunting, or engaged in tribal ceremonies. These things were all of much more interest and apparently gave considerably more enjoyment to the African than working in rubber forests, or digging in gold and diamond mines.

But the object of modern capitalist colonization in Africa is to obtain rubber, diamonds and gold. The white man can not stand it to labor in that climate, and there is no use trying to make him. Therefore the native must be compelled in some way to do the rough toil, swing the pick and shovel, etc.

One way is open slavery. This is a very primitive and crude way, though quite effective if secret enough. It it is not secret, there is trouble; humanitarians and laboring classes in Europe and America make a lot of fuss about it.

One excellent way is to take labor contracts in return for goods sold the negro. This is perfectly ethical, according to most liberals even, and would meet with universal favor, if it were not for the peculiar tastes of the negro. In the beginning the negro doesn't want anything the factories of Europe provide, except the very things he shouldn't have. He rejects plows, overalls, baby carriages, chewing gum, and frock coats—and everything else except whiskey and rifles. That would make very little difference, the negro would get whiskey and rifles, if the white trader had not discovered by experience that when the negro is about half shot he loses all his superstitious awe and reverence for the mysterious white man, and instead, always tries to ambush him somewhere on the garden walk and ram a spear through him. And if you sell the untutored savage guns, why, it's even worse.

White bourgeois ingenuity is not paralysed by these difficulties, however. There are two ways left, both of which have succeeded exceedingly well. One is the Kaffir way. You levy a tax, payable in money. All white people know about taxes; none of them, however liberal and humanitarian, can object to taxes. But the negro hasn't any money. You levy this tax on his huts, or his cattle. If you have to, you take these things, using machine guns if necessary. But usually the negro loves his hut, and his range cattle. He is willing to compromise. Very well, let him earn the money for the tax. You offer him a job. And the trick is done. You see to it that you get a good long labor contract, and charge him almost as much for his board as you pay him in wages, and then take the rest of the cash away from him with the tax. While he is yours, you keep him in a stockade, and perhaps you teach him to use civilized commodities, create a market for them. The mines of Africa were started by this process, except where the Boers used chattel slaves.

The other way is the Congo way. You levy a tribute directly, in rubber, on the chiefs, whom you keep drunk or drugged. You suggest to the chiefs that they make their people collect rubber, so many pounds per man, and that if they don't, it is a deadly insult to their royal majesty, and somebody must have his hands cut off. You provide a guard of honor for the chiefs, with whom you make such treaties, and in return for the tribute, you defend them from rebellion on the part of their subjects. But the mutilations and the torture that go with this method are usually performed by the black soldiers of the native kings, and European capitalism can still go to church on Sundays, and contribute to foreign missions. No stain on its hands.

The play, "White Cargo" is seriously misleading, in that it fails to specify which of these methods is used. It pretends to give a glimpse of African life, and leaves out this most necessary information. However, from references to rubber, we presume that it is the Congo way that occupies the ordinary working hours of the white masters in the play.

You are shown a hut or bungalow, somewhere in Africa. It is the station of some big English corporation, after rubber. Everybody is very peevish. All the whites are grouchy, except those that are drunk, either upon gin or religion. You are introduced to Witzel, the slave driver, too tough to rot; the doctor, too drunk to stay in Europe; the skipper and the engineer of the river packet, just comic relief; the missionary, same tribe everywhere—regular salvation army attitude, but the environment gets him, in the end he becomes an advocate of adultery; Jim Fish, much abused negro house servant; Ashley, in the process of decay, the younger son of some English master class family, he is supposed to be the chief boss; Langford, his successor, same type as Ashley—his decay is the main plot of the play; Worthington—same type as Langford—comes in at the end, ready to begin decaying.

Then there is Tondeleyo, half breed vamp—she is there to point the moral.

The characters, as you will observe, are all, with the exception of Tondeleyo and Jim Fish, of the master class—not exactly owners themselves, but straw-bosses and attaches of the ruling class, reacting as the real rulers do under practically all circumstances, and representing capitalism to the natives.

Now, as Bonn pointed out to his class some years ago, there is a very definite way of conduct for the white master in a negro country.

In the first place, he must **not** do "nigger work". He must **not** do what the Catholics call "servile labor". It is all right to perform clerical work—the negro probably considers that magic, anyway. It is all right to engage in sport, hunting, etc. But you must everlastingly drill it into the heads of the negroes that the white man is something divine, created on purpose to be worked for, or the primitive logic of the savage will cause him to try to invent some way to avoid working for you.

In the second place, there absolutely must **not** be any fraternizing between races. The negro **must** be kept in his place at all times. It is an excellent thing if the native women can be kept in their places, too, but if they can't be, why, above all else, don't marry them, for that admits a certain equality.

In the third place, all whites should be of a cold, superior, indomitable, tireless type. Any complaining, weeping or loss of nerve is fatal.

Witzel meets these requirements fairly well. He is nearly the ideal slave driver. He has an overpowering greed himself, and is staying in Africa just for no other reason than to buy two hundred shares a year of the stock of the rubber company. He is a little dirty, but that is as much as anything due to his association with the weaker whites who are supposed to be his bosses. He is cruel—the first thing he does on the stage is to hand Jim Fish a lick with a black-snake whip. He flies into rages at the complaining, whining bosses the company sends to order him around. He does what he can to preserve the dignity of the white caste. If capitalism had enough like him, its rule over the tropics would be secure.

But capitalism has no such sinecure. There is the problem of the younger son. The younger son, in America (the South), in Africa, in Asia, is a great spoiler of the omniscient, god-like white ruling caste idea.

The white ruler will have too many children. The older children under primo-geniture, to which ruling castes are addicted, will take over the family estates. The younger son has nothing to do, and has been necessarily brought up under a code of ethics which tells him he cannot do "nigger work". So, whatever his merits, or demerits, he has to be given a place as a petty official of some sort in some government service, or some big company, or he will become "poor white trash," poverty stricken, characterless, shiftless and a disgrace to his race and his family.

And the younger sons are usually descendants of people whose only claim to fame was greed, and unscrupulousness, whose only abilities, in a capitalistic age, were those that do not stand them in good stead as white masters of native tribes. They come to the tropics, full of illusions, and once there, find that they have either inherited no abilities from their parents, or those which are useless under these circumstances. The result is the rotting away of these individuals, and their spreading ruin about them as they decay.

Of course, the parts of Africa from which rubber comes are admittedly bad places to live in. All the authorities from the times of Cruikshank and of Livingstone to the very latest Geographical Society experts are unanimous that this region is extra hot, full of many sorts of fevers, humid, etc. These facts are brought out in the play. The very bungalow the company occupies is rotting away. Strings rot and pictures fall while the speeches go on. But that is part of the particular job these men are supposed to do. Scientists, even drunken ones, stand the climate pretty well. The younger sons of capitalists and landlords do not.

You find young Ashley, the first victim, a whining, gibbering wreck, panting for the ship to take him back to the coast, and eventually, out of the country. There comes in young Langford, the second victim, and you are treated to three acts of drama while Africa, or rather Langford's own weaknesses, get him. He turns into a monomaniac, dead set on breaking solidarity with his race and marrying the half-breed, Tondeleyo.

When he attempts this, even his enemy, Witzel, pleads with him not to do it. Even the missionary, who has held a high and mighty moral tone up until now, advises him that in this case an unchaste union with the girl is far better than one sanctioned by the holy St. Paul, and the practice and sacrament of the church. This is the best part of the play, where it shows the master class stripping itself of its hypocrisics, and demanding adherence to master class ideals.

The moral of the play is that the master who breaks this master class solidarity gets it in the neck. Tondeleyo, whom the half insane Langford does marry, poisons him. And again master class solidarity comes to the fore. Witzel has now added the utmost in disgust to his former resentment toward the erring Langford, but he can't let any "nigger" get away with the murder of a white man. He is two-thirds in love with Tondeleyo himself, but he sets a trap for her, catches her giving a second dose to Langford, and makes her drink it herself. Then while they carry out victim number two, victim number three appears on the scene, in the shape of young Worthington. And you get the curtain, fully confident that Worthington will go the way the other two went.

All workers have a right to be thankful for the weaknesses of master class children.

# A Few Black Flashes

(Continued from page 4.)

ef yo'll stan' theah, an' let me tie yo' eyes like heuh's was tied, an' let me tie yo' ahms like heuh's was tied, an' jes' stan theah till the moon shines in, fo' we pulled heuh up on the rope when the the moon shined in—why Jim, the quatah's youhs!'

"An' Jim, he look soht uh queeah, an' he says, 'Boss, Ah ain' a-scahed, but Ah reckon, jes' the same, Ah, won' do it.'

"Yeh, thas' it. Theah all supiśtitious—niggah supistition, an' it's a damn good thing."

And just to cap the climax, this same man, not five minutes later, in answer to some query of mine as to what killed the tree of the execution, or whether they picked out a dead tree to hang negroes on, looked at me in real surprise and said: "Dead tree? Why suah—it alluz kills a tree to hang a niggah on it!"

* * *

Then there was an episode in Pearl River County, Miss. You come up through the cypress swamps, and enter somewhat higher ground. Houses appear, negro tenants, the beginning of Southern tenancy. The land is owned by big landlords. The tenant farmers rent on shares, and turn over to the landowners their product. The landowners sell the product, and give the negro farmers back what they think they need of the cornmeal and bacon, and a little money from the sale of sugar cane, or cotton. This is really serfdom. In Pearl River County it is not as well developed as in other places. There is plenty of standing timber still, and more than the usual number of white workers in the logging camps.

Pearl River County, you see, has enough civilization in it, and enough industry, to require banks; and as luck would have it, somebody robbed a bank just as I strolled into Poplarville, the county seat.

All strangers were arrested, including myself, and I was thrown into a cell where they kept a most unsavory character. This individual had been an assistant nurse, or orderly, in a hospital for venereal diseases in New Orleans. He wanted to talk shop, and immediately flooded me with statistics about the prevalence of gonorrhea and syphilis in the South. It seems to be about twice as bad there as anywhere else in the world, due to the abysmal ignorance of the entire population in regard to elementary sanitation and prophylactic measures. This individual seemed to feel that a part of his duties was to aid the white prostitutes in their rivalry with the black, and especially the mulattoes, quadroons and octoroons. He was well able to prove that he was not alone in this attitude. The race war in the redlight district was a matter of some moment in the larger cities of the South. There were innumerable clippings from the best and most widely read daily papers of

The Home Of The Black Slave

Louisiana, Alabama, Mississippi and Georgia, making propaganda against the mixed breeds in the brothels.

Few white women would consort with any but white men, and not so very many white men would deliberately seek out the coal black women. But the cream colored women took customers from among the blacks and whites indiscriminately, and got rich twice as fast as the purer bloods. They were gradually taking over the redlight districts of the South, and white supremacy was endangered. My cellmate got quite indignant over it, thoroughly worked up. He was in jail, as I found out afterwards, for some particularly mean sort of graft, but he was a white man, and standing for white supremacy everywhere.

So, finally, the sheriff found my alibi in good shape, and tried to make amends for my imprisonment by carrying me several miles on my way in his car. On the way he conversed, to pass away the time, about his latest execution. He had hanged a negro the day before. There had been, several months before, a hold-up, in which three negroes shot and fatally wounded one white man.

Those particular negroes got away, but when negroes kill a white man, the logic of a white terror demands victims. Some negroes have to suffer for it, as an example to the rest. So they arrested a couple of black men, and brought them to trial. The judge was, as my sheriff companion said, "soft." Perhaps he was infatuated with the law, or perhaps he was merely a kindly soul, who did not realize that a master class must be heartless, cruel, and terrible, if it is to rule by terror. Anyway, after these negroes were convicted (negroes are **always** convicted) this judge declared that there was no evidence against them, and that he would exercise his privilege, and sentence them to a term of years instead of to death. Within an hour after this became known, "the boys" assembled, and took the two negroes out and hanged them.

But this was not the end of the story. After

a bit, and in the way of an object lesson to the judge, the sheriff arrested a promising young fellow in whom the judge had shown some interest —perhaps he was a relative. All around the most glorious of old Southern families there is a twilight zone of black relatives, sons and daughters of the concubines of the slave-holding ancestors.

Anyway, this young negro was charged with being the third murderer—there was no evidence, but that meant nothing in a Southern court, and he came up in due form for sentence. And the judge said, "George, I'm going to sentence you to death. I know you didn't do this killing. But if I don't hang you the boys will, and I reckon we can hang you better than they can."

* * *

Another doctor, a real one this time, one who had studied at Harvard Medical School, picked me up in the actually civilized part of Georgia, south of Atlanta. His northern residence had made him a little critical of the Southerners. He despised them also because of the quantities of Coca-Cola they drank. And he told me this story:

Roosevelt appointed a negro postmaster to a little station on the Georgia side of the Alabama border. Such a thing had never been heard of since the carpet-bag days. And the doctor, whose practice lay in that vicinity, rode into town a few days after the new postmaster arrived and found the office padlocked.

"Where's the postmaster?" he said to the justice of the peace, who was chewing tobacco on the porch next door.

"That niggah!" came the slow and scornful answer. "The las' time Ah seed that niggah, he was tryin' to swim across the Chattahoochie Rivah, with a piece of railroad rail tied to his neck, an' Ah nevah heeuhd whethuh he made it across oah not —'spec' prob'ly he didn'."

* * *

All these things, and many more like them, I heard from the whites, the master class. They did not try to conceal the fact that they ruled by terror, they tried to make it plain to me. It was their justification for the things they did. They were cynical, amused, confident—morally superior, for they knew that they held the right of life and death over the black slaves that hoed their cotton, plowed their fields and did all the heavy work of whatever sort.

When you go to the negroes, to ask about the white terror, be sure that you roll your r's and clip your pronunciation—talk as little like a Southerner as possible. The Northerner and especially the Westerner, are liked. When you have talked a few minutes with any negro in the South, any one long enough to convince him you are not of the tribe of his enemies, you will get some story of violence and oppression. You will hear of wholesale cheating by white bosses, of wanton and brutal assault, of black men being knocked down with hammers, or shot dead with rifles, shotguns or revolvers for slight discourtesies, or fancied insubordination. No white man is ever punished for this sort of thing.

The negro has just two things the master class wants, his women and his labor power. The white landowners in the South are in the habit of taking either one of these, without recompense, and requiting any attempt to defend either, or to secure payment for either, by the infliction of extreme pain, or sudden death. You can hear stories of whole families of negroes being wiped out in a few minutes by some infuriated employer whose servants have dared to ask for the payment of their wages, or the return of their daughter. They will tell you ghastly tales of black men being burned to death an inch at a time, with kerosene-soaked rags, because they resented with a blow, perhaps, some intolerable insult. But all these stories come from the oppressed, and there are too many of them to repeat, and when they are repeated, the apologists for the Southern master always dismisses them as "nigger lies" intended to excuse the negroes' "well known laziness, sinfulness, and immorality."

That is why I have chosen in illustration of the white terror, to stick pretty closely to the "confessions" of members of the white ruling class itself.

## SECTION II. THE FUTILITY OF SEGREGATION

The entire system of the white terror is built on the **fact** that the whites own the property, the land and all the machinery of production, while the negro works for a living; but it is also built on the **theory** that the whites are immensely wiser, better, and more respectable, while the negroes belong to a sub-race, different essentially from the whites, unfit to own property, or to be masters of their own destiny, and especially unfit to associate with the superior race, the whites. The theory draws upon a pseudo-scientific literature, is full of half-baked arguments about the shape of negro heads, and the hardness of the sutures in negro skulls, and has lately derived new support from the intelligence testers. These, during the period in which they were a fad, contrived to draw the same erroneous conclusions from tests of negroes that they drew from tests of workers; namely, that both negroes and white workers were inferior, intellectually, to white business men, and that negro workers were inferior to the whites. The intelligence test is coming under fire now; it makes too many mistakes; all the most honest of the intelligence test advocates are beginning to admit that training, education, home environment, and a thousand factors in personality intervene in tests which the older "testers" thought they had been excluded from. But the South hasn't heard of the repudia-

A PLAN SURE TO FAIL
The desire for segregation of races carries the Southern legislator to ridiculous extremes. This small railway station, hardly larger than a packing crate, has still its two tiny waiting rooms, one for whites and one for blacks.

tion of the intelligence test. It has just learned of the test itself, and Southern magazines and newspapers are making the most of it.

The Marxian theory that men, in the mass, are prone to accept those intellectual theories that suit their pocketbook, is being proved in the South by the uncritical way the Southern intelligentsia swallows every faddish notion that tends to the discredit of the negro.

* * *

But the theory that the negro is a kind of beast, fore-ordained to an infra-human status, is doomed anyway. A beast can be kept in a stall in the barn, while men sleep in their beds in houses. This division was never observed in the South. The Southern white man either cannot or will not observe it. And as a result, there is hardly such a thing as pure Ethiopian blood any more, in spite of the fact that the negroes brought to America came mostly from the Gold Coast, where the tribes were about the least mixed with non-Ethiopians of any negroes in Africa. There are coal black negroes in the South now only as Mendelian reversions. They may look black, perhaps some of them are black, but only because of some peculiar crossing of chromosomes. The race itself is thoroughly mixed, and many an almost white child is born of parents both of whom seem absolutely African in feature and color. By the same token, the number of African looking negroes is growing steadily less. During the period of slavery and afterwards, the negro women have been willingly or unwillingly mated with white men. The mere fact that the white man had no respect for negro women has resulted in a kind of poetic justice. His lack of respect has made it now so that there are no more black women, but only mulattoes, anywhere from half white to thirty-one thirty-seconds white, at which stage it is not very easy to tell whether there is any Ethiopian strain left at all.

The mixture still goes on. I remember with what a shock I observed, for the first time, as I walked along the country roads, that all negro women I met left the road on their first sight of me, and went way out around, ready to flee at any sign of pursuit by me. Afterwards I got used to that, as I also became accustomed to the frank boasting of the white boys wherever I stopped, among whom leadership seemed to descend upon him who could count the most "nigger wenches on his string."

Another thing you begin to notice, is that the mulattoes are crowding the white business men. There are a lot of little retail stores and shops being opened by the mulatto. The mulatto buys a little land where he can. If he is very light in color, he poses as white and avoids the worst of the persecution. He is hardy, he stands the climate better than the white. He has energy, more than the white man has in this subtropical climate.

And still another thing you see, in the industrial sections of the South, the white labor unions are beginning to realize that the negro and the mulatto can do a white man's work. They can run machinery, truck cargo and dig mines. The white unions, filled with the petty bourgeois notions that abound in that part of the country, clinging to all the hopes and ideals of the white race, insisting on white supremacy just as vigorously as the white employer, are beginning to be worried. It is all right to declare that you are a one hundred per cent K. K. K., and that by the God of White men, no dirty animal-like negro is going to get into the good old A. F. of L. International Brotherhood of Skilled Craftsmen. You can feel fine and supreme about that, until your boss gives you the air, and puts one of these "animal-like" negroes in your place. Then you may try to lynch the negro, but after a while the fact sinks into your consciousness that the boss regards him as your equal—considers both of you merely as a source of labor power, and incites you to keep him out of your union, approves of your attempts at race segregation, merely to keep the negro's wages down and be able to replace you with the negro.

In all the bigger cities of the South, New Orleans, Birmingham, Atlanta, Savannah, the theory of se-

Crowded School House

gregation is collapsing. The negro is gradually being admitted to the unions, under restrictions usually; or where he is not, the union is disappearing, throwing whites and blacks alike into the same common pool, the labor market for unorganized labor.

Civilization, industry, and biology alike operate to break down the race lines, and in the end they will have their way. But the white master class of the South is putting up a furious contest. Its economic security depends on keeping the black and white races quarreling, and it has accomplished much.

## SECTION III—THE BLACKS STRUGGLE

The first definite breach in the wall of oppression came on the educational field. The passion for learning among the common, field negroes of the South is amazing. The Southern white landlords, who control the agricultural states of the South just as their capitalist brothers control the industrial states of the North, realize quite well that one secret of domination is to keep the dominated group in ignorance. This prevents easy communication between individuals, prevents knowledge of the struggles of labor outside of the South, and permits all sorts of prejudices, especially religious prejudices, to be implanted among the negroes, doping them, and dividing them.

So there are very few schools for negroes. As I walked through Alabama, as good a state as any in the South in the way of negro education, I made a special study of this feature of negro life. The country schools provided for negro children are few and far between. I remember one, typical of the best, close to the main road from Meridian to Montgomery. It was an old and shattered church building—they still held church services there on Sunday. The floor had many boards missing; you had to tread carefully on the boards that were left. The walls were built of logs, with chinks between them. The roof leaked; there was mud under the floor, where the water ran down. The children sat on every sort of stool and chair you could think of, and many sat on blocks of wood. They were crowded as thick as sardines, about twenty of them in a single room, and this was only half. At noon these children were to go home, and another twenty were to come for the rest of the day.

This double shift stunt was a shock to me. It was not until I came to Chicago that I could believe that it was done anywhere else than in the last century Southland. The teacher who had charge of this swarming mass of children was not a normal school graduate, not even a high school graduate, just an eighth grade graduate. A beneficent county had selected her, probably because she was docile, and religious, and not for her intellectual equipment. It paid her thirty dollars a month to teach forty children, of all ages and degrees of ignorance. She was doing the best she could, but I don't think the youngsters were learning much.

* * *

That is what the state of the Southern Gentleman will do for the sake of education among his slaves. The negro himself does more. In the outskirts of Demopolis, Alabama, there is a fairly good, six-room house, in a fairly large yard. It is not exactly the best type of building for a school house, but it is decidedly better than those dilapidated ex-churches the state provides. A very energetic, thick-bodied, pleasant-faced negro teacher is in the yard, the first instance I saw in the South of school playground supervision. On the porch, and seated at desks inside, are the rest of the faculty, very busy, for this school too is evidently overcrowded.

I am invited in, when I explain that I am interested in negro schools. The bell rings, doors are thrown open, all the interior rooms are thrown into one. There is an assembly of all the students. And the work starts with a song, a negro "spiritual". The "spirituals" are all religious, but no worse than the Wesleyan hymns that are sung in the Southern state schools. The selection of this indigenous negro song, and its substitution for the regular church hymn, show two things, first that the negro is not ready to abandon his religion, but secondly that he is not anxious to take the white man's variety unquestioned. There was a certain amount of race patriotism, perhaps of social protest, in that "spiritual".

Then class room work begins—not under anywhere near such bad conditions as in the regular public schools. The floor is all right, the children sit in regular school seats and write on the standard slanted desk—the teachers give as much personal attention as is possible with the small teaching force, which runs about one instructor to every twenty-five children instead of one to every forty. The two-shift system is not in use. The teachers, I find on enquiry, are all high school graduates. The principle has had a course of pedagogy at a Northern university. One of the other teachers is a college graduate. One has studied at Tuskegee. Not a bad school, though the teachers' wages are low.

And how was this school maintained? Not by the white master class of Alabama. Oh, no. There was a big club, of the parents of negro children of school age. These parents worked farms on shares, for enough to live on, and sold the corn meal they should have eaten to raise the money for dues in their Parents' Association. Or they worked on plantations for wages, usually a dollar and a half a day, and raised a couple of dollars a week out of that, for dues to the Parents' Association. This Parents' Association was the financer and manager of the school I saw, the best negro school in the South, though others are being organized now, I understand, in other cities and in the country districts.

This is the struggle of the negro proletariat to

gain knowledge. There is nothing revolutionary about it, they are still willing to cringe to the white master; the school stationery carried a whole list of white patrons and protectors, and the school itself was very careful to confine its activities to elementary education and avoid dangerous topics. But the school itself was a symbol of rebellion, of successful revolution, against the master class tactics of ignorance for the negroes, and shows certain forces at work.

Tuskegee, the negro college, financed by northern business men, liberals, is not nearly so significant, Undoubtedly, however, the Tuskegee institute does its little part in breaking down the barrier of ignorance. The young negro who can read, even if the sloppy sentimentality of Booker T. Washington was the thing that taught him to read, is likely to be some kind of a rebel, either a racial or a social revolutionist.

A brief conversation with one of the retail storekeepers in the town of Tuskegee satisfied me of this. Here was a family that was making good money out of the presence of Tuskegee Institute. In fact, their town would have amounted to absolutely nothing without the institute.

And the good burger admitted this at once. "Yes, that niggah college brings a lot of trade to the stoah—but don' it look like an awful waste of good money, spending it on them young bucks an' black wenches that way! Seems like the folks in the No'th would have something bettah to do with they-uh money! Education spiles a niggah!"

That's the attitude of the Southern white towards the negro's attempt at self-education, and undoubtedly they are right, from their class point of view. Education does spoil the negro as a slave. It gives him somewhat of a true idea of his position and he reacts.

## SECTION IV—CLASS WAR OR RACE WAR

Before long the negro is going to fight. That fact is growing more obvious all the time. The race has been so badly abused that it feels it cannot sink much deeper. Its members have literally nothing to lose, not even their lives, for these are forfeit already. Even in their abasement, the toll of lynchings and plain murders, never recorded in the papers, is outrageous. It is only, as we said once before, when something like the Williams farm affair comes to light, that much stir is made about these matters. In the coming battle the class and the race issues are confused, deliberately confused, by the ruling white oligarchy. This keeps the two issues confused in the minds of the white workers, and of the negro workers themselves. The rising fire of negro rebellion is as likely to sweep over the white worker as it is likely to scorch the white master. The white worker's foolishness is mostly to blame for this, next to the vicious and false propaganda of the conservative oligarchy. The white worker has failed to do a single thing to explain the true situation to the negro worker. On the contrary, he has, especially in the South, barred him from the unions until the last possible moment, and has even then refused him any measure of comradeship or of fellowship. As long as the white worker clings to the shreds and dregs of bourgeois racial pride, he can not expect the negro worker to be so very anxious to show solidarity with him.

The Garvey movement, the middle-class and professional class negro Sanhedrin held last summer in Chicago, are the first steps toward a race-war, perhaps a very bloody and terrible race-war, and, as far as achieving any lasting benefit for the negro worker is concerned, almost a useless war, since it will put the negro worker under the negro capitalist, where he will be nearly as badly off as he was under the white capitalist.

What we have to do is to prove to the negro that he is not so much exploited as a negro, as he is robbed as a worker. In general, the whites own, and the negroes work. They work twelve hours a day on the plantations, for enough of the crop to live on. Those are the tenant farmers. Or they work twelve hours or longer, for wages running from $1.50 per day down to fifty cents a day. Those are the laborers. In the sawmills and logging camps, they get a little more, perhaps $2 or $2.50 per day. In the mines they do piece work, and possibly make $3 per day.

But a lot of the work in the South, all the public work, much of the farm labor, is done for no wages at all. It is done under the form of law, called in "Barbarous Mexico" of the Diaz period "peonage". Or it is done by negroes enslaved through the vagrancy laws. All the temporarily unemployed inhabitants of the South who do not own property are guilty of vagrancy. The laws are very sweeping and general in character. But it is only when there is need for recruits on the county farms that these laws are enforced. Or when some big plantation needs labor.

One such plantation owner south of Atlanta told me how it worked. He didn't have any labor problem. When he wanted men, he didn't go out on the "skid road" (they call it something else down there) and hunt for men, or patronize the employment shark. He called up the sheriff, and said, "Bert, I need twenty niggahs this afternoon."

"All right," says Bert.

And that afternoon the planter would go into town and attend court. There would be a mass of worried, woe-begone negroes, arrested for "vagrancy". They would be sentenced to eleven months and twenty-nine days, and sentence commuted if they could find some one to stand their bail and act as parole officer for them. Up steps the planter, and there are his workers, handed over to him by the law.

He pays them a dollar or two a week if he cares

## *THE BOYS IN SAN QUENTIN*

**This is a group of San Quentin prisoners. Members of the I. W. W. who are identifiable in this photograph are marked with crosses. These men have done nothing wrong; no crime but that of joining the union of their class is charged against them. They are flung into this state penitentiary as a result of master class hatred. It is necessary for all workers to show that they are not forgotten. Send your donation to Class War Prisoners' Christmas Fund, General Defense, 1001 West Madison St., Chicago.**

to, or nothing, if he doesn't think they deserve anything, and if any one of them tries to run away, the sheriff is ordered to catch the fellow and bring him back. Any time any of them fail to work properly, they are turned in to the court again and put on the chain gang, building road, or put on the county farm. I used to pass hundreds of these chain gangs, anywhere from fifty to half a thousand men, all fastened with short chains to a long chain, one end of which was attached to a big iron ball. They worked mighty hard and fast, under the broiling sun, with guards sitting over them and carelessly swinging shotguns about. Also, the mortality was high in these chain gangs.

The farmer lost nothing by turning these men over to the state or county, because the work they did reduced his taxes. He stood to win, one way or the other. And the worker stood to lose.

Now this is capitalistic feudalism, and something like chattel slavery. The white landowner, lacking negro labor, would treat white labor in the same way. The fact that the worker and the master have different colored skins merely confuse the issue, but should not obscure it entirely. As a matter of fact, when work is really plentiful, and the negro, because of migration or for some other reason, is scarce, the white masters of the South do enslave through the vagrancy laws white workers. Remember the Martin Tabert case?

What we have to do is to help these workers, negro workers, in their struggle for elementary education, and recognize them as equals, as producers, as co-workers, as good as any other workers. It is not our business to encourage race-wars, but if such wars break out, we ought to be on the side of the negro. And all the time, we have to emphasize, and prove over and over again, that white labor is not at war with black labor, that on the contrary white labor sympathizes with black labor, and will show solidarity with it, and will fight the masters, whether white or not, side by side with black labor, any time the latter wishes. What we want, and what will save the negro worker, even as it saves the white worker, is a recognition of class-war—open class war.

# "The Scum of Industry"

An Answer, By CHARLES J. SMITH

**A recent issue of the Machinists Monthly Journal carries an article a page and a half long, written by Matthew O. Tobriner, entitled "California and Syndicalism." Tobriner is opposed to the anti-labor C. S. law, his conclusions being, "Such laws eliminate no causes of the trouble; accomplish only one thing—the aggravation of the problem."**

**Tobriner's analysis leading up this conclusion is, however, a sentimental fallacy, comparing the I. W. W. to the flotsam and jetsam of the sea of industry, and to the dirt in a kitchen which, he advises, should be cleaned "with Dutch Cleanser," meaning, "make conditions better in industry, and thus rid us of the I. W. W."**

**In the article below Tobriner is answered by Fellow Worker Charles J. Smith, serving time as a victim of this same criminal syndicalism persecution.**

LET us investigate the industries and their unemployed, or "scum." What is the cause of all this "scum?" Is it not a fact that the progress of the machine development is the cause of the unemployed "scum" of industry?

You, Mr. Tobriner, say of this scum, that from it the Industrial Workers of the World secures its membership; you also say they are men who have not developed and cannot develop under the present system.

I will show you that we are more developed mentally than you and your kind in regards to unionism and the betterment of the working class as a world class struggle. We organize scientific industrial unions to keep up with the scientific machine development, while you, with your backward craft unions, go backward instead of forward.

We are organizing scientific industrial unions regardless of the persecutions, always going ahead regardless of jails, tar and feathers, scalding hot coffee poured on little children by the K. K. K., and lynching of our fellow workers. Our enemies, the master class, are paying men (excuse me for calling them men) to get into the I. W. W. to cause internal trouble, to try to stop the growth of the One Big Union. There is a force driving us to the "One Big Union."

Could we overcome all these obstacles, if there were not some force driving us forward, pushing us on, in spite of every hindrance, in spite of our own mistakes, even? That force is economic necessity, the greatest force in the world. It will yet bring us and our idea victory, in spite of everything.

If the craft union officials and leaders had taught the workers to organize on industrial lines long ago, we would not have this so-called "scum" of industry, for we would not now have unemployment.

But the craft union leaders sold out the workers in times of strikes, instead of staying with the workers and being true to the working class.

Now, Mr. Tobriner, "how come" that the master makes laws that put I. W. W. members in jail for from one to fourteen years? How well we know, and any thinking person knows, that if we get the workers organized in the I. W. W., the master will lose his profits. Our past history shows that we "got the goods" for the workers in the harvest, on construction jobs, and in the woods.

Our forefathers fought for new ideas and went to the front, and Darwin's early ancestors came out of the woods with their big clubs and had courage enough to face their enemies, and so it is with the I. W. W. We will come out of the woods with our One Big Union club, and face our enemies —the masters.

You say ninety per cent of us are itinerant, (migratory workers) going from job to job. We know that we have to work for our living and we have to go where the work is, that's true necessity, it forces us to migrate.

It is always the migratory worker and blanket stiffs who build the railroad and do all frontier work; and the harvest stiff who has to harvest the wheat in the hot sun. Now, if the migratory worker did not build the railroads and do all the out of the way labors of all kinds, you and the machinists, engineers and trainmen would have to do that work before you could run your engines and work at your trade. So why all the slams at the poor hard-working stiffs?

It is no disgrace to work in the harvest fields or construction jobs or to be a timber worker, but it is a disgrace to have a system of society in the world, with rotten bunks, rotten pay, rotten food, and rotten women, and damned rotten men, who try to stop the growth of Industrial Scientific Unionism.

We will keep on organizing the migratory workers and timber wolves and stiffs, and we will show the world how to do away with this so-called "scum of industry."

## THE MISSING LINK

**(Unfortunately no longer missing)**
By IMA DUBB

Now Darwin's theory is profound
And reading you will find
How man rose up from off the ground
In Evolution's grind.

But I think old Darwin must have lost
A specimen or two;
Maybe their breed was somewhat crossed.
But now they've come to view.

You'll find them now in saw-mills
In the woods and on the grade,
The farmer's help when land he tills
When it's a hundred in the shade.

He says he's never seen the day
That he would organize;
He sits around and waits his pay
And thinks that he is awful wise.

He's decorated all his bunk
With pictures in the nude;
The Hollywood beauties and such junk
His simple mind delude.

When payday comes the union man
Puts stamps upon his card;
He tries to help out all he can,
Each oppressed one is his pard.

But Henry Shears, whose money is burning
A hole in his pocket so worn,
Must find a chance for turning
His ten dollar bill into more.

The Crown and Anchor he tries to buck;
His buck it is immense.
He cries: "My God, what rotten luck!
I'm left with fifty cents."

From pay to pay, this way he goes
Bucking the game of chance,
Working for what? God only knows,
Maybe, to line the tin-horn's pants.

Easy come, easy go,
Is a moral, I understand,
But when a man works hard for dough
How comes it to slip from his hands.

"A man's a man for a' that"
Wrote Robbie Burns, the Scot,
But sometimes I stop and wonder if
This specimen's a man or not.

But on with the good old O. B. U.
We'll educate them yet;
And show the boss a thing or two
And call the Missing Link's last bet.

## ACTION!

The new delegate is giving a hammer to each new member.

Why the hammer?

O, that's to strike with.

**Primitive Accumulation**

## MAYBE HE'LL BE PRESIDENT

A crabby millionaire, as he climbed out of his limousine, was approached by a newsboy. "No, I don't want any paper; get out!" he snarled.

"Well, keep your shirt on, boss," replied the newsboy, "the only difference between you and me is that you are making your second million and I am still working on my first."

——wIw——

## MAKES YOU MORE OF A MAN

Ma, has Pa taken out a red card?
Yes. How did you know?
I heard him tell the boss, "Go to hell."

——wIw——

## BY-PRODUCT

Experience is what you get while you are looking for something else.

——wIw——

**This one comes from Miles McCabe, G. O. C. of I. U. 110.**

During a free speech fight in Sioux City, Iowa, a few years ago a fellow worker who was working in the harvest came into town on a train and immediately went down to the corner where the fight was in progress. Upon arriving there and seeing no one on the box, and thinking they were all in jail, he got up on the box himself. Throwing out his hand in a majestic way, he said, "Fellow workers and friends."

A slight pause and then again: "Fellow workers and friends!"

Another pause, as he looked around expectantly, and then he said, in an aggravated tone, "Say! Where in hell's that bull?"

# Can YOU Get 150 Subs by February 1st, 1925?

# A Bigger Press-A Bigger Union

# A Small Press is an Indebtedness

WE MUST DOUBLE THE CIRCULATION OF THE PIONEER AND SOLIDARITY WITHIN THE NEXT TWO MONTHS

To do this we must have 6,000 new subs and 4,000 additional bundle orders for each of the two publications.

## Can We Do It?

## We Can Because We Must!!

We are going to do it by making it worth your while to gather subscriptions for Industrial Solidarity and Industrial Pioneer.

## Cash Prizes for Sub Agents

| | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| 150 | yearly | subs | $120.00 | plus | 20 | per | cent | Commission |
| 100 | " | " | 75.00 | " | " | " | " | " |
| 75 | " | " | 55.00 | " | " | " | " | " |
| 50 | " | " | 35.00 | " | " | " | " | " |
| 25 | " | " | 18.00 | " | " | " | " | " |
| 15 | " | " | 10.00 | " | " | " | " | " |

### RULES GOVERNING CONTEST

**Contest opens November 21, 1924, and ends February 1, 1925. To the Sub-Agent Who Turns In the Highest Number of Subscriptions Over 150 an Additional Prize of $25.00 Will Be Paid.**

Only subscriptions accompanied by payment will be credited to Sub-Agents. Sub-Agents will not be credited with subs from books that are carried by other agents.

New subs must be turned in from week to week.

Subs put in the mails on or before February 1st that do not reach this office before the closing date will be credited to Sub-Agent. Subs will be counted four days after contest closes and winners notified by first mail and in publications.

Six months subs count one-half. Three months subs count one quarter.

**Special prizes of $35.00 will be paid to everyone turning in 50 subs before December 20th. All those who turn in 50 before this date will be credited 15 subs for contest closing February 1, 1925.**

Read the next issue of Solidarity for further information.

## Let's Go! Write in for a Sub Book!

# Boycott California Products

## The Flies of California

THE flies of California are bringing death to you if you are eating California products. They go from the pens where cattle are dying from Hoof-and-Mouth disease over to the raisin packing plants; they go from heaps of excrement full of typhoid germs right to the tables of the workers in grade camps and lumber camps; rats and fleas breed under the same rotten conditions that give birth to flies, and they are spreading Bubonic Plague.

The capitalists of California are so used to suppressing Labor, disregarding Labor's rights, murdering Rebel Workers in their San Quentin jute mills, destroying free speech, free press and freedom of assemblage with their Criminal Syndicalism laws and their Busick Injunction arrests, that they have no longer any hearts left, no mercy, no consideration.

Instead of keeping their poisonous products at home, they are concealing the diseases that infect them, and advertising them more and more for sale!

Thousands of labor camps throughout the United States put dangerous California products on their dining tables. The capitalists of California don't care; your employers don't care—but you care. Strike as the workers of Natron Cutoff and the workers of Concrete struck, for freedom from California products!
